DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records within the requested search area for the following databases:

FEDERAL RECORDS

NPL	National Priority List
Proposed NPL	Proposed National Priority List Sites
Delisted NPL	National Priority List Deletions
NPL LIENS	Federal Superfund Liens
CERCLIS	Comprehensive Environmental Response, Compensation, and Liability Information System
LIENS 2	CERCLA Lien Information
CORRACTS	Corrective Action Report
RCRA-TSDF	RCRA - Treatment, Storage and Disposal
US ENG CONTROLS	Engineering Controls Sites List
US INST CONTROL	Sites with Institutional Controls
HMIRS	Hazardous Materials Information Reporting System
DOT OPS	Incident and Accident Data
US CDL	Clandestine Drug Labs
US BROWNFIELDS	A Listing of Brownfields Sites
DOD	Department of Defense Sites
FUDS	Formerly Used Defense Sites
LUCIS	Land Use Control Information System
CONSENT	Superfund (CERCLA) Consent Decrees
ROD	Records Of Decision
UMTRA	Uranium Mill Tailings Sites
ODI	Open Dump Inventory
DEBRIS REGION 9	Torres Martinez Reservation Illegal Dump Site Locations
MINES	Mines Master Index File
TSCA	Toxic Substances Control Act
FTTS	FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
HIST FTTS	FIFRA/TSCA Tracking System Administrative Case Listing
SSTS	Section 7 Tracking Systems
MLTS	Material Licensing Tracking System
RADINFO	Radiation Information Database
RAATS	RCRA Administrative Action Tracking System
FEMA UST	Underground Storage Tank Listing
PCB TRANSFORMER	PCB Transformer Registration Database
US HIST CDL	National Clandestine Laboratory Register
SCRD DRYCLEANERS	State Coalition for Remediation of Drycleaners Listing

COAL ASH EPA ---- Coal Combustion Residues Surface Impoundments List
COAL ASH DOE ---- Sleam-Electric Plan Operation Data
FEDERAL FACILITY ---- Federal Facility Site Information listing

STATE AND LOCAL RECORDS

SHWS ---- Potential and Confirmed Sites List
AUL ---- Conveyance Notice Listing
UIC ---- Underground Injection Wells Listing
SWRCY ---- Recycling Directory
LUST ---- Leaking Underground Storage Tanks
LIENS ---- Environmental Liens
VCP ---- Voluntary Remediation Program Sites
DRYCLEANERS ---- Drycleaner Facility Listing
COAL ASH ---- Coal Ash Disposal Sites
ASBESTOS ---- Asbestos Projects List

TRIBAL RECORDS

INDIAN RESERV ---- Indian Reservations

INDIAN LUST ---- Leaking Underground Storage Tanks on Indian Land
INDIAN UST ---- Underground Storage Tanks on Indian Land
INDIAN VCP ---- Voluntary Cleanup Priority Listing

EDR PROPRIETARY RECORDS

Manufactured Gas Plants ---- EDR Proprietary Manufactured Gas Plants

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there is 1 CERC-NFRAP site within the searched area.

EXECUTIVE SUMMARY

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 01/13/2010 has revealed that there is 1 RCRA-LQG site within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 2 RCRA-SQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 7 RCRA-CESQG sites within the searched area.

EXECUTIVE SUMMARY

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 01/13/2010 has revealed that there are 15 RCRA-NonGen sites within the searched area.

EXECUTIVE SUMMARY

TRIS: The Toxic Chemical Release Inventory System identifies facilities that release toxic chemicals to the air, water, and land in reportable quantities under SARA Title III, Section 313. The source of this database is the U.S. EPA.

A review of the TRIS list, as provided by EDR, and dated 12/31/2008 has revealed that there is 1 TRIS site within the searched area.

Site	Address	Map ID
DAYBROOK FISHERIES INC	***136 DAYBROOK LN***	***23-19,22***

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 11/10/2009 has revealed that there is 1 ICIS site within the searched area.

Site	Address	Map ID
PLAQUEMINES PARISH GOVERNMENT	180 LEE DRIVE PORT S	11-13,15

PADS: The PCB Activity Database identifies generators, transporters, commercial storers and/or brokers and disposers of PCBs who are required to notify the United States Environmental Protection Agency of such activities. The source of this database is the U.S. EPA.

A review of the PADS list, as provided by EDR, and dated 09/01/2009 has revealed that there is 1 PADS site within the searched area.

Site	Address	Map ID
TENNESSEE GAS PIPELINE STA 52	***26166 HWY 23 .25 M S EN***	***6-13***

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/19/2009 has revealed that there are 30 FINDS sites within the searched area.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003

Map ID	Site	Database(s)	EPA ID Number

TENNESSEE GAS PIPELINE STA 527 (Continued) **1000306723**

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 9200

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 9200

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 9200

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Louisiana Tools for Environmental Management and Protection Organizations (LA-TEMPO) is an Integrated Management System.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No

Map ID	Site	Database(s)	EPA ID Number

LANDRY BROTHERS AUTOMOTIVE (Continued) **1004707113**

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Verified to be non-commercial

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SPILLS:

Incident Id:	33584
Incident Date:	20-May-00
Incident Status:	**Closed**
Media Desc:	Water
Location Description:	136 Daybrook Rd
Incident Source Name:	Daybrook Fisheries, Inc.
Incident Desc:	s00-2063. Diesel spill due to boating accident -- JP
Parameter:	Diesel
Quantity:	300
Units:	gallons
Other Substance Desc:	Not reported

Incident Id:	116600
Incident Date:	17-Jul-09
Incident Status:	**Closed**
Media Desc:	Air
Location Description:	Daybrook 136 Daybrook Rd Empire
Incident Source Name:	Daybrook Fisheries Inc
Incident Desc:	c09-2423 Daybrook emitting steam from stack with foul odor...jd
Parameter:	Not reported
Quantity:	Not reported

Historical Generators:
Date form received by agency: 12/11/1995
Facility name: MARINE SPILL RESPONSE CORP
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Violation Status: No violations found

FINDS:

Registry ID: 110003351774

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information

Map ID	Site	Database(s)	EPA ID Number

CHEVRON PIPE LINE CO - EMPIRE-OSTRICA TERMINAL (Continued) **1010227784**

on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Louisiana Tools for Environmental Management and Protection Organizations (LA-TEMPO) is an Integrated Management System.

Hazardous Waste Summary:

Map ID	Site	Database(s)	EPA ID Number

Y & S MARINE INC (Continued) **1004707571**

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Violation Status: No violations found

Off-site waste receiver: Verified to be non-commercial

Historical Generators:
Date form received by agency: 04/15/1997
Facility name: PSC INDUSTRIAL OUTSOURCING INC
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SECTION 4 - EPA WASTE CODES

There are no epa codes to report for this search area.

Section 5

Databases Searched and Update Dates

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/01/2009

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Source: EPA

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/30/2009
Date Data Arrived at EDR: 08/11/2009
Date Made Active in Reports: 09/21/2009
Number of Days to Update: 41

Source: EPA

Last EDR Contact: 02/09/2010
Next Scheduled EDR Contact: 04/12/2010
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/23/2009
Date Data Arrived at EDR: 09/02/2009

Next Scheduled EDR Contact: 06/14/2010
Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 11/03/2009

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010
Date Made Active in Reports: 02/18/2010

Data Release Frequency: Quarterly

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 01/13/2010

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010
Date Made Active in Reports: 02/18/2010

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/19/2009
Date Data Arrived at EDR: 12/29/2009

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 10/01/2009

Data Release Frequency: Annually

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

Total Maps: 0

Limited Permission To Make Copies

Quaternary Resource Invest.LLC (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

LOUISIANA
FORTS QUADRANGLE
GRID ZONE "C"

Prepared under the direction of the President, Mississippi River Commission.
Horizontal control by Mississippi River Commission; Corps of Engineers, U. S. Army, New Orleans District; U. S. Coast and Geodetic Survey and U. S. Geological Survey.
Vertical control by Mississippi River Commission; Corps of Engineers, U. S. Army, New Orleans District and U. S. Geological Survey.
Descriptions, elevations and geodetic positions of bench marks may be obtained from New Orleans District, New Orleans, La.
Topography by Corps of Engineers, U. S. Army, New Orleans District, 1948
Planimetry for area along Mississippi River revised from aerial photographs flown by U. S. Air Force October 1946. Planimetry for remaining portions of quadrangle map was revised from photographs flown by U. S. Air Force December 1945, and from photographs flown by Aero Service Corporation November 1940, for the New Orleans District, and from information obtained from Federal and State agencies and private corporations.
U. S. Geological Survey quadrangle maps, scale 1:31,680, used as base, with necessary corrections and additions made for adaption to flood control use.
Political boundaries are shown according to best available information and are subject to change except where established by court decision.
Depths along the thalweg in the Mississippi River are below (Mississippi River Commission) mean low water and were taken from surveys of June 5 to 23, 1916.
Depths in California Bay and Breton Sound are below mean low water and were taken from U. S. Coast and Geodetic Survey Chart 1272, dated August 30, 1948.
Dashed land lines are projected from best available data.
Polyconic Projection, 1927 North American Datum.

Scale 1/62500

1 0 1 2 3 4 Miles
1000 200 0 1000 2000 3000 4000 5000 6000 7000 Yards
1500 0 1000 2000 3000 4000 5000 6000 Feet
0 1/2 0 1 2 3 4 5 Kilometers

Contour Interval 5 feet

Datum is mean sea level. Elevations differ from mean gulf level elevations at Biloxi, Mississippi, by small fractions of a foot. Persons interested may secure elevations of bench marks so determined by the latest U. S. C. & G. S. adjustment, by applying to the U. S. Coast and Geodetic Survey.

FIVE THOUSAND YARD GRID COMPUTED FROM "GRID SYSTEM FOR PROGRESSIVE MAPS IN THE U.S." ZONE C, U. S. C. & G. S. SPECIAL PUBLICATION NO. 18
LOUISIANA STATE GRID ZONE SOUTH IS INDICATED BY DOTTED TICKS OUTSIDE THE NEATLINE AT 10,000-FOOT INTERVALS

Prepared under the direction of the President, Mississippi River Commission, by the U. S. Army Engineer District, New Orleans, Corps of Engineers.

Edited and published by Mississippi River Commission, Corps of Engineers, U. S. Army, Vicksburg, Mississippi.

Control by Mississippi River Commission and U. S. Army Engineer District, New Orleans, Corps of Engineers, and U. S. Coast and Geodetic Survey.

Polyconic Projection. 1927 North American Datum.

Descriptions, elevations and geodetic positions of permanent survey marks may be obtained from U. S. Army Engineer District, New Orleans, Corps of Engineers, New Orleans, Louisiana.

Topography by U. S. Army Engineer District, New Orleans, Corps of Engineers, 1948-51.

Planimetry remapped from aerial photographs by stereo methods.

Aerial photography, March 1960. Field checked Dec. 1960.

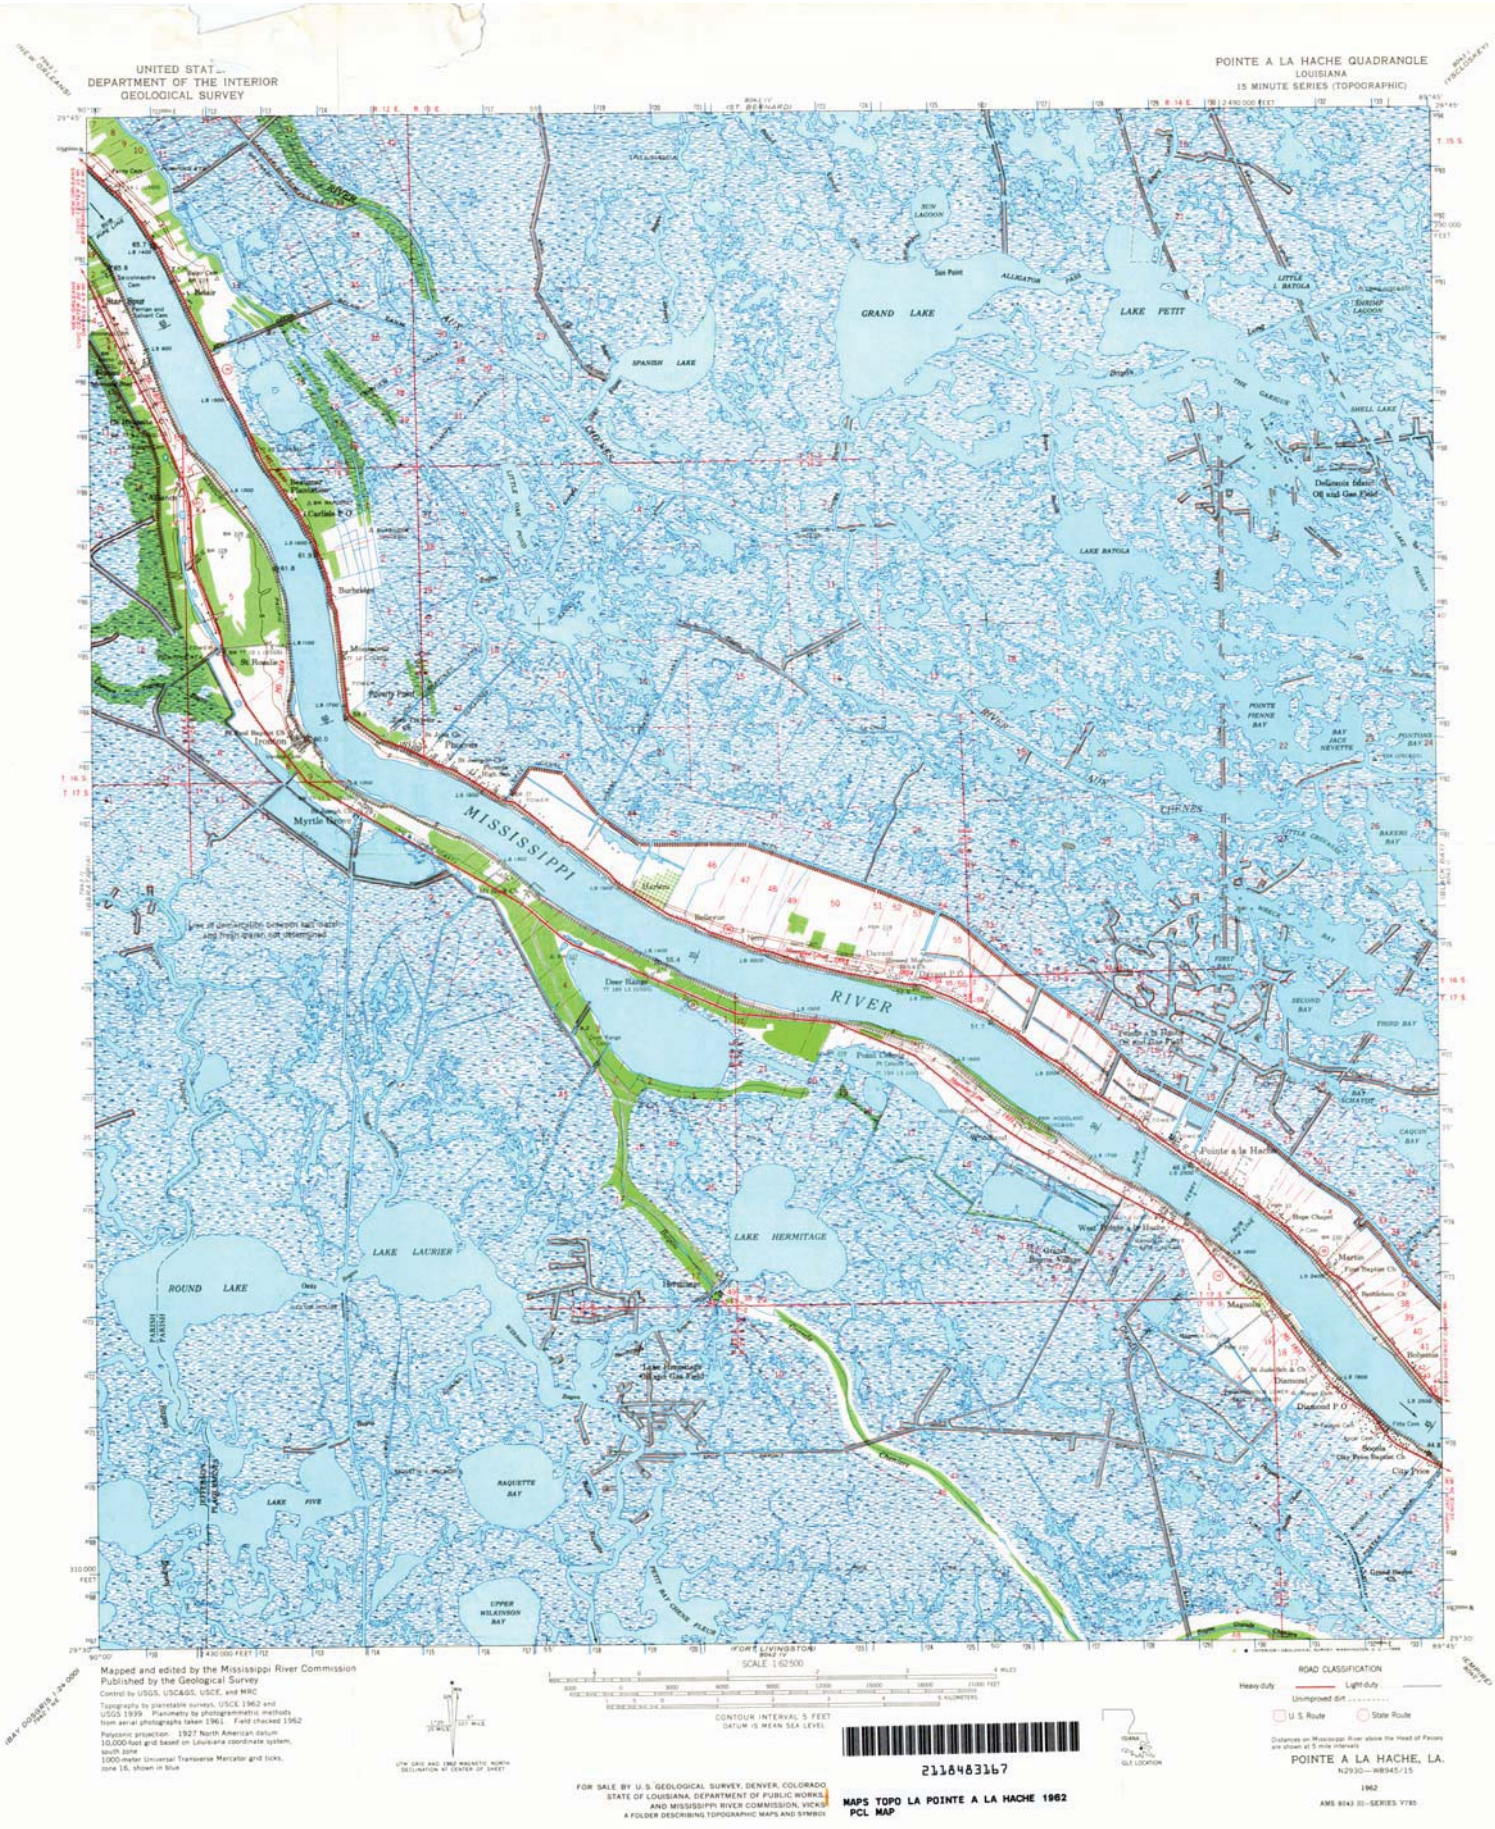

Depths in Gulf of Mexico and coastal waters from U. S. Coast and Geodetic Survey Chart No. 1273 revised as of May 1, 1961, expressed in feet below mean low water.

Dashed land lines are projected.

Political boundaries are shown according to best available information.

Work under Flood Control Act shown as of 1961.

CORPS OF ENGINEERS

BLACK BAY QUADRANGLE
LOUISIANA

Mapped, edited and published under the direction of the President, Mississippi River Commission, by the U.S. Army Engineer District, New Orleans, Corps of Engineers.

Planimetry remapped by photogrammetric methods. Aerial photography 1961. Field checked 1962.

Topography by U.S. Army Engineer District, New Orleans, Corps of Engineers, 1962 and U.S. Geological Survey.

Control by Mississippi River Commission, U.S. Army Engineer District, New Orleans, Corps of Engineers, U.S. Coast and Geodetic Survey and U.S. Geological Survey.

Polyconic Projection, 1927 North American Datum.

Descriptions, elevations and geodetic positions of permanent survey marks may be obtained from the U.S. Army Engineer District, New Orleans, Corps of Engineers, New Orleans, Louisiana.

Dashed land lines are projected.

Political boundaries are shown according to best available information.

Work under Flood Control Act shown as of February 1963.

Scale 1:62,500

LOUISIANA
7.5 MINUTE SERIES ORTHOPHOTOMAP (TOPOGRAPHIC)
SW/4 POINTE A LA HACHE 15' QUADRANGLE

Produced by the United States Geological Survey
Control by USGS and NOS/NOAA
Orthophotomap prepared from high-altitude aerial photographs
Taken Oct. 11, 1971 Topography by planetable surveys 1973
Selected hydrographic data compiled from USC&GS Chart 1271 (1972)
This information is not intended for navigational purposes
Projection and 10,000-foot grid ticks: Louisiana coordinate system, south zone(Lambert conformal conic)
1000-meter Universal Transverse Mercator grid ticks, zone 16, shown in blue. 1927 North American datum
The difference between 1927 North American Datum and North American Datum of 1983 (NAD 83) for 7.5-minute intersections is given in USGS Bulletin 1875. The NAD 83 is shown by dashed corner ticks
All or part of this quadrangle lies within a subsidence area
Where omitted, land lines have not been established or are not shown because of insufficient data

UTM GRID AND 1992 MAGNETIC NORTH DECLINATION AT CENTER OF SHEET

Photoinspected from 1989 source; no major culture or drainage changes observed. Boundaries and names verified 1992

SCALE 1:24 000

APPENDIX D

SOIL SURVEY

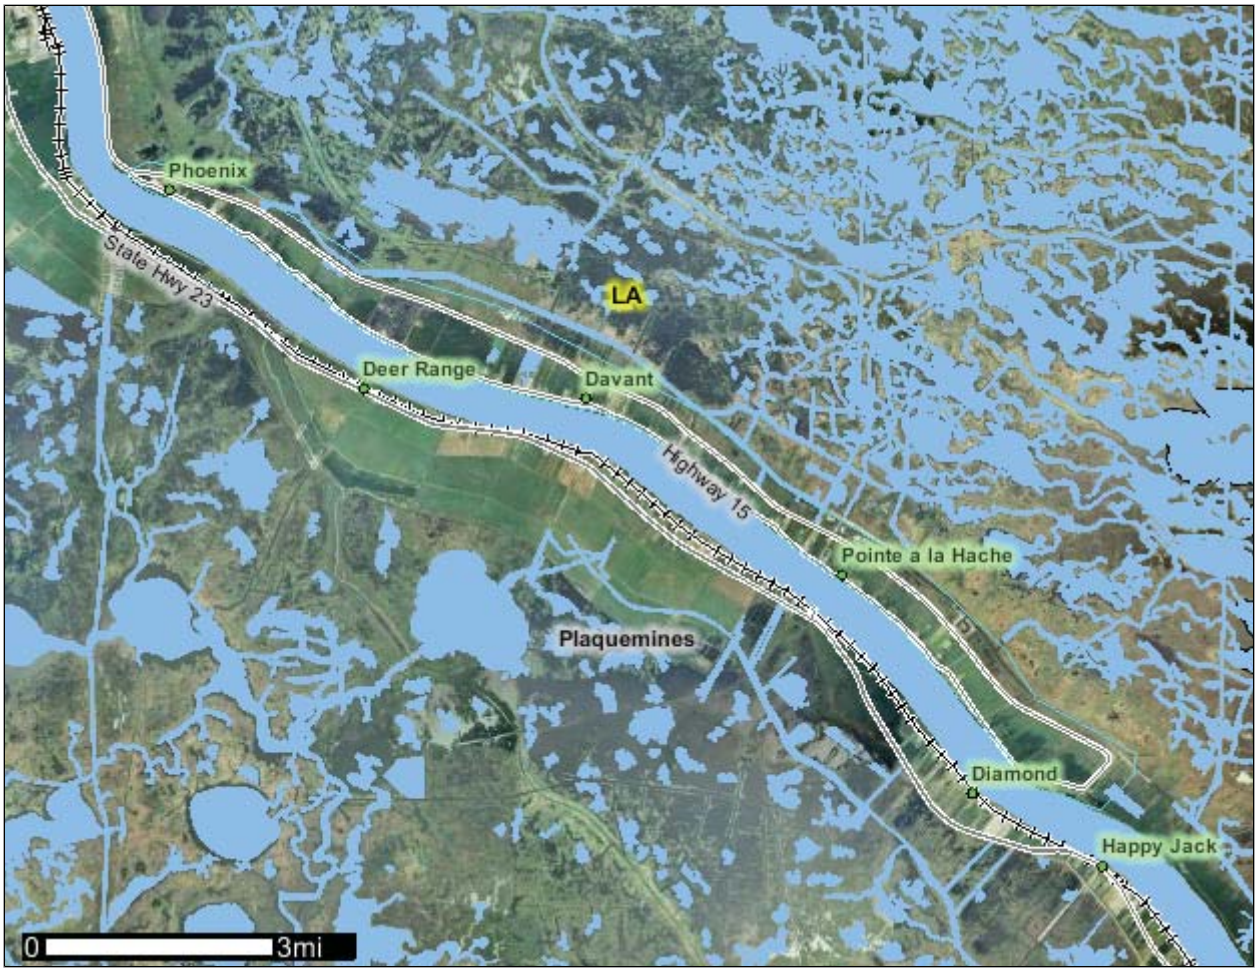

United States Department of Agriculture

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Plaquemines Parish, Louisiana

Reaches 1 and 2

April 9, 2010

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://soils.usda.gov/sqi/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (http://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://soils.usda.gov/contact/state_offices/).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Soil Data Mart Web site or the NRCS Web Soil Survey. The Soil Data Mart is the data storage site for the official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means

for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

Map Scale: 1:119,000 if printed on A size (8.5" × 11") sheet.

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for accurate map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: UTM Zone 16N NAD83

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Plaquemines Parish, Louisiana
Survey Area Data: Version 7, Aug 4, 2009

Date(s) aerial images were photographed: 9/20/2007

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the

contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Plaquemines Parish, Louisiana

AT—Aquents, dredged, frequently flooded

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Aquents and similar soils: 90 percent

Description of Aquents

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Depth to water table: More than 80 inches
Frequency of flooding: Frequent
Frequency of ponding: None

CE—Clovelly muck

Map Unit Setting

Elevation: 0 feet
Mean annual precipitation: 54 to 62 inches
Mean annual air temperature: 66 to 70 degrees F
Frost-free period: 265 to 350 days

Map Unit Composition

Clovelly and similar soils: 80 percent

Description of Clovelly

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Herbaceous organic material over very fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained

Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Very slightly saline to slightly saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 15.0
Available water capacity: Very high (about 14.5 inches)

Interpretive groups
Land capability (nonirrigated): 8w

Typical profile
0 to 42 inches: Muck
42 to 70 inches: Clay

Co—Cancienne silty clay loam

Map Unit Setting
Elevation: 0 to 120 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition
Cancienne and similar soils: 95 percent

Description of Cancienne

Setting
Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very high (about 12.7 inches)

Interpretive groups
Land capability (nonirrigated): 2w

Typical profile
0 to 4 inches: Silty clay loam
4 to 30 inches: Silt loam
30 to 60 inches: Stratified very fine sandy loam to silty clay loam to silty clay

CV—Carville, Cancienne, and Schriever soils, frequently flooded

Map Unit Setting

Elevation: 0 to 150 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 365 days

Map Unit Composition

Carville and similar soils: 40 percent
Cancienne and similar soils: 30 percent
Schriever and similar soils: 20 percent

Description of Carville

Setting

Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 8 inches: Silt loam
8 to 30 inches: Very fine sandy loam
30 to 60 inches: Silt loam

Description of Cancienne

Setting

Landform: Depressions
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained

Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 11 inches: Silt loam
11 to 21 inches: Silt loam
21 to 60 inches: Stratified very fine sandy loam to silty clay

Description of Schriever

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 8.3 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 10 inches: Silt loam
10 to 43 inches: Clay
43 to 60 inches: Clay

FA—Fausse muck, saline

Map Unit Setting

Elevation: 10 to 50 feet
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 270 to 300 days

Map Unit Composition
Fausse and similar soils: 80 percent

Description of Fausse

Setting
Landform: Backswamps
Down-slope shape: Concave
Parent material: Clayey alluvium

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Very slightly saline to moderately saline (4.0 to 16.0 mmhos/cm)
Available water capacity: Very high (about 12.3 inches)

Interpretive groups
Land capability (nonirrigated): 7w

Typical profile
0 to 4 inches: Muck
4 to 25 inches: Clay
25 to 60 inches: Clay

GE—Gentilly muck

Map Unit Setting
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition
Gentilly and similar soils: 80 percent

Description of Gentilly

Setting
Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Thin herbaceous organic material over semifluid clayey over consolidated clayey alluvium

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches

Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Nonsaline to slightly saline (2.0 to 8.0 mmhos/cm)
Available water capacity: High (about 10.4 inches)

Interpretive groups
Land capability (nonirrigated): 7w

Typical profile
0 to 10 inches: Muck
10 to 24 inches: Clay
24 to 60 inches: Clay

Ha—Harahan clay

Map Unit Setting
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition
Harahan and similar soils: 90 percent

Description of Harahan

Setting
Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: High (about 10.4 inches)

Interpretive groups
Land capability (nonirrigated): 3w

Typical profile
0 to 5 inches: Clay
5 to 22 inches: Clay

22 to 32 inches: Clay
32 to 75 inches: Clay

LF—Lafitte muck

Map Unit Setting

Elevation: 0 feet
Mean annual precipitation: 50 to 65 inches
Mean annual air temperature: 68 to 70 degrees F
Frost-free period: 265 to 350 days

Map Unit Composition

Lafitte and similar soils: 80 percent

Description of Lafitte

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Herbaceous organic material

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): High (2.00 to 6.00 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Very slightly saline to slightly saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 10.0
Available water capacity: Very high (about 19.1 inches)

Interpretive groups

Land capability (nonirrigated): 8w

Typical profile

0 to 60 inches: Muck

Sk—Schriever clay

Map Unit Setting

Elevation: 0 to 80 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition
Schriever and similar soils: 90 percent

Description of Schriever

Setting
Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 7.8 inches)

Interpretive groups
Land capability (nonirrigated): 3w

Typical profile
0 to 4 inches: Clay
4 to 40 inches: Clay
40 to 65 inches: Clay

W—Water

Map Unit Composition
Water, large: 100 percent

Ww—Westwego clay

Map Unit Setting
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition
Westwego and similar soils: 95 percent

Description of Westwego

Setting
Landform: Backswamps
Down-slope shape: Linear

Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches

Custom Soil Resource Report for Plaquemines Parish, Louisiana

Reaches 5 and 9

April 9, 2010

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://soils.usda.gov/sqi/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (http://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://soils.usda.gov/contact/state_offices/).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Soil Data Mart Web site or the NRCS Web Soil Survey. The Soil Data Mart is the data storage site for the official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means

for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially

where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases.* Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Plaquemines Parish, Louisiana

CE—Clovelly muck

Map Unit Setting

Elevation: 0 feet
Mean annual precipitation: 54 to 62 inches
Mean annual air temperature: 66 to 70 degrees F
Frost-free period: 265 to 350 days

Map Unit Composition

Clovelly and similar soils: 80 percent

Description of Clovelly

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Herbaceous organic material over very fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Very slightly saline to slightly saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 15.0
Available water capacity: Very high (about 14.5 inches)

Interpretive groups

Land capability (nonirrigated): 8w

Typical profile

0 to 42 inches: Muck
42 to 70 inches: Clay

Co—Cancienne silty clay loam

Map Unit Setting

Elevation: 0 to 120 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition

Cancienne and similar soils: 95 percent

Description of Cancienne

Setting

Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very high (about 12.7 inches)

Interpretive groups

Land capability (nonirrigated): 2w

Typical profile

0 to 4 inches: Silty clay loam
4 to 30 inches: Silt loam
30 to 60 inches: Stratified very fine sandy loam to silty clay loam to silty clay

CV—Carville, Cancienne, and Schriever soils, frequently flooded

Map Unit Setting

Elevation: 0 to 150 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 365 days

Map Unit Composition

Carville and similar soils: 40 percent
Cancienne and similar soils: 30 percent
Schriever and similar soils: 20 percent

Description of Carville

Setting

Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)

Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 8 inches: Silt loam
8 to 30 inches: Very fine sandy loam
30 to 60 inches: Silt loam

Description of Cancienne

Setting

Landform: Depressions
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 11 inches: Silt loam
11 to 21 inches: Silt loam
21 to 60 inches: Stratified very fine sandy loam to silty clay

Description of Schriever

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 8.3 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 10 inches: Silt loam
10 to 43 inches: Clay
43 to 60 inches: Clay

GE—Gentilly muck

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Gentilly and similar soils: 80 percent

Description of Gentilly

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Thin herbaceous organic material over semifluid clayey over consolidated clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Nonsaline to slightly saline (2.0 to 8.0 mmhos/cm)
Available water capacity: High (about 10.4 inches)

Interpretive groups

Land capability (nonirrigated): 7w

Typical profile

0 to 10 inches: Muck
10 to 24 inches: Clay
24 to 60 inches: Clay

Ha—Harahan clay

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Harahan and similar soils: 90 percent

Description of Harahan

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: High (about 10.4 inches)

Interpretive groups

Land capability (nonirrigated): 3w

Typical profile

0 to 5 inches: Clay
5 to 22 inches: Clay
22 to 32 inches: Clay
32 to 75 inches: Clay

Sk—Schriever clay

Map Unit Setting

Elevation: 0 to 80 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition
Schriever and similar soils: 90 percent

Description of Schriever

Setting
Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 7.8 inches)

Interpretive groups
Land capability (nonirrigated): 3w

Typical profile
0 to 4 inches: Clay
4 to 40 inches: Clay
40 to 65 inches: Clay

W—Water

Map Unit Composition
Water, large: 100 percent

Ww—Westwego clay

Map Unit Setting
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition
Westwego and similar soils: 95 percent

Description of Westwego

Setting
Landform: Backswamps
Down-slope shape: Linear

Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: Very high (about 15.0 inches)

Interpretive groups

Land capability (nonirrigated): 4w

Typical profile

0 to 31 inches: Clay
31 to 49 inches: Muck
49 to 62 inches: Clay

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://soils.usda.gov/sqi/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (http://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://soils.usda.gov/contact/state_offices/).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Soil Data Mart Web site or the NRCS Web Soil Survey. The Soil Data Mart is the data storage site for the official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means

for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used.

Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Plaquemines Parish, Louisiana

AN—Aquents, dredged

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Aquents and similar soils: 90 percent

Description of Aquents

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None

AT—Aquents, dredged, frequently flooded

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Aquents and similar soils: 90 percent

Description of Aquents

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Depth to water table: More than 80 inches

Frequency of flooding: Frequent
Frequency of ponding: None

BE—Bellpass muck

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 73 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Bellpass and similar soils: 80 percent

Description of Bellpass

Setting

Landform: Marshes
Down-slope shape: Linear
Parent material: Decomposed organic material overlying fluid clayey backswamp deposits

Properties and qualities

Slope: 0 to 0 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Very frequent
Frequency of ponding: Frequent
Maximum salinity: Slightly saline to moderately saline (8.0 to 16.0 mmhos/cm)
Available water capacity: Very high (about 15.7 inches)

Interpretive groups

Land capability (nonirrigated): 7w

Typical profile

0 to 29 inches: Muck
29 to 70 inches: Clay

CE—Clovelly muck

Map Unit Setting

Elevation: 0 feet
Mean annual precipitation: 54 to 62 inches
Mean annual air temperature: 66 to 70 degrees F
Frost-free period: 265 to 350 days

Map Unit Composition
Clovelly and similar soils: 80 percent

Description of Clovelly

Setting
Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Herbaceous organic material over very fluid clayey alluvium

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Very slightly saline to slightly saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 15.0
Available water capacity: Very high (about 14.5 inches)

Interpretive groups
Land capability (nonirrigated): 8w

Typical profile
0 to 42 inches: Muck
42 to 70 inches: Clay

Cm—Cancienne silt loam

Map Unit Setting
Elevation: 0 to 120 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition
Cancienne and similar soils: 90 percent

Description of Cancienne

Setting
Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches

Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very high (about 12.9 inches)

Interpretive groups
Land capability (nonirrigated): 2w

Typical profile
0 to 8 inches: Silt loam
8 to 38 inches: Silt loam
38 to 60 inches: Stratified very fine sandy loam to silty clay

Co—Cancienne silty clay loam

Map Unit Setting
Elevation: 0 to 120 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition
Cancienne and similar soils: 95 percent

Description of Cancienne

Setting
Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very high (about 12.7 inches)

Interpretive groups
Land capability (nonirrigated): 2w

Typical profile
0 to 4 inches: Silty clay loam
4 to 30 inches: Silt loam
30 to 60 inches: Stratified very fine sandy loam to silty clay loam to silty clay

CV—Carville, Cancienne, and Schriever soils, frequently flooded

Map Unit Setting

Elevation: 0 to 150 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 365 days

Map Unit Composition

Carville and similar soils: 40 percent
Cancienne and similar soils: 30 percent
Schriever and similar soils: 20 percent

Description of Carville

Setting

Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 8 inches: Silt loam
8 to 30 inches: Very fine sandy loam
30 to 60 inches: Silt loam

Description of Cancienne

Setting

Landform: Depressions
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained

Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Available water capacity: Very high (about 13.1 inches)

Interpretive groups
Land capability (nonirrigated): 5w

Typical profile
0 to 11 inches: Silt loam
11 to 21 inches: Silt loam
21 to 60 inches: Stratified very fine sandy loam to silty clay

Description of Schriever

Setting
Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 8.3 inches)

Interpretive groups
Land capability (nonirrigated): 5w

Typical profile
0 to 10 inches: Silt loam
10 to 43 inches: Clay
43 to 60 inches: Clay

Ha—Harahan clay

Map Unit Setting
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition
Harahan and similar soils: 90 percent

Description of Harahan

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: High (about 10.4 inches)

Interpretive groups

Land capability (nonirrigated): 3w

Typical profile

0 to 5 inches: Clay
5 to 22 inches: Clay
22 to 32 inches: Clay
32 to 75 inches: Clay

LF—Lafitte muck

Map Unit Setting

Elevation: 0 feet
Mean annual precipitation: 50 to 65 inches
Mean annual air temperature: 68 to 70 degrees F
Frost-free period: 265 to 350 days

Map Unit Composition

Lafitte and similar soils: 80 percent

Description of Lafitte

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Herbaceous organic material

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained

Capacity of the most limiting layer to transmit water (Ksat): High (2.00 to 6.00 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Very slightly saline to slightly saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 10.0
Available water capacity: Very high (about 19.1 inches)

Interpretive groups
Land capability (nonirrigated): 8w

Typical profile
0 to 60 inches: Muck

SC—Scatlake muck

Map Unit Setting
Elevation: 0 feet
Mean annual precipitation: 54 to 62 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 265 to 350 days

Map Unit Composition
Scatlake and similar soils: 80 percent

Description of Scatlake

Setting
Landform: Salt marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fluid clayey backswamp deposits

Properties and qualities
Slope: 0 to 0 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Very frequent
Frequency of ponding: Frequent
Maximum salinity: Slightly saline to moderately saline (8.0 to 16.0 mmhos/cm)
Sodium adsorption ratio, maximum: 20.0
Available water capacity: Moderate (about 7.8 inches)

Interpretive groups
Land capability (nonirrigated): 8w

Typical profile
0 to 7 inches: Muck
7 to 13 inches: Clay
13 to 70 inches: Clay

Sk—Schriever clay

Map Unit Setting

Elevation: 0 to 80 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition

Schriever and similar soils: 90 percent

Description of Schriever

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 7.8 inches)

Interpretive groups

Land capability (nonirrigated): 3w

Typical profile

0 to 4 inches: Clay
4 to 40 inches: Clay
40 to 65 inches: Clay

W—Water

Map Unit Composition

Water, large: 100 percent

Ww—Westwego clay

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Westwego and similar soils: 95 percent

Description of Westwego

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: Very high (about 15.0 inches)

Interpretive groups

Land capability (nonirrigated): 4w

Typical profile

0 to 31 inches: Clay
31 to 49 inches: Muck
49 to 62 inches: Clay

April 28, 2010

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://soils.usda.gov/sqi/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (http://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://soils.usda.gov/contact/state_offices/).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Soil Data Mart Web site or the NRCS Web Soil Survey. The Soil Data Mart is the data storage site for the official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means

for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil scientists classified and named the soils in the survey area, they compared the

individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

Map Scale: 1:16,100 if printed on A size (8.5" × 11") sheet.

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for accurate map measurements.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Map Unit Legend (7b and 8b)

Map Unit Legend

Plaquemines Parish, Louisiana (LA075)			
Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
AN	Aquents, dredged	184.7	13.7%

Plaquemines Parish, Louisiana

AN—Aquents, dredged

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Aquents and similar soils: 90 percent

Description of Aquents

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None

AT—Aquents, dredged, frequently flooded

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Aquents and similar soils: 90 percent

Description of Aquents

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Depth to water table: More than 80 inches

Frequency of flooding: Frequent
Frequency of ponding: None

BE—Bellpass muck

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 73 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Bellpass and similar soils: 80 percent

Description of Bellpass

Setting

Landform: Marshes
Down-slope shape: Linear
Parent material: Decomposed organic material overlying fluid clayey backswamp deposits

Properties and qualities

Slope: 0 to 0 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Very frequent
Frequency of ponding: Frequent
Maximum salinity: Slightly saline to moderately saline (8.0 to 16.0 mmhos/cm)
Available water capacity: Very high (about 15.7 inches)

Interpretive groups

Land capability (nonirrigated): 7w

Typical profile

0 to 29 inches: Muck
29 to 70 inches: Clay

Cm—Cancienne silt loam

Map Unit Setting

Elevation: 0 to 120 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition
Cancienne and similar soils: 90 percent

Description of Cancienne

Setting
Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very high (about 12.9 inches)

Interpretive groups
Land capability (nonirrigated): 2w

Typical profile
0 to 8 inches: Silt loam
8 to 38 inches: Silt loam
38 to 60 inches: Stratified very fine sandy loam to silty clay

CV—Carville, Cancienne, and Schriever soils, frequently flooded

Map Unit Setting
Elevation: 0 to 150 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 365 days

Map Unit Composition
Carville and similar soils: 40 percent
Cancienne and similar soils: 30 percent
Schriever and similar soils: 20 percent

Description of Carville

Setting
Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches

Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 8 inches: Silt loam
8 to 30 inches: Very fine sandy loam
30 to 60 inches: Silt loam

Description of Cancienne

Setting

Landform: Depressions
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 11 inches: Silt loam
11 to 21 inches: Silt loam
21 to 60 inches: Stratified very fine sandy loam to silty clay

Description of Schriever

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Frequent

Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 8.3 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 10 inches: Silt loam
10 to 43 inches: Clay
43 to 60 inches: Clay

Sk—Schriever clay

Map Unit Setting

Elevation: 0 to 80 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition

Schriever and similar soils: 90 percent

Description of Schriever

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 7.8 inches)

Interpretive groups

Land capability (nonirrigated): 3w

Typical profile

0 to 4 inches: Clay
4 to 40 inches: Clay
40 to 65 inches: Clay

Co—Cancienne silty clay loam

Map Unit Setting

Elevation: 0 to 120 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition

Cancienne and similar soils: 95 percent

Description of Cancienne

Setting

Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very high (about 12.7 inches)

Interpretive groups

Land capability (nonirrigated): 2w

Typical profile

0 to 4 inches: Silty clay loam
4 to 30 inches: Silt loam
30 to 60 inches: Stratified very fine sandy loam to silty clay loam to silty clay

Ha—Harahan clay

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Harahan and similar soils: 90 percent

Description of Harahan

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: High (about 10.4 inches)

Interpretive groups

Land capability (nonirrigated): 3w

Typical profile

0 to 5 inches: Clay
5 to 22 inches: Clay
22 to 32 inches: Clay
32 to 75 inches: Clay

Ww—Westwego clay

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Westwego and similar soils: 95 percent

Description of Westwego

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: Very high (about 15.0 inches)

Interpretive groups

Land capability (nonirrigated): 4w

Typical profile

0 to 31 inches: Clay
31 to 49 inches: Muck
49 to 62 inches: Clay

W—Water

Map Unit Composition

Water, large: 100 percent

APPENDIX E

FEMA MAPS

KEY TO MAP

**Referenced to the National Geodetic Vertical Datum of 1929

*EXPLANATION OF ZONE DESIGNATIONS

ZONE	EXPLANATION
A	Areas of 100-year flood; base flood elevations and flood hazard factors not determined.
AO	Areas of 100-year shallow flooding where depths are between one (1) and three (3) feet; average depths of inundation are shown, but no flood hazard factors are determined.
AH	Areas of 100-year shallow flooding where depths are between one (1) and three (3) feet; base flood elevations are shown, but no flood hazard factors are determined.
A1-A30	Areas of 100-year flood; base flood elevations and flood hazard factors determined.
A99	Areas of 100-year flood to be protected by flood protection system under construction; base flood elevations and flood hazard factors not determined.
B	Areas between limits of the 100-year flood and 500-year flood; or certain areas subject to 100-year flooding with average depths less than one (1) foot or where the contributing drainage area is less than one square mile; or areas protected by levees from the base flood. (Medium shading)
C	Areas of minimal flooding. (No shading)
D	Areas of undetermined, but possible, flood hazards.
V	Areas of 100-year coastal flood with velocity (wave action); base flood elevations and flood hazard factors not determined.
V1-V30	Areas of 100-year coastal flood with velocity (wave action); base flood elevations and flood hazard factors determined.

NOTES TO USER

This map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planimetric features outside Special Flood Hazard Areas. The community map repository should be consulted for possible updated flood hazard information prior to use of this map for property purchase or construction purposes.

Coastal base flood elevations apply only landward of 0.0 NGVD, and include the effects of wave action; these elevations may also differ significantly from those developed by the National Weather Service for hurricane evacuation planning.

Areas of special flood hazard (100-year flood) include Zones A, A1-A30, AH, AO, A99, V, and V1-V30.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

For adjoining map panels see separately printed Map Index.

INITIAL IDENTIFICATION:
JANUARY 17, 1985

FLOOD HAZARD BOUNDARY MAP REVISION:
NONE

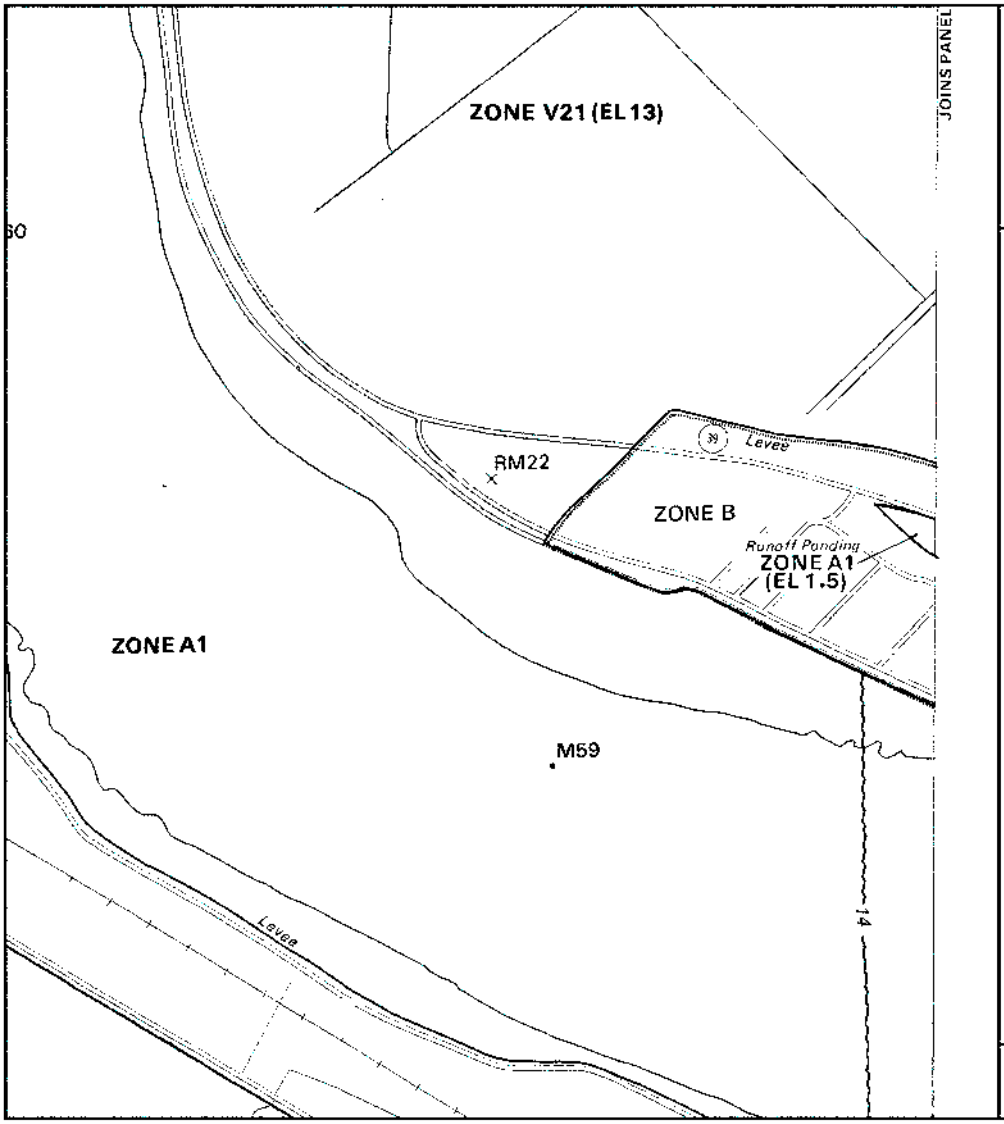

FLOOD INSURANCE RATE MAP EFFECTIVE:
MAY 1, 1985

FLOOD INSURANCE RATE MAP REVISIONS:
September 28, 1990 - to incorporate previously issued letters of map revision.

ALL ZONE B AREAS PROTECTED FROM 100-YEAR FLOOD BY LEVEE, DIKE OR OTHER STRUCTURE, SUBJECT TO FAILURE OR OVERTOPPING DURING LARGER FLOODS.

For description of Elevation Reference Marks see panel 220139 0030.

To determine if flood insurance is available in this community, contact your insurance agent, or call the National Flood Insurance Program, at (800) 638-6620.

WETLANDS AND DEEPWATER HABITATS CLASSIFICATION

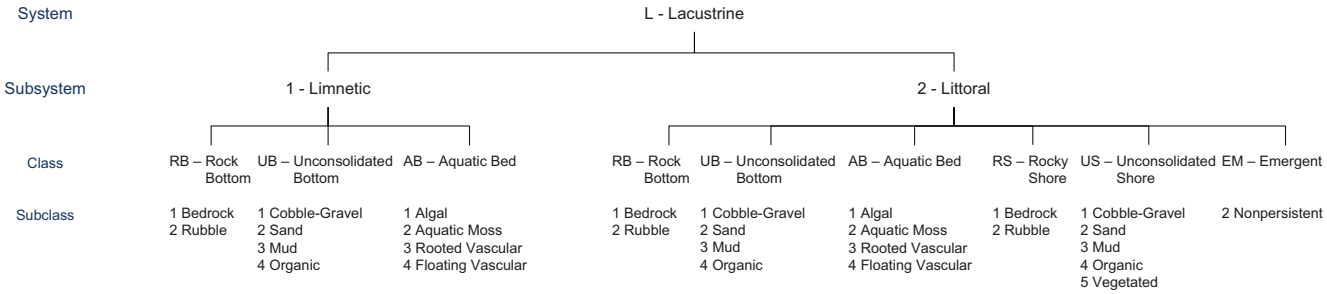

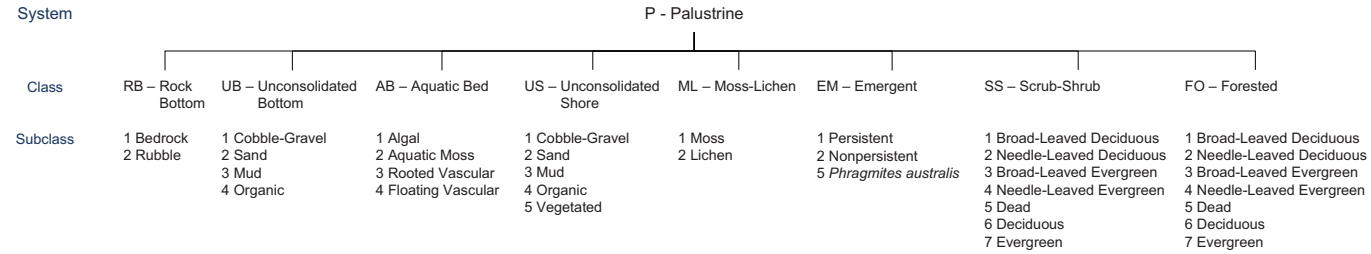

Classification of Wetlands and Deepwater Habitats of the United States, Cowardin *et al.* 1979

WETLANDS AND DEEPWATER HABITATS CLASSIFICATION

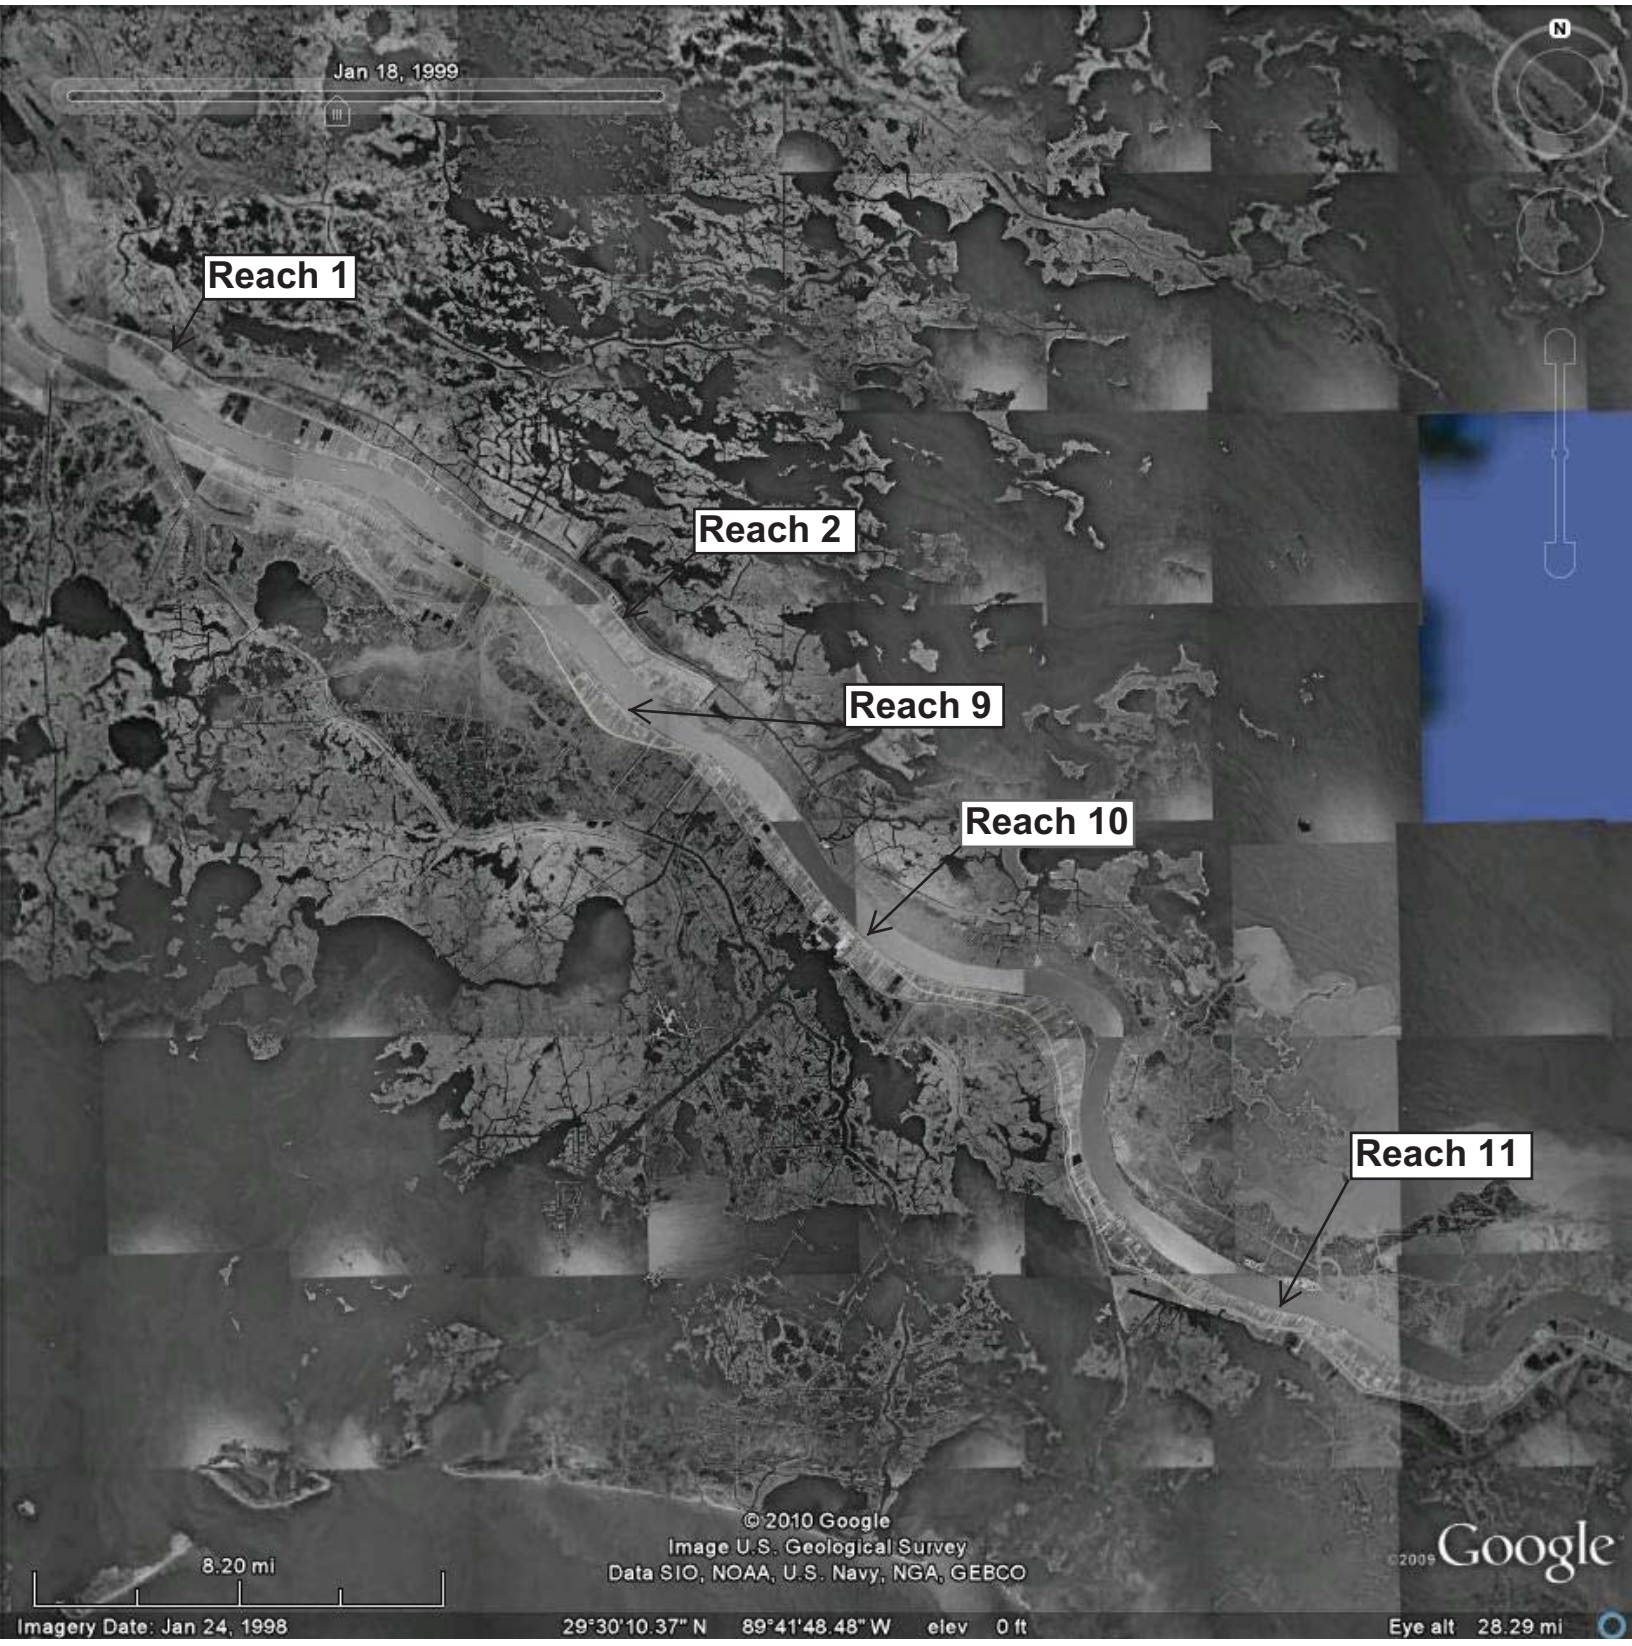

MODIFIERS

In order to more adequately describe the wetland and deepwater habitats, one or more of the water regime, water chemistry, soil, or special modifiers may be applied at the class or lower level in the hierarchy. The farmed modifier may also be applied to the ecological system.

Water Regime			Special Modifiers	Water Chemistry			Soil
Nontidal	**Saltwater Tidal**	**Freshwater Tidal**		**Coastal Halinity**	**Inland Salinity**	**pH Modifiers for all Fresh Water**	
A Temporarily Flooded	L Subtidal	S Temporarily Flooded-Tidal	b Beaver	1 Hyperhaline	7 Hypersaline	a Acid	g Organic
B Saturated	M Irregularly Exposed	R Seasonally Flooded-Tidal	d Partly Drained/Ditched	2 Euhaline	8 Eusaline	t Circumneutral	n Mineral
C Seasonally Flooded	N Regularly Flooded	T Semipermanently Flooded-Tidal	f Farmed	3 Mixohaline (Brackish)	9 Mixosaline	l Alkaline	
E Seasonally Flooded/ Saturated	P Irregularly Flooded	V Permanently Flooded-Tidal	h Diked/Impounded	4 Polyhaline	0 Fresh		
F Semipermanently Flooded			r Artificial	5 Mesohaline			
G Intermittently Exposed			s Spoil	6 Oligohaline			
H Permanently Flooded			x Excavated	0 Fresh			
J Intermittently Flooded							
K Artificially Flooded

APPENDIX H

SITE PHOTOGRAPHS

Reach 1, Bell South copper and/or fiber optic line

Reach 1, Burn and debris piles at boat launch, *de minimis*

Reach 1, Concrete vault

Reach 1, Typical land use within levee protected area (view to S from levee)

Reach 1, Back of United Bulk Terminal facility

Reach 1, Example of old pipeline crossing canal to the west of Highway 39

Reach 2, hurricane debris, marsh side of levee; also typical view of marsh

Reach 2, Water line and erosion on bridge at Adema Lane - more erosion to the right of the photo

Reach 2, Five gallon propane tank, *de minimis*

Reach 2, Fresh burrow in levee

Reach 9, example of a lift station (Port Sulphur Lift Station #14)

Reach 10, typical transformer throughout all the reaches

Reach 10, dump site under tree

Reach 10, barrel containing waste oil filters, *de minimis*

Reach 10, empty lot, typical site view

Reach 10, Markers for unknown pipeline – condition of possible concern, parallel to levee

Reach 10, typical housing

Reach 10, view of Mississippi River at a pipeline crossing

Reach 10, Dump site

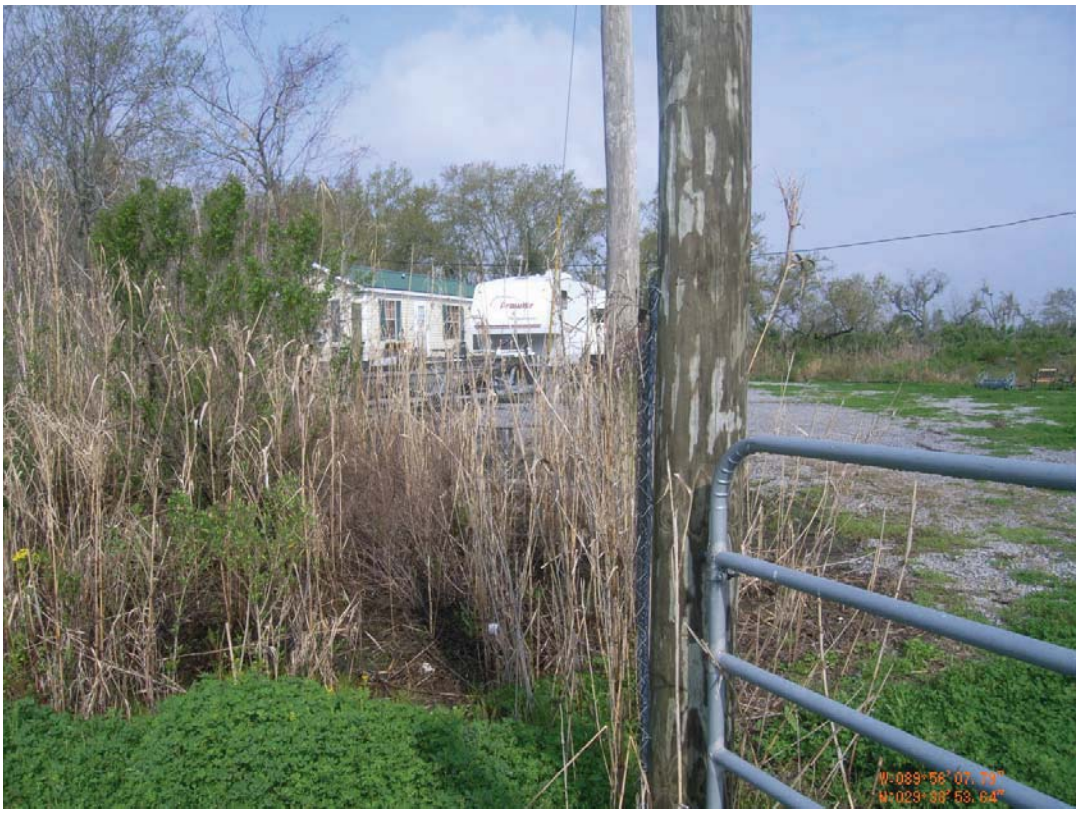

Reach 10, Atmos Energy natural gas pipeline, out of area (potentially could enter area)

Reach 11, Electrical station; transformers not listed on EPA's list of transformers with PCBs

