Executive Summary

The purpose of the proposed action is to create a freshwater diversion that would deliver nutrient-rich water from the Mississippi River to the Maurepas Swamp.

Personnel from CEMVN-PDC-C performed field inspections on May 3rd, 6th, and 25th, 2021, of the proposed Maurepas Diversion project areas. The areas were inspected for the presence of pipes, containers, tanks or drums, ponds or lagoons, car bodies, tires, refrigerators, trash dumps, electrical equipment, oil drilling equipment, gas or oil wells, discoloration of vegetation or soils, water sheens, out-of-place dirt mounds or depressions in the landscape, evidence of fire, stressed soils with lack of vegetation, animal remains, unusual animal behavior, biota indicative of a disturbed environment, and odors indicative of poor water quality or chemical presence. None of these indicators of possible HTRW problems were noted.

Several petroleum product pipelines were identified as crossing the Hope Canal improvement area approximately 1½ miles south of Interstate Highway 10. Several petroleum pipelines were also identified as crossing the Maurepas Diversion alignment near U.S. Hwy. 61 and LA Hwy. 44 near Garyville, Louisiana.

A review of government environmental databases, historical aerial photographs, and historic topographical maps did not reveal any evidence of Recognized Environmental Conditions (RECs) that would affect the proposed project.

The objective of the Phase I ESA is to identify, to the extent feasible pursuant to the process described herein, RECs in connection with a given property. This assessment did not reveal any HTRW or RECs in connection with the project site.

I. Introduction

1.1 Purpose

The USACE regulations (ER-1165-2-132) and District policy require procedures be established to facilitate early identification and appropriate consideration of potential hazardous, toxic, or radioactive waste (HTRW) in reconnaissance, feasibility, preconstruction engineering and design, land acquisition, construction, operations and maintenance, repairs, replacement, and rehabilitation phases of water resources studies or projects by conducting a Phase I ESA. These assessments follow the process/standard practices for conducting Phase I ESAs published by the American Society for Testing and Materials (ASTM).

This assessment was prepared using the following ASTM Standard:
E 1527-13: Standard Practice for Environmental Site Assessments – Phase I Environmental Site Assessment Process.

The purpose of a Phase I ESA is to identify, to the extent feasible, in the absence of sampling and analysis, the likelihood for the presence of contaminants (i.e., RECs) within the scope of the United States Environmental Protection Agency's (USEPA's) Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and petroleum products.

The scope of this Phase I ESA consists of the following four components:

- a. Records review,
- b. Site reconnaissance,
- c. Interviews, and
- d. Report.

II. Project/Site Description

2.1 Location Description

The West Shore Lake Pontchartrain – Maurepas Diversion sites are located across St. John the Baptist, St. James, and Ascension Parishes in southeast Louisiana. The project areas are situated north of the Mississippi River, east of Blind River, and west of Lake Maurepas within the Maurepas Swamp Wildlife Management Area (MSWMA). Most of the project is located in the MSWMA while the lower portion of the Maurepas Diversion Channel south of US Hwy. 61 is located near Garyville and Mt. Airy, Louisiana, in St. John the Baptist Parish.

2.2 Site/Vicinity Characteristics

The project site vicinity includes the MSWMA north of US Hwy. 61 and a mixture of residential, light commercial, and light, medium, and heavy industrial properties located to the south of US Hwy. 61. Garyville is east of the lower diversion project while Mt. Airy is located near the southern terminus of the diversion project.

III. User Provided Information

Site visits and a records search revealed no reported HTRW issues. Aerial photographs depicting the site were provided by Envirosite Corp. Topographic maps were reviewed at the U.S. Geological Survey's web site.

IV. Records Review

For the purpose of this ESA, the following standard records sources were obtained and reviewed to assist in the identification of RECs in connection with this proposed project site and adjacent areas:

- Environmental Sources (Federal, State and Local, Tribal, and Proprietary)
- Historical Use (topographic maps and aerial photographs)

4.1 Environmental Sources

Publicly available environmental records were obtained and reviewed from available resources on the internet or in correspondence with the managing institution. Not all databases are publicly available with the most recent data that can be referenced as meeting the ASTM 1527-13 standard, and unavailable information must be considered as a data gap.

