Ms. Marcia St. Martin
Executive Director
Sewerage and Water Board of New Orleans
625 Joseph Street
New Orleans, Louisiana 70165

Dear Mr. Doody, Mr. Graves, and Ms. St. Martin:

You are hereby informed that the contract for the Lake Pontchartrain and Vicinity (LPV), Hurricane and Storm Damage Risk Reduction System, LPV-113, Michoud Slip/Canal Levee (W912P8-08-D-0037), in Orleans Parish, Louisiana, has been completed. Segment LPV-113 is located within the National Aeronautics and Space Agency (NASA) Michoud Facility in New Orleans East. LPV-113 consists of accomplishing levee enlargement, channel excavation, foreshore protection works, and levee scour protection as project betterments instead of at a project cost, and the addition of required relief wells at project cost. This project was completed by the United States pursuant to Public Law 109-148, Emergency Supplemental Appropriations to Address Hurricanes in the Gulf of Mexico and Pandemic Influenza Act, 2006.

A final inspection of the project was conducted on December 17, 2012, and all contract work was performed in accordance with the approved plans and specifications and meets the 100-year event design criteria. For operations and maintenance guidance, refer to the interim operations, maintenance, repair, replacement, and rehabilitation (OMRR&R) manual, Volume 1 and Volume 2, previously provided to you. Please note, Volume 3 of the OMRR&R manual will be provided in the near future which will provide the final OMRR&R information associated with above referenced contract. Please see enclosed the following items:

- a. As-built contract drawings – Enclosure 1
- b. Notification of Contract Completion (NCC) survey data – Enclosure 2
- c. Final inspection attendance roster – Enclosure 3

The punch list items identified during the pre-final inspection have been corrected and inspected by representatives of the Southeast Louisiana Flood Protection Authority - East, the Coastal Protection and Restoration Authority Board of Louisiana (CPRAB), formerly known as Coastal Protection and Restoration Authority (CPRA), and by our office. The Bermuda grass has been established and with proper maintenance should continue to improve in density and root structure.

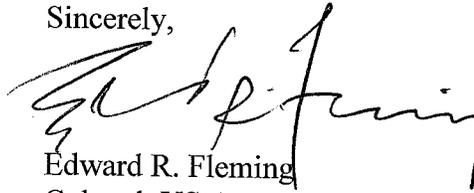

The NCC survey data includes a table presenting elevations at stations that can be compared to the construction plans. The data represents a centerline profile of the levee and was obtained within 60 days of the date of this letter. The survey data reflects the elevations of the levee are above the elevations required to provide a 100-year level of risk reduction in 2013. The levees were constructed with overbuild to allow for the natural occurrence of settlement and subsidence. The amount of settlement and subsidence that has occurred since the time of construction is within allowable tolerances based on site specific settlement curves.

In accordance with the Cooperation Agreement between the Department of the Army and the Southeast Louisiana Flood Protection Authority-East and the Sewerage and Water Board of New Orleans dated February 13, 2007, and the Project Partnership Agreement between the Department of the Army and CPRA (now known as CPRAB) dated September 22, 2008, the Southeast Louisiana Flood Protection Authority - East and CPRAB shall undertake the OMRR&R of this completed project feature of the Lake Pontchartrain and Vicinity, Hurricane and Storm Damage Risk Reduction System in Orleans Parish.

In this connection, maintenance is construed as keeping all completed works in working condition to serve the purpose for which they were designed.

If there are any questions concerning your OMRR&R responsibilities, please call Ms. Amy Powell, Operations Manager, Completed Works, or Ms. Karen Clement, Assistant Operations Manager, Completed Works, at (504) 862-2241 and (504) 862-2313, respectively.

Sincerely,

Edward R. Fleming
Colonel, US Army
District Engineer