APPENDIX I

PHOTOGRAPHS of RECOGNIZED ENVIRONMENTAL CONDITIONS

REC 19, Reach 2. Pipelines

REC 20, Reach 2. Pumpjack, possible pipelines and ASTs

REC 21, Reach 2. AST

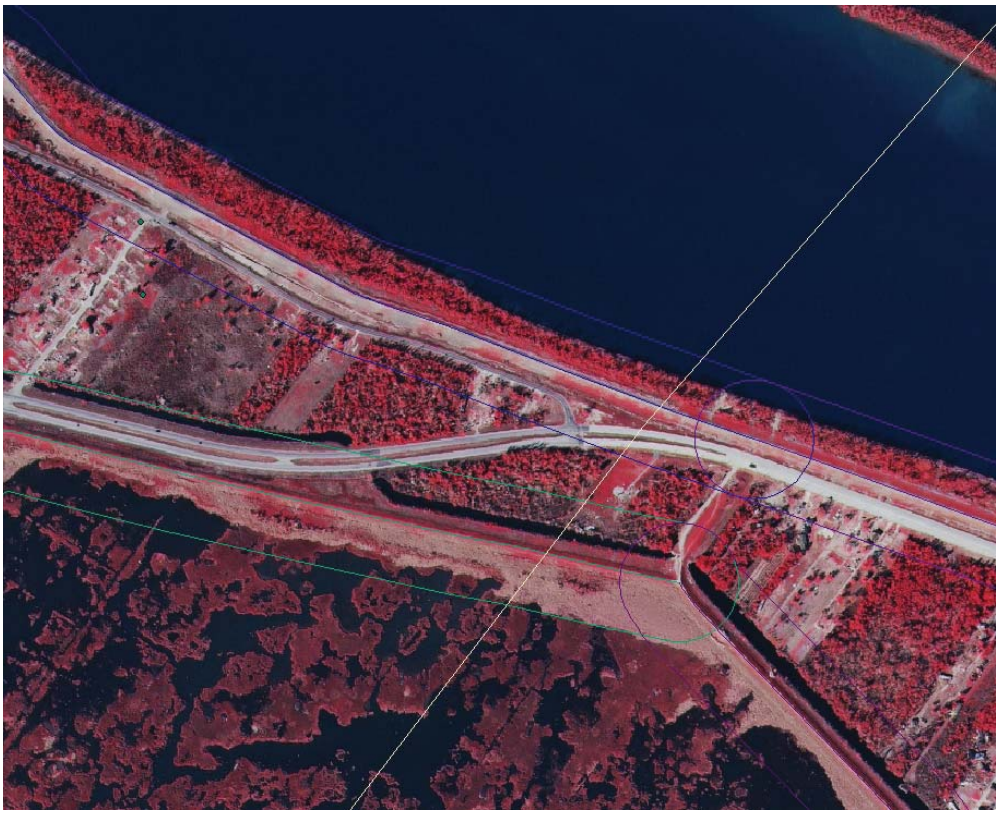

REC 22, Reach 2. Pipeline, unknown contents

REC 23, Reach 2. ASTs

REC 24, Reach 2. ASTs

REC 1, Reach 9. BP Oil Pipeline crossing not observed on site visit

REC 1, Reach 10. Sewer pipeline, not observed during site visit

REC 2, Reach 10. Private residence with AST (square), drum and compressed gas cylinders

REC 3, Reach 10. Tennessee Natural Gas high pressure gas pipeline

REC 3, Reach 10. Pipelines on levee by Tennessee Natural Gas facility

REC 4, Reach 10. Tennessee Natural Gas facility

REC 5, Reach 10. Dump site with possible petroleum products

REC 6, Reach 10. Private land with pipeline and equipment

REC 7, Reach 10. Sundown West Potash Facility with well, pipelines and tank battery

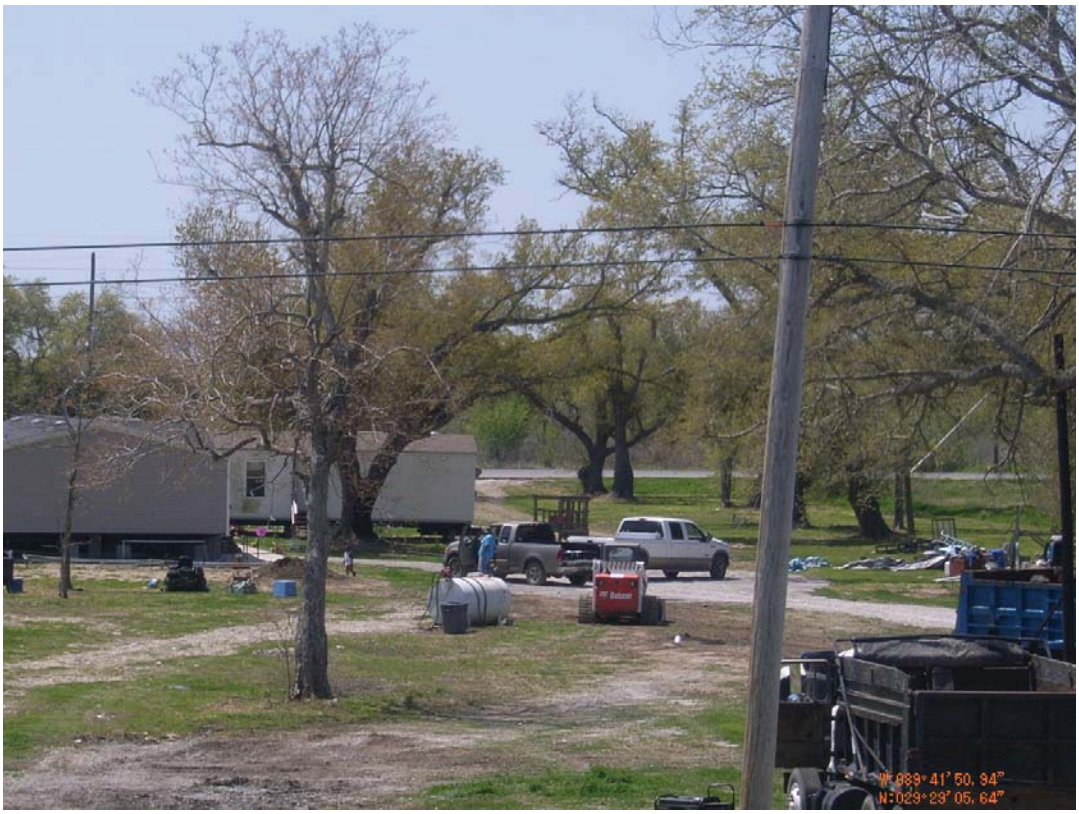

REC 8, Reach 10. Pipeline crossing

REC 9, Reach 10. Dump site with Exxon drum of humble hydraulic fluid, HCl ASTs, drums and battery

REC 9, Reach 10. Dump site with HCl ASTs, drums and battery, view 2

REC 10, Reach 10. Private residence with AST

REC 11, Reach 10. Unnamed gas station with ASTs

REC 12, Reach 10. Abandoned gas station, with possible USTs

RECs 11 and 12 overview photo showing spatial relationship (10 in background and 11 in foreground)

REC 13, Reach 10. Freeport-McMoran sulfur pipeline

REC 14, Reach 10. Crude Oil pipeline between Freeport-McMoran and levee

REC 15, Reach 10. Cooking oil

REC 16, Reach 10. Private residence with drums and compressed gas cylinders

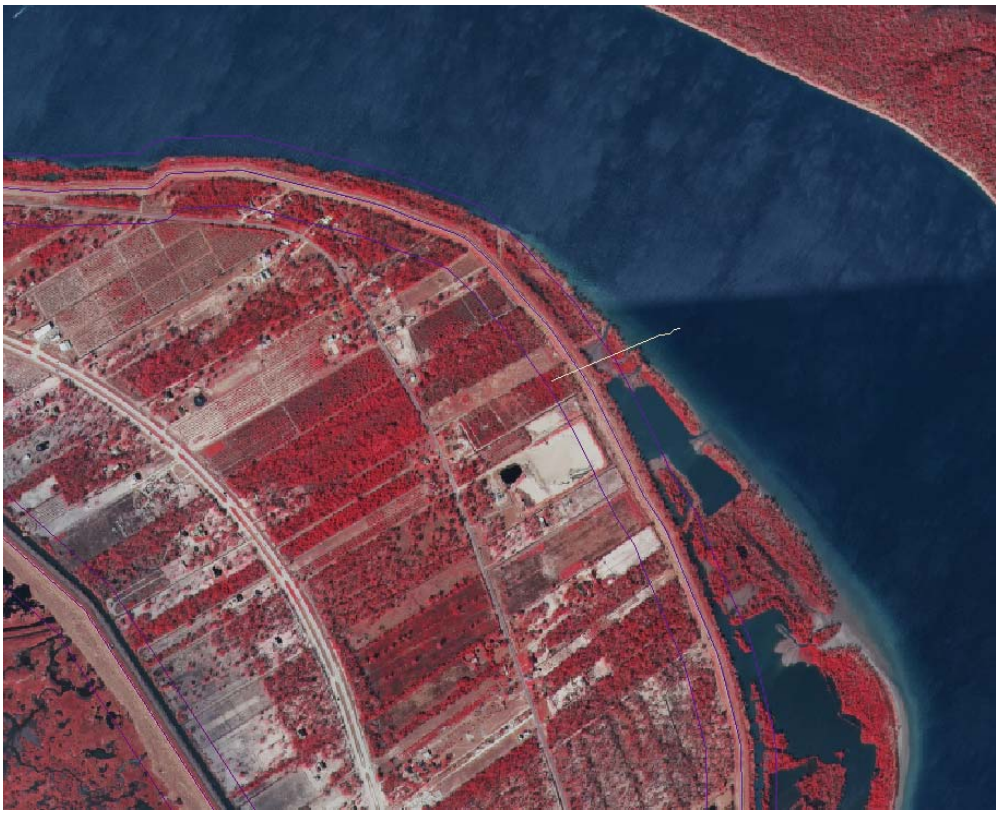

REC 17, Reach 10. Private building with engine hoist (backyard mechanic)

REC 18, Reach 10. Private land with engine hoist, drums and PVC pipe

REC 19, Reach 10. Private land with AST and drums

REC 20, Reach 10. Nairn Enterprises discharge line (20 in.), unknown contents, not seen on site visit

REC 21, Reach 10. Commercial facility with diesel AST and drums, photo of drums

REC 21, Reach 10. Commercial facility with diesel AST and drums, photo of AST

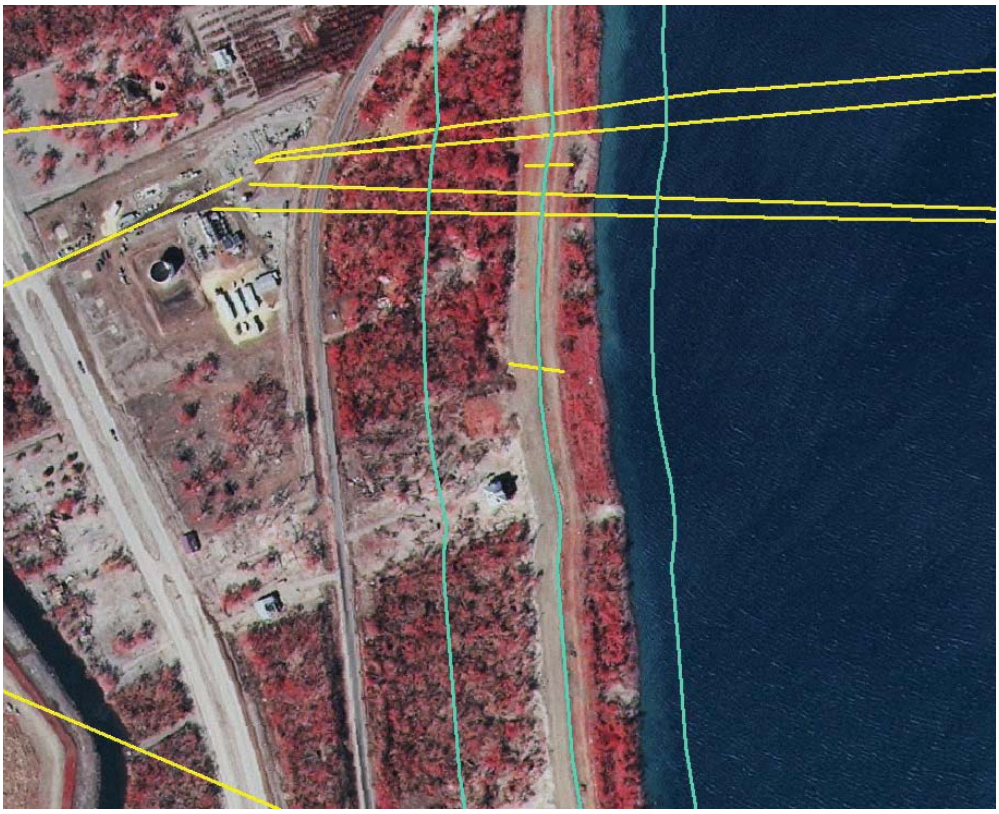

REC 22, Reach 10. Shell pipeline and associated equipment

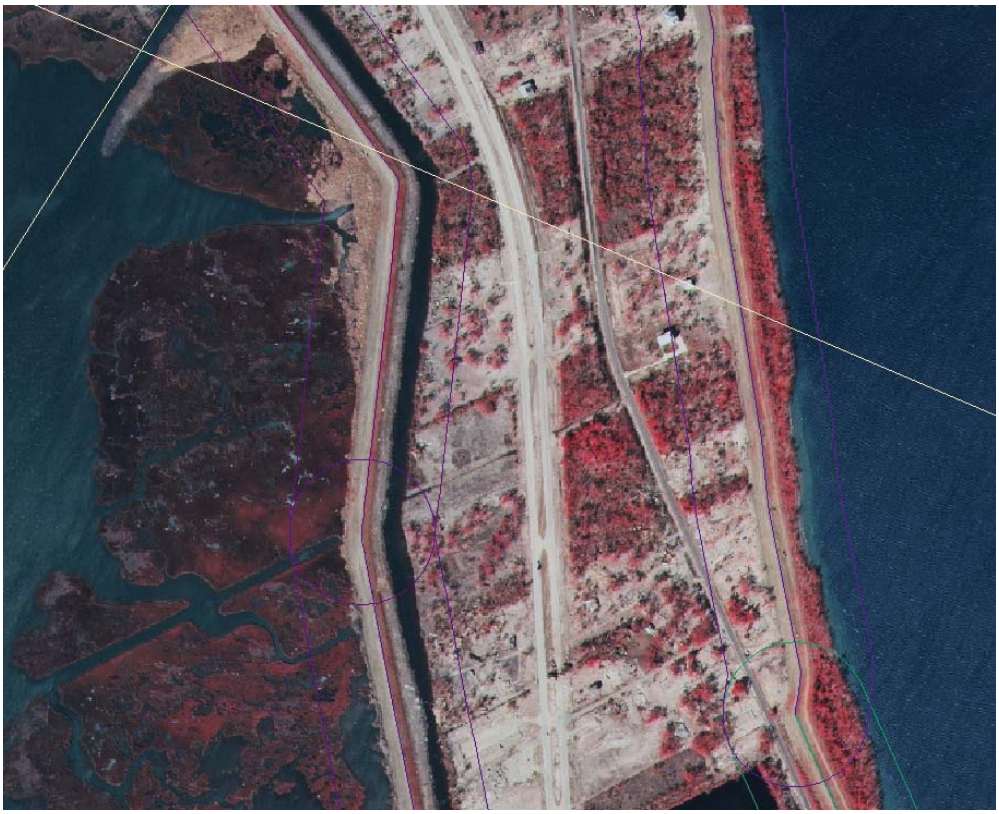

REC 22, Reach 10. Shell pipeline and associated equipment, view of actual pipeline crossing

REC 23, Reach 10. 2 pipeline crossings (Shell and TN Natural Gas) S of REC 20 not seen on site visit

REC 24, Reach 10. 2 Shell pipeline crossings (others are removed), one is crude oil; not seen on site visit

REC 25, Reach 10. Shell pipeline crossing, unknown contents, not seen on site visit

REC 1, Reach 11. Atmos Energy natural gas pipeline

REC 2, Reach 11. United States Army Corps of Engineers facility-ASTs, pipelines, equipment, drums

REC 3, Reach 11. Empire Lock-AST

REC 4, Reach 11. AST

REC 5, Reach 11. Pipelines, stand pipe and another pipeline at dock, view to northeast

REC 5, Reach 11. View of pipeline crossing with facility to southwest

REC 6, Reach 11. ExxonMobil petroleum pipeline

REC 7, Reach 11. 2 Exxon and 2 Chevron pipelines not seen during site visit

REC 8, Reach 11. BP, Plains Pipeline LP and ExxonMobil pipeline crossings not seen on site visit

REC 9, Reach 11. Pipeline valve at base of levee

REC 9, Reach 11. Pipeline crossing the levee

REC 10, Reach 11. ExxonMobil petroleum pipeline

REC 11, Reach 11. Private land with AST, lift rack, miscellaneous metal debris

REC 12, Reach 11. Private land with lift rack, discarded tires, motor vehicles and engine parts

REC 13, Reach 11. Chevron natural gas pipeline

REC 14, Reach 11. Auto dump site with lift rack and unknown contents

REC 15, Reach 11. Dump site with compressed gas cylinder, drum and other debris

REC 16, Reach 11. Abandoned facility with AST vault and pipes, possible UST

REC 17, Reach 11. Commercial facility with used cooking oil in drums

REC 18, Reach 11. Abandoned facility with probable USTs

REC 19, Reach 11. Buras Recreational Center with generator and possible fuel for generator

REC 20, Reach 11. Dump site with creosote logs, wrecked boat and compressed gas cylinder

REC 21, Reach 11. Marine Spill Response, diesel AST

REC 22, Reach 11. Private land with stand pipe, unknown use

REC 23, Reach 11. Unknown commercial facility with ASTs, tanks, tires and metal

REC 24, Reach 11. Vela's Garage and Rentals with ASTs and hoses

REC 25, Reach 11. LZ Dock with drums and ASTs

REC 25, Reach 11. LZ Dock with drums and ASTs, view 2

PHASE I ENVIRONMENTAL SITE ASSESSMENT - FEDERAL LEVEES
PLAQUEMINES PARISH, LOUISIANA

Contract No. W912EE-07-D-0013
Reaches 1, 2, 9, 10, 11

PREPARED FOR:

US Army Corps of Engineers
Vicksburg District

U. S. Army Corps of Engineers, Mississippi Valley Division
Vicksburg District (USACE-MVK)
4155 East Clay Street
Vicksburg, MS 39183

PREPARED BY:

Quaternary Resource Investigations, L.L.C.
"Government & Industry in Harmony with the Environment"
13588 Florida Boulevard
Baton Rouge, Louisiana 70819
(225) 292-1400

July 2010

1.0 EXECUTIVE SUMMARY

1.1 Subject Property

Plaquemines Parish Federal Levee Project
Diamond to Fort Jackson (Mississippi River west bank levees), Plaquemines Parish, LA
US Army Corps of Engineers Contract Number: W912EE-07-D-0013
Task Order Numbers: 0004 Item 0003 (Reaches 1, 2, 9, 10 and 11)

1.2 Inspection Date(s)

March 17-18, March 30-31, April 1, 2010, and May 6, 2010

1.3 Name of Inspector(s)

Teresa Russin, Douglas Martin, Kim Barton

1.4 Client and User

Client: USACE-MVK
User: USACE-MVK

1.5 Site Descriptions and General Observations

Reach 1: Beginning at the juncture of the river levee and the back levee at approximately 29° 38' 50.65" N latitude, 89° 56' 44.96" W longitude continue northeast to approximately 29° 38' 58.38" N latitude, 89° 56' 36.88" W longitude, then continue east and southeast following the back levee to approximately 29° 36' 52.93" N latitude, 89° 51' 02.99" W longitude. This back levee passes through residential, wooded, agricultural and industrial (e.g. coal depot) areas, with marsh on the back (generally east) side of the levee.

Reach 2: Beginning at approximately 29° 36' 52.93" N latitude, 89° 51' 02.99" W longitude continue generally southeast following the back levee to approximately 29° 32' 33.13" N latitude, 89° 43' 52.02" W longitude, then continue southwest to the point where the back levee merges with the river levee at approximately 29° 32' 08.58" N latitude, 89° 44' 17.54" W longitude. This back levee reach passes through residential, wooded, agricultural and industrial (e.g. marina) areas, with marsh on the back (generally east) side of the levee.

Reach 9: Beginning at the juncture of the river levee and the back levee at approximately 29° 32' 49.54" N latitude, 89° 46' 24.57" W longitude continue generally southeast along the river levee to approximately 29° 31' 29.30" N latitude, 89° 44' 22.68" W longitude. This river levee reach passes through residential and wooded areas with the river on the northeast side.

Reach 10: Beginning at approximately 29° 31' 29.30" N latitude, 89° 44' 22.68" W longitude continue generally southeast along the river levee to approximately 29° 24' 28.63" N latitude, 89° 36' 34.10" W longitude. This river levee reach passes through residential, agricultural, industrial and wooded areas with the river on the east and/or north side of the levee.

Reach 11: Beginning at approximately 29° 24' 28.63" N latitude, 89° 36' 34.10" W longitude continue generally southeast, east and northeast to approximately 29° 21' 17.06" N latitude, 89° 27' 08.22" W longitude. This river levee reach passes through residential, industrial, wooded, and historical (Ft. Jackson is at the eastern terminus) areas with the river on the northeast, north and northwest side of the levee.

1.6 Findings and Conclusions

Quaternary Resource Investigations, LLC (QRI) conducted this Phase I Environmental Site Assessment (ESA) according to the guidelines of ASTM Standard Practice E 1527-05. Any exceptions to, or deletions from, this practice are described in Sections 2.0 and 10.0 of this report.

QRI found a total of 80 RECs in Reaches 1, 2, 9, 10 and 11, which are summarized in Tables 1.1 through 1.5. Figure 1 is an aerial overview of Reaches 1, 2, 9, 10 and 11 and maps of these RECs are generally presented from north to south in Figures 2-16.

As long as construction activities are conducted in a safe and conscientious manner, taking care not to damage ASTs, wells, or pipelines in and around the levees, none of the RECs cited in this report should prevent the earth-moving activities on the levees from being conducted. The hazardous materials present on the subject property are currently contained; as long as they are not released into the environment they should pose no additional threat. The larger debris piles and abandoned tanks and boats may require removal but the other RECs should generally just be avoided. Specific recommendations, by types of RECs, are presented in section 1.7.

Table 1.1 Reach 1 Recognized Environmental Conditions (RECs)

LZ Dock	25	29 20 34.12	89 28 08.49	ASTs, drums

1.7 Recommendations

Generally, QRI contends that as long as construction activities are conducted in a safe and conscientious manner, taking care not to damage ASTs, wells, or pipelines in and around the levees, none of the RECs cited in this report should prevent the earth-moving activities on the levees from being conducted. The hazardous materials present on the subject property are currently contained; as long as they are not released into the environment they should pose no additional threat. The larger debris piles and abandoned tanks and boats may require removal but the other RECs should generally just be avoided.

Specific recommendations, by types of RECs, are presented below:

ASTs – in the majority of instances the ASTs are far enough away from the levees, *i.e.* no closer than 100-feet, that they do not specifically pose a hazard to earth-moving activities associated with levee construction/enlargement. QRI recommends that the USACE contractors who conduct the enlargement activities notify the landowners at the respective AST locations of the impending earth-moving activities. The landowners would have the ability to be present when activities were taking place and the responsibility of ensuring that their ASTs were not impacted or damaged by the USACE activities.

Drums – There are isolated drums throughout the reaches, most of which are unlabelled. Where possible, before listing a drum as a REC QRI examined the drums to make certain that they were intact and contained something. Empty drums are not a REC but in some cases QRI could not determine if the drums were empty. If drums cannot be avoided during levee construction/enlargement activities QRI recommends that the drums be properly removed and disposed of.

Debris piles/dump sites – There are many piles of hurricane debris and there are many promiscuous dumpsites throughout the project area, throughout all of the reaches. QRI asserts that, as with the ASTs, these sites do not specifically pose a hazard to earth-moving activities associated with levee construction and enlargement because they can be avoided during earth-moving activities. Obtrusive debris, including tanks and boats should be properly removed.

Pipelines – There is an abundance of pipelines in all of the reaches. QRI recommends that the operators of these lines be notified of impending construction/enlargement activities and request the operators mark the exact location of these lines. The USACE should also coordinate with the operators of these lines so that safe construction methods are used when working around these lines. There are also above-ground lines present in the reaches that may require relocation or modification.

Water Lines – QRI recommends that the USACE contact the Plaquemines Parish Government to locate water lines before commencing earth-moving activities.

Power Lines – QRI recommends that the USACE avoid contact with overhead power lines present in the site area, some of which are hanging close to the ground and could be a hazard to tall equipment.

Waste Water Treatment Plants/Lift Stations - Because of the raw sewage associated with waste water treatment facilities and with lift stations, care must be taken to avoid

these facilities. QRI recommends that the USACE contact the Plaquemines Parish Government to locate sewer lines before commencing earth-moving activities.

Private residences – There are a variety of types of RECs on private property throughout the reaches. In all instances the item(s) that are on these sites that make the site a REC can be avoided during earth-moving activities. Coordination with the landowners prior to earth-moving activities is recommended.

2.0 INTRODUCTION

2.1 Purpose

The purpose of a Phase I ESA is to identify, to the extent feasible, recognized environmental conditions pursuant to ASTM Standard Practice E 1527-05; and certain potential environmental conditions outside the scope of ASTM Standard Practice E 1527-05 in connection with the property at the time of the site reconnaissance. A recognized environmental condition (REC) is defined as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes petroleum products or hazardous substances even under conditions in compliance with laws. The term does not include *de minimis* conditions, which do not generally present a threat to human health or the environment and would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs. This report documents the findings, opinions, and conclusions of the Phase I ESA.

The specific purpose of this Phase I ESA is to document RECs for the USACE to consider prior to their scheduled construction and enlargement of the river levee from Phoenix to Bohemia on the east side of the Mississippi River, and from Diamond to Fort Jackson on the west side of the Mississippi River.

2.2 Scope of Work

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E 1527-05 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances with the following exceptions. Due to the geometry of the property and the multitude of property owners stretched over approximately 42.7 miles of levees, the client specified no individual interviews with property owners and facility operators, no access of private property to assess or photograph potential RECs, no chain-of-title or environmental lien searches, and that all inspections be conducted from adjacent right-of-ways.

2.2.1 Records Review

Historical Research: Historical sources are used to develop a history of the previous uses of the property and surrounding area to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. The standard historical sources used in this investigation were historical aerial photographs and historical topographic maps. Sanborn maps were sought but were not available for any of this property. Chain of title and environmental lien searches were not conducted at the direction of the User.

Physical Setting Research: Various maps and photographs and geographic sources were reviewed and observations of the site were made to evaluate the hydro-geological and geological conditions of the site and surrounding properties. These data provide information

such as soil classification and surface water flow. Soil maps were obtained from the Natural Resources Conservation Service (NRCS) United States Department of Agriculture (USDA) Web Soil Survey website.

Environmental Public Records Review: Reasonably ascertainable local, state, tribal and federal environmental records and the results of the regulatory database search were reviewed to assess the likelihood of environmental problems from on-site or nearby petroleum product contamination or any other hazardous substances. Public records identifying these facilities provide an indication of the potential for RECs to be present at the site. Environmental Data Resources, Inc. (EDR) conducted the records review; their report is provided in Appendix A. The conclusions and recommendations of this report are based in part upon this information. The data reviewed during this investigation appeared to be accurate; however, the provided services do not include the verification of the accuracy or authenticity of information provided by others and may not be completely comprehensive.

2.2.2 Site Reconnaissance

On-Site Reconnaissance: Visual inspection conducted as part of this investigation included observing the levee and lateral area (buffer of 325 feet on either side of the levee) from the levee top as well as physically traversing areas of interest. Care was taken to remain within the levee and roadway right-of-way during the investigation to avoid trespassing on private property. Observation of operations and conditions of the properties within the area of interest were focused on identifying potential RECs. RECs and potential environmental concerns were documented and photographed by investigators.

Off-Site Reconnaissance: Visual inspection conducted as off-site reconnaissance included observing the adjoining properties outside the area of concern (buffer of 325 feet on either side of the levee) during a vehicular tour. Observation of operations and conditions of the properties adjoining the area of interest were focused on identifying potential RECs. RECs and potential environmental concerns were documented by investigators.

2.2.3 Interviews

In accordance with the client's instruction interviews were not conducted with site owners and/or occupants.

2.2.4 Report Preparation

This report was prepared based on information obtained from site reconnaissance and from reviewing available records. This report was prepared within the professional conduct of the industry and in accordance with the contract. No other warranties, representations or certifications are made.

2.3 Limitations

The findings and conclusions of this report are based upon professional judgment concerning the significance of the data gathered during the course of the assessment. QRI was able to assess the presence of hazardous substances, petroleum products, or other latent conditions as much as they were existent and detectable at the time of the site inspections. The possibility always exists for contaminants to be present in and migrate through surface water, air, soil, or groundwater. The ability to accurately address the environmental risks associated with transport in these media is beyond the scope of a Phase I ESA. The opinions expressed by QRI with reference to the subject property only pertain to the conditions that existed at the subject property during the time in which the site inspection was conducted.

2.3.1 Data Gaps

A "data gap" is the failure to obtain information required by the standard in spite of good faith efforts by the environmental professional to gather the information. For this subject property, some information that would normally be available for a property, e.g. Sanborn maps, does not exist. The inability to collect information that does not exist does not constitute a data gap.

2.4 Special Terms and Conditions

Due to the geometry of the property and the multitude of property owners in the project area of approximately 42.7 miles of levees, the client requested that QRI not conduct interviews, or research environmental liens and title records.

2.5 User Reliance

This report is for the use and benefit of, and may be relied upon by, United States Army Corps of Engineers (USACE) and any of its affiliates, and third parties authorized in writing by USACE, and QRI. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the Property that were not discovered within the authorized scope of the assessment.

QRI makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental professionals in assembling relevant data and information to prepare the site assessment report.

3.0 SITE DESCRIPTION

3.1 Location

Reach 1: Beginning at the juncture of the river levee and the back levee at approximately 29° 38' 50.65" N latitude, 89° 56' 44.96" W longitude continue northeast to approximately 29° 38' 58.38" N latitude, 89° 56' 36.88" W longitude, then continue east and southeast following the back levee to approximately 29° 36' 51.37" N latitude, 89° 51' 02.99" W longitude. This back levee passes through residential, wooded, agricultural and industrial (e.g. coal depot) areas, with marsh on the back (generally east) side of the levee.

Reach 2: Beginning at approximately 29° 36' 51.37" N latitude, 89° 51' 02.99" W longitude continue generally southeast following the back levee to approximately 29° 32' 33.13" N latitude, 89° 43' 52.02" W longitude, then continue southwest to the point where the back levee merges with the river levee at approximately 29° 32' 08.58" N latitude, 89° 44' 17.54" W longitude. This back levee reach passes through residential, wooded, agricultural and industrial (e.g. marina) areas, with marsh on the back (generally east) side of the levee.

Reach 9: Beginning at the juncture of the river levee and the back levee at approximately 29° 32' 49.54" N latitude, 89° 46' 24.57" W longitude continue generally southeast along the river levee to approximately 29° 31' 29.30" N latitude, 89° 44' 22.68" W longitude. This river levee reach passes through residential and wooded areas with the river on the northeast side.

Reach 10: Beginning at approximately 29° 31' 29.30" N latitude, 89° 44' 22.68" W longitude continue generally southeast along the river levee to approximately 29° 24' 28.63" N latitude, 89° 36' 34.10" W longitude. This river levee reach passes through residential, agricultural, industrial and wooded areas with the river on the east and/or north side of the levee.

Reach 11: Beginning at approximately 29° 24' 28.63" N latitude, 89° 36' 34.10" W longitude continue generally southeast, east and northeast to approximately 29° 21' 17.06" N latitude, 89° 27' 08.22" W longitude. This river levee reach passes through residential, industrial, wooded, and historical (Ft. Jackson is at the eastern terminus) areas with the river on the northeast, north and northwest side of the levee.

3.2 Site and Vicinity General Characteristics

At the time of the site investigation, the site consisted of approximately 42.7 miles of levee passing through marsh, arboreal, residential, and pasture/agricultural land as well as some industrial/commercial properties. In Reaches 1 and 2 most of the marsh was on the (generally) northeastern side of the back levee and the pasture, forested land and residential and industrial/commercial properties were located on the interior (generally) southwestern side of the levee. The Mississippi River and some marsh and arboreal land is on the (generally) northeastern side of the levee throughout Reaches 9, 10 and 11 and the arboreal, residential, agricultural and industrial/commercial properties are located on the interior (generally) southwestern side of the levee. An overview of the reaches discussed in this report is presented in Figure 1.

3.3 Current Use(s) of the Property

The site is currently used in residential, agricultural, and industrial/commercial applications; and includes several marinas, two pumping stations, a coal depot, petroleum product pipelines and facilities, Freeport-McMoran facility, Tennessee Natural Gas facility, and various Plaquemines Parish facilities, including sewer lift stations and community recreational centers.

3.4 Structures, Roads and Other Improvements on the Site

The site is paralleled by Highway 39 along the entire length of Reaches 1 and 2 and by Highway 23 along Reaches 9 through 11. There is a road on top of the levee as well as improved roads running throughout all of the reaches. The levees in Reaches 9 through 11 can be accessed from roads off of Highways 11 and 23. Currently the site is lightly developed with industrial/commercial and residential structures throughout its length. The site was more heavily developed prior to hurricanes Katrina and Rita in 2005, and Hurricanes Gustave and Ike in 2008. Some portions of Reaches 1, 2, 9, 10 and 11 have been redeveloped since the four hurricanes.