4.1.1 Federal Records

The following information sources (databases) were searched as a part of the federal agency review process:

- a. USEPA National Priorities List (NPL database – current and deleted sites);
- b. USEPA Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS);
- c. USEPA Superfund Enterprise Management System Archive (SEMS-ARCHIVE);
- d. USEPA Emergency Response Notification System (ERNS);
- e. USEPA Corrective Action Report (CORRACTS);
- f. USEPA Biennial Reporting System (BRS);
- g. USEPA Superfund (CERCLA) Consent Decrees (CONSENT);
- h. USEPA Facility Index System/Facility Identification Initiative Program Summary Report (FINDS);
- i. United States Department of Transportation (USDOT) Hazardous Materials Information Reporting System (HMIRS);
- j. United States Nuclear Regulatory Commission (USNRC) Material Licensing Tracking System (MLTS);
- k. USEPA Federal Superfund Liens (NPL LIENS);
- l. USEPA PCB Activity Database System (PADS);

- m. USEPA Land Use Controls (LUCs);
- n. USEPA RECRA Administrative Action Tracking System (RAATS);
- o. USEPA Toxic Chemical Release Inventory System (TRIS); and
- p. USEPA Toxic Substances Control Act (TSCA).

A search of available environmental records was conducted by Envirosite. These records assist in meeting the requirements of USEPA's Standards and Practices for All Appropriate Inquiry (40 CFR Part 312), and the ASTM Standard Practice for Environmental Site Assessments: ASTM 1527-13 Phase I Environmental Site Assessment Process. For properties that contained inadequate address information for mapping purposes, reasonable efforts were made to identify the approximate location of the sites in relation to the target properties as part of the review process. In addition, the physical setting of the target properties was assessed by reviewing topographic maps, to identify conditions in which hazardous substances or petroleum products could migrate.

4.1.2 State and Local Records

The following information sources were searched as a part of the state and local agency review process:

- a. Solid and Hazardous Waste Sites (SHWS);
- b. Solid Waste Facilities/Landfill Sites (SWF/LF);
- c. LDEQ Approved Debris Sites (DEBRIS);
- d. Leaking Underground Storage Tanks (LUST);
- e. Leaking Underground Storage Tanks on Indian Land (INDIAN LUST);
- f. Historic Leaking Underground Storage Tanks (HIST LUST);
- g. Underground Storage Tank Listing (FEMA UST);
- h. Louisiana Underground Storage Tank Database (UST);
- i. Underground Storage Tanks on Indian Land (INDIAN UST);
- j. Conveyance Notice Listing (AUL);
- k. Environmental Liens (LIENS);
- l. Spills and Releases (SPILLS);

- m. Voluntary Remediation Program Sites (VCP);
- n. Voluntary Cleanup Priority Listing (INDIAN VCP);
- o. Dry Cleaner Facility Listing (DRYCLEANERS); and
- p. Louisiana Pollutant Discharge Elimination System (LPDES) Permits Database.

4.1.3 Results

Several Resource Conservation and Recovery Act (RCRA) facilities; one underground storage tank (UST) site with two 12,000-gallon gasoline, two 12,000-gallon diesel USTs, and one 12,000-gallon compartmentalized gasoline and diesel UST; and several spill notifications were identified within one mile of the proposed project site.

Several petroleum product pipelines were found to be crossing the Hope Canal project improvement area south of Interstate Highway 10. Additional petroleum product pipelines were noted to be within the proposed project vicinity.

Several plugged and abandoned oil and gas wells were identified within one mile of the project site. The plugged and abandoned wells are not within the project's footprint; therefore, they are not expected to have any negative impacts to the proposed project.

Several oil and gas wells and water wells were identified within one mile of the proposed project area; however, none of the wells are within the footprint of the proposed project and none should have any negative impact on the proposed project.

No RECs were identified within the footprint of the proposed project.

4.2 Historical Use Information

Historical aerial photographs from 1952 to 2019 and historical topographic maps from 1892 to 2020 were reviewed as part of this investigation.