3.4.1 Existing Structures

The site is generally lightly developed with occasional industrial/commercial and residential structures present. Most of the residences are mobile homes. Commercial structures including the pumping stations are concrete block buildings. There are also wood frame buildings faced with wood, brick or vinyl siding. In the surrounding area, vinyl fabric over frame structures and steel-sided buildings are also present.

3.4.2 Existing Roads

Reaches 1 and 2, except for the extreme northern and southern ends of the back levee, is paralleled by Highway 39 along the entire length and has a road along the top of the levee. Several cross roads enter the area including (from north to south) St. John Lane, Schayot Road, Harlem Lane, Perez Road, Ansardi Lane, Gravolet Road, Suburban Road, Kelly's Road, United Gas Road, Bass Road, Adema Lane, Beshel Road (at the large marina), Tabony Lane, and Highway 15.

Diamond Road is roughly parallel to the site throughout Reach 9, although not always within the 325' buffer zone. There is a road along the top of the levee which can be accessed in two places - at the northwest end of Reach 9 and at the intersection of Fosters and Diamond Roads.

Route 23, River Road and Route 11 also run roughly parallel to the site along Reach 10, although not always within the 325 foot buffer zone. The levee road can be accessed in at least 9 places – 1) at the northwest end of the reach at Martin Lane, 2) about 0.33 mile southeast at an unnamed road that crosses over the levee, 3) at the southeast terminus of River Road, 4 & 5) opposite the Freeport-McMoran site (two accesses), 6) at an unnamed road about 0.7 mile southeast of the downriver Freeport-McMoran access, 7) near the intersection of Turner Road and Hwy 11, 8) at Cat Bay Road (near Goodwin Lane), and 9) about 0.33 mile south of Oak Forest Loop.

The levee road can be accessed along the northern section of Reach 11 at Locks Road and the southern section can be accessed from at least 10 places – 1) an unnamed road across the

locks, 2) near John Riley Road, 3) at an unnamed road near East Dazet Lane, 4) at an unnamed road about 0.2 mile east of Chimers Lane, 5) near Ballviero Lane, 6) near the intersection of Buras River Road and School Lane, 7) near Toms Lane, 8) near Moaks Lane, 9 & 10) at Herbert Harvey Drive and again about 0.25 mile downstream from Herbert Harvey Drive.

3.4.3 Heating/Cooling Systems

Heat is provided to the structures in the subject area by natural gas and electrical heating units; cooling is provided by central and window air conditioning units.

3.4.4 Utilities (including Sewage Disposal)

Electrical service to residential and commercial buildings is provided by Entergy, natural gas is provided by Atmos Energy, and water and sanitary sewer services are provided by Plaquemines Parish. There are some private septic systems for sewer.

3.4.5 Potable Water

Potable water is provided via municipal water supply by Plaquemines Parish Water Department.

3.5 Current Uses of Surrounding Area

Current uses of properties in the surrounding area are presented briefly in Tables 3.1 and 3.2, and in detail in Section 6.2.

Table 3.1 Current Uses of Surrounding Properties, Reaches 1 and 2

Direction From Site	Current Use
North	Marshland for approximately 15 miles north, and then the Mississippi River and light commercial/residential development for approximately 5 miles
East	Marshland for 10-20 miles, merging into the Gulf of Mexico
South	Land with agricultural, residential and commercial use protected by the levee, then the Mississippi River levee and river
West	Land with agricultural, residential and commercial use protected by the levee, then the Mississippi River levee and river

Table 3.2 Current Uses of Surrounding Properties, Reaches 9, 10 and 11	
Direction From Site	**Current Use**
North	The Mississippi River and light commercial/residential development along the river, then marshland for approximately 15 miles
East	The Mississippi River and then marshland for 10-20 miles, merging into the Gulf of Mexico
South	Land with agricultural, residential and commercial use protected by the levee and back levee systems; then marshland for 7 to 15 miles, merging into the Gulf of Mexico
West	Land with agricultural, residential and commercial use protected by the levee, then marshland

Many properties in the surrounding area were identified in federal or state regulatory databases. QRI reviewed this data and determined that there were no reported environmental issues that would adversely affect earth-moving activities on the site property.

4.0 USER PROVIDED INFORMATION

The following sections presents information (if any) provided by the United States Army Corps of Engineers (User) with regard to the Phase I ESA.

4.1 Title Records

User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

User provided no information regarding property environmental liens or activity and use limitations.

4.3 Specialized Knowledge

User provided no information regarding specialized knowledge or experience pertaining to recognized environmental conditions associated with the site or the surrounding area.

4.4 Commonly Known or Reasonably Ascertainable Information

User provided no knowledge of commonly known or reasonably ascertainable information about the site that would indicate the presence of recognized environmental conditions associated with the property.

4.5 Significant Valuation Reduction for Environmental Issues

User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.6 Owner, Property Manager and Occupant Information

User provided no site contact information. User provided no additional specific information identifying the property owners, managers, or occupants of the multiple private properties.

4.7 Reason for Performing Phase I ESA

The purpose of the Phase I ESA was to determine prior to scheduled levee construction the potential for contamination of the levee and the surrounding area by petroleum products, pollutants or other hazardous substances within the scope of CERCLA via means consistent with customary practices in environmental consulting.

4.8 Other User Provided Documents

User provided no other documents as described in the ASTM Standard Practice E 1527-05.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

QRI reviewed the regulatory agency database report discussed in this section, provided by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, for information regarding reported releases of hazardous substances and petroleum products within a one mile (1 mi) search radius of the centerline each levee. The results of the EDR database review for all reaches are presented in Table 5.1.

Many "unmappable/orphan" sites that are potentially in the project area were presented in the EDR report. "Unmappable" or "orphan" sites are those whose locations could not be determined with confidence because the reported site/location data is incomplete. QRI reviewed the information that was available on the orphan sites and conducted site reconnaissance in an attempt to locate them. Details about the orphan sites that were located are presented in Table 5.2.

5.2 Additional Environmental Records Sources

QRI reviewed a variety of types of Geographic Information Systems (GIS) data from the Louisiana Department of Natural Resources (LDNR) on-line GIS database (SONRIS), including wells and well pit data. In addition, QRI obtained from the Department of Homeland Security and LDNR a current database of oil and gas pipelines and platforms in coastal Louisiana.

5.3 Physical Setting Sources

The physical setting of the site and vicinity was determined by examining historical and recent USGS topographic maps of the site and surroundings, the *Geologic Map of Louisiana* (Louisiana Geological Survey) and the NRCS/USDA soils maps.

5.3.1 Regional Geology

According to the *Geologic Map of Louisiana* (1984), produced by the Louisiana Geological Survey in cooperation with the United States Geological Survey, the site in Reaches 1 and 2 is underlain by "Quaternary Natural Levees" deposits with "Quaternary Delta Plain, Saline Marsh" deposits in the marshes to the (generally) east of the back levee. In Reaches 9, 10 and 11 the site is underlain by "Quaternary Natural Levees" deposits with "Quaternary Delta Plain, Saline Marsh" deposits in the marshes to the (generally) southwest of the back levee. Relevant excerpts from the *Geologic Map of Louisiana* are included in Appendix B. The natural levee deposits occur along the banks of the Mississippi River and the delta plain deposits occur in areas of active and abandoned delta lobes of the Mississippi River.

Table 5.1 Summary of Federal, State and Tribal Database Findings

Regulatory Database	Search Radius	Property Listed?	# Sites Listed
Federal National Priority (NPL)	1 mile	No	0
Federal Proposed NPL	1 mile	No	0
Federal Delisted NPL	1 mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	1 mile	No	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	1 mile	No	1
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	0
Federal RCRIS non-CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	1 mile	No	0
Federal RCRA Generators (LQG, SQG, CESQG)	1 mile	No	10
Federal Institutional Control/Engineering Control Registry	1 mile	No	0
Federal Emergency Response Notification System (ERNS) list	1 mile	No	22
Federal Facility Index System/Facility Registry System (FINDS)	1 mile	No	30
Toxic Chemical Release Inventory System (TRIS)	1 mile	No	1
Integrated Compliance Information System (ICIS)	1 mile	No	1
PCB Activity Database (PADS)	1 mile	No	1
State and Tribal NPL	1 mile	No	0
State CERCLIS	1 mile	No	1
State Landfill or Solid Waste Disposal Sites	1 mile	No	1
State and Tribal Leaking Underground Storage Tanks (LUST/HIST LUST)	1 mile	No	0
State and Tribal Registered Underground Storage Tanks (UST)	1 mile	No	9
State Institutional Control/Engineering Control Registry	1 mile	No	0
State Voluntary Cleanup Site	1 mile	No	0
State Approved (Hurricane) Debris Sites (DEBRIS)	1 mile	No	1
Louisiana Pollutant Discharge Elimination System permitted sites (LPDES)	1 mile	No	9
State Tribal Brownfield Sites	1 mile	No	0
Reported spills or releases to land (SPILLS)	1 mile	No	18

Table 5.2 Summary of Orphan Sites Findings			
EDR ID	**Site Name**	**Site Address**	**QRI Findings**
S109352809	East Bank Burn Site	110 Prison Rd	Building was demolished; the burn site couldn't be located. No potential environmental issues were observed.
98427088	LZ Dock	100 Herbert Harvey Lane	ASTs present. Listed as a REC in this report.

5.3.2 Topography

Based on QRI's review of the United States Geological Survey (USGS) 7.5 Minute Topographic Map Series - Phoenix, Lake Laurier, Pointe a la Hache, and Happy Jack Quadrangles, dated 1992-1994 - the site is located at an elevation of approximately 3 to 14 feet above mean sea level (MSL). The more recent topographic map series from 2009 does not include elevations. The levee represents the higher elevations, and other than the levee and man-made canals the topography is relatively flat. A copy of each of the topographic maps is included in Appendix C.

5.3.3 Soils/Geology

Review of the custom soil resource report obtained from the United States Department of Agriculture National Resources Conservation Service online Web Soil Survey indicates that the site is underlain by the following soils:

Reach 1:

Along the top part of the back levee from Highway 15 to the back levee road is found *Cancienne silty clay loam*.

Cancienne silty clay loam - The Cancienne series consists of very deep, level to gently undulating, somewhat poorly drained mineral soils that are moderately slowly permeable. These soils formed in loamy and clayey alluvium. They are on high and intermediate positions on natural levees and deltaic fans of the Mississippi River and its distributaries. Slopes range from 0 to 3 percent.

At the top corner of the back levee system, just northeast of the back levee road there is a mixture of *Westwego clay, Schriever clay* with *Harahan clay* on the levee and towards the southwest and *Gentilly muck* in the marsh to the northeast.

Westwego clay - The Westwego series consist of deep, poorly drained, very slowly permeable soils. They formed in semifluid clayey alluvium and organic material that dried and shrank irreversibly in the upper part as the result of artificial drainage. These soils are on broad, drained former swamps along the lower Mississippi River and its distributaries. Slopes range from 0 to 0.5 percent. These soils are protected from flooding by a system of levees and are artificially drained by pumps.

Shriever clay - The Schriever series consists of very deep, poorly drained, very slowly permeable soils that formed in clayey alluvium. These soils are on the lower parts of natural levees and in backswamp positions on the lower Mississippi River alluvial plain. Mean annual air temperature is 68 degrees F. near the type location, and mean rainfall is about 65 inches. Slope is dominantly less than 1 percent but ranges up to 3 percent.

Harahan clay - The Harahan series consist of very deep, poorly drained, very slowly permeable soils. They formed in moderately thick firm clayey alluvium overlying fluid clayey sediments. These soils are on broad backswamp positions on the lower Mississippi River flood plain. Slopes range from 0 to 1 percent. These soils are protected from flooding by levees, and are artificially drained by pumps.

Gentilly muck - The Gentilly series consists of very deep, very poorly drained, very slowly permeable slightly to moderately saline soils. These soils formed in thin accumulations of herbaceous plant remains and semifluid clayey alluvium over consolidated clayey deposits. Slopes are less than 1 percent.

From Schayot Road south to Lopez Canal (opposite the Wilson Lane/Nathan Lane area), *Harahan clay* is present on the levee and to the southwest of the levee and *Gentilly muck* is present in the marsh northeast of the levee.

At Lopez Canal (opposite the Wilson Lane/Nathan Lane area), the marsh soil changes from *Gentilly muck* to *Fausse muck (saline)*, with *Harahan clay* still present on the levee and southwest side of the levee.

Fausse muck (saline) - The Fausse series consists of very deep, very poorly drained, very slowly permeable soils that formed in clayey alluvium. These soils are in low, ponded backswamp areas of the lower Mississippi River alluvial plain. Slopes are less than 1 percent.

At Harlem Lane, near Horse Power Canal, the marsh soil is *Gentilly muck* on the northeast side of the canal paralleling the levee, and *Fausse muck* on the southeast side of this canal until the canal turns to the east and the *Gentilly muck* tapers out of the area leaving only *Fausse muck* on the marsh side of the levee. *Harahan clay* remains on the levee and to the southwest of the levee throughout the remainder of Reach 1.

Reach 2:

Reach 2 is a continuation of Reach 1 and at its northwesterly beginning *Harahan clay* (see description above in Reach 1) is present on the levee and to the southwest of the levee with *Fausse muck* (see description above in Reach 1) present in the marsh to the northeast of the levee.

At Beshel Road and around the marina on the marsh side of the levee the soil is designated as “Aquents, dredged, frequently flooded” due to the man-made disturbance of the original soils. An aquent is a soil classification suborder of the order Entisols (recent soils) indicating permanently or seasonally saturated soils, and is not a name of any particular mapped soil. Southeast of the marina the soils are mapped as *Harahan clay* on the levee and to the southwest of the levee and *Fausse muck* on the marsh (northeast) side of the levee. Occasionally *Fausse muck* is mapped on the levee in this part of the reach.

Approximately one mile southeast of the marina at Beshel Road the soil designation on the west side of Highway 39 is *Schriever clay* (see description above in Reach 1) for approximately 1100 feet, then reverts back to *Harahan clay*.

Approximately 2000 feet beyond the point where the levee makes a distinct eastward turn and where *Schriever clay* is found towards the southwest, the soil mapped on the levee and in the marsh to the northeast changes to *Carville*, *Cancienne* and *Schriever* soils (frequently flooded) from *Fausse muck,* with *Harahan clay* to the southwest of the levee. This continues until the levee curves back around to the southwest, at which point the levee and land to the northwest are mapped as *Harahan clay* and the marsh to the southeast is mapped as *Carville*, *Cancienne* and *Schriever* soils (frequently flooded). Approximately 1740 feet southwest from the corner of the levee the levee and land to the northwest change from *Harahan clay* to *Schriever clay* with *Carville*, *Cancienne* and *Schriever* soils (frequently flooded) on the marsh side of the levee,

continuing all the way to the point where the back levee joins the river levee at the end of Reach 2.

Carville Series - The Carville series consists of very deep, somewhat poorly drained, moderately permeable soils that formed in recent loamy alluvium. These soils are on nearly level to very gently sloping natural levee positions on flood plains, mainly along the Mississippi River and its distributaries. Slopes range from 0 to 2 percent.

Reach 9:

Reach 9 is the northernmost reach on the west side of the Mississippi River. Beginning at its northern end on the river side of the levee the entire length of the reach, the soil type is a mixture of *Carville*, *Cancienne* and *Schriever* soils which are frequently flooded. The levee and west side of the levee is classified as *Cancienne silty clay loam* from the northern end to about 140 feet north of Trene Lane, at which point the soil type changes to *Schriever clay* for the remainder of the reach until its southernmost point.

Reach 10:

Reach 10 begins at the southern terminus of Reach 9 with *Schriever clay* on the levee and west side of the levee and a mixture of frequently flooded *Carville, Cancienne and Schriever* soils on the river side of the levee. At Martin Lane, the soil type changes to *Cancienne silty clay loam* on the levee and to the west with *Schriever clay* further west at the edge of the 325 foot buffer area. These soil types persist until Iga Lane, at which point the entire 325 foot buffer area from the levee and to the west is Cancienne silty clay loam, with the frequently flooded *Carville, Cancienne and Schriever* soils on the river side of the levee. At Antonia Lane *Schriever clay* is found at the western edge of the site area and gradually edges out the *Cancienne silty clay loam* just north of the Freeport-McMoran facility in Port Sulphur. The reach continues with *Schriever clay* on and west of the levee with the mixture of *Carville, Cancienne and Schriever* soils east of the levee by the river until Powell Lane, at which location *Cancienne silty clay loam* is again found on and west of the levee until Stephen Bailey Lane. *Schriever clay* is the classification on and to the west of the levee from Stephen Bailey Lane until Goodwin Lane. At Goodwin Lane, *Cancienne silty clay loam* reappears as the soil type on and west of the levee, with the mixture of *Carville, Cancienne and Schriever* soils east on the river side of the levee. Just south of Oak Forest Loop and until the end of the reach, *Schriever clay* is found in the western part of the site with *Cancienne silty clay loam* on the levee and immediately west of the levee and the frequently flooded *Carville, Cancienne and Schriever* soils on the river side of the levee.

Reach 11:

Reach 11 begins at the southern terminus of Reach 10 with the frequently flooded *Carville, Cancienne and Schriever* soils on the river side of the levee and *Cancienne silty clay loam* on the levee and to the west with *Schriever clay* at the western edge of the site. These designations continue south to near Bernie Lane in Empire, at which location *Schriever clay* is found on the levee and to the west for about 0.25 mile. Immediately downriver from this, *Harahan clay* is found on the levee and to the southwest with *Carville, Cancienne and Schriever* soils on the river side of the levee all the way down to Cozezu Drive in Buras. At this location, *Schriever clay* is found on the levee and to the south for approximately 0.25 mile, where it changes to *Cancienne silty clay loam* on the levee and to the southwest with *Carville, Cancienne and Schriever* soils on the river side of the levee. The soils change again along

Reach 11 in Triumph near Colorado Lane where *Harahan clay* is present on the levee and to the southeast with *Carville, Cancienne and Schriever* soils on the river side of the levee. Fort Jackson, located at the downstream end of Reach 11, is underlain by *Schriever clay*.

Copies of the soil resource reports specifically generated for this project are included in Appendix D.

5.3.4 Hydrogeology

Little reasonably ascertainable information is available on the hydrogeology of Plaquemines Parish and hydrogeologic investigations are out of the scope of ASTM Phase I assessments. Generally, the geology in the area is Quaternary fluvial deposits, most recently natural levee deposits. The topography of this entire site is relatively flat as this site is part of a major river delta. The Mississippi River flows in a generally northwest to southeast direction throughout these reaches.

5.3.5 Other Physical Setting Sources

Federal Emergency Management Agency (FEMA) Flood Plain Maps

QRI reviewed the 1985 Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM) for Reaches 1, 2, 9, 10 and 11 and surrounding areas. The area between the front and back levees and the area south/southwest of the levees are zoned B and A1 throughout Reaches 1 and 2. The levee itself is in zone B and the protected land is almost entirely A1 with the exception of a small area in the northernmost section of Reach 1, which is zoned B. The marsh areas to the northeast are zoned V2. An A1 designation indicates that the area would flood in a 100 year flood. V2 indicates velocity flooding, or wave action. A B designation indicates the area would not flood during a 100 year flood but would flood during a 500 year flood.

Beginning in Reach 9 heading roughly south and ending in Reach 11, the areas south and west of the levees are designated A16 (10) with indicates a 100 year flood depth of 10 feet, occasionally trending to an A99 designation, indicating areas of 100 year flood to be protected by a flood protection system under construction with base flood elevations and flood hazard factors not determined, and A2 (1.0) and (1.5), indicating that the area is in the 100 year flood plain with expected flooding depths of 1 to 1.5 feet. North and east of the levees the floodplain designations begin with V6, indicating that there is wave action from the coast. Down the levees towards the coast, the floodplain designations change to A2 (1.0), then A16 (15), and V21 from Port Sulphur to the community of Homeplace. Just south of Homeplace the flood plain designation is A2 (1.0), then trends to A16 (11), and then at the end of Reach 11 the designation is A99.

The flood zone designations are not considered to present an environmental concern for the proposed earth-moving activities on the property. Copies of the relevant FIRM maps and the flood map codes are presented in Appendix E.

Wetlands Maps

Based on review of the digital version of the U.S. Department of the Interior, Fish & Wildlife Service's National Wetland Inventory Maps (http://www.fws.gov/wetlands/data/index.html), QRI determined that throughout both Reaches 1 and 2 estuarine and marine wetlands exist outside of the levee protected area and the protected areas remain classified as non-wetland. Along the river side of the levee in Reaches 9, 10 and 11 are found freshwater forested/shrub wetlands, with the protected areas classified as non-wetland with small forested areas classified as freshwater forested/shrub wetlands. This investigation did not include a formal wetland determination. The National Wetlands Inventory map sections are included in Appendix F.

5.4 Historical Use Information on the Site

In Reaches 1 and 2, according to readily available historic maps, construction of the riverfront levees occurred sometime between 1892 and 1935. Construction of the back levee as it currently exists began by 1962 in conjunction with creation of Highway 39 and was completed by 1971. Oil and gas (O&G) activity has been present since at least the mid 1950s. Much of the area has been cultivated since the mid 1930s but this land use has steadily decreased.

In Reaches 9 and 10, the riverfront levees were present by 1935 and the back levees were constructed by 1953. Highway 31 and the New Orleans and Lower Gulf Coast Railroad were present by 1941. By 1962 Highway 31 was improved/resurfaced and renamed Highway 23. Highway 11 which is generally parallel to the river levee was created sometime between 1992 and 2009. Electricity was made available in 1948. The area has been agriculturally developed since the 1930s, with a significant increase in the 1950s. Oil and gas activity surged in the 1960s. The marshes on both sides of the Mississippi River began to deteriorate in the 1940s.

In Reach 11, the riverfront levees were present by 1935 and the back levees were constructed by 1953. Missouri Pacific Railroad was present in 1935 but extended only to Buras. Electricity was made available in 1948. The area has been agriculturally developed since the 1930s, with a significant increase in the 1960s. Oil and gas activity surged in the 1960s. The marshes on both sides of the Mississippi River began to deteriorate in the late 1940s.

5.5 Historical Use of the Surrounding Area

Land use in areas outside of the levees has been similar to land use in the project area. Oil and gas activity primarily began in the mid 1950s, surged in the 1960s, and has been increasing steadily since. The areas north/northeast of the project area were solid land with some marsh in 1892 have gradually converted into marsh and open water. The areas south/southwest of the project area have had similar O&G activity and conversion to broken marsh. Much commercial development in support of O&G activity has occurred since the mid 1950s.

5.6 Standard Historical Sources Reviewed

5.6.1 Aerial Photographs

QRI reviewed aerial photographs and digital orthophoto quarter quadrangles (DOQQs) of the property and surrounding areas obtained from EDR and from Louisiana State University's online database (LSU Atlas). Aerial photographs were available from the time period of 1956 to 2005. Changes in land use in Reaches 1, 2, and 9 through 11 are summarized in Tables 5.3 through 5.7. For ease of presentation the information is presented according to reach number. QRI did not find any additional or previously unknown RECs during this review. Aerial photographs for each of the reaches are presented in Appendix G.

Table 5.3 Aerial Photographs Historic Use Summary
Reach 1

Year	Scale	Comments
1956	1 inch = 2,500 feet	**Property:** Northern portion of Reach 1 contained primarily farmland, with some commercial development that appears to be O&G related. More apparent O&G activity towards at the southern boundary. **Surrounding Area:** Northern portions are mostly undeveloped or farmland. Southern portions are mostly undeveloped/farmland, with some apparent oil & gas activity.
1971	1 inch = 6,666 feet	**Property:** Increasing apparent O&G activity; still primarily undeveloped/farmland. **Surrounding Area:** Increasing apparent O&G activity; still primarily undeveloped/farmland to the south.
1978	1 inch = 5,503 feet	**Property:** Significant increase in O&G activity; many additional slips and access canals appear. An apparent O&G pit appears in the southeast. **Surrounding Area:** Significant increase in O&G activity; many additional slips and access canals appear.
1989/1990	1 inch = 3,333 feet	**Property:** Barge terminal or port suggested in 1978 imagery is clearly visible. Large impoundments now visible. **Surrounding Area:** Barge terminal or port suggested in 1978 imagery is clearly visible on the southwest side of the river. New areas have been converted from farming to apparent O&G activity.
1998	1 inch = 12,000 feet	**Property:** Retention pond on the NE side of the reach, near Bellevue has been enlarged. Southwest of the levee, between Harlem and Bellevue, a series of four retention ponds have been filled in. **Surrounding Area:** Land use remains essentially the same since the 1989 imagery.
2005	1 inch = 24,000 feet	**Property:** Much storm damage apparent. Many buildings destroyed. **Surrounding Area:** Also shows much storm damage.

Table 5.4 Aerial Photographs Historic Use Summary
Reach 2

Year	Scale	Comments
1956	1 inch = 2,500 feet	**Property:** Northern portions of Reach 2 contained primarily undeveloped/farmland, with some O&G-related activity. **Surrounding Area:** Primarily undeveloped/farmland, with some O&G-related activity.
1971	1 inch = 6,666 feet	**Property:** Little change from 1956; contained primarily undeveloped/farmland, with some O&G-related activity. **Surrounding Area:** Little change from 1956; primarily undeveloped/farmland, with some O&G-related activity.
1978	1 inch = 5,503 feet	**Property:** Significant increase in O&G activity; many additional slips and access canals appear. **Surrounding Area:** Significant increase in O&G activity; many additional slips and access canals appear.
1989	1 inch = 3,333 feet	**Property:** Significant increase in commercial/O&G activity; much apparent commercial development since 1978. Additional roads have been created. **Surrounding Area:** Significant increase in commercial/O&G activity; much apparent commercial development since 1978. Additional roads have been created.
1998	1 inch = 12,000	**Property:** At the southern boundary of Reach 2, previously non-vegetated areas have been filled in. **Surrounding Area:** Land use remains essentially the same since the 1989 imagery.

Table 5.5 Aerial Photographs Historic Use Summary
Reach 9

Year	Scale	Comments
1956	1 inch = 2,500 feet	**Property:** At the northern boundary primarily undeveloped/farmland, few private residences, some commercial/O&G-related activity. Agricultural lands to the southern boundary. **Surrounding Area:** Partially broken marsh extending from approximately 0.5-mil from the levees, south/southwest.
1971	1 inch = 6,666 feet	**Property:** Little change from 1956; primarily undeveloped/farmland, with some commercial/O&G-related activity. **Surrounding Area:** Little change from 1956; primarily undeveloped/farmland, with many O&G-related cuts/access canals in the marsh south/southwest.
1978	1 inch = 5,503 feet	**Property:** Still sparse, but an increased mix of residential and commercial/O&G activity since 1971 along the entire reach. **Surrounding Area:** Many O&G-related cuts/access canals in the marsh south/southwest.
1989	1 inch = 3,333 feet	**Property:** O&G access canals/slips seen around Diamond in the 1978 imagery are filled in. Still largely a mix of agriculture and O&G, with steadily and slowly increasing residential activity. **Surrounding Area:** Heavy O&G activity and largely broken marsh starting approximately 0.5-miles south/south west of the levees.
2005	1 inch = 24,000 feet	**Property:** Photos collected soon after Hurricane Katrina. Almost no structures standing from Diamond to Happy Jack. **Surrounding Area:** Severely impacted as a result of Hurricane Katrina. Heavy marsh and agricultural damage.

Table 5.6 Aerial Photographs Historic Use Summary
Reach 10

Year	Scale	Comments
1956	1 inch = 2,500 feet	**Property:** Primarily undeveloped/farmland, some private residences, with some commercial/O&G-related activity. **Surrounding Area:** Partially broken marsh extending from approximately 0.5-mil from the levees, south/southwest.
1971	1 inch = 6,666 feet	**Property:** Little change from 1956 at the northern boundary; primarily undeveloped/farmland, with some O&G-related activity to the southern boundary. A tank battery, likely Freeport McMoran, appears near Port Sulphur. **Surrounding Area:** Little change from 1956; partially broken marsh extending from approximately 0.5-mil from the levees, south/southwest.
1978	1 inch = 5,503 feet	**Property:** Increased commercial/O&G activity as well as increased residential development since 1971, primarily around Port Sulphur. Approximately equal agricultural and commercial mix from Port Sulphur to Buras. **Surrounding Area:** Partially broken marsh extending from approximately 0.5-mil from the levees, south/southwest.
1989	1 inch = 3,333 feet	**Property:** Still largely a mix of agriculture and O&G, with steadily and slowly increasing residential activity. Freeport McMoran facility has expanded. **Surrounding Area:** Heavy O&G activity and largely broken marsh starting approximately 0.5-miles south/south west of the levees.
2005	1 inch = 24,000 feet	**Property:** Photos collected soon after Hurricane Katrina. Almost no structures standing from Potash down to Empire. The Freeport McMoran tanks remain but are damaged. **Surrounding Area:** Severely impacted as a result of Hurricane Katrina. Heavy marsh and agricultural damage.

Table 5.7 Aerial Photographs Historic Use Summary
Reach 11

Year	Scale	Comments
1956	1 inch = 2,500 feet	**Property:** Primarily agricultural, with few residences. **Surrounding Area:** Partially broken marsh extending from approximately 0.5-mil from the levees, south/southwest.
1971	1 inch = 6,666 feet	**Property:** Little change from 1956 at the northern boundary; primarily undeveloped/farmland, with some O&G-related activity around Buras. **Surrounding Area:** Little change from 1956; primarily undeveloped/farmland, with many O&G-related cuts/access canals in the marsh south/southwest.
1978	1 inch = 5,503 feet	**Property:** Increased commercial/O&G activity as well as increased residential development since 1971. Approximately equal agricultural and commercial mix extending south to Buras. **Surrounding Area:** Broken marsh extending from approximately 0.5-mil from the levees, south/southwest.
1989	1 inch = 3,333 feet	**Property:** Still largely a mix of agriculture and O&G, with steadily increasing residential activity. New industrial ponds are present around Empire. **Surrounding Area:** Heavy O&G activity starting approximately 0.5-miles south/south west of the levees. Significant increase since 1971 in the degree to which the marsh is broken up.
2005	1 inch = 24,000 feet	**Property:** Photos collected soon after Hurricane Katrina. Almost no structures standing from Empire down to Buras. **Surrounding Area:** Severely impacted as a result of Hurricane Katrina. Heavy marsh and agricultural damage.

5.6.2 Property Ownership Records

Property ownership records were not researched for this investigation at the request of the Client.

5.6.3 City Directory Review

As stated in the ASTM Standard, the Environmental Professional may choose to omit a potential source of information for a subject property based upon the time and cost associated with obtaining the information compared to the value of the information that would be obtained. Because of the spatial extent of the subject property, QRI determined that a review of city directories was not a cost effective source of information.

5.6.4 Fire Insurance Maps

The complete holdings of the Sanborn Library, LLC collection were searched based on client-supplied target property information. No fire insurance maps covering the target property were available. The lack of historical fire insurance maps is not considered to be a significant data gap.

5.6.5 Other Historical Sources

Topographic Maps

QRI reviewed available historical USGS Topographic Quadrangles (quad maps) for information regarding past uses of the property. QRI reviewed the historical USGS Topographic Maps for the years 1892, 1935, 1939, 1944, 1948, 1953, 1960, 1962, 1964, 1973, 1992, 1994, and 2009 from Pointe a la Hache, Myrtle Grove, Hermitage, Happy Jack, Black Bay, Phoenix, and Lake Laurier. Descriptions and changes in land use in Reaches 1, 2, and 9 through 11 as seen in the relevant topographic maps are presented in Tables 5.8 through 5.12.

Table 5.8 Summary of Historical USGS Topographic Map Observations

Reach 1

Date	Scale	Property	Surrounding Area
1892	1:62,500	Mostly undeveloped land on natural levee. A few buildings. Single track railroad passes through location of the northeast corner of levee system.	Undeveloped marsh to north and east. Road, buildings and single track railroad along Mississippi River on natural levee.
1935	1:31,680	Mostly undeveloped land on natural levee with some marshland. Back levee canal and levee and a few other canals have been constructed.	Undeveloped natural levee and marsh to north and east. Back levee canal and levee, a few other canals and the river levee have been constructed.
1939	1:62,500	More drainage canals present.	More drainage canals present.
1944	1:62,500	No appreciable change.	No appreciable change.
1948	1:62,500	"People's Utilities, Inc" line installed.	Electrical lines present along river. Single track railroad abandoned between Phoenix and Harlem.
1962	1:62,500	A few more buildings and radio tower in Phoenix. Single track railroad removed.	More buildings along Mississippi River on natural levee. Single track railroad removed.
1964	1:62,500	Route 39 under construction.	Route 39 under construction.
1973	1:24,000	Route 39 finished with new canal and levee to the southwest. Building present at Bellevue pumping station.	Route 39 finished with new canal and levee to the southwest. Conveyer and facility present at Bellevue.
1992, 1994	1:24,000	No appreciable change.	More buildings in Phoenix. O&G activity in marsh to northeast.
2009	1:24,000	Bellevue pumping station seen. Coal products stored at Bellevue conveyer facility.	Coal products stored at Bellevue conveyer facility.

Table 5.9 Summary of Historical USGS Topographic Map Observations

Reach 2

Date	Scale	Property	Surrounding Area
1892	1:62,500	Undeveloped land on natural levee with a few canals passing through site of present day levee.	Undeveloped marsh to northeast. Road, buildings and single track railroad by Mississippi River on natural levee.
1935	1:31,680	Back levee canal and levee and a few other canals have been constructed. Map missing for part of Reach 2.	Back levee canal and levee, a few other canals and the Mississippi River levee have been constructed.
1939	1:62,500	More drainage canals present.	More drainage canals/buildings present. Single track railroad is not mapped. Ferry present at Pointe a la Hache.
1944	1:62,500	No appreciable change.	No appreciable change.
1948	1:62,500	"People's Utilities, Inc" line installed. Potash District Camp present at junction of back levee and river levee systems in Bohemia.	Electrical lines present along river. Single track railroad present but abandoned. Gravalet and Adema canals and levees constructed. More buildings present.
1962	1:62,500	Pointe a la Hache boat harbor completed. More cross roads from Route 15 to back levee. One pipeline crosses present day levee site.	More buildings along Mississippi River on natural levee. Single track railroad removed. Two pipelines cross the river near Pointe a la Hache and one south of Bohemia. New canal and levee in middle of land area from Davant to Adema Canal. Cross canals also leveed. Pointe a la Hache oilfield present with concomitant growth of the community of Pointe a la Hache.
1964	1:62,500	Route 39 under construction.	Route 39 under construction. Levees beside Adema and Meyers Canals and canal between Davant and the back levee system.
1973	1:24,000	Rt. 39 finished with new canal and levee to the southwest. Four elevated pipelines cross present day levee site.	Route 39 finished with new canal and levee to the southwest. Road and O&G activity south of Bohemia.
1992	1:24,000	Adema pumping station present.	More drainage canals.
2009	1:24,000	No appreciable change.	No appreciable change.

Table 5.10 Summary of Historical USGS Topographic Map Observations

Reach 9

Date	Scale	Property	Surrounding Area
1892	1:62,500	Few buildings on the south side of the natural levee, primarily between Woodland and Magnolia. Isolated structures elsewhere.	New Orleans and Gulf railroad on the north side of the river. New Orleans Ft. Jackson and Grand Isle railroad on the south side. Marsh extends outwards, starting approximately 0.25 miles from the north and south levees.
1935	1:31,680	River levees and State Highway 31 now present.	Marsh extends outwards, starting approximately 0.25 miles from the north and south levees.
1939	1:62,500	New settlements on the south side of the river including Ironton, Myrtle Grove, and Diamond.	State Highway 31 is classified as: medium duty. Grande Bayou delineated.
1944	1:62,500	Minimal change since 1939.	Additional canals created perpendicular to the river, near City Price.
1948	1:62,500	People's Utilities, Inc. line installed. Increased agricultural activity between Magnolia and Diamond.	Marsh north of the river converting to more open water.
1962	1:62,500	Increased agricultural development between Point Celeste and City Price. Hwy 31 renamed Hwy 23.	Bayou Grand Chenier expanded. Point a la Hache oil and gas field appears to the north of the river. Increased O&G activity south of the river.
1964	1:62,500	Significant increase in structures around Diamond.	Increased O&G activity south of the river.
1973/ 1992	1:24,000	Highway 23 is classified as: secondary highway, hard surface.	Significant increase in O&G activity south of the river.
2009	1:24,000	Many buildings along Fernandez Canal perpendicular to the back levee.	Potash O&G field is heavily developed. Significant O&G activity south of the river. Significant marsh deterioration north and south of the river.

Table 5.11 Summary of Historical USGS Topographic Map Observations

Reach 10

Date	Scale	Property	Surrounding Area
1892	1:62,500	Many buildings on the south side of the natural levee, primarily between Home Place and Empire, and around Sunrise. Dry land 0.25 miles south of levee.	Primarily open water north of the river.
1935	1:31,680	River levees constructed.	No appreciable change since 1892.
1941	1:62,500	Freeport McMoran in Port Sulphur and Highway 31 appear. New Orleans and Lower Coast railroad seen. Marsh almost to the Gulf.	Point a la Hache Relief Outlet appears.
1944	1:62,500	Highway 31 upgraded to: dependable hard surface. Increased numbers of buildings around Empire.	Both sides of the river are marsh; the northeast side is largely deteriorated marsh.
1953	1:62,500	Significant agricultural increase north of Tropical Bend, at Hesperides. Back levees constructed.	Freeport Sulphur Canal constructed from Freeport McMoran site out to the Gulf.
1962	1:62,500	Increased number of buildings along the entire reach. Three new pumping stations from Homeplace to Tropical Bend. Highway 31 renamed Highway 23. "Sub Pipe Line" crosses the river at Encalade.	Extensive O&G activity at Cox Bay Oil Field north of Hesperides, and south of the river in general.
1964	1:62,500	No appreciable change.	No appreciable change.
1973/ 1992	1:24,000	New Lock at Empire. Increased agricultural, commercial development.	Empire Oil & Gas Field across the river from Empire. Ballandock Siphon Structure seen at 60 Mile Point, crossing to the East bank of the river.
2009	1:24,000	Encalade largely open land; presumed not rebuilt after Hurricane Katrina. Highway 11 seen. New industrial pond appears around Tropical Bend. Tropical Bend Revetment appears.	Extensive O&G activity; extensive marsh deterioration north/northeast of the river. Bayou Lamoque Revetment seen across from 60 mile point.

Table 5.12 Summary of Historical USGS Topographic Map Observations

Reach 11

Date	Scale	Property	Surrounding Area
1892	1:62,500	Many buildings on the south side of the natural levee, downriver from Buras. Dry land 0.25 miles south of levee.	Marsh extends outwards, starting approximately 0.25 miles from the north and south levees.
1922	1:62,500	Unimproved roads to Forts Jackson and St. Phillip. Marsh extends out from the river banks approximately 0.5 miles. Some buildings northwest of Ft. Jackson.	Marsh extends out from the river banks approximately 0.25 miles.
1935	1:31,680	Missouri Pacific Railroad stops at Buras. Fairly high building density around Buras. Highway 31 seen. River levees constructed.	Marsh extends directly out from the river.
1941	1:62,500	Buras Drainage District canal seen. Many buildings along Highway 31.	Largely open water north/northeast of the river – Quarantine Bay and Breton Sound.
1944	1:62,500	No appreciable change.	No appreciable change.
1948	1:62,500	People's Utilities Inc lines seen. Highway 31 classified as: other surface improvement. Many buildings around Triumph.	Largely open water north/northeast of the river – Quarantine Bay and Breton Sound.
1960	1:62,500	Many buildings upriver from Triumph, at Gulftown. Front and back levees present. Extensive agriculture at Triumph, extending approximately 0.5 miles from the south river bank. Buras Revetment created at Fasterling Canal, north of Buras.	Extensive O&G activity north/northeast of the river. Bastion Bay Oil and Gas field south of Buras.
1962	1:62,500	Many buildings around Buras. Extensive agriculture in Buras. Buras Drainage District Canal appears.	Significant increase in O&G activity south of the river below Buras.
1973	1:24,000	Doullet Canal at the Empire Lock seen.	Quarantine Bay Oil field north of the river.
1998	1:24,000	Extensive commercial/industrial activity at Venice/Grand Pass.	Extensive O&G activity; extensive marsh deterioration north/northeast of the river.
2009	1:24,000	No significant change since 1998.	No significant change since 1998.

6.0 SITE RECONNAISSANCE

Teresa Russin and Doug Martin of QRI conducted site reconnaissance of Reaches 1, 2 and 9 on March 17-18, 2010. Teresa Russin and Kim Barton conducted site reconnaissance of Reaches 10 and 11 from March 30-April 1, 2010 and on May 6, 2010. Information obtained as a result of site reconnaissance is presented in the following subsections. Representative photographs from Reaches 1, 2, 9, 10 and 11 are presented in Appendix H.

6.1 Methodology and Limiting Conditions

This assessment covers the existing centerline of the Mississippi River Back Water levees listed in Table 6.1 and as shown on the location map. The project area extends laterally 325 linear feet perpendicular to and in both directions from the levee centerline. Visual and physical inspections were carried out from the levee and road rights-of-way, focusing on visible surface features. QRI did not access private properties in performing this Phase I ESA at the request of the Client. Information provided by this Phase I ESA highlights all project area locations with Recognized Environmental Conditions (REC).

Table 6.1. Project Reach Locations

Reach	Approx. Reach Length (miles)	Work Item
East Bank Back Levee Reach 1	6.2	NOV-01
East Bank Back Levee Reach 2	9.6	NOV-02
West Bank River Levee Reach 9	3.0	NOV-09
West Bank River Levee Reach 10	12.5	NOV-10
West Bank River Levee Reach 11	11.4	NOV-11

6.2 General Site Setting

The site in Reaches 1 and 2 is a back levee system protecting the communities along the east side of the Mississippi River from Phoenix to Bohemia. In Reaches 9, 10 and 11 the site is the river levee along the west bank of the Mississippi River from Diamond to Fort Jackson.

6.2.1 Current Use(s) of the Site

The site in Reaches 1 and 2 consists of levee and levee road, undeveloped marsh and swampland, a borrow pit, residential land, forested land, canals, agricultural land, industrial land (United Bulk Terminal-back end of property), two pumping stations (Bellevue and Adema), and several small and one large boat launch/marina.

In Reaches 9, 10, and 11, the site consists of river levee and levee road, undeveloped forest/shrub wetlands on the river side of the levee with several docking facilities, and a lock at Empire; and on the protected side of the levee is residential, forested and agricultural land, lakes, industry including Tennessee Natural Gas and Freeport-McMoran, and light commercial activities.

6.2.2 Past Use(s) of the Site

Based upon historical map review, around the turn of the century land in the area was primarily used for agriculture. It was largely undeveloped, with natural levees and marsh. Based upon the relative lack of apparent commercial activity agriculture and hunting/fishing/trapping were likely the primary "industry." There was gradual growth beginning in the 1920s and 1930s in residential and agricultural use throughout the reaches. The lower reaches were serviced by railroads starting 1940s and electrical services were available in the late 1940s. During the 1960s and 1970s there was oilfield growth in the area as evidence by the increase in manmade canals, roads, and pipelines crossing the site.

6.2.3 Current Use(s) of the Surrounding Area

The land between the back levee and the Mississippi River levee (generally south and west of the site in Reaches 1 and 2) is used for residential, agricultural, and commercial/industrial activities. The communities located on this side, from north to south, include Phoenix, Harlem, Bellevue, Davant, Nero, Pointe a la Hache, Martin, Beshel, and Bohemia. There are some maritime and oilfield activities in the marsh (generally north and east of the site).

The land on the west side of the Mississippi River in Reaches 9 - 11 is generally more developed than the east side of the river, and is also used for residential, agricultural, and commercial/industrial activities. Communities along this side, from north to south, include Diamond, Happy Jack, Port Sulphur, Homeplace, Empire, Buras, Triumph, Boothville, and Venice.

6.2.4 Past Use(s) in the Surrounding Area

In the late 1800s, on the north/northeast side of the river, there were a few small communities including St. Sophie (Phoenix), Harlem, Belvue, Favret (Davant), Pointe a la Hache, Empire Mills (Martin) and Bohemia. On the south/southwest side of the river there were small communities including Myrtle Grove, Oakland, Deer Range, Point Celeste, City Price, Potash, Home Place (Homeplace), Empire, Buras, and Ft. Jackson. There was rail and road service as well as river transport and numerous canals with access to the marshes and the Gulf of Mexico. Agriculture and maritime activities were the primary land uses until later shipping and oilfield development in the mid to late twentieth century.

6.2.5 Geologic, Hydrogeologic, Hydrologic and Topographic Conditions

The geology of the site is Quaternary fluvial deposits - the most recent deposits are natural levee deposits (Appendix B). The topography of this entire site is relatively flat as it is part of a major river delta. The Mississippi River flows in a generally northwest to southeast direction throughout these five reaches. Phase I investigations do not reveal sub-surface hydrology.

6.2.6 General Description of Structures

Residential structures on the site are mobile homes and wood framed homes. Commercial structures are primarily concrete block and brick faced steel and wood framed buildings.

Commercial/government structures include the Empire Lock, Sundown West Potash Facility, Bellevue and East Pointe a la Hache Pumping Stations, convenience store/gasoline stations, and the Buras Recreational Center.

6.2.7 Roads

Highway 39 is parallel to and generally to the west of the back levee along Reaches 1 and 2. Various cross roads intersect this highway, connecting it with Highway 15 which parallels the river to the west.

Highway 23 roughly parallels the river beginning in Belle Chasse (out of the project area) down to the end of Reach 12 in Venice. Highway 11 splits off from Highway 23 just south of Home Place, closely parallels the river levee except at Buras, and extends to just upriver of Ft. Jackson.

6.2.8 Potable Water Supplies

Potable water is provided to the site area by Plaquemines Parish Water Department.

6.2.9 Sewage Disposal System

Sewage disposal is provided to the site area by Plaquemines Parish Water Department and private septic systems.

6.3 Observations

6.3.1 Hazardous Substance Use, Storage, and Disposal

QRI noted a variety of hazardous substances in reportable quantities on private properties in Reaches 1, 2, and 9 through 11. In many instances the containers were not accessible, though often they were marked with placards and therefore their contents could be ascertained. When necessary, QRI used professional judgment and experience to determine the likely contents and tank capacity. QRI did not observe any pools of liquid or stained ground. Based on the observed conditions, QRI does not consider the use, storage, and/or disposal of hazardous substances other than petroleum-based products (diesel, propane) on the site to pose an environmental threat.

QRI observed four sets of overhead pipelines crossing the back levee (RECs 6, 9, 16, and 19) in Reach 2. Limited information was available in the Louisiana Office of Coastal Management, Coastal Pipelines and Platforms April, 2010 database (which includes all permitted pipelines from 1980 to April, 2010), but the following information was determined:

- REC 6 has a three inch salt water disposal pipeline owned by Phillips Petroleum (four pipelines are present)
- REC 16 has a three inch oil pipeline owned by Bass Enterprises Production Company (four pipelines are present)
- REC 19 has two four inch natural gas pipelines owned by Southern Natural Gas that are abandoned (two eight to ten inch pipes are present).

It's noteworthy that QRI observed twelve pipelines crossings in REC 9 but no information for those lines was available in the Coastal Management database.

6.3.2 Storage Tanks

Many ASTs were observed throughout the reaches but since QRI did not have to access private property the contents and capacity of many of these were estimated. Additionally, some likely UST locations were observed though their presence was not verified because they were located on private property.

6.3.3 Odors

QRI did not note any unusual odors during site inspections.

6.3.4 Pools of Liquid

QRI did not observe any pools of liquid during site inspections.

6.3.5 Drums

QRI observed many single drums in the vegetation, along the levees, and in the canals. These were likely present as a result of recent hurricane activity. Where possible, QRI inspected the drums in an attempt to determine if they contained any chemicals and if appropriate, the identity of those chemicals.

6.3.6 Unidentified Substance Containers

QRI observed a number of containers of unidentified substances. It is likely that the contents and capacity of these containers, mostly ASTs, could have been accurately determined had QRI been granted access to the private property where these containers were located. The majority of containers of unidentified substances were likely diesel or propane.

6.3.7 Polychlorinated Biphenyls (PCBs)

Many transformers were observed along the project route. A search of the EPA PCB-containing transformers database revealed none were in Reaches 1, 2, 9, 10 or 11.

6.3.8 Pits, Ponds and Lagoons

QRI observed constructed ponds at the United Bulk Terminal (coal depot), a borrow pit at the northern boundary of Reach 1, and a pond at the Freeport McMoran facility.

6.3.9 Stained Soil or Pavement

QRI did not observe any incidences of stained soil or stained concrete/asphalt.

6.3.10 Stressed Vegetation

QRI did not observe any incidences of stained stressed vegetation.

6.3.11 Solid Waste

A number of promiscuous dump sites were observed. Generally, they contained debris and household trash. In consideration of the four hurricanes that impacted the area within the last five years it is possible that the dump sites are mainly hurricane debris. Some have been used as burn sites as well, and are considered to be a *de minimis* condition.

6.3.12 Wastewater

QRI observed lift stations along Highway 15, Route 23 and Highway 11; but did not observe any waste water treatment facilities in Reaches 1, 2, 9, 10 or 11.

6.3.13 Water Wells

Three water wells were identified within the site area. Care should be taken to avoid damaging these wells by physically determining and marking the locations of these wells before commencing any earthmoving activities. Table 6.3 presents information about water wells in Reaches 1, 2, and 9 through 11.

Table 6.2 Water Wells

N Latitude	W Longitude	Aquifer ID	Owner	Depth (feet BGS)	Use

6.3.14 Septic Systems

QRI did not specifically observe non-municipal septic systems though there are likely some on the inaccessible private properties.

6.3.15 Other Conditions of Concern

A variety of conditions were noted that were not classifiable as RECs, HRECs, or *de minimis* conditions. Information about sites of concern is presented in Table 6.3. Sewer lift stations are the most common conditions of concern; and there are many throughout the reaches.

Hurricane debris is minimally present in Reaches 1 and 2. Hurricane debris in Reaches 9, 10 and 11 includes boats, tanks, and remains of previous residential and commercial structures. QRI noted at least nine (9) promiscuous (unofficial) dump sites in Reaches 9 through 11. Typically these contained construction debris, junked autos/auto parts, scrap metal, and household debris. There are also many potential PCB-containing transformers throughout the reaches though only one, at the Tennessee Natural Gas facility in Port Sulphur, is listed in the EPA PCB Transformer Registration Database (and is probably located out of the site area).

Other conditions of concern include a dump site that is almost completely covered with vegetation and therefore was difficult to assess in terms of contents and potential hazard level, and an abandoned electrical substation. Representative photos of the conditions of concern are presented in Appendix H.

Table 6.3 Other Conditions of Concern

Reach 1		
N Latitude	**W Longitude**	**Description**
29 38 56.40	89 56 36.96	Bellsouth Fiber Optic lines
29 38 34.80	89 55 12.36	Valve in a cement vault at boat launch
29 37 02.63	89 51 26.63	Abandoned above-ground pipeline
Reach 2		
29 36 49.68	89 50 59.99	Waterline cover
29 36 44.64	89 50 44.16	Abandoned above-ground pipeline
29 35 40.20	89 48 46.80	Abandoned above-ground pipeline
29 33 56.87	89 46 00.12	Abandoned above-ground pipeline
Reach 9		
29 32 40.28	89 46 14.55	Low overhead electrical line
Reach 10		
29 31 17.80	89 43 53.12	Significant debris
29 28 20.41	89 41 06.10	Appears to have been a backyard mechanic at one point
29 28 04.09	89 40 45.87	Plaquemines Parish heavy equip stockpile area
29 28 01.50	89 40 41.67	Metal debris; assessment hindered by heavy vegetation
29 24 33.67	89 36 38.10	ATMOS Energy Natural Gas pipeline. May extend into project area
Reach 11		
29 21 34.45	89 32 13.08	Transformers, but not on EPA PCB website

6.4 Interior Observations

The interiors of buildings along the corridor were not accessed during the site inspection at the request of the Client.

7.0 INTERVIEWS

As requested by the Vicksburg USACE, QRI did not conduct interviews with occupants or operators. However, when Plaquemines Parish Government was contacted by telephone regarding potable water, sewer, electrical utility and natural gas services, a representative of the Plaquemines Parish Government informed QRI of the providers of these services as given in this report.

8.0 FINDINGS AND OPINIONS

In this section QRI identifies known or suspected recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and *de minimis* conditions, and provides opinions on the potential impacts of these conditions.

8.1 Known or Suspect Recognized Environmental Conditions

The ASTM Standard E 1527-05 (2005) defines a recognized environmental condition (REC) as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property." A REC can include petroleum products or hazardous substances even under conditions that are in compliance with applicable laws.

Eighty RECs were observed during site assessment activities associated with Reaches 1, 2, 9, 10 and 11. The details of these RECs are presented in Tables 8.1 through 8.5. Photographs of the RECs are presented Appendix I. The most common RECs in Reaches 1, 2, 9, 10 and 11 are ASTs and pipelines. Many presumed or confirmed diesel and propane ASTs were observed, particularly at private residences. This is fairly common in rural areas. Because of the abundance of O&G activity in the area there are many pipelines and associated separator, production, transport, and metering facilities in the area. Because of the potential presence of petroleum products all of these sites are considered RECs. Additionally, isolated drums of unknown contents were commonly observed in the canals and on dry land. These individual and isolated drums are likely storm-related debris. The area has sustained damages from four major hurricanes in the last five years – Katrina, Rita, Gustave and Ike.

QRI contends that as long as levee enlargement activities are conducted in a safe and conscientious manner, taking care not to damage ASTs, wells, or pipelines in and around the levees, none of the RECs cited in this report should prevent the earth-moving activities from being conducted. The hazardous materials are currently contained; as long as they are not released into the environment they should pose no additional threat. Specific recommendations by types of RECs are presented in Section 1.7.

8.2 Historical Recognized Environmental Conditions

No historical recognized environmental conditions (HRECs) were noted for Reaches 1, 2, 9, 10 and 11.

8.3 *De Minimis* Conditions

According to the ATSM standard, *de minimis* conditions those that generally do not present a threat to human health or the environment and that would not be the subject of an enforcement action if brought to the attention of the appropriate government agencies.

Three example environmental concerns that are *de minimis* conditions are noted in Table 8.6. These *de minimis* sites are not likely to cause problems for the USACE. Photographs of these

three typical *de minimis* conditions are presented in Appendix H. Other *de minimis* conditions may be present in Reaches 1, 2, 9, 10 and 11.

Table 8.1 Reach 1 Recognized Environmental Conditions (RECs)				
Facility Name/Description	**REC #**	**N Latitude**	**W Longitude**	**REC Issues**
Private Residence	1	29 38 53.63	89 56 07.80	AST

9.0 CONCLUSIONS

Quaternary Resource Investigations, LLC (QRI) conducted this Phase I Environmental Site Assessment (ESA) according to the guidelines of ASTM Standard Practice E 1527-05. Any exceptions to, or deletions from, this practice are described in Sections 2.0 and 10.0 of this report. QRI found a total of 80 RECs in Reaches 1, 2, 9, 10 and 11, which are summarized in Tables 1.1 through 1.5 and again in Tables 8.1 to 8.5. As long as construction activities are conducted in a safe and conscientious manner, taking care not to damage ASTs, wells, or pipelines in and around the levees, none of the RECs cited in this report should prevent the earth-moving activities on the levees from being conducted. The hazardous materials present on the subject property are currently contained, and as long as they are not released into the environment they should pose no additional threat. The larger debris piles and abandoned tanks and boats may require removal, but the other RECs can be avoided.

Specific recommendations, by types of RECs, are presented below:

ASTs – in the majority of instances the ASTs are far enough away from the levees, *i.e.* no closer than 100-feet, that they do not specifically pose a hazard to earth-moving activities associated with levee construction/enlargement. QRI recommends that the USACE contractors who conduct the enlargement activities notify the landowners at the respective AST locations of the impending earth-moving activities. The landowners would have the ability to be present when activities were taking place and the responsibility of ensuring that their ASTs were not impacted or damaged by the USACE activities.

Drums – There are isolated drums throughout the reaches, most of which are unlabelled. Where possible, before listing a drum as a REC QRI examined the drums to make certain that they were intact and contained something. Empty drums are not a REC but in some cases QRI could not determine if the drums were empty. If drums cannot be avoided during levee construction/enlargement activities QRI recommends that the drums be properly removed and disposed of.

Debris piles/dump sites – There are many piles of hurricane debris and there are many promiscuous dumpsites throughout the project area, throughout all of the reaches. QRI asserts that, as with the ASTs, these sites do not specifically pose a hazard to earth-moving activities associated with levee construction and enlargement because they can be avoided during earth-moving activities. Obtrusive debris, including tanks and boats should be properly removed.

Pipelines – There is an abundance of pipelines in all of the reaches. QRI recommends that the operators of these lines be notified of impending construction/enlargement activities and request the operators mark the exact location of these lines. The USACE should also coordinate with the operators of these lines so that safe construction methods are used when working around these lines. There are also above-ground lines present in the reaches that may require relocation or modification.

Water Lines – QRI recommends that the USACE contact the Plaquemines Parish Government to locate water lines before commencing earth-moving activities.

Power Lines – QRI recommends that the USACE avoid contact with overhead power lines present in the site area, some of which are somewhat close to the ground and could be a hazard to tall equipment.

Waste Water Treatment Plants/Lift Stations - Because of the raw sewage associated with waste water treatment facilities and with lift stations, care must be taken to avoid these facilities. QRI recommends that the USACE contact the Plaquemines Parish Government to locate sewer lines before commencing earth-moving activities.

Private residences – There are a variety of types of RECs on private property throughout the reaches. In all instances the item(s) that are on these sites that make the site a REC can be avoided during earth-moving activities. These activities should be coordinated with the landowners in both the site area and of adjacent properties**.**

10.0 DEVIATIONS

QRI conducted and prepared this Phase I ESA in accordance with ASTM Standard E 1527-05, with the following client-requested exceptions:

- Interviews were not conducted.
- No title searches were conducted.
- No environmental liens or activity and use limitations (AULs) were determined
- City directories were not reviewed.

11.0 ADDITIONAL SERVICES

No additional services were provided in association with this Phase I ESA.

1.0 EXECUTIVE SUMMARY

1.1 Subject Property

Plaquemines Parish Federal Levee Project
Diamond to Venice (east bank back levees), Plaquemines Parish, LA
Fort Jackson to Venice (Mississippi River levee), Plaquemines Parish, LA
US Army Corps of Engineers Contract Number: W912EE-07-D-0013
Task Order Number: 0004
Item Number: 0004 (Reaches 5, 6, 7, 8, 12)

1.2 Inspection Date(s)

March 17-18, 2010; March 30 – April 1, 2010; May 6, 2010

1.3 Name of Inspector(s)

Teresa Russin, Douglas Martin, Kim Barton

1.4 Client and User

Client: USACE-MVK
User: USACE-MVK

1.5 Site Descriptions and General Observations

Reach 5: Beginning at the juncture of the river levee and the back levee at approximately 29° 32' 49.50" N latitude and 89° 46' 24.61" W longitude, continue southwest to approximately 29° 35' 32.84" N latitude and 89° 46' 44.95" W longitude, then continue southeast following the back levee to approximately 29° 31' 21.62" N latitude and 89° 44 27.47 W longitude. This back levee passes through marshland on the west side and Highway 23 on the east side, with agricultural, arboreal and residential land on the east side of Highway 23. Diamond pumping station is located in this stretch of back levee.

Reach 6: Beginning at approximately 29° 31' 21.62" N latitude and 89° 44 27.47 W longitude, continue southeast and east following the back levee until approximately 29° 24' 37.38" N latitude and 89° 36' 56.21" W longitude. This stretch of back levee passes through marshland (on the west and south side of the levee), with a canal on the east and north side of the levee. On the east and north side of the canal is found residential, arboreal, industrial and agricultural land. Two pumping stations (Hayes and Gainard Woods #2) are located in this stretch of back levee.

Reach 7: Beginning at approximately 29° 24' 37.38" N latitude and 89° 36' 56.21" W longitude, continue southeast, east and northeast following the back levee to approximately 29° 20' 29.41" N latitude and 89° 27' 26.43" W longitude. This stretch of back levee passes through marshland on the west and south side of the levee with a canal on the east and north side of the levee. On the east and north side of the canal is found residential, arboreal and industrial land. Parts of this back levee are used for grazing of cattle and horses. Sunrise #2 and Grand Bayou DeLiard Pumping Stations are located in this stretch of back levee.

Reach 8: Beginning at approximately 29° 20' 29.41" N latitude and 89° 27' 26.43" W longitude, continue east and southeast along the back levee to approximately 29° 16' 09.52" N latitude and 89° 21' 21.36" W longitude. This stretch of back levee passes through marshland on the south and west side of the levee with a canal on the north and east side of the levee. On the north and east side of the canal is found residential, arboreal and industrial land. This back levee joins with the Mississippi River levee in Venice at its southeast terminus. Duvic Pumping Station is located in this stretch of the back levee.

Reach 12: Beginning at Fort Jackson approximately 29° 21' 17.04" N latitude and 89° 27' 08.17" W longitude, continue southeast following the Mississippi River levee, curving around the southern tip of Venice to approximately 29° 16' 09.52" N latitude and 89° 21' 21.36" W longitude where this reach joins with the back levee (Reach 8). This river levee passes through residential, arboreal, commercial and industrial land. Numerous docks are present along the river and especially in Venice.

1.6 Findings and Conclusions

Quaternary Resource Investigations, LLC (QRI) conducted this Phase I Environmental Site Assessment (ESA) according to the guidelines of ASTM Standard Practice E 1527-05. Any exceptions to, or deletions from, this practice are described in Sections 2.0 and 10.0 of this report.

Seventy-three (73) recognized environmental conditions (RECs) were located in Reaches 5, 6, 7, 8, and 12 and are presented in Tables 1.1 to 1.5. An aerial overview of Reaches 5, 6, 7, 8, and 12 is presented in Figure 1. Maps of the locations of the 73 RECs are presented at the end of this report in Figures 2-15, presented from north to south.

As long as maintenance activities are conducted in a safe and conscientious manner, taking care not to damage ASTs, wells, or pipelines in and around the levees, none of the RECs cited in this report should prevent the earth-moving activities on the levees from being conducted. The hazardous materials present on the subject property are currently contained; as long as they are not released into the environment they should pose no additional threat. The larger debris piles and abandoned tanks and boats may require removal but the other RECs should generally just be avoided. Specific recommendations, by types of RECs, are presented in section 1.7.

1.7 Recommendations

Generally, QRI contends that as long as maintenance activities are conducted in a safe and conscientious manner, taking care not to damage ASTs, wells, or pipelines in and around the levees, none of the RECs cited in this report should prevent the earth-moving activities on the levees from being conducted. The hazardous materials present on the subject property are currently contained; as long as they are not released into the environment they should pose no additional threat. The larger debris piles and abandoned tanks and boats may require removal but the other RECs should generally just be avoided.

Specific recommendations, by types of RECs, are presented below:

ASTs – in the majority of instances the ASTs are far enough away from the levees, i.e. no closer than 100-feet, that they do not specifically pose a hazard to earth-moving activities associated with levee-resurfacing/re-building. QRI recommends that the USACE/contractors who conduct the repairs notify the landowners at the respective AST locations of the impending earth-moving activities. The landowners would have the ability to be present when activities were taking place and the responsibility of ensuring that their ASTs were not impacted/damaged by the USACE activities.

Drums – There are isolated drums throughout the reaches, most of which are unlabelled. Where possible, before listing a drum as a REC QRI examined the drums to make certain that they were intact and contained something. Empty drums are not a REC but in some cases QRI could not determine if the drums were empty. If drums cannot be avoided during levee construction/enlargement activities QRI recommends that the drums be properly removed and disposed of.

Debris piles/dump sites – There are many piles of hurricane debris and there are many promiscuous dumpsites throughout the project area, throughout all of the reaches. QRI asserts that, as with the ASTs, these sites do not specifically pose a hazard to earth-moving activities associated with levee construction and enlargement because they can be avoided during earth-moving activities. Obtrusive debris, including tanks and boats should be properly removed.

Pipelines – There is an abundance of pipelines in all of the reaches. QRI recommends that the operators of these lines be notified of impending construction/enlargement activities and request the operators mark the exact location of these lines. The USACE should also coordinate with the operators of these lines so that safe construction methods are used when working around these lines. There are also above-ground lines present in the reaches that may require relocation or modification.

Water Lines – QRI recommends that the USACE contact the Plaquemines Parish Government to locate water lines before commencing earth-moving activities.

Power Lines – QRI recommends that the USACE avoid contact with overhead power lines present in the site area, some of which are hanging close to the ground and could be a hazard to tall equipment.

Waste Water Treatment Plants/lift stations - Because of the raw sewage associated with waste water treatment facilities and with Lift Stations care must be taken to avoid adversely impacting these sites.

Private residences – There are a variety of types of RECs on private property throughout the reaches. In all instances the item(s) that are on these sites that make the site a REC can be avoided during earth-moving activities. Coordination with the landowners prior to earth-moving activities is recommended.

2.0 INTRODUCTION

2.1 Purpose

The purpose of a Phase I ESA is to identify, to the extent feasible, recognized environmental conditions pursuant to ASTM Standard Practice E 1527-05; and certain potential environmental conditions outside the scope of ASTM Standard Practice E 1527-05 in connection with the property at the time of the site reconnaissance. A recognized environmental condition (REC) is defined as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes petroleum products or hazardous substances even under conditions in compliance with laws. The term does not include *de minimis* conditions, which do not generally present a threat to human health or the environment and would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs. This report documents the findings, opinions, and conclusions of the Phase I ESA.

The specific purpose of this Phase I ESA is to document RECs for the USACE to consider prior to their scheduled repairs of the levees from Diamond to Venice, and from Ft. Jackson to Venice.

2.2 Scope of Work

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E 1527-05 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances with the following exceptions. Due to the geometry of the property and the multitude of property owners stretched over approximately 46.9 miles of levees, the client requested no individual interviews with property owners and facility operators, no access of private property to assess or photograph potential RECs, all inspections to be performed from adjacent right-of-ways, and without conducting chain-of-title or environmental lien searches.

2.2.1 Records Review

Historical Research: Historical sources are used to develop a history of the previous uses of the property and surrounding area to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. The standard historical sources used in this investigation were historical aerial photographs and historical topographic maps. Sanborn maps were sought but were not available for any of this property. At the direction of the User chain of title and environmental lien searches were not conducted.

Physical Setting Research: Various maps and photographs and geographic sources were reviewed and observations of the site were made to evaluate the hydro-geological and geological conditions of the site and surrounding properties. These data provide information such as soil classification and surface water flow. Soil maps were obtained from the Natural

Resources Conservation Service (NRCS) United States Department of Agriculture (USDA) Web Soil Survey website.

Environmental Public Records Review: Reasonably ascertainable local, state, tribal and federal environmental records and the regulatory database search were reviewed to assess the likelihood of environmental problems from on-site or nearby petroleum product contamination or any other hazardous substances. Public records identifying these facilities provide an indication of the potential for RECs to be present at the site. Records review was performed by Environmental Data Resources, Inc. (EDR) and their report is provided in Appendix A. The conclusions and recommendations of this report are based in part on this information. The data reviewed during this investigation appeared to be accurate; however, the provided services do not include the verification of the accuracy or authenticity of information provided by others and may not be completely comprehensive.