4.2.1 Aerial Photograph Review

1952 Aerial Photographs

The project site is mostly undeveloped land above U.S. Highway 61 (Hwy. 61). The project site south of Hwy. 61 appears to be used for agricultural purposes. Several structures are located just to the east of the southern terminus of the project site.

1961 Aerial Photographs

No significant changes appear to have occurred since the 1952 photographs.

1970 Aerial Photographs

Several additional structures have been built to the east and west of the southern terminus of the project site. No significant changes appear to have occurred north of Hwy. 61.

1972 Aerial Photographs

No significant changes appear to have occurred since the 1970 photographs.

1973 Aerial Photographs

No significant changes appear to have occurred since the 1972 photographs.

1978 Aerial Photographs

A large industrial facility appears to have been constructed to the west/northwest of the southern terminus of the project site.

1982 Aerial Photographs

No significant changes appear to have occurred since the 1978 photographs near the southern terminus of the project site. Some oil wells appear to have been constructed to the east of the project site south of Interstate Highway 10.

1983 Aerial Photographs

No significant changes appear to have occurred since the 1982 photographs.

1985 Aerial Photographs

No significant changes appear to have occurred since the 1983 photographs.

1990 Aerial Photographs

No significant changes appear to have occurred since the 1985 photographs.

1994 Aerial Photographs

No significant changes appear to have occurred since the 1990 photographs.

1998 Aerial Photographs

No significant changes appear to have occurred since the 1994 photographs.

2004 Aerial Photographs

No significant changes appear to have occurred since the 1998 photographs.

2005 Aerial Photographs

No significant changes appear to have occurred since the 2004 photographs.

2007 Aerial Photographs

No significant changes appear to have occurred since the 2005 photographs.

2009 Aerial Photographs

No significant changes appear to have occurred since the 2007 photographs.

2010 Aerial Photographs

No significant changes appear to have occurred since the 2009 photographs.

2013 Aerial Photographs

No significant changes appear to have occurred since the 2010 photographs.

2015 Aerial Photographs

No significant changes appear to have occurred since the 2013 photographs.

2017 Aerial Photographs

A large petroleum bulk storage plant appears to be under construction to the west of the southern terminus of the project site. No other significant changes appear to have occurred since the 2015 photographs.

2019 Aerial Photographs

No significant changes appear to have occurred since the 2017 photographs.

4.2.2 Topographic Map Review

1892 Topographic Maps

Some structures appear to be located near the southern terminus of the project site on both the east and west sides. The New Orleans and Texas Railroad is noted to be crossing the southern portion of the project site. North of the railroad appears to be undeveloped land and swamp.

1946 Topographic Maps

Few additional structures appear to be located near the southern terminus of the project site. The Louisiana and Arkansas Railroad (L&ARR) has been constructed. U.S. Highway 61 has been constructed. There is very little development north of the New Orleans and Texas Railroad.

1954 Topographic Maps

No significant changes appear to have occurred since the 1946 topographic map. The New Orleans and Texas Railroad is now the Illinois Central Railroad.

1962 Topographic Maps

Several additional structures appear to have been built near the southern terminus of the project site. The L&A RR is now the Kansas City Southern Railroad. A large industrial facility has been constructed to the west of the southern terminus of the project site. No significant changes appear to have occurred north of Hwy. 61.

1998 Topographic Maps

Additional structures, both commercial and residential, appear to have been built to the east and west of the southern terminus of the project site. Interstate Highway 10 has been constructed approximately 3 miles north of Hwy. 61. No other significant changes appear to have occurred north of Hwy. 61

2012 Topographic Maps

No significant changes appear to have occurred since the 1998 topographic maps.

2015 Topographic Maps

No significant changes appear to have occurred since the 2012 topographic maps.

2018 Topographic Maps

No significant changes appear to have occurred since the 2015 topographic maps.

2020 Topographic Maps

No significant changes appear to have occurred since the 2018 topographic maps.

4.2.3 City Directory Search

A review of the City Directory Report did not reveal any issues for the proposed project site.

4.2.4 Fire Insurance Maps Search

Fire insurance maps were not available for the proposed project site and the adjacent areas.

V. Site Reconnaissance

Personnel from CEMVN-PDC-C performed a field inspection on May 3rd, 6th, and 25th, 2021 of the proposed WSLP – Maurepas Diversion project areas.

The project site was visually inspected for the presence of pipes, containers, tanks or drums, ponds or lagoons, car bodies, tires, refrigerators, trash dumps, electrical equipment, oil drilling equipment, gas or oil wells, discoloration of vegetation or soils, water sheens, out-of-place dirt mounds or depressions in the landscape, evidence of fire, stressed soils with lack of vegetation, animal remains, unusual animal behavior, biota indicative of a disturbed environment, and odors indicative of poor water quality or chemical presence. Several petroleum product pipelines in the vicinity of the proposed project location were found during the site visits.

VI. Interviews

No interviews were conducted during the site visits. This may be considered a data gap.

VII. Findings

This assessment did not reveal RECs in connection with the project site.

VIII. Opinion

A Phase I ESA was conducted in conformance with the scope and limitations of ASTM Practice E 1527-13 for the West Shore Lake Pontchartrain – Maurepas Diversion project area. Based on the environmental records review and site visits, there is a low probability of encountering HTRW during construction of the project.

IX. Conclusions

A Phase I ESA was conducted in accordance with the scope and limitations of ASTM Practice E 1527-13 for the West Shore Lake Pontchartrain – Maurepas Diversion project area. No further investigation at the site is necessary. If the proposed project site area changes significantly, the HTRW would need to be re-investigated under a new Phase I ESA.

X. Limitations

USACE Environmental Planning Branch and Environmental Compliance Branch should be contacted with any known or suspected variations from the conditions described herein. If future development of the area indicates the presence of hazardous or toxic materials, USACE should be notified to perform a re-evaluation of the environmental conditions.

The scope of this assessment did not include any additional environmental investigation not outlined herein or analyses for the presence or absence of hazardous or toxic materials in the soil, ground water, surface water, or air, in, on, under, or above the subject tract.

This Phase I ESA was performed in accordance with generally accepted practices of environmental professionals undertaking similar investigations at the same time and in the same geographical area, and USACE personnel observed the degree of care and skill generally exercised by environmental professionals under similar circumstances and conditions. The findings and conclusions stated herein must be considered not as scientific certainties, but rather as professional opinions concerning the significance of the limited data gathered during the environmental site assessment. No other warranty, expressed or implied, is made.

Specifically, USACE does not and cannot state that the site contains no hazardous waste or material, petroleum products, or other latent conditions beyond those observed by USACE during the site assessment.

The observations described in this report were made under the conditions stated herein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services. Furthermore, such conclusions are based solely on site conditions and rules and regulations which were in effect at the time of the assessment.

In preparing this report, USACE relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to USACE at the time of the site assessment. Although there may have been some degree of overlap in the information provided by these various sources, no attempt was made to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment.

Observations were made of the site, as indicated within the report. Where access to portions of the site was unavailable or limited, USACE renders no opinion as to the presence of indirect evidence relating to hazardous waste or petroleum products, in that portion of the site or structure.

Unless otherwise specified in the report, USACE did not perform testing or analyses to determine the presence or concentration of asbestos, radon, formaldehyde, lead-based paint, lead in drinking water, or electromagnetic fields at the site or in adjacent areas.

The purpose of this report was to assess the physical characteristics of the subject site with respect to the presence in the environment of hazardous, toxic, or radioactive waste or material, or petroleum products. No specific attempt was made to check on the compliance of present or past owners or operators of the site with federal, state, or local laws and regulations, environmental or otherwise.