2.2.2 Site Reconnaissance

On-Site Reconnaissance: Visual inspection conducted as part of this investigation included observing the levee and lateral area (buffer of 325 feet on either side of the levee) from the levee top as well as physically traversing areas of interest. Care was taken to remain within the levee and roadway right-of-way during the investigation to avoid trespassing on private property. Observation of operations and conditions of the properties within the area of interest were focused on the potential for RECs. RECs and potential environmental concerns were documented and photographed by investigators.

Off-Site Reconnaissance: Visual inspection conducted as off-site reconnaissance included observing the adjoining properties outside the area of concern (buffer of 325 feet on either side of the levee) during a vehicular inspection. Observation of operations and conditions of the properties adjoining the area of interest were focused on the potential for RECs. RECs and potential environmental concerns were documented by investigators.

2.2.3 Interviews

In accordance with the client's instruction interviews were not conducted with site owners and/or occupants.

2.2.4 Report Preparation

This report was prepared based on information obtained from site reconnaissance and from reviewing available records. This report was prepared within the professional conduct of the industry and in accordance with the contract. No other warranties, representations or certifications are made.

2.3 Limitations

The findings and conclusions of this report based upon professional judgment concerning the significance of the data gathered during the course of the assessment. QRI was able to assess the presence of hazardous substances, petroleum products, or other latent conditions as much

as they were existent and detectable at the time of the site inspections. The possibility always exists for contaminants to be present in and migrate through surface water, air, soil, or groundwater. The ability to accurately address the environmental risks associated with transport in these media is beyond the scope of a Phase I ESA. The opinions expressed by QRI with reference to the subject property only pertain to the conditions that existed at the subject property during the time in which the site inspection was conducted.

2.3.1 Data Gaps

A "data gap" is the failure to obtain information required by the standard in spite of good faith efforts by the environmental professional to gather the information. For this subject property, some information that would normally be available for a property, e.g. Sanborn maps, does not exist. The inability to collect information that does not exist does not constitute a data gap.

2.4 Special Terms and Conditions

Due to the geometry of the property and the multitude of property owners stretched over approximately 46.9 miles of levees, the client requested that QRI not conduct interviews or research environmental liens or title records.

2.5 User Reliance

This report is for the use and benefit of, and may be relied upon by, United States Army Corps of Engineers (USACE) and any of its affiliates, and third parties authorized in writing by USACE, and QRI. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the Property that were not discovered within the authorized scope of the assessment.

QRI makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental professionals in assembling relevant data and information to prepare the site assessment report.

3.0 SITE DESCRIPTION

3.1 Location

Reach 5: Beginning at the juncture of the river levee and the back levee at approximately 29° 32' 49.50" N latitude and 89° 46' 24.61" W longitude, continue southwest to approximately 29° 35' 32.84" N latitude and 89° 46' 44.95" W longitude, then continue southeast following the back levee to approximately 29° 31' 21.62" N latitude and 89° 44 27.47 W longitude. This back levee passes through marshland on the west side and Highway 23 on the east side, with agricultural, arboreal and residential land on the east side of Highway 23. Diamond pumping station is located in this stretch of back levee.

Reach 6: Beginning at approximately 29° 31' 21.62" N latitude and 89° 44 27.47 W longitude, continue southeast and east following the back levee until approximately 29° 24' 37.38" N latitude and 89° 36' 56.21" W longitude. This stretch of back levee passes through marshland (on the west and south side of the levee), with a canal on the east and north side of the levee. On the east and north side of the canal is found residential, arboreal, industrial and agricultural land. Two pumping stations (Hayes and Gainard Woods #2) are located in this stretch of back levee.

Reach 7: Beginning at approximately 29° 24' 37.38" N latitude and 89° 36' 56.21" W longitude, continue southeast, east and northeast following the back levee to approximately 29° 20' 29.41" N latitude and 89° 27' 26.43" W longitude. This stretch of back levee passes through marshland on the west and south side of the levee with a canal on the east and north side of the levee. On the east and north side of the canal is found residential, arboreal and industrial land. Parts of this back levee are used for grazing of cattle and horses. Sunrise #2 and Grand Bayou DeLiard Pumping Stations are located in this stretch of back levee.

Reach 8: Beginning at approximately 29° 20' 29.41" N latitude and 89° 27' 26.43" W longitude, continue east and southeast along the back levee to approximately 29° 16' 09.52" N latitude and 89° 21' 21.36" W longitude. This stretch of back levee passes through marshland on the south and west side of the levee with a canal on the north and east side of the levee. On the north and east side of the canal is found residential, arboreal and industrial land. This back levee joins with the Mississippi River levee in Venice at its southeast terminus. Duvic Pumping Station is located in this stretch of the back levee.

Reach 12: Beginning at Fort Jackson approximately 29° 21' 17.04" N latitude and 89° 27' 08.17" W longitude, continue southeast following the Mississippi River levee, curving around the southern tip of Venice to approximately 29° 16' 09.52" N latitude and 89° 21' 21.36" W longitude where this reach joins with the back levee (Reach 8). This river levee passes through residential, arboreal, commercial and industrial land. Numerous docks are present along the river and especially in Venice.

3.2 Site and Vicinity General Characteristics

At the time of the site investigation, the site consisted of approximately 46.9 miles of levee passing through marsh, pasture, forested land, residential and some industrial/commercial properties. In Reaches 5-8, the marsh was on the (generally) southwestern side of the back levee and the pasture, forested land and residential and industrial/commercial properties were

located on the interior (generally) northeastern side of the levee. For Reach 12, the Mississippi River was on the northeastern side of the levee, along with some arboreal and marsh land, and on the southwest side of the levee were located residential, arboreal and commercial/industrial properties. Figure 1 provides an overview of the site and surrounding area.

3.3 Current Use(s) of the Property

The site use is currently a mixture of residential, agricultural, and industrial/commercial applications; including docks, six pumping stations, air transportation facilities, petroleum product pipelines and associated facilities, Freeport-McMoran facility, Tennessee Natural Gas facility and various Plaquemines Parish facilities (including sewer lift stations and community recreational centers).

3.4 Structures, Roads and Other Improvements on the Site

The site contains a road on top of the levee as well as main roads running roughly parallel to the levees throughout all of the reaches. The levees can be accessed from developed roads including Highways 11 and 23. Currently the site is developed with industrial/commercial and residential structures throughout. The site was more heavily developed prior to hurricanes Katrina and Rita in 2005, and Hurricanes Gustave and Ike in 2008. Some portions of the site have been redeveloped since the four hurricanes. Most of the vertical structures are mobile homes and concrete block buildings. Heat is provided to the site area by natural gas and electrical heating units and cooling is provided by central and window air conditioning units. Utilities are present throughout the developed areas of the site.

3.4.1 Existing Structures

The site is developed with occasional industrial/commercial and residential structures present. Most of the buildings are mobile homes and the pumping stations are concrete block buildings. There are also wood frame buildings faced with wood or vinyl siding. In the surrounding area, vinyl fabric over frame structures and steel-sided buildings are also present.

3.4.2 Existing Roads

Reaches 5-8 and 12 are roughly paralleled by the main roads, Highway 23 and Highway 11, throughout the length with cross roads present as well. The roads are not always within the 325' buffer zone. The levee road can be accessed intermittently in all the reaches. In Reach 5, the levee is accessed at its northwest corner, at it southeast corner, at Grand Bayou and at several small unnamed crossings. Reach 6 must be accessed at pumping stations, at locked gates at Martin Lane, at locked gates behind the Plaquemines Parish Government building and next door at the Freeport-McMoran facility and at Milan Avenue. Much of Reach 7 is gated due to livestock grazing and at least one locked gate provides access in Reach 7 at the road that leads to the floodgate just south of the bridge at Empire. Reach 7 can be accessed at several unnamed crossover roads, the pumping stations, Amvina Road, Cazezu Drive and Rock Road. Reach 8 is accessible at Compactor Road, Nells Lane, the pumping station, and at its juncture with Reach 12 and Highway 23 in Venice. Reach 12 can be accessed at Fort Jackson, Deadsmans Lane, Gille Lane, near Bertha Lane, GBH Lane, Marathon Lane, Sisung Lane,

Guns Lane, at its intersection with Reach 8 and Highway 23 and at least one other unnamed access road.

3.4.3 Heating/Cooling System

Heat is provided to the structures in the subject area by natural gas and electrical heating units; cooling is provided by central and window air conditioning units.

3.4.4 Utilities (including Sewage Disposal)

Electrical service to residential and commercial buildings is provided by Entergy, natural gas is provided by Atmos Energy, and water and sanitary sewer services are provided by Plaquemines Parish or by private septic systems (sewer only).

3.4.5 Potable Water

Potable water is provided via municipal water supply by Plaquemines Parish Water Department.

3.5 Current Uses of Surrounding Area

Current uses of properties in the surrounding area are presented briefly in Tables 3.1 to 3.3 and in detail in Section 6.2.

Table 3.1 Current Uses of Surrounding Properties, Reaches 5

Direction From Site	Current Use
North	Land with agricultural, residential and commercial use to river levee, Mississippi River, light commercial/agricultural development in leveed area on east bank, marshland to Chalmette
East	Mississippi River, then marshland for approximately 20 miles merging into the Gulf of Mexico
South	Approximately 15 miles of marshland merging into the Gulf of Mexico
West	Marshland for ~30 miles to the LaFourche delta

Table 3.2 Current Uses of Surrounding Properties, Reaches 6 and 7

Direction From Site	Current Use
North	Land with agricultural, residential and commercial use to river levee, Mississippi River, marshland with O & G activity then Breton Sound
East	Land with commercial/residential development to river levee, Mississippi River, then ~3 miles of marshland merging into Breton Sound
South	Marshland (Reach 6, 9-14 miles, Reach 7, 7-9 miles) merging into the Gulf of Mexico
West	Marshland for ~30 miles to the LaFourche delta

Table 3.3 Current Uses of Surrounding Properties, Reaches 8 and 12	
Direction From Site	**Current Use**
North	Land with residential/commercial development (Reach 8 only), Mississippi River, ~1 to 5 miles marsh, then Breton Sound
East	Land with residential/commercial development (Reach 8 only), Mississippi River, ~8 to 13 miles marsh then the Gulf of Mexico
South	Land with residential/commercial use protected by Levees (Reach 12 only) followed by approximately 10-12 miles of marsh or delta (marsh and channels) merging into the Gulf of Mexico
West	Land with residential/commercial use (Reach 12 only), then marshland, Barataria Bay and the Gulf of Mexico for ~30 miles to the LaFourche delta

Many properties in the surrounding area were identified in federal or state regulatory databases. QRI reviewed this data and determined that there were no environmental issues that would adversely affect earth-moving activities on the site property.

4.0 USER PROVIDED INFORMATION

The following sections presents information (if any) provided by the United States Army Corps of Engineers (User) with regard to the Phase I ESA.

4.1 Title Records

User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

User provided no information regarding property environmental liens or activity and use limitations.

4.3 Specialized Knowledge

User provided no information regarding specialized knowledge or experience pertaining to recognized environmental conditions associated with the site or the surrounding area.

4.4 Commonly Known or Reasonably Ascertainable Information

User provided no knowledge of commonly known or reasonably ascertainable information about the site that would indicate the presence of recognized environmental conditions associated with the property.

4.5 Significant Valuation Reduction for Environmental Issues

User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.6 Owner, Property Manager and Occupant Information

User provided no site contact information. User provided no additional specific information identifying the property owners, managers, or occupants of the multiple private properties.

4.7 Reason for Performing Phase I ESA

The purpose of the Phase I ESA was to determine prior to scheduled levee maintenance the potential for contamination of the levee and the surrounding area by petroleum products, pollutants or other hazardous substances within the scope of CERCLA via means consistent with customary practices in environmental consulting.

4.8 Other User Provided Documents

User provided no other documents as described in the ASTM Standard Practice E 1527-05.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

QRI reviewed the regulatory agency database report discussed in this section, provided by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, for information regarding reported releases of hazardous substances and petroleum products within a one mile (1 mi) search radius of the centerline each levee. The results of the EDR database review for all reaches are presented in Table 5.1.

Many “unmappable/orphan” sites that were potentially in the project area were presented in the EDR report. “Unmappable” or “orphan” sites are those whose locations cannot be plotted with confidence because the available site data is incomplete. QRI reviewed the information that was available on the orphan sites and if sufficient information was available conducted site reconnaissance in an attempt to locate them. Many orphan sites were listed in the EDR database. QRI conducted site reconnaissance to attempt to locate these sites. Many of the sites were found and none were deemed potential problems for the planned levee repair activities.

Table 5.1. Summary of Federal, State and Tribal Database Findings			
Regulatory Database	**Search Radius**	**Property Listed?**	**# Sites Listed**
Federal National Priority (NPL)	1 mile	No	0
Federal Proposed NPL	1 mile	No	0
Federal Delisted NPL	1 mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	1 mile	No	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	1 mile	No	1
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	0
Federal RCRIS non-CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	1 mile	No	0
Federal RCRA Generators (LQG, SQG, CESQG)	1 mile	No	10
Federal Institutional Control/Engineering Control Registry	1 mile	No	0
Federal Emergency Response Notification System (ERNS) list	1 mile	No	22
Federal Facility Index System/Facility Registry System (FINDS)	1 mile	No	30
Toxic Chemical Release Inventory System (TRIS)	1 mile	No	1
Integrated Compliance Information System (ICIS)	1 mile	No	1
PCB Activity Database (PADS)	1 mile	No	1
State and Tribal NPL	1 mile	No	0
State CERCLIS	1 mile	No	1
State Landfill or Solid Waste Disposal Sites	1 mile	No	1
State and Tribal Leaking Underground Storage Tanks (LUST/HIST LUST)	1 mile	No	0
State and Tribal Registered Underground Storage Tanks (UST)	1 mile	No	9
State Institutional Control/Engineering Control Registry	1 mile	No	0
State Voluntary Cleanup Site	1 mile	No	0
State Approved (Hurricane) Debris Sites (DEBRIS)	1 mile	No	1
Louisiana Pollutant Discharge Elimination System permitted sites (LPDES)	1 mile	No	9
State Tribal Brownfield Sites	1 mile	No	0
Reported spills or releases to land (SPILLS)	1 mile	No	18

5.2 Additional Environmental Records Sources

QRI reviewed a variety of types of Geographic Information Systems (GIS) data from the Louisiana Department of Natural Resources (LDNR) on-line GIS database (SONRIS), including wells and well pit data. In addition, QRI obtained from the Department of Homeland Security and LDNR a current database of oil and gas pipelines and platforms in coastal Louisiana.

5.3 Physical Setting Sources

The physical setting of the site and vicinity was determined by examining historical and recent USGS topographic maps of the site and surroundings, the *Geologic Map of Louisiana* (Louisiana Geological Survey) and the NRCS/USDA soils maps.

5.3.1 Regional Geology

According to the *Geologic Map of Louisiana* (1984), produced by the Louisiana Geological Survey in cooperation with the United States Geological Survey, the site is underlain by "Quaternary Natural Levees" deposits with "Quaternary Delta Plain, Saline Marsh" deposits in the marshes to the (generally) east of the back levee in Reaches 5, 6, and 7. Reaches 8 and 12 are nearly all "Quaternary Delta Plain, Fresh Marsh" except for a small portion in the vicinity of Fort Jackson which is classified as "Quaternary Natural Levee." An excerpt from this map is included in Appendix B. These natural levee deposits occur along the banks of the Mississippi River and the delta plain deposits occur in areas of active and abandoned delta lobes of the Mississippi River.

5.3.2 Topography

Based on QRI's review of the United States Geological Survey (USGS) 7.5 Minute Topographic Map Series (Pointe a la Hache, Happy Jack, Port Sulphur, Buras, Triumph, Empire and Venice Quadrangles, dated 1992-1994) the site is located at an elevation of approximately 3 to 14 feet above mean sea level (MSL). Although more recent, the topographic map series from 2009 does not include elevations. The levees represent the higher elevations, and other than the levee and man-made canals the topography is relatively flat. A copy of each of the topographic maps is included in Appendix C.

5.3.3 Soils/Geology

Review of the custom soil resource report obtained from the United States Department of Agriculture National Resources Conservation Service online Web Soil Survey indicates that the site is underlain by soils described below. After each description of the soils present in the reach, given if order from northwest to southeast (down river), brief descriptions of the soil type appear unless already referenced in an earlier reach description.

Reach 5:

At the northern section of Reach 5 (connecting the river levee and the back levee) the northeastern half is underlain by *Cancienne silty clay loam* and the southwestern half by

Shriever clay. The entire back levee reach from the northwest corner to the bottom of the reach is underlain by *Shriever clay*; and the marsh to the southwest of the levee is underlain by *Clovelly muck*.

Cancienne silty clay loam - The Cancienne series consists of very deep, level to gently undulating, somewhat poorly drained mineral soils that are moderately slowly permeable. These soils formed in loamy and clayey alluvium. They are on high and intermediate positions on natural levees and deltaic fans of the Mississippi River and its distributaries. Slopes range from 0 to 3 percent.

Shriever clay - The Schriever series consists of very deep, poorly drained, very slowly permeable soils that formed in clayey alluvium. These soils are on the lower parts of natural levees and in backswamp positions on the lower Mississippi River alluvial plain. Mean annual air temperature is 68 degrees F. near the type location, and mean rainfall is about 65 inches. Slope is dominantly less than 1 percent but ranges up to 3 percent.

Clovelly muck - The Clovelly series consists of very deep, very poorly drained, very slowly permeable soils. These soils formed in moderately thick accumulations of herbaceous organic material overlying very fluid clayey alluvial sediments. These soils are on broad coastal marshes that are nearly continuously flooded with brackish water. Slope ranges from 0 to 0.2 percent.

Reach 6:

At the junction of Reach 6 with Reach 5, the levee is underlain by *Shriever clay*, which within a few hundred meters changes to *Westwego clay*. After approximately one mile *Harahan clay* is present under the levee. On the marsh side of the reach, *Clovelly muck* is present for the northernmost two miles but then is replaced by *Lafitte muck*. These soils continue until just north of the Freeport-McMoran facility, where *Harahan clay* changes to *Westwego clay* under the levee and to the east. At this point on the marsh side, the *Lafitte muck* changes to *Bellpass muck*, dredged aquents around the pond, and then *Clovelly muck, Scatlake muck* and *Bellpass muck* again where the river turns east. *Harahan clay* replaces *Westwego clay* about 0.4 mile east of the Gainard Woods #2 Pumping Station, which then changes to *Schriever clay* 0.6 mile east. The marsh side of the levee remains *Bellpass muck*. *Schriever clay* on the east side of the levee and *Bellpass muck* on the west side continue until the southern terminus of the reach.

Westwego clay - The Westwego series consist of deep, poorly drained, very slowly permeable soils. They formed in semifluid clayey alluvium and organic material that dried and shrank irreversibly in the upper part as the result of artificial drainage. These soils are on broad, drained former swamps along the lower Mississippi River and its distributaries. Slopes range from 0 to 0.5 percent. These soils are protected from flooding by a system of levees and are artificially drained by pumps.

Harahan clay - The Harahan series consist of very deep, poorly drained, very slowly permeable soils. They formed in moderately thick firm clayey alluvium overlying fluid clayey sediments. These soils are on broad backswamp positions on the lower Mississippi River flood plain. Slopes range from 0 to 1 percent. These soils are protected from flooding by levees, and are artificially drained by pumps.

Lafitte muck - The Lafitte series consists of very deep, very poorly drained, moderately rapidly permeable organic soils that formed in herbaceous plant remains over mineral sediments.

These soils are in intermediate and brackish marshes in the extreme lower Mississippi River Delta and coastal areas. Slope ranges from 0 to 0.2 percent.

Bellpass muck - The Bellpass series consists of very deep, very poorly drained, very slowly permeable soils that formed in moderately thick herbaceous organic materials overlying fluid clayey sediments in saline coastal marshes. Slopes range from 0 to 0.2 percent. These soils are flooded very frequently by saltwater during high tides.

Scatlake muck - The Scatlake series consists of very deep, very poorly drained, very slowly permeable fluid mineral soils. These soils formed in unconsolidated saline clayey and organic sediments. These soils are in saline marsh areas along the Gulf Coast. Slope ranges from 0 to 0.2 percent.

Reach 7:

Reach 7 begins with *Schriever clay* on the east side of the levee and *Bellpass muck* on the west (marsh) side of the levee as at the end of Reach 6. This continues until close to Doullut Canal, where the Empire lock and a bridge and floodgate are located and dredged aquents are prevalent near the water on both sides of the levee. About 1.2 miles south of the bridge, *Westwego clay* is present to the east of the levee for about 0.6 mile, when *Harahan clay* replaces it. The marsh side of the levee remains dredged aquents. *Harahan clay* to the north and dredged aquents to the south continue through Buras and until the end of the reach near Fort Jackson.

Reach 8:

In Reach 8 *Harahan clay* is present to the north and east of the levee and dredged aquents are present south and west of the levee for its entire length.

Reach 12:

At the upstream end of the reach, Fort Jackson is underlain by *Schriever clay*. On the other side of the lake east of Fort Jackson *Cancienne silty clay loam* is found on the south and west side of the river levee. This soil is present until around Patton Lane, where *Harahan clay* is found across the entire protected area. About 0.25 mile south, *Cancienne silty clay loam* reappears for about 0.5 mile, and then *Harahan clay* is found across the entire protected area for the remainder of the reach. On the river side of the levee are found *Carville, Cancienne and Schriever* soils, frequently flooded throughout the entire reach.

Carville Series - The Carville series consists of very deep, somewhat poorly drained, moderately permeable soils that formed in recent loamy alluvium. These soils are on nearly level to very gently sloping natural levee positions on flood plains, mainly along the Mississippi River and its distributaries. Slopes range from 0 to 2 percent.

A copy of the soil resource report specifically generated for this project is included in Appendix D.

5.3.4 Hydrogeology

Little reasonably ascertainable information is available on the hydrogeology of Plaquemines Parish and hydrogeologic investigations are out of the scope of ASTM Phase I assessments.

Generally, the geology in the area is Quaternary fluvial deposits, most recently natural levee deposits. The topography of this entire site is relatively flat as this site is part of a major river delta. The Mississippi River flows in a generally northwest to southeast direction throughout these reaches. A geologic map was presented in Appendix B.

5.3.5 Other Physical Setting Sources

Federal Emergency Management Agency (FEMA) Flood Plain Maps

QRI reviewed the 1985 Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM) for Reaches 5, 6, 7, 8, and 12 and the surrounding areas. Describing the flood zones from north to south, in Reach 5 the area between the front and back levees is zoned A99 (areas of 100 year flood to be protected by flood protection system under construction; base flood elevations and flood hazard factors not determined) and A2 (EL 1.0), which means the flood depth would be 1 foot in a 100 year flood. The marsh southwest of the levee is zoned A16 (EL 10), which means the flood depth would be 10 feet in a 100 year flood; and the area is susceptible to flooding effects from the Gulf of Mexico. Reach 6 is zoned similarly to Reach 5 - inside the levee it is zoned A2 (EL 1.0 to EL 1.5) and A99, and outside the levee in the marsh it is zoned A16 (EL 10 to EL 12) with flooding effects from the Gulf of Mexico throughout most of the reach with the marsh in the southernmost part of the reach zoned V21 (EL 13), which means it is an area of 100 year coastal flood with velocity (wave action); base flood elevations and flood hazard factors determined and the depth of the 100 year flood would be 13 feet. Reach 7 is also similarly zoned to Reaches 5 and 6 but generally the flood depth and severity increases downriver. The area protected by the levee is zoned A99, A2 (EL 1.5) and A3 (EL 1.5 to 4.5) and the marsh area is zoned V21 (EL 13 to EL 14). Reaches 8 and 12 are opposite and largely parallel to each other with protected land between them. The zoning of the protected area is zoned A3 (EL 3.5 to 4.5) and A99, and the marsh area outside the levee is zoned V21 (EL 13 to 15). The Mississippi River is zoned V6 and V10, which means it is an area of 100 year coastal flood with velocity (wave action); base flood elevations and flood hazard factors determined. The flood zone designations are not considered to present an environmental concern to the property, although flooding can result in environmental contamination from sources outside the area brought in by floodwaters. Copies of the relevant FIRM maps and the flood map codes are presented in Appendix E.

Wetlands Maps

Based on review of the digital version of the U.S. Department of the Interior, Fish & Wildlife Service's National Wetland Inventory Maps (http://www.fws.gov/wetlands/data/index.html), QRI determined that throughout all five reaches wetlands (freshwater forested/shrub, estuarine and marine, and freshwater emergent) exist outside of the levee protected area and the protected areas remain classified as non-wetland (Reach 5), with small scattered areas of freshwater forested/shrub wetland, lakes and freshwater emergent wetland (Reaches 6-8, 12). This investigation did not include a formal wetland determination. The National Wetlands Inventory map sections are included in Appendix F.

5.4 Historical Use Information on the Site

Based upon historical map review, around the turn of the century land in the area was primarily used for agriculture. It was largely undeveloped, with natural levees and marsh. Based upon the

relative lack of apparent commercial activity agriculture and hunting/fishing/trapping were likely the primary "industry." There was gradual growth beginning in the 1920s and 1930s in residential and agricultural use throughout the reaches. The lower reaches were serviced by railroads starting 1940s and electrical services were available in the late 1940s. During the 1960s and 1970s there was oilfield growth in the area as evidence by the increase in manmade canals, roads, and pipelines crossing the site.

5.5 Historical Use of the Surrounding Area

In the late 1800s there were a few small communities - Potash (Port Sulphur), Little Texas Guyot Settlement, Empire, Sunrise, Buras Settlement and Fort Jackson. There was no settlement below Fort Jackson. There was rail and road service as well river transport and numerous canals with access to the marshes and the Gulf of Mexico. Agriculture and maritime activities were the only main uses until later shipping and oilfield development in the mid to late twentieth century.

5.6 Standard Historical Sources Reviewed

5.6.1 Aerial Photographs

QRI reviewed aerial photographs and digital orthophoto quarter quadrangles (DOQQs) of the property and surrounding areas obtained from EDR and from Louisiana State University's online database (LSU Atlas). Aerial photographs were available from the time period of 1956 to 2005. Changes in land use in Reaches 5-8, and 12 are summarized in Tables 5.3 to 5.7. For ease of presentation the information is presented according to reach number. QRI did not find any additional or previously unknown RECs in this review. Relevant portions of the aerial photographs containing the reaches and surrounding areas are included in Appendix G.

Table 5.3 Aerial Photograph Historic Use Summary

Reach 5

Year	Scale	Comments
1956	1 inch = 2,500 feet	Property: Primarily undeveloped/farmland at the northern boundary, few private residences, some commercial/O&G-related activity. Agricultural lands extending to the southern boundary. Surrounding Area: Partially broken marsh extending from approximately 0.5 mile from the levees, south/southwest. Mississippi River to the northwest.
1971	1 inch = 6,666 feet	Property: Little change from 1956; primarily undeveloped/farmland, with some commercial/O&G-related activity. Surrounding Area: Little change from 1956; primarily undeveloped/farmland, with many O&G-related cuts/access canals in the marsh south/southwest.
1978	1 inch = 5,503 feet	Property: Increased residential and commercial/O&G activity since 1971 along the entire reach. Surrounding Area: Many O&G-related cuts/access canals in the marsh south/southwest.
1989	1 inch = 3,333 feet	Property: O&G access canals/slips seen around Diamond in the 1978 imagery are no longer visible. Still largely a mix of agriculture and O&G activities, with steadily and slowly increasing residential use. Surrounding Area: Heavy O&G activity and largely broken marsh starting approximately 0.5 mile south/southwest of the levees.
2005	1 inch = 24,000 feet	Property: Photos collected soon after Hurricane Katrina. Almost no structures standing from Diamond to Happy Jack. Surrounding Area: Severely impacted as a result of Hurricane Katrina. Heavy marsh and agricultural damage.

Table 5.4 Aerial Photograph Historic Use Summary

Reach 6

Year	Scale	Comments
1956	1 inch = 2,500 feet	Property: At the northern boundary is primarily undeveloped/farmland, few private residences, some commercial/O&G-related activity. Agricultural lands extend to the southern boundary. Primarily undeveloped/farmland, some private residences, with some commercial/O&G-related activity. Surrounding Area: Partially broken marsh extending from approximately 0.5 mile from the levees, south/southwest.
1971	1 inch = 6,666 feet	Property: Little change from 1956; primarily undeveloped/farmland, with some commercial/O&G-related activity. Little change from 1956 at the northern boundary; primarily undeveloped/farmland, with some O&G-related activity to the southern boundary. A tank battery exists near Port Sulphur. Surrounding Area: Little change from 1956; primarily undeveloped/farmland, with many O&G-related cuts/access canals in the marsh south/southwest.
1978	1 inch = 5,503 feet	Property: Still sparse, but an increased mix of residential and commercial/O&G activity since 1971 along the entire reach. Increased commercial/O&G activity as well as increased residential development since 1971, primarily around Port Sulphur. Approximately equal agricultural and commercial mix from Port Sulphur to Buras. Surrounding Area: Many O&G-related cuts/access canals in the marsh south/southwest.
1989/1990	1 inch = 3,333 feet	Property: Still largely a mix of agriculture and O&G, with steadily and slowly increasing residential activity. Tank battery facility in Port Sulphur has expanded. Surrounding Area: Heavy O&G activity and largely broken marsh starting approximately 0.5 mile south/south west of the levees.
2005	1 inch = 24,000 feet	Property: Photos collected soon after Hurricane Katrina. Devastation from Happy Jack to Empire extensive. Surrounding Area: Photos collected soon after Hurricane Katrina show severe impact. Heavy marsh and agricultural damage. Almost no structures standing from Potash down to Empire. The tanks at the site now operated by Freeport McMoran remain but are damaged.

Table 5.5 Aerial Photograph Historic Use Summary

Reach 7

Year	Scale	Comments
1956	1 inch = 2,500 feet	Property: Primarily agricultural, with few residences. Surrounding Area: Partially broken marsh extending from approximately 0.5 mile from the levees, south/southwest.
1971	1 inch = 6,666 feet	Property: Little change from 1956 at the northern boundary; primarily undeveloped/farmland, with some O&G-related activity around Buras. Surrounding Area: Little change from 1956; primarily undeveloped/farmland, with many O&G-related cuts/access canals in the marsh south/southwest.
1978	1 inch = 5,503 feet	Property: Increased commercial/O&G activity as well as increased residential development since 1971. Approximately equal agricultural and commercial mix extending south to Buras. Surrounding Area: Broken marsh extending from approximately 0.5 mile from the levees, south/southwest.
1989/1990	1 inch = 3,333 feet	Property: Still largely a mix of agriculture and O&G, with steadily increasing residential activity. New industrial ponds are present around Empire. Surrounding Area: Heavy O&G activity starting approximately 0.5 mile south/south west of the levees. Significant increase since 1971 in marsh degradation.
2005	1 inch = 24,000 feet	Property: Photos collected soon after Hurricane Katrina. Almost no structures standing from Empire down to Buras. Surrounding Area: Severely impacted as a result of Hurricane Katrina. Heavy damage to marsh and agricultural land.

Table 5.6 Aerial Photograph Historic Use Summary

Reach 8

Year	Scale	Comments
1956	1 inch = 2,500 feet	Property: Almost entirely agriculture. Surrounding Area: Agriculture to approximately 0.25 mile south of the levees, then broken marsh.
1971	1 inch = 6,666 feet	Property: Primarily agriculture, with some residential and commercial activity from approximately Ft. Jackson to the end of the reach. Surrounding Area: To the south/southwest broken marsh with many O&G slips/access canals.
1978	1 inch = 5,503 feet	Property: Increasing residential and commercial /O&G development since 1971. Surrounding Area: To the south/southwest broken marsh with many O&G slips/access canals.
1989/1990	1 inch = 3,333 feet	Property: Increasing residential/commercial/O&G development. Surrounding Area: Extensive marsh degradation from Triumph to Venice.
2005	1 inch = 24,000	Property: Photos collected soon after Hurricane Katrina. Almost no structures standing from Boothville down to Venice. Surrounding Area: Severely impacted as a result of Hurricane Katrina. Heavy marsh and agricultural damage.

Table 5.7 Aerial Photograph Historic Use Summary

Reach 12

Year	Scale	Comments
1956	1 inch = 2,500 feet	Property: Almost entirely agriculture. Surrounding Area: Agriculture to approximately 0.25 mile south of the levees, then broken marsh.
1971	1 inch = 6,666 feet	Property: Primarily agriculture, with some residential and commercial activity from approximately Ft. Jackson to the end of the reach. Surrounding Area: To the south/southwest broken marsh with many O&G slips/access canals.
1978	1 inch = 5,503 feet	Property: Increasing residential and commercial /O&G development since 1971. Extensive commercial development at the southern end, at Venice. A new tank battery shows up around Venice. Surrounding Area: To the south/southwest broken marsh with many O&G slips/access canals.
1989/1990	1 inch = 3,333 feet	Property: Increasing residential/commercial/O&G development. Surrounding Area: Extensive marsh deterioration from Triumph to the end of the reach.
2005	1 inch = 24,000	Property: Photos collected soon after Hurricane Katrina. Many structures destroyed from Boothville down to Venice. Surrounding Area: Severely impacted as a result of Hurricane Katrina. Heavy damage to marsh and agricultural land.

5.6.2 Property Ownership Records

Property ownership records were not researched for this investigation at the request of the Client.

5.6.3 City Directory Review

As stated in the ASTM Standard, the Environmental Professional may choose to omit a potential source of information for a subject property based upon the time and cost associated with obtaining the information compared to the value of the information that would be obtained. Because of the spatial extent of the subject property, QRI determined that a review of city directories was not a cost effective source of information.

5.6.4 Fire Insurance Maps

The complete holdings of the Sanborn Library, LLC collection were searched based on client-supplied target property information. No fire insurance maps covering the target property were available. The lack of historical fire insurance maps is not considered to be a significant data gap.

5.6.5 Other Historical Sources

Topographic Maps

QRI reviewed available historical USGS Topographic Quadrangles for information regarding past uses of the property. QRI reviewed the historical USGS Topographic Maps for the years 1892, 1935, 1939, 1944, 1948, 1953, 1962, 1964, 1973, 1992, 1994, and 2009 from Pointe a la Hache, Happy Jack, Black Bay, Fort St. Phillip, Forts, Port Sulphur, Quarantine, Tropical Bend, Buras, Triumph, Empire and Venice. Land use in Reaches 5-8 and 12 as determined from the topographic maps are presented in Tables 5.8 to 5.12.

Table 5.8 Summary of Historical USGS Topographic Map Observations

Reach 5

Date	Scale	Property	Surrounding Area
1892	1:62,500	Few buildings on the south side of the natural levee, primarily between Woodland and Magnolia. Isolated structures elsewhere.	New Orleans and Gulf Railroad on the north side of the river. New Orleans, Ft. Jackson and Grande Isle Railroad on the south side. Marsh extends outwards, starting approximately 0.25 mile from the north and south levees.
1935	1:31,680	Front levees and State Highway 31 now present.	Marsh extends outwards, starting approximately 0.25 mile from the north and south levees.
1939	1:62,500	New settlements on the south side of the river including Diamond.	State Highway 1 is classified "medium duty." Grande Bayou delineated.
1944	1:62,500	Minimal change since 1939.	Additional canals created perpendicular to the river, near City Price.
1948	1:62,500	"People's Utilities, Inc" line installed. Increased agricultural activity between Magnolia and Diamond.	Marsh north of the river more open.
1962	1:62,500	Increased agricultural development between Point Celeste and City Price.	Bayou Grand Chenier expanded. Point a la Hache oil and gas field appears to the north of the river. Increased O&G activity south of the river.
1964	1:62,500	Significant increase in buildings around Diamond.	Increased O&G activity south of the river.
1973/1992	1:24,000	Highway 23 is classified as "secondary highway, hard surface."	Significant increase in O&G activity south of the river.
2009	1:24,000	Many buildings along Fernandez Canal perpendicular to the back levee. Encalade largely open land; presumed not rebuilt after Hurricane Katrina.	Potash O&G field is heavily developed. Significant O&G activity south of the river. Significant marsh degradation north and south of the river.

Table 5.9 Summary of Historical USGS Topographic Map Observations

Reach 6

Date	Scale	Property	Surrounding Area
1892/1905	1:62,500	Few buildings on the south side of the natural levee, between Potash and Home Place. Isolated structures elsewhere.	New Orleans and Gulf Railroad on the north side of the river. New Orleans, Ft. Jackson and Grande Isle Railroad on the south side. Marsh extends outwards, starting approximately 0.25 mile from the north and south levees.
1935	1:31,680	Front levees and State Highway 31 now present.	Marsh extends outwards, starting approximately 0.25 mile from the north and south levees.
1939	1:62,500	No appreciable change since 1935.	State Highway 1 is classified "medium duty." Grande Bayou delineated.
1941	1:62,500	Faciltity (currently operated by Freeport-McMoran) in Port Sulphur and Highway 31 appear. New Orleans and Lower Coast Railroad seen. Marsh extends almost to the Gulf.	Point a la Hache Relief Outlet appears.
1948	1:62,500	"People's Utilities, Inc" line installed.	Marsh north of the River more open.
1953	1:62,500	New levees at current Freeport McMoran site. Back levees constructed.	Freeport Sulphur Canal constructed from Freeport McMoran site out to the Gulf.
1962	1:62,500	Three cemeteries added.	Increased O&G activity south of the river.
1964	1:62,500	Significant increase in structures around Happy Jack.	Increased O&G activity south of the river.
1973/1992	1:24,000	Highway 23 is classified as "secondary highway, hard surface."	Significant increase in O&G activity south of the river.
2009	1:24,000	Many buildings along Fernandez Canal perpendicular to the back levee. Encalade largely open land; presumed not rebuilt after Hurricane Katrina,	Potash O&G field is heavily developed. Significant O&G activity south of the river. Significant marsh degradation north and south of the river.

Table 5.10 Summary of Historical USGS Topographic Map Observations

Reach 7

Date	Scale	Property	Surrounding Area
1892	1:62,500	Many buildings on the south side of the natural levee, from Sunrise, down river. Dry land 0.25 mile south of levee.	Marsh extends outwards, starting approximately 0.25 mile from the north and south levees.
1922	1:62,500	Unimproved roads to Forts Jackson and St. Phillip. Marsh extends out from the river bank approximately 0.5 mile.	Marsh extends out from the river banks approximately 0.25 mile.
1935	1:31,680	Missouri Pacific Railroad stops at Buras. Fairly high building density around Buras, Empire and Boothville. Highway 31 seen. Riverfront levees constructed.	Marsh extends directly out from the river.
1941	1:62,500	Buras Drainage District canal seen. Many buildings along Highway 31.	Largely open water north/northeast of the river – Quarantine Bay and Breton Sound.
1944	1:62,500	No appreciable change.	No appreciable change.
1948	1:62,500	People's Utilities Inc lines seen. Highway 31 surface changed to "other surface improvement" at Triumph. Many buildings around Triumph.	Largely open water north/northeast of the river – Quarantine Bay and Breton Sound.
1953	1:62,500	Back levees constructed.	Back levees constructed on the north side of the river.
1960	1:62,500	Many buildings upriver from Triumph, at Gulftown. Extensive agriculture at Triumph, extending approximately 0.5 mile from the south river bank.	Pipeline Canal north of Buras. Extensive O&G activity north/northeast of the river.
1962	1:62,500	Many buildings around Buras. Extensive agriculture in Buras. Buras Drainage District Canal appears.	Significant increase in O&G activity south of the river below Buras.
1960/1967	1:62,500	Buras Revet created at Fasterling Canal, north of Buras.	Bastion Bay Oil and Gas field south of Buras.
1973/1992	1:24,000	Doullet Canal at the Empire Lock seen.	Quarantine Bay Oil field north of the river.
1998	1:24,000	Extensive commercial/industrial activity at Venice/Grand Pass.	Extensive O&G activity; extensive marsh degradation north/northeast of the river.
2009	1:24,000	No significant change since 1998.	No significant change since 1998.

Table 5.11 Summary of Historical USGS Topographic Map Observations

Reach 8

Date	Scale	Property	Surrounding Area
1922	1:62,500	Unimproved roads stop at Ft. Jackson. No buildings down river from Ft. Jackson.	Marsh 0.5 mile from river banks, south, and 0.25 mile from river banks, north, to Venice.
1935	1:31,680	Front levees created down to Venice. Many buildings down river to Venice. Missouri Pacific Railroad and Highway 31 constructed.	No appreciable change.
1948	1:62,500	People's Utilities, Inc electrical line extends to Venice. Back levees constructed to Venice.	Increased O&G activity; Grand Bay Oilfield. Delta National Wildlife Refuge present.
1960	1:62,500	Significantly increased agriculture on the south/southwest side of the river from Ft Jackson to Venice. Highway 31 now Highway 23. Pump House at Venice.	Heavy O&G activity north/northeast of Venice. Increased O&G activity south/southwest of Venice.
1971	1:24,000	Buras Drainage Canal. Pipeline Canal south of Ft. Jackson. Significant increase in the number of buildings. Tank Farm upriver from Venice.	Venice Oilfield southeast of Boothville.
1992	1:24,000	Significant increase in the number of buildings down to Venice. Sewage disposal facility between Boothville and Venice.	Heavy O&G activity north/northeast and south/southwest of Venice.
1998	1:24,000	No significant change.	Almost entirely open water north/northeast of the river.
2009	1:24,000	Boothville River Road delineated. Fewer structures around Boothville, likely indicating little rebuilding after Hurricane Katrina. Many structures around Venice.	South of the river mostly open water. Heavy O&G activity.

Table 5.12 Summary of Historical USGS Topographic Map Observations

Reach 12

Date	Scale	Property	Surrounding Area
1892	1:62,500	Many buildings on the south side of the natural levee, from Buras down river. Dry land 0.25 mile south of levee.	Marsh extends outwards, starting approximately 0.25 mile from the north and south levees.
1922	1:62,500	Unimproved roads to Forts Jackson and St. Phillip. Marsh extends out from the River banks approximately 0.5 mile. Some buildings northwest of Ft. Jackson.	Marsh 0.5 mile from river banks, south, and 0.25 mile from river banks, north, to Venice.
1935	1:31,680	Front levees created down to Venice. Many buildings down river to Venice. Missouri Pacific Railroad and Highway 31 built.	Marsh extends directly out from the river.
1941	1:62,500	Buras Drainage District canal seen. Many buildings along Highway 31.	Largely open water north/northeast of the river – Quarantine Bay and Breton Sound.
1948	1:62,500	People's Utilities, Inc electrical line extends to Venice. Back levees constructed to Venice.	Increased O&G activity; Grand Bay Oilfield. Delta National Wildlife Refuge present.
1960	1:62,500	Significantly increased agriculture on the south/southwest side of the river from Ft. Jackson to Venice. Highway 31 now Highway 23. Pump House at Venice. River and back levees present.	Heavy O&G activity north/northeast of Venice. Increased O&G activity south/southwest of Venice.
1971	1:24,000	Pipeline Canal south of south of Ft. Jackson. Significant increase in the number of buildings down to Venice. Tank Farm upriver from Venice.	Venice Oilfield southeast of Boothville.
1992	1:24,000	Significant increase in the number of buildings down to Venice. Sewage disposal facility between Boothville and Venice.	Heavy O&G activity north/northeast and south/southwest of Venice.
1998	1:24,000	Extensive commercial/industrial activity at Venice/Grand Pass. .	Extensive O&G activity; extensive marsh degradation north/northeast of the river.
2009	1:24,000	Boothville River Road delineated. Fewer structures around Boothville, likely indicating little rebuilding after Hurricane Katrina. Many structures around Venice.	South of the river mostly open water. Heavy O&G activity.

6.0 SITE RECONNAISSANCE

Teresa Russin and Douglas Martin of QRI conducted site reconnaissance of Reach 5 and part of Reach 6 on March 17-18, 2010. Teresa Russin and Kim Barton of QRI conducted site reconnaissance of Reaches 6, 7, 8, and 12 March 30-April 1, 2010 and May 6, 2010. Information obtained as a result of site reconnaissance is presented in the following subsections. Photographs of Reaches 5-8 and 12 are presented in Appendix H.

6.1 Methodology and Limiting Conditions

This assessment covers the existing centerline of the Mississippi River Back Water levees and the Mississippi River levee listed in Table 6.1 and as shown on the location map. The project area extends laterally 325 linear feet perpendicular to and in both directions from the levee centerline. Visual and physical inspections were carried out from the levee and road rights-of-way, focusing on visible surface features. QRI did not access private properties in performing this Phase I ESA at the request of the Client. Information provided by this Phase I ESA highlights all project area locations with Recognized Environmental Conditions (REC).

Table 6.1. Project Reach Locations

Reach	Approx. Reach Length (miles)	Work Item
West Bank Back Levee Reach 5	3.3	NOV-05
West Bank Back Levee Reach 6	12.5	NOV-06
West Bank Back Levee Reach 7	12.7	NOV-07
West Bank Back Levee Reach 8	8.5	NOV-08
West Bank River Levee Reach 12	9.9	NOV-12

6.2 General Site Setting

The site is a back levee protecting the communities along the west side of the Mississippi River from Diamond to Venice (Reaches 5-8) and the river levee from Fort Jackson to Venice (Reach 12).

6.2.1 Current Use(s) of the Site

The site to the north and east of the back levee system (Reaches 5-8) is currently a mixture of residential, agricultural, and industrial/commercial applications including docks, six pumping stations, air transportation facilities, petroleum product pipelines and associated facilities, Freeport-McMoran facility, Tennessee Natural Gas facility and various Plaquemines Parish facilities (including sewer lift stations and community recreational centers). Marshland is present to the south and west of the back levee system (Reaches 5-8). Reach 12 consists of river levee with undeveloped forest/shrub wetlands on the river side of the levee with several docking facilities; and on the protected side of the levee its uses include residential and commercial facilities, e.g. a helicopter terminal, a large oil storage facility and several oil service companies.

6.2.2 Past Use(s) of the Site

Based upon historical map review, around the turn of the century land in the area was primarily used for agriculture. It was largely undeveloped, with natural levees and marsh. Based upon the relative lack of apparent commercial activity agriculture and hunting/fishing/trapping were likely the primary "industry." There was gradual growth beginning in the 1920s and 1930s in residential and agricultural use throughout the reaches. The lower reaches were serviced by railroads starting 1940s and electrical services were available in the late 1940s. During the 1960s and 1970s there was oilfield growth in the area as evidence by the increase in manmade canals, roads, and pipelines crossing the site.

6.2.3 Current Use(s) of the Surrounding Area

The land between the back levee and the Mississippi River levee (generally north and east of the site in Reaches 5-8 and south and west of the site in Reach 12) is used for residential, agricultural and industrial activities. The communities located there are (north to south) Happy Jack, Port Sulphur, Home Place, Nairn, Tropical Bend, Empire, Buras, Triumph, Boothville and Venice. There are maritime and oilfield activities in the surrounding marshes.

6.2.4 Past Use(s) in the Surrounding Area

In the late 1800s there were a few small communities - Potash (Port Sulphur), Little Texas Guyot Settlement, Empire, Sunrise, Buras Settlement and Fort Jackson. There was no settlement below Fort Jackson. There was rail and road service as well river transport and numerous canals with access to the marshes and the Gulf of Mexico. Agriculture and maritime activities were the only main uses until later shipping and oilfield development in the mid to late twentieth century.

6.2.5 Geologic, Hydrogeologic, Hydrologic and Topographic Conditions

The geology of the site is Quaternary fluvial deposits - the most recent deposits are natural levee deposits (Appendix B). The topography of this entire site is relatively flat as it is part of a major river delta. The Mississippi River flows in a generally northwest to southeast direction throughout these two reaches. Phase I investigations do not reveal sub-surface hydrology.

6.2.6 General Description of Structures

Residential structures on the site are mobile homes and wood framed homes. Commercial structures are primarily concrete block and brick or steel faced wood or steel framed buildings. Commercial/government structures include Diamond, Hayes, Gainard Woods #2, Sunrise #2, Grand Bayou DeLiard, and Duvic Pumping Stations.

6.2.7 Roads

Highways 23 and 11 are roughly parallel to and generally to the west of the river levee and east of the back levee. Various cross roads intersect these highways and connect them with each other. A levee road (both unimproved and gravel) exists on top of the levee throughout all the reaches.

6.2.8 Potable Water Supplies

Potable water is provided to the site area by Plaquemines Parish Water Department.

6.2.9 Sewage Disposal System

Sewage disposal is provided to the site area by Plaquemines Parish Water Department and private septic systems.

6.3 Observations

6.3.1 Hazardous Substance Use, Storage, and Disposal

QRI noted a variety of hazardous substances in reportable quantities on private properties in Reaches 5-8 and 12. In many instances the containers were not accessible, though often they were marked with placards and therefore their contents could be ascertained. When necessary, QRI used professional judgment and experience to determine the likely contents and tank capacity. QRI did not observe any pools of liquid or ground staining on these properties. Based on the observed conditions, QRI does not consider the use, storage, and/or disposal of hazardous substances at these properties to be an environmental concern to the site at this time.

QRI observed two sets of overhead pipelines crossing the levees (REC 6 in Reach 7 and REC 11 in Reach 12). Many more pipeline and suspected pipeline crossings were observed by QRI on the site visit. Information is also available in the Louisiana Office of Coastal Management Coastal Pipelines and Platforms April, 2010 database (which includes all permitted pipelines from 1980 to April, 2010), which data is included in a shapefile on the CD attached to the final report.

6.3.2 Storage Tanks

Many ASTs were observed throughout the reaches but since QRI did not have to access private property the contents and capacity of many of these were estimated. Additionally, some likely UST locations were observed though their presence was not verified because they were located on private property.

6.3.3 Odors

QRI did not observe odors indicative of any potential RECs or of hazardous waste.

6.3.4 Pools of Liquid

QRI did not observe any pools of liquid during site visitation.

6.3.5 Drums

QRI observed many single drums in the vegetation, along the levees, and in the canals. These were likely present after having been deposited there by recent hurricanes.

6.3.6 Unidentified Substance Containers

QRI observed a number of containers of unidentified substances. It is likely that the contents and capacity of these containers, mostly ASTs, could have been accurately determined had QRI been granted access to the private property where these containers were located. The majority of containers of unidentified substances were probably diesel or propane.

6.3.7 Polychlorinated Biphenyls (PCBs)

Many transformers were observed along the project route. However, a search of the EPA PCB-registry database did not reveal any registered PCB-containing transformers in Reaches 5-8 and 12 with the exception of one registered to the Tennessee Natural Gas Facility (located in Reach 6). This transformer most likely is out of the site area, as most of the facility is outside of the 325 foot buffer and no transformers were observed on the portion of the facility located within the 325 foot buffer.

6.3.8 Pits, Ponds and Lagoons

QRI observed occasional constructed ponds along the reaches, none of which appeared to be a hazard to the site.

6.3.9 Stained Soil or Pavement

QRI observed stained soil at the head of Reach 12 on the levee around Fort Jackson. This is included in the RECs (REC 1 in Reach 12). It is likely that contaminated soil will have to be removed from this area and disposed of in an appropriate manner.

6.3.10 Stressed Vegetation

QRI observed stressed vegetation in Reach 6 immediately south of the Freeport-McMoran facility. There was also stressed vegetation in Reach 7 on the marsh side of the levee. Some was likely due to salt contamination during recent hurricanes, but the back levee is used for livestock grazing which further stressed marginal vegetation.

6.3.11 Solid Waste

A number of promiscuous dumpsites were observed throughout the reaches. Generally, they contained hurricane debris and household trash in non-hazardous quantities. In consideration of the four hurricanes that impacted the area within the last five years it is also possible that the dumpsites are mainly hurricane debris.

6.3.12 Wastewater

QRI observed lift stations along Highway 11 and Highway 23 and observed two waste water treatment facilities located in Reach 6 (REC 7) and Reach 12 (REC 4).

6.3.13 Water Wells

Two water wells were identified within the site area. Care should be taken to avoid damaging these wells by physically determining and marking the locations of these wells before commencing any earthmoving activities. Table 6.2 presents information about the water wells in Reaches 5-8 and 12.

Table 6.2 Water Wells

N Latitude	W Longitude	Aquifer ID	Owner	Depth (ft)	Use
Reach 5					
None					
Reach 6					
29° 30' 49.68"	89° 43' 50.88"	111NORLC	Tennessee Gas	15	Monitoring
Reach 7					
None					
Reach 8					
None					
Reach 12					
29° 17' 32.64"	-89° 22' 01.92"	111NORLC	Marathon Oil Co	40	Monitoring

6.3.14 Septic Systems

QRI did not specifically observe septic systems though there are likely some on the inaccessible private properties.

6.3.15 Other Conditions of Concern

A variety of conditions were noted that were not classifiable as RECs, historical recognized environmental conditions (HRECs), or *de minimis* conditions. Information about conditions of concern is presented in Table 6.3. Sewer lift stations are the most common conditions of concern; and there are many throughout the reaches. QRI recommends contacting Plaquemines Parish government for the exact number and location of the lift stations.

Hurricane debris is still present in the marshes to the south and west of Reaches 5-8 and includes a tank, a barge, boat trailers, drums, trash, crates and other items too numerous to describe. Promiscuous (unofficial) dump sites also abound, containing construction debris, scrap metal and household trash. Although there are many transformers throughout the reaches, only one, at the Tennessee Natural Gas facility in Port Sulphur, is listed in the EPA PCB Transformer Registration Database (and is probably located out of the site area, as is most of the facility).

Other conditions of concern include an abandoned electrical substation, a large hole at Grand Bayou Road, an I-beam dock, water lines and a buried electrical line. Representative photos of the conditions of concern are presented in Appendix H.

Table 6.3 Other Conditions of Concern		
Reach 5		
N Latitude	W Longitude	Description
29° 31’ 31.27”	89° 45’ 10.23”	Large hole at water line at Grand Bayou Rd – physical hazard to equipment
Reach 6		
29° 29’ 08.64”	89° 42’ 25.11”	Dump in canal
29° 28’ 00.24”	89° 41’ 26.08”	Coal and Sulfur piles
Reach 7		
29° 21’ 54.14”	89° 34’ 25.26”	Large tank; should be removed prior to earth-moving activities
29° 22’ 17.49”	89° 35’ 10.50”	Water valve and pipeline on levee – physical hazard to equipment
Reach 8		
29° 20’ 17.39”	89° 24’ 57.59”	Dump at canal edge
29° 16’ 45.13”	89° 21’ 49.38”	Possible old pumping station – may have physical hazard of pipe on levee
Reach 12		
29° 20’ 24.93”	89° 24’ 30.24”	I beam dock – physical hazard to equipment
29° 19’ 51.85”	89° 23’ 52.83”	Dump with vehicles, other unknown debris
unknown	unknown	Dump site between 29° 19’ 51.85” N, 89° 23’ 52.83” W and 29° 18’ 58.37” N,89° 23’ 05.48” W; no longer visible during the May reconnaissance
29° 18’ 20.71”	89° 22’ 36.67”	Junked automobile – physical hazard to equipment
29° 17’ 12.55”	89° 21’ 43.87”	Large empty barge – physical hazard to equipment

29° 16’ 51.46”	89° 21’ 27.50”	Abandoned substation, possible PCBs
29° 16’ 26.01”	89° 21’ 09.72”	Water lines in close proximity to levee

6.4 Interior Observations

The interiors of buildings along the corridor were not accessed during the site inspection at the request of the Client.

7.0 INTERVIEWS

As requested by the Vicksburg USACE, QRI did not conduct interviews with occupants or operators. However, when Plaquemines Parish Government was contacted by telephone regarding potable water, sewer, electrical utility and natural gas services, a representative of the Plaquemines Parish Government informed QRI of the providers of these services as given in this report.

8.0 FINDINGS AND OPINIONS

In this section QRI identifies known or suspected recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and *de minimis* conditions, and provides opinions on the potential impacts of these conditions.

8.1 Known or Suspect Recognized Environmental Conditions

The ASTM Standard E 1527-05 (2005) defines a recognized environmental condition (REC) as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property." A REC can include petroleum products or hazardous substances even under conditions that are in compliance with applicable laws.

Seventy-three (73) RECs were observed during site assessment activities associated with Reaches 5-8 and 12. The details of these RECs are presented in Tables 8.1 through 8.5. Photographs of the RECs are presented Appendix I. The most common REC in Reaches 5-8 and 12 are pipeline crossings and the second most common are ASTs. Because of the abundance of O&G activity in the area there are many pipelines and associated separator, production, transport, and metering facilities in the area. Because of the presence of petroleum products all of these types of sites are considered RECs. Many presumed or confirmed diesel and propane ASTs were observed, particularly at private residences. This is fairly common in this somewhat rural area. Isolated drums of unknown content were also commonly observed in the canals and on dry land. These individual and isolated drums are likely present as a result of hurricane activity. The area has sustained damages from four (4) major hurricanes in the last 5 years – Katrina, Rita, Gustave and Ike.

8.2 Historical Recognized Environmental Conditions

QRI noted many listings in the EDR database that could be considered Historical Recognized Environmental Conditions (HRECs) in Reaches 5-8 and 12. QRI reviewed these and determined that none would hinder earth-moving activities along the levees in Reaches 5-8, and 12.

8.3 *De Minimis* Conditions

According to the ATSM standard, *de minimis* conditions those that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate government agencies.

No environmental concerns that were deemed *de minimis* conditions were noted in Reaches 5-8 and 12.

Table 8.1 Reach 5 Recognized Environmental Conditions (RECs)				
Facility Name/Description	**REC #**	**Latitude**	**Longitude**	**REC Issues**
Diamond Pumping Station	1	29 31 40.29	89 45 45.85	ASTs

9.0 CONCLUSIONS

Quaternary Resource Investigations, LLC (QRI) conducted this Phase I Environmental Site Assessment (ESA) according to the guidelines of ASTM Standard Practice E 1527-05. Any exceptions to, or deletions from, this practice are described in Sections 2.0 and 10.0 of this report. QRI found a total of 73 RECs in Reaches 5, 6, 7, 8 and 12, which are summarized in Tables 1.1 through 1.5 and again in Tables 8.1 to 8.5. As long as maintenance activities are conducted in a safe and conscientious manner, taking care not to damage ASTs, wells, or pipelines in and around the levees, none of the RECs cited in this report should prevent the earth-moving activities on the levees from being conducted. The hazardous materials present on the subject property are currently contained; as long as they are not released into the environment they should pose no additional threat. The larger debris piles and abandoned tanks and boats may require removal but the other RECs should generally just be avoided.

Specific recommendations, by types of RECs, are presented below:

ASTs – in the majority of instances the ASTs are far enough away from the levees, i.e. no closer than 100-feet, that they do not specifically pose a hazard to earth-moving activities associated with levee-resurfacing/re-building. QRI recommends that the USACE/contractors who conduct the repairs notify the landowners at the respective AST locations of the impending earth-moving activities. The landowners would have the ability to be present when activities were taking place and the responsibility of ensuring that their ASTs were not impacted/damaged by the USACE activities.

Drums – There are isolated drums throughout the reaches, most of which are unlabelled. Where possible, before listing a drum as a REC QRI examined the drums to make certain that they were intact and contained something. Empty drums are not a REC but in some cases QRI could not determine if the drums were empty. If drums cannot be avoided during levee construction/enlargement activities QRI recommends that the drums be properly removed and disposed of.

Debris piles/dump sites – There are many piles of hurricane debris and there are many promiscuous dumpsites throughout the project area, throughout all of the reaches. QRI asserts that, as with the ASTs, these sites do not specifically pose a hazard to earth-moving activities associated with levee construction and enlargement because they can be avoided during earth-moving activities. Obtrusive debris, including tanks and boats should be properly removed.

Pipelines – There is an abundance of pipelines in all of the reaches. QRI recommends that the operators of these lines be notified of impending construction/enlargement activities and request the operators mark the exact location of these lines. The USACE should also coordinate with the operators of these lines so that safe construction methods are used when working around these lines. There are also above-ground lines present in the reaches that may require relocation or modification.

Water Lines – QRI recommends that the USACE contact the Plaquemines Parish Government to locate water lines before commencing earth-moving activities.

Power Lines – QRI recommends that the USACE avoid contact with overhead power lines present in the site area, some of which are somewhat close to the ground and could be a hazard to tall equipment.

Waste Water Treatment Plants/Lift Stations - Because of the raw sewage associated with waste water treatment facilities and with lift stations care must be taken to avoid adversely impacting these sites.

Private residences – There are a variety of types of RECs on private property throughout the reaches. In almost all instances the item(s) that are on these sites that make the site a REC can be avoided during earth-moving activities. These activities should be coordinated with the landowners in both the site area and of adjacent properties**.**

10.0 DEVIATIONS

QRI conducted this modified Phase I ESA within the scope and limitations of ASTM Standard E 1527-05, with the following client-request deviations:

- Interviews were not conducted.
- No title searches were conducted.
- No environmental liens or activity and use limitations (AULs) were determined
- City directories were not reviewed.

.

11.0 ADDITIONAL SERVICES

No additional services were provided in association with this Phase I ESA.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there is 1 CERC-NFRAP site within the searched area.

EXECUTIVE SUMMARY

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 01/13/2010 has revealed that there is 1 RCRA-LQG site within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 2 RCRA-SQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 7 RCRA-CESQG sites within the searched area.

EXECUTIVE SUMMARY

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 01/13/2010 has revealed that there are 15 RCRA-NonGen sites within the searched area.

EXECUTIVE SUMMARY

TRIS: The Toxic Chemical Release Inventory System identifies facilities that release toxic chemicals to the air, water, and land in reportable quantities under SARA Title III, Section 313. The source of this database is the U.S. EPA.

A review of the TRIS list, as provided by EDR, and dated 12/31/2008 has revealed that there is 1 TRIS site within the searched area.

Site	Address	Map ID
DAYBROOK FISHERIES INC	***136 DAYBROOK LN***	***23-19,22***

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 11/10/2009 has revealed that there is 1 ICIS site within the searched area.

Site	Address	Map ID
PLAQUEMINES PARISH GOVERNMENT	180 LEE DRIVE PORT S	11-13,15

PADS: The PCB Activity Database identifies generators, transporters, commercial storers and/or brokers and disposers of PCBs who are required to notify the United States Environmental Protection Agency of such activities. The source of this database is the U.S. EPA.

A review of the PADS list, as provided by EDR, and dated 09/01/2009 has revealed that there is 1 PADS site within the searched area.

Site	Address	Map ID
TENNESSEE GAS PIPELINE STA 52	***26166 HWY 23 .25 M S EN***	***6-13***

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/19/2009 has revealed that there are 30 FINDS sites within the searched area.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003

Map ID	Site	Database(s)	EPA ID Number

TENNESSEE GAS PIPELINE STA 527 (Continued) **1000306723**

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 9200

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 9200

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 9200

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Louisiana Tools for Environmental Management and Protection Organizations (LA-TEMPO) is an Integrated Management System.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No

Map ID	Site	Database(s)	EPA ID Number

LANDRY BROTHERS AUTOMOTIVE (Continued) **1004707113**

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Verified to be non-commercial

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Historical Generators:
Date form received by agency: 12/11/1995
Facility name: MARINE SPILL RESPONSE CORP
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Violation Status: No violations found

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information

Map ID	Site	Database(s)	EPA ID Number

CHEVRON PIPE LINE CO - EMPIRE-OSTRICA TERMINAL (Continued) **1010227784**

on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Louisiana Tools for Environmental Management and Protection Organizations (LA-TEMPO) is an Integrated Management System.

Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:
Owner/operator name: UNKNOWN
Owner/operator address: A805 HWY 23 S
BURAS, LA 70041
Owner/operator country: Not reported
Owner/operator telephone: (000) 000-0000
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Verified to be non-commercial

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: U103
Waste name: DIMETHYL SULFATE

Violation Status: No violations found

FINDS:

Registry ID: 110006021161

Hazardous Waste Summary:

Map ID	Site	Database(s)	EPA ID Number

Y & S MARINE INC (Continued) **1004707571**

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Violation Status: No violations found

Contact address:	40360 HWY 23 S BOOTHVILLE, LA 70038
Contact country:	US
Contact telephone:	(337) 233-4889
Contact email:	Not reported
EPA Region:	06
Classification:	Conditionally Exempt Small Quantity Generator
Description:	Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Owner/Operator Summary:

Owner/operator name:	PSC INDUSTRIAL OUTSOURCING INC
Owner/operator address:	5151 SAN FELIPE STE 600 HOUSTON, TX 77056
Owner/operator country:	Not reported
Owner/operator telephone:	(713) 628-8777
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	01/01/0001
Owner/Op end date:	Not reported

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	Yes
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No

Map ID	Site	Database(s)	EPA ID Number

PSC INDUSTRIAL OUTSOURCING INC (Continued) **1001196387**

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Verified to be non-commercial

Historical Generators:
Date form received by agency: 04/15/1997
Facility name: PSC INDUSTRIAL OUTSOURCING INC
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110006029939

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

USFWS - DELTA NATIONAL WILDLIFE REFUGE (Continued) **U003922019**

Interior Line With Some Material:	Not reported
Dble Wall As Opposed To Single Wall:	Not reported
Outside Lined w/ Polyethylen Jacket:	Not reported
Made Of Concrete:	Not reported
Liner Covering Excavation Hole:	Not reported
Unknown:	Not reported
Other Material:	Not reported
Other Description:	Not reported
Pipe Method Desc:	Not reported

SPILLS:

Incident Id:	73908
Incident Date:	15-Sep-04
Incident Status:	**Closed**
Media Desc:	Water
Location Description:	US Fish & Wildlife Service, Delta NWR 215 Offshore Shipyard Rd.
Incident Source Name:	US Fish & Wildlife Service - Southeast Louisiana Refuges
Incident Desc:	s04-3763 chlorinator for sewage treatment system washed away, less than 50 gal. - tj
Parameter:	Not reported
Quantity:	Not reported
Units:	Not reported
Other Substance Desc:	Not reported

NPDES:

Facility Id:	20979
Facility Phone:	Not reported
Issued Date:	8/22/2003
Title Description:	LAG531468 Permit
Permit Type Description:	Gen-LAG53-Sanitary Class I
Program:	Water
Activity Number:	GEN20020001

Facility Id:	20979
Facility Phone:	Not reported
Issued Date:	2/1/2008
Title Description:	Renewed Coverage
Permit Type Description:	Gen-LAG53-Sanitary Class I
Program:	Water
Activity Number:	GEN20080001

SECTION 4 - EPA WASTE CODES

There are no epa codes to report for this search area.