XII. Qualifications of the Environmental Professionals

Joseph Musso
Environmental Resource Specialist
US Army Corps of Engineers
New Orleans District
New Orleans, LA

Work Experience:

Mr. Musso has over 30 years of experience as an environmental specialist/manager in both the private and public sector. He has actively participated in projects related to toxic and hazardous waste site evaluation, hydrocarbon site assessments, air quality projects, surface water quality projects, Solid and Hazardous Waste management programs, and Pollution Prevention Plans over the course of his career. He is experienced in a wide range of environmental applications, including environmental management at the state and federal levels, compliance of facilities for industrial, domestic, and storm water regulations, and requirements for groundwater monitoring plans. He has also directed multi-

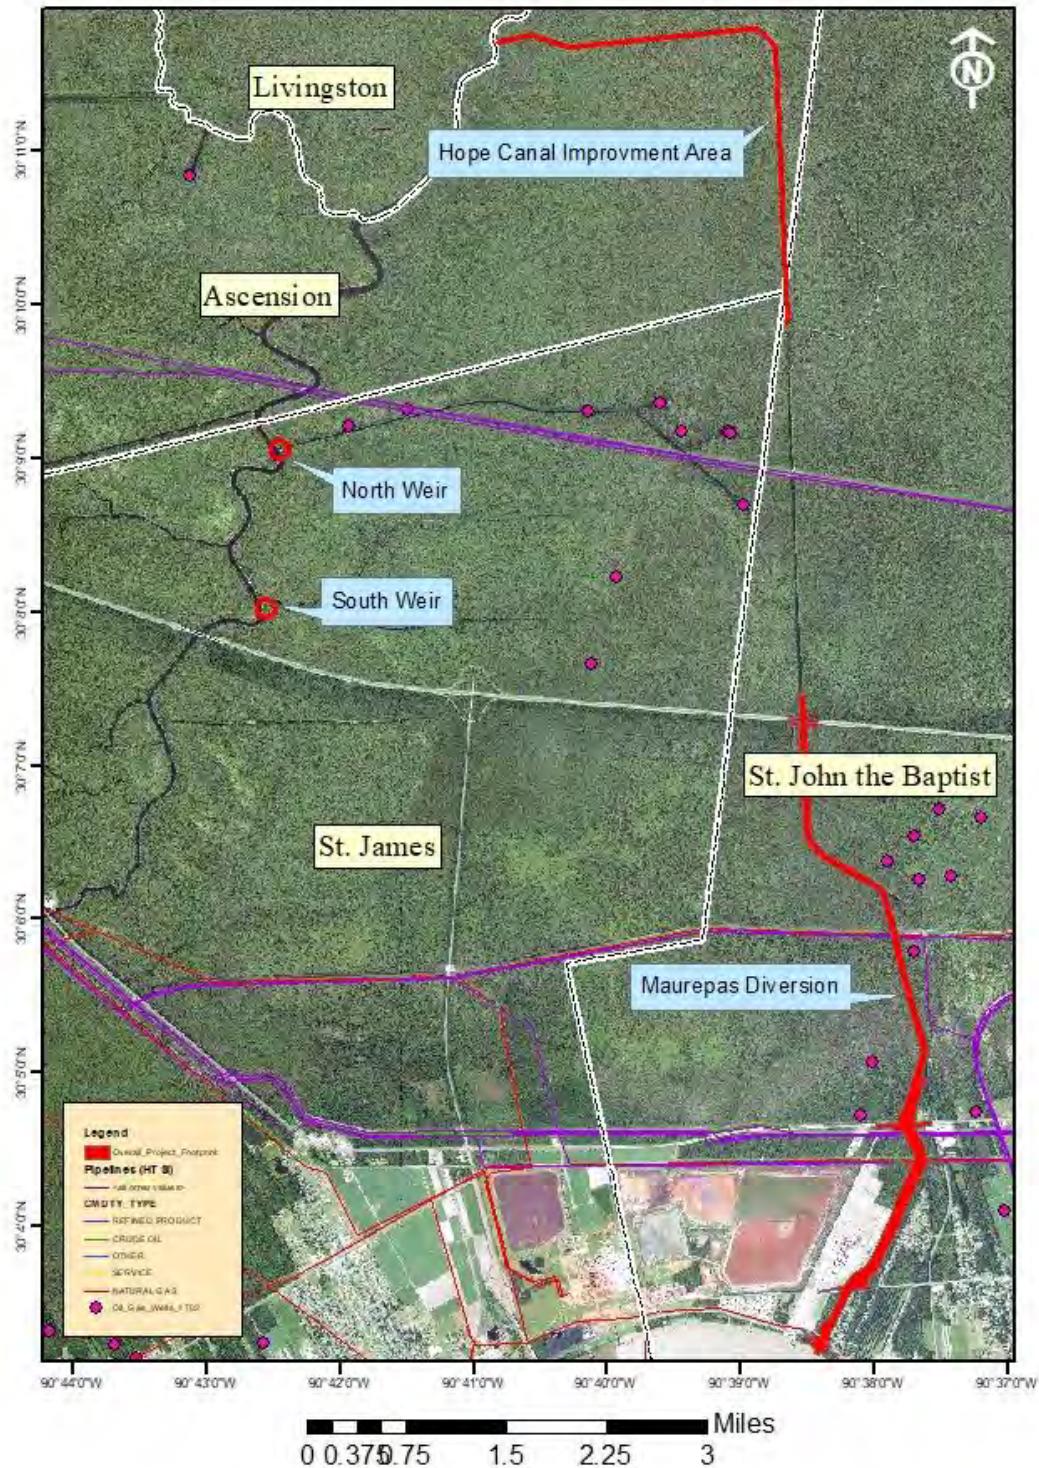

disciplinary environmental projects for private industry and the public sector.

Mr. Musso has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site and declares that, to the best of his professional knowledge and belief, he meets the definition of an Environmental Professional as defined under 40 CFR 312.

County : ST. JOHN THE BAPTIST

Incident Information

Incident Date Time : 2015-01-23 10:45:00
Type of Incident : PIPELINE
Incident Cause : UNKNOWN
Incident DTG : OCCURRED
Incident Location : N/R
Sequence Number : 1106427
Potential Flag : N

Description of Incident : CALLER STATED BUBBLES CAME UP IN A PARKING LOT FROM A PIPELINE AND RELEASED A FLAMMABLE GAS MIXTURE INTO THE AIR.

Last Date in Agency List : 2015-12-23

Incident Response Summary

Date Time Received : 2015-01-23 14:39:48
Date Time Completed : 2015-01-23 14:46:41
Call Type : Incident
Source : TELEPHONE
Responsible Company : SHELL PIPELINE
Responsible Org Type : PRIVATE ENTERPRISE
Responsible City : ST. JAMES
Responsible State : LA
Responsible Zip : 70086

Incident Details Summary

Remedial Action : PIPELINE WAS SHUT DOWN, CONDUCTING AIR MONITORING , WILL DEVELOP A REPAIR PLAN AFTER EXCAVATION.

Medium : ATMOSPHERE
Medium Description : AIR
Body of Water : N/R
Weather Conditions : OVERCAST
Water Temperature : N/R
Water Supply Contaminated : U
Waterway Closed : N
Waterway Description : N/R

Source Description

Source Description :

The NPDES module of the Compliance Information System (CIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The RMP database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Comments :

On 4/15/19, I conducted surveillance at 10:01 a.m. using the MultiRae meter. The driving route was as follows: Traveled East on Highway 61 to Highway 54 South to the Plantation Oaks subdivision. From the Plantation Oaks subdivision, I continued traveling South on Highway 54 to Highway 44 West to LA3213. LA3213 to Highway 44 East to Petroleum Fuel and Terminal. Next, traveled East on Highway 44 to North Highway 54 to Highway 61. No odor was detected while surveillance was being conducted. A site visit was conducted on 4/15/19 at Petroleum Fuel Terminal Company with Robert Moreau and a Field Interview Form was left with the facility to maintain Best Management Practices for all permits and plans. The facility is also to notify LDEQ of any tank modifications/repairs prior to the commencement of the project for evaluation. The facility received vacuum tank bottom oil on 4/13/19, #6 fuel oil was transferred from tank to ship from 4/13/19 to 4/14/19. Asphalt was transferred from tank to barge from 4/14/19-4/16/19. No Areas of Concern or Violations were noted at the time of this site visit.. On 4/16/19 Brandon Saunier conducted surveillance in the vicinity and a site visit to MPLX. At this time he looked over their transfer logs, maintenance records, and conducted a site tour/odor tour around the facilities tanks and equipment. At the time of inspection no unusual or strong odors were noted at the facility. Facility personnel, Jackie Gast, explained their odor protocol, their in house air monitoring program once they are aware of any odor incidents, and spoke of how they brought a 3rd party company in to conduct air monitoring. No Areas of Concern or Violations were noted at the time of this site visit. Air monitoring/surveillance to continue. All complainants were contacted.