Section 5

Databases Searched and Update Dates

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/01/2009
Date Data Arrived at EDR: 01/14/2010

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/01/2009
Date Data Arrived at EDR: 01/14/2010

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/01/2009

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/30/2009
Date Data Arrived at EDR: 08/11/2009
Date Made Active in Reports: 09/21/2009
Number of Days to Update: 41

Last EDR Contact: 02/09/2010
Next Scheduled EDR Contact: 04/12/2010
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/23/2009
Date Data Arrived at EDR: 09/02/2009

Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 11/03/2009

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 01/13/2010

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 01/13/2010

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010
Date Made Active in Reports: 02/18/2010

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Data Release Frequency: Varies

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/19/2009

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Next Scheduled EDR Contact: 03/29/2010
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

SOIL SURVEY

United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Plaquemines Parish, Louisiana

Reaches 5 and 9

April 9, 2010

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://soils.usda.gov/sqi/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (http://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://soils.usda.gov/contact/state_offices/).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Soil Data Mart Web site or the NRCS Web Soil Survey. The Soil Data Mart is the data storage site for the official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means

for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

W	Water	49.9	4.4%
Ww	Westwego clay	4.8	0.4%
Totals for Area of Interest		**1,143.1**	**100.0%**

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially

where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases.* Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Plaquemines Parish, Louisiana

CE—Clovelly muck

Map Unit Setting

Elevation: 0 feet
Mean annual precipitation: 54 to 62 inches
Mean annual air temperature: 66 to 70 degrees F
Frost-free period: 265 to 350 days

Map Unit Composition

Clovelly and similar soils: 80 percent

Description of Clovelly

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Herbaceous organic material over very fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Very slightly saline to slightly saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 15.0
Available water capacity: Very high (about 14.5 inches)

Interpretive groups

Land capability (nonirrigated): 8w

Typical profile

0 to 42 inches: Muck
42 to 70 inches: Clay

Co—Cancienne silty clay loam

Map Unit Setting

Elevation: 0 to 120 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition

Cancienne and similar soils: 95 percent

Description of Cancienne

Setting

Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very high (about 12.7 inches)

Interpretive groups

Land capability (nonirrigated): 2w

Typical profile

0 to 4 inches: Silty clay loam
4 to 30 inches: Silt loam
30 to 60 inches: Stratified very fine sandy loam to silty clay loam to silty clay

CV—Carville, Cancienne, and Schriever soils, frequently flooded

Map Unit Setting

Elevation: 0 to 150 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 365 days

Map Unit Composition

Carville and similar soils: 40 percent
Cancienne and similar soils: 30 percent
Schriever and similar soils: 20 percent

Description of Carville

Setting

Landform: Natural levees
Down-slope shape: Convex
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)

Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 8 inches: Silt loam
8 to 30 inches: Very fine sandy loam
30 to 60 inches: Silt loam

Description of Cancienne

Setting

Landform: Depressions
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 18 to 48 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Available water capacity: Very high (about 13.1 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 11 inches: Silt loam
11 to 21 inches: Silt loam
21 to 60 inches: Stratified very fine sandy loam to silty clay

Description of Schriever

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 8.3 inches)

Interpretive groups

Land capability (nonirrigated): 5w

Typical profile

0 to 10 inches: Silt loam
10 to 43 inches: Clay
43 to 60 inches: Clay

GE—Gentilly muck

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Gentilly and similar soils: 80 percent

Description of Gentilly

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Thin herbaceous organic material over semifluid clayey over consolidated clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Maximum salinity: Nonsaline to slightly saline (2.0 to 8.0 mmhos/cm)
Available water capacity: High (about 10.4 inches)

Interpretive groups

Land capability (nonirrigated): 7w

Typical profile

0 to 10 inches: Muck
10 to 24 inches: Clay
24 to 60 inches: Clay

Ha—Harahan clay

Map Unit Setting

Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition

Harahan and similar soils: 90 percent

Description of Harahan

Setting

Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: High (about 10.4 inches)

Interpretive groups

Land capability (nonirrigated): 3w

Typical profile

0 to 5 inches: Clay
5 to 22 inches: Clay
22 to 32 inches: Clay
32 to 75 inches: Clay

Sk—Schriever clay

Map Unit Setting

Elevation: 0 to 80 feet
Mean annual precipitation: 45 to 65 inches
Mean annual air temperature: 61 to 70 degrees F
Frost-free period: 200 to 350 days

Map Unit Composition
Schriever and similar soils: 90 percent

Description of Schriever

Setting
Landform: Backswamps
Down-slope shape: Linear
Across-slope shape: Linear

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 24 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum content: 5 percent
Available water capacity: Moderate (about 7.8 inches)

Interpretive groups
Land capability (nonirrigated): 3w

Typical profile
0 to 4 inches: Clay
4 to 40 inches: Clay
40 to 65 inches: Clay

W—Water

Map Unit Composition
Water, large: 100 percent

Ww—Westwego clay

Map Unit Setting
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 300 to 350 days

Map Unit Composition
Westwego and similar soils: 95 percent

Description of Westwego

Setting
Landform: Backswamps
Down-slope shape: Linear

Across-slope shape: Linear
Parent material: Nonfluid over fluid clayey alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: Rare
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 2.0 mmhos/cm)
Available water capacity: Very high (about 15.0 inches)

Interpretive groups

Land capability (nonirrigated): 4w

Typical profile

0 to 31 inches: Clay
31 to 49 inches: Muck
49 to 62 inches: Clay

APPENDIX E

FEMA MAPS

KEY TO MAP

**Referenced to the National Geodetic Vertical Datum of 1929

*EXPLANATION OF ZONE DESIGNATIONS

ZONE	EXPLANATION
A	Areas of 100-year flood; base flood elevations and flood hazard factors not determined.
AO	Areas of 100-year shallow flooding where depths are between one (1) and three (3) feet; average depths of inundation are shown, but no flood hazard factors are determined.
AH	Areas of 100-year shallow flooding where depths are between one (1) and three (3) feet; base flood elevations are shown, but no flood hazard factors are determined.
A1-A30	Areas of 100-year flood; base flood elevations and flood hazard factors determined.
A99	Areas of 100-year flood to be protected by flood protection system under construction; base flood elevations and flood hazard factors not determined.
B	Areas between limits of the 100-year flood and 500-year flood; or certain areas subject to 100-year flooding with average depths less than one (1) foot or where the contributing drainage area is less than one square mile; or areas protected by levees from the base flood. (Medium shading)
C	Areas of minimal flooding. (No shading)
D	Areas of undetermined, but possible, flood hazards.
V	Areas of 100-year coastal flood with velocity (wave action); base flood elevations and flood hazard factors not determined.
V1-V30	Areas of 100-year coastal flood with velocity (wave action); base flood elevations and flood hazard factors determined.

NOTES TO USER

This map is for use in administering the National Flood Insurance Program; it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size, or all planimetric features outside Special Flood Hazard Areas. The community map repository should be consulted for possible updated flood hazard information prior to use of this map for property purchase or construction purposes.

Coastal base flood elevations apply only landward of 0.0 NGVD, and include the effects of wave action; these elevations may also differ significantly from those developed by the National Weather Service for hurricane evacuation planning.

Areas of special flood hazard (100-year flood) include Zones A, A1-A30, AH, AO, A99, V, and V1-V30.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures.

For adjoining map panels see separately printed Map Index.

INITIAL IDENTIFICATION:
JANUARY 17, 1985

FLOOD HAZARD BOUNDARY MAP REVISION:
NONE

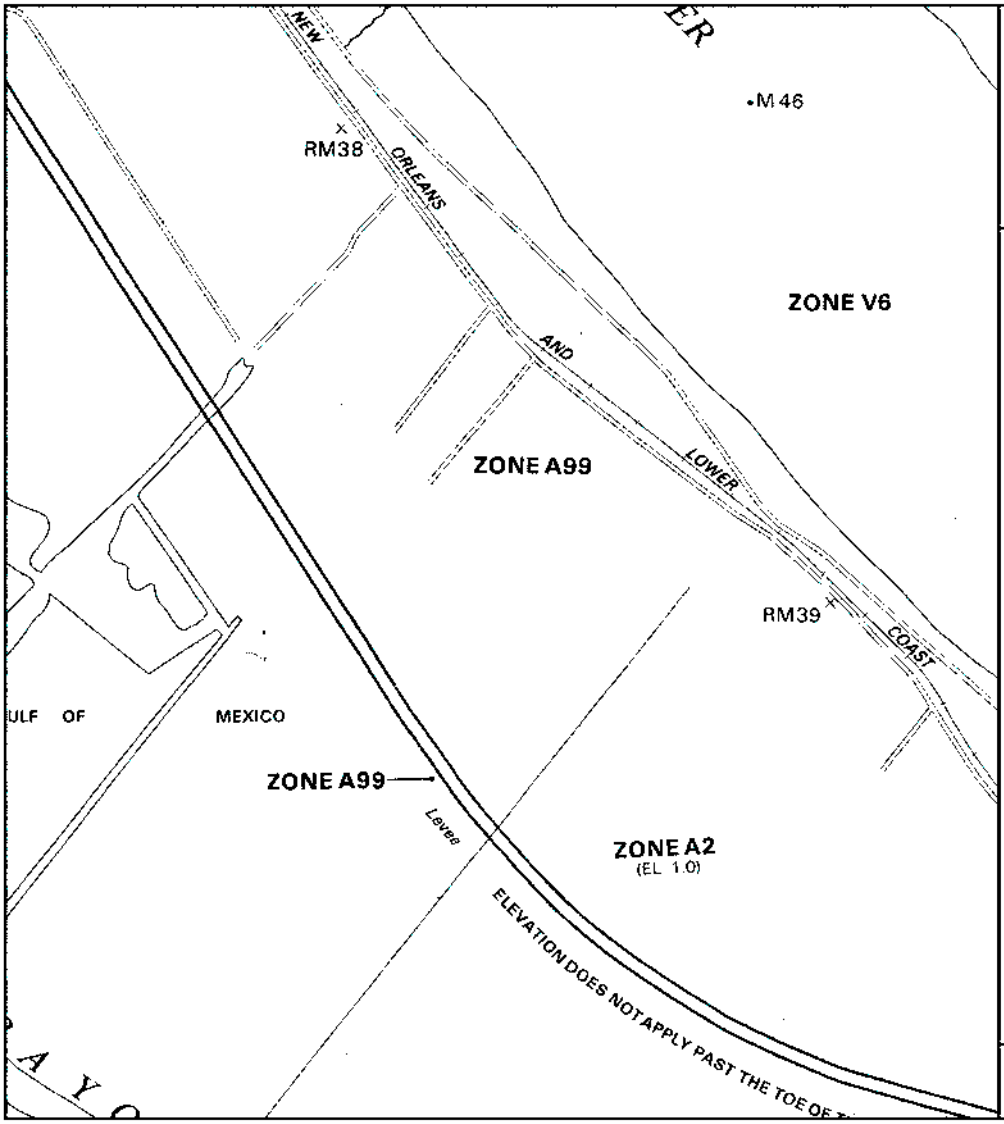

FLOOD INSURANCE RATE MAP EFFECTIVE:
MAY 1, 1985

FLOOD INSURANCE RATE MAP REVISIONS:
September 28, 1990 - to incorporate previously issued letters of map revision.

ALL ZONE B AREAS PROTECTED FROM 100-YEAR FLOOD BY LEVEE, DIKE OR OTHER STRUCTURE, SUBJECT TO FAILURE OR OVERTOPPING DURING LARGER FLOODS.

For description of Elevation Reference Marks see panel 220139 0030.

To determine if flood insurance is available in this community, contact your insurance agent, or call the National Flood Insurance Program, at (800) 638-6620.

APPENDIX F

WETLANDS INVENTORY MAPS

WETLANDS AND DEEPWATER HABITATS CLASSIFICATION

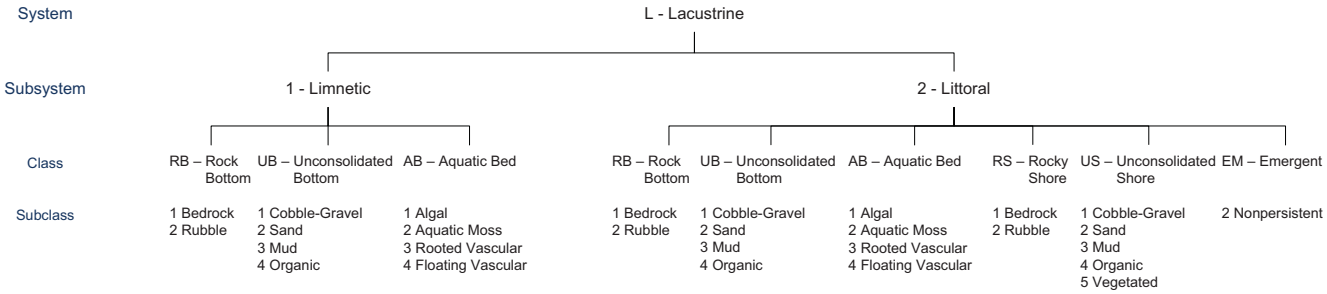

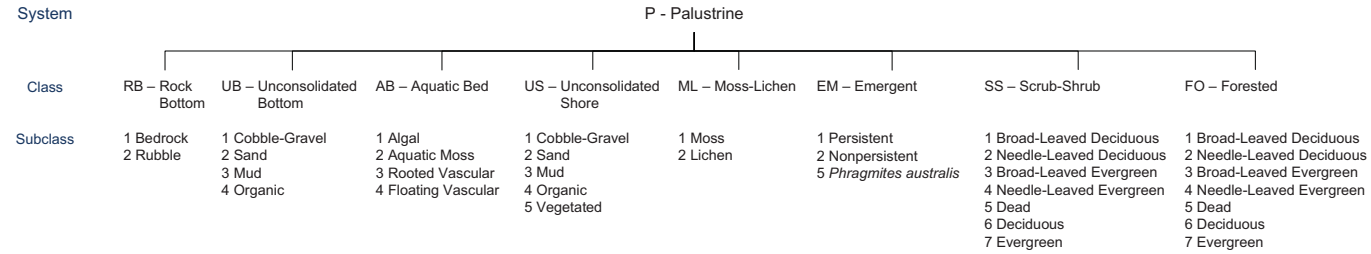

Classification of Wetlands and Deepwater Habitats of the United States, Cowardin *et al.* 1979

WETLANDS AND DEEPWATER HABITATS CLASSIFICATION

MODIFIERS

In order to more adequately describe the wetland and deepwater habitats, one or more of the water regime, water chemistry, soil, or special modifiers may be applied at the class or lower level in the hierarchy. The farmed modifier may also be applied to the ecological system.

Water Regime			Special Modifiers	Water Chemistry			Soil
Nontidal	**Saltwater Tidal**	**Freshwater Tidal**		**Coastal Halinity**	**Inland Salinity**	**pH Modifiers for all Fresh Water**	
A Temporarily Flooded	L Subtidal	S Temporarily Flooded-Tidal	b Beaver	1 Hyperhaline	7 Hypersaline	a Acid	g Organic
B Saturated	M Irregularly Exposed	R Seasonally Flooded-Tidal	d Partly Drained/Ditched	2 Euhaline	8 Eusaline	t Circumneutral	n Mineral
C Seasonally Flooded	N Regularly Flooded	T Semipermanently Flooded-Tidal	f Farmed	3 Mixohaline (Brackish)	9 Mixosaline	l Alkaline	
E Seasonally Flooded/ Saturated	P Irregularly Flooded	V Permanently Flooded-Tidal	h Diked/Impounded	4 Polyhaline	0 Fresh		
F Semipermanently Flooded			r Artificial	5 Mesohaline			
G Intermittently Exposed			s Spoil	6 Oligohaline			
H Permanently Flooded			x Excavated	0 Fresh			
J Intermittently Flooded							
K Artificially Flooded							

Wetland Inventory Reaches 5 and 9

APPENDIX H

SITE PHOTOGRAPHS

Reach 5, Typical transformer throughout the reaches

Reach 5, Hole next to water line at Grand Bayou Road

Reach 5, Close up view of hole associated with water line near Grand Bayou Road

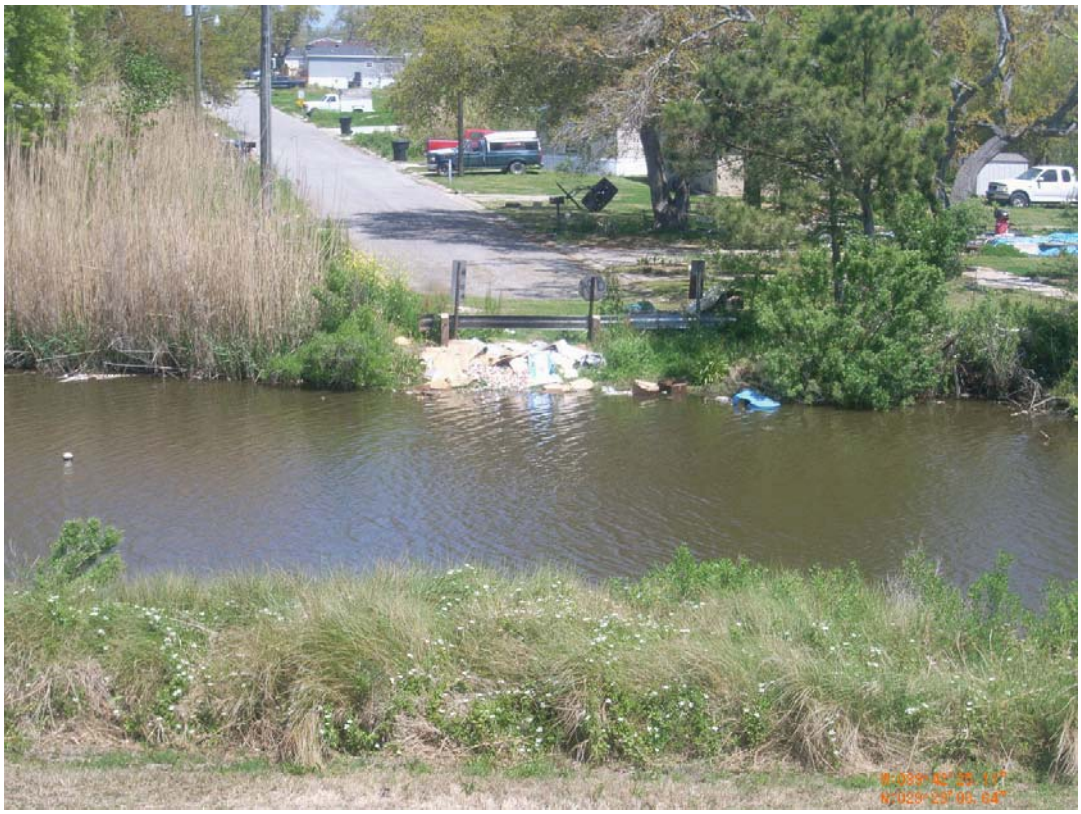

Reach 5, Typical view of marsh to southwest

Reach 6, Freeport-McMoran facility, PVC pipeline and piles of sulfur and coal

Reach 6, Aerial photo (GoogleEarth, USGS) showing distressed vegetation

Reach 6, Dump site in canal at first road south of Stephyll Loop, Port Sulphur, LA

Reach 7, Water valve on levee near white overhead pipeline

Reach 7, Tank debris, probably from Katrina

Reach 8, Possible old pumping station with pipes that could possibly pass through levee area

Reach 8, Debris adjacent to canal, man in bobcat deconstructing and adding metal shed to pile

Reach 12, Large rusted empty tank in area of interest

Reach 12, I-beam dock in area of interest

Reach 12, Dump site with abandoned vehicles, tires and appliances

Reach 12, Private land with piles of materials, exact location unknown

Reach 12, Dumped automobile and port-a-potty

Reach 12, Empty rusty barge

Reach 12, Probable electrical box and conduit, river side of levee, line probably crosses levee

Reach 12, Land side of levee opposite probable electrical box and conduit

Reach 12, Abandoned electrical station

Reach 12, Water lines close to levee

APPENDIX I

PHOTOGRAPHS of RECOGNIZED ENVIRONMENTAL CONDITIONS

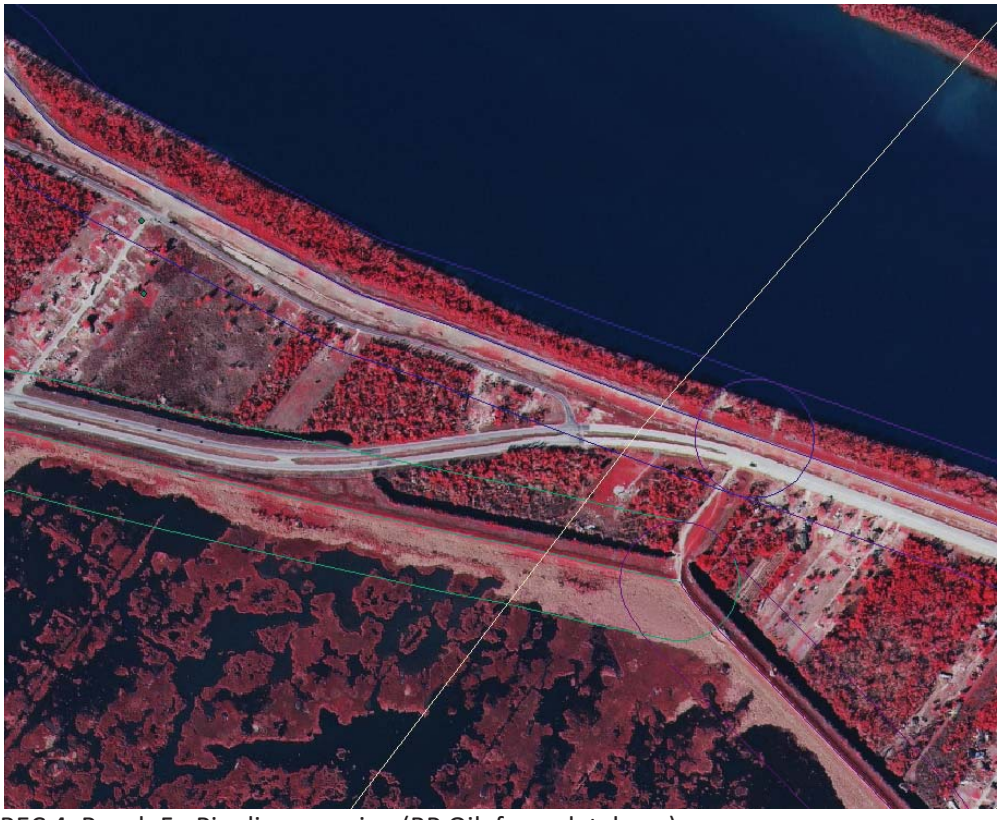

REC 1, Reach 5. Diamond Pumping Station, ASTs

REC 2, Reach 5. White barrel with unknown contents in marsh

REC 3, Reach 5. White drum with unknown contents in marsh

REC 4, Reach 5. Pipeline crossing (BP Oil, from database)

REC 1, Reach 6. Engineering and Public Works sewer pipeline, from database

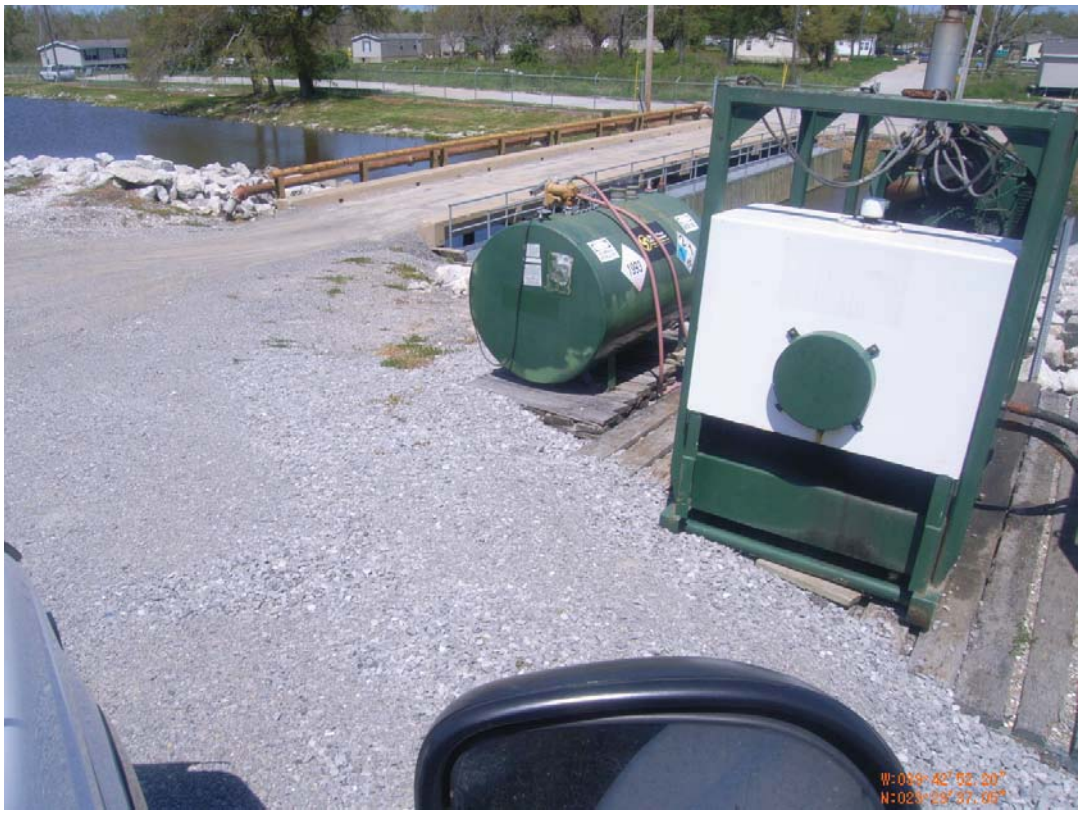

REC 2, Reach 6. Pipeline of unknown contents

REC 3, Reach 6. Tennessee Natural Gas facility with tanks and pipelines

REC 4, Reach 6. Pipeline crossing from Tennessee Natural Gas facility to marsh

REC 5, Reach 6. Hayes Pumping Station (Port Sulphur) with ASTs and equipment

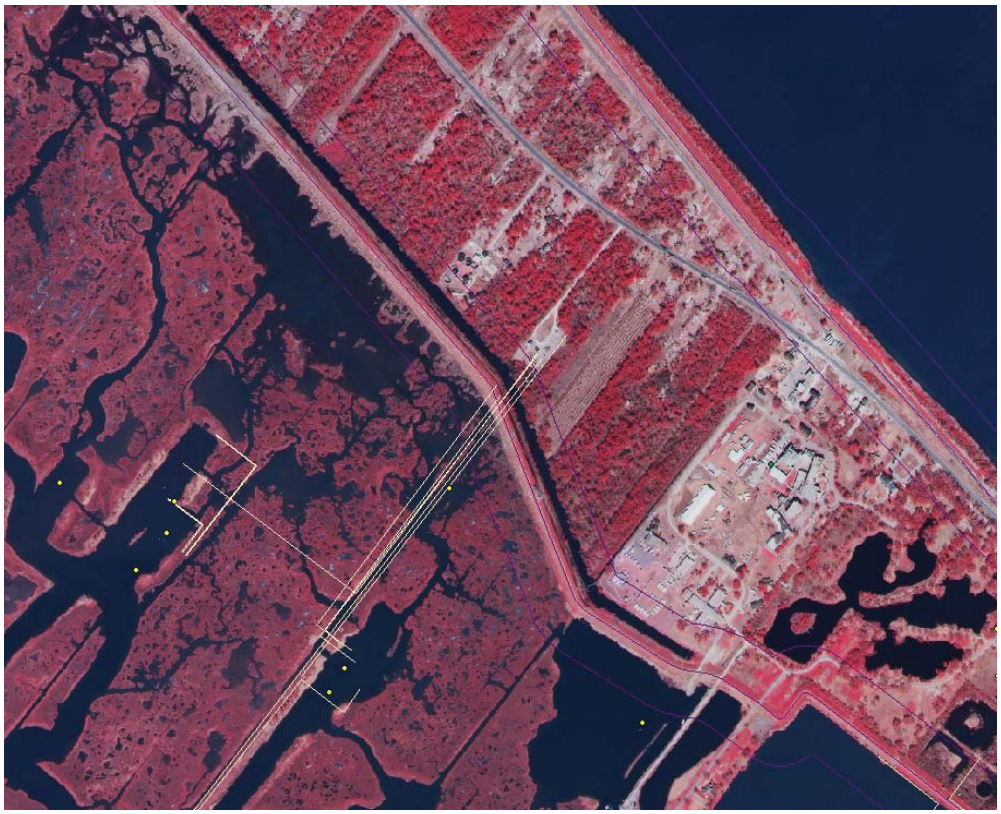

REC 6, Reach 6. Pipeline of unknown contents

REC 7, Reach 6. Sewage treatment plant

REC 8, Reach 6. Tank battery, ASTs, pipelines, and drums (not all in 325’ buffer)

REC 9, Reach 6. Hilcorp and ExxonMobil Oil Companies' pipelines (from database)

REC 10, Reach 6. Pipeline of unknown contents

REC 11, Reach 6. Aminoil, Phillips and Freeport McMoran pipelines (from database)

REC 12, Reach 6. Freeport-McMoran facility with pipelines and pumps, example photo

REC 13, Reach 6. Swift Energy Operating, LLC-Lake Washington Field with ASTs, pipelines and tanks

REC 14, Reach 6. Gainard Woods #2 Pumping station, ASTs

REC 15, Reach 6. Tennessee natural gas pipeline crossing

REC 16, Reach 6. Shell pipeline crossing (from database, northernmost line)

REC 17, Reach 6. Pipeline crossing

REC 18, Reach 6. Pipeline crossing (diesel AST is out of the area)

REC 19, Reach 6. Shell pipeline crossing (from database, 2nd from top)

REC 20, Reach 6. Shell temporary pipeline crossing (from database, southernmost levee crossing)

REC 21, Reach 6. Shell (probably) pipeline crossing (from database, southernmost crossing)

REC 1, Reach 7. Dump site with ASTs and equipment

REC 2, Reach 7. Suspected ExxonMobil pipeline crossing

REC 3, Reach 7. Suspected pipeline crossing, view to southwest

REC 3, Reach 7. Suspected pipeline crossing, view to northeast

REC 4, Reach 7. ExxonMobil Crude Oil pipeline crossing, view to northeast

REC 4, Reach 7. ExxonMobil Crude Oil pipeline crossing, view to southwest

REC 5, Reach 7. Dock with ASTs

REC 6, Reach 7. Overhead ExxonMobil (operator from database) pipeline

REC 7, Reach 7. ExxonMobil Crude Oil Pipeline crossing

REC 8, Reach 7. Chevron pipeline crossings (from database, two easternmost lines)

REC 9, Reach 7. Clajon Industrial Gas pipeline crossing (operator from database), view to southwest

REC 9, Reach 7. Clajon Industrial Gas pipeline (operator from database), view to northeast

REC 10, Reach 7. BP Oil pipeline (from database, 2nd crossing from right)

REC 11, Reach 7. Plains petroleum Crude Oil pipeline crossing, view to northeast

REC 11, Reach 7. Plains crude oil pipeline, view to southwest

REC 12, Reach 7. Sunrise Pumping Station with ASTs, pipelines and equipment

REC 13, Reach 7. Chevron Pipe Line Company natural gas, crude oil and petroleum pipeline crossings

REC 13, Reach 7. Chevron Pipe Line Company natural gas, crude oil and petroleum pipeline crossings

REC 13, Reach 7. View from levee of Chevron Pipe Line Company crossing

REC 14, Reach 7. TexOil (left), Delta Gas (center) and LA State Gas (right) pipelines (from database)

REC 15, Reach 7. Atmos Energy gas pipeline crossing; may be same as LA State Gas in REC 14

REC 16, Reach 7. Louisiana State Gas Corporation natural gas pipeline crossing

REC 16, Reach 7. Louisiana State Gas Corporation natural gas pipeline crossing, view from levee

REC 17, Reach 7. Suspected LA State Natural Gas pipeline crossing

REC 18, Reach 7. Louisiana State Gas Corporation pipeline crossing, view to northeast

REC 18, Reach 7. Louisiana State Natural Gas pipeline crossing, view to southwest

REC 19, Reach 7. Acadian Gas pipeline (from database, parallel to levee w/ dog leg to NE)

REC 20, Reach 7. Louisiana State Gas Corporation natural gas pipeline crossing (view to southwest)

REC 20, Reach 7. Louisiana State Gas Corporation natural gas pipeline crossing (view to northeast)

REC 21, Reach 7. Grand Bayou de Liard Pumping Station with ASTs and equipment

REC 1, Reach 8. Pipelines of unknown contents

REC 2, Reach 8. Drum of marine cleaner of unknown formulation in marsh

REC 3, Reach 8. Creosote log dump by Duvic Pumping Station

REC 4, Reach 8. Duvic Pumping Station with ASTs

REC 5, Reach 8. Dump site with unknown contents on private posted land

REC 6, Reach 8. Pipeline with unknown contents

REC 7, Reach 8. Plains All American Petroleum Crude Oil pipeline crossing

REC 8, Reach 8. Gulf South gas pipeline crossing (diagonal to levee), view to south

REC 8, Reach 8. Gulf South gas pipeline crossing (diagonal to levee), view to north

REC 1, Reach 12. Pumps on levee and in water, pipeline, and contaminated soil under pumps

REC 2, Reach 12. Petroleum Helicopters, Inc. port with ASTs and pipelines for fuel

REC 3, Reach 12. Suspected pipeline crossing

REC 4, Reach 12. Sewage treatment plant with ASTs

REC 5, Reach 12. Compressed gas cylinders on private land

REC 6, Reach 12. Private land with ASTs and compressed gas cylinders

REC 7, Reach 12. Private land with AST on flat bed and drums of unknown contents beside shed

REC 8, Reach 12. Private land with ASTs and concrete

REC 9, Reach 12. Tank farm with petroleum storage, pipelines and transformers

REC 10, Reach 12. Pipeline crossing at southern edge of tank farm facility

REC 11, Reach 12. Nobel Energy, Inc. pipeline crossing

REC 12, Reach 12. Docking facility with ASTs, boat lift and drums

REC 13, Reach 12. Commercial facility with pipelines and ASTs; metal debris in foreground

REC 14, Reach 12. AST on US Government land

REC 15, Reach 12. MMP/Baker Hughes Drilling Fluids site with tanks, pipelines and ASTs

REC 16, Reach 12. L & L Oil and Gas Services, LLC with tanks, drums and ASTs

REC 16, Reach 12. L & L Oil and Gas Services, LLC with tanks, drums and ASTs, view 2

REC 17, Reach 12. Whitetail Oilfield Services, LLC with drums and ASTs

REC 18, Reach 12. Property with AST; appears to be labeled 1863 (aviation fuel)

REC 19, Reach 12. Ellzey Marine gas station with USTs