Comments :

On 11/15/2018, I conducted a review of all odor incidents in the Garyville/Mt. Airy, La. vicinity for 2018. After review of the odor incidents, on 11/16/2018, I requested transfer logs, dated 11/15/2018, from Pin Oak Terminals and Petroleum Fuel and Terminal Co. The transfer log received from Pin Oak, dated 11/15/2018, indicated product was transferred from barge to storage tank. The transfer logs received from Petroleum Fuel and Terminal Co., dated 11/15/2018, indicated product was transferred from barge to the storage tank and a transfer was conducted from tank to barge. On 11/16/2018, I conducted surveillance with the MultiRae meter and traveled Airline Highway to Highway 54, the neighborhood of the complainant, and to River Road. A mild hydrocarbon odor was present. The MultiRae meter registered 0 ppm of VOC, H2S, and SO2 in the garage where odor was present. Along River Road in-between Pin Oak Terminals and Petroleum Fuel and Terminal Company a strong hydrocarbon odor was present and the MultiRae meter registered 0 ppm of VOC, H2S, and SO2. Due to ongoing odor complaints in the area surveillance will continue. CAG

Comments :

Based on the frequency of calls received, air monitoring was conducted on 08/22/2018 and 08/23/2018 on the levy in front of APEX Terminals, Pin Oak Terminals, the surrounding neighborhoods, on LA-54, and the neighborhoods found off of LA-54. Odors were detected while conducting air monitoring; however, no elevated readings were noted for H2S, VOC, or SO2 at the time. Surveillance was also conducted on 08/27/2018. Additional surveillance was conducted 09/17/2018. Although odors were detected, no origination point could be determined at the time. Surveillance was conducted on 09/21/2018 and 09/26/2018, no odors were detected. On 10/05/2018, spoke via telephone with Mr. Johnson and provided a status update of the above surveillance information. Surveillance will continue due to the frequency of reports in the area. CAG

Comments :

On 12/14/2018, surveillance was conducted in the Mt. Airy/Garyville vicinity. In the Plantation Oak neighborhood, located off Highway 54, a strong odor was detected. The Jerome meter registered 0.003 ppm at several locations in the neighborhood. The MultiRae meter did not detect any H2S, VOC, SO2 in the Plantation Oaks neighborhood. Also, during the surveillance, 2 air canisters were deployed. The first air canister was deployed at Oakland Court, in the cul-de-sac. The second air canister was deployed at the corner of Daffodil and Oak Park Blvd. Both air canisters were sent to the LDEQ contracted lab for analysis. On 12/19/2018, residents that provided emails on the incident report were sent the following information via email: Good Afternoon, I wanted to provide an update regarding the Garyville Odor's and Louisiana DEQ's investigation. Last week, I made multiple site visits to APEX and MPLX (Formerly Pin Oak). I conducted multiple forms of air monitoring, and took air canister samples in the affected neighborhoods for analysis. I have also been informed that Louisiana DEQ will be sending out the MAML (Mobile Air Monitoring Lab) in the next couple of weeks in the area. There is not a set date at this time; however, what this means is: The MAML will be in Garyville for a currently undetermined amount of time. While in the field, there will be 24/7 monitoring being conducted so that air analysis will be done for all time periods throughout the day. Regular odor patrols will be conducted simultaneously during this time period. Air canisters will be collected at this time as well. This will be a large help as it will allow investigation outside of regular business hours. At this time, results are still being analyzed for the canisters collected last week. As always, our reports and inspections are public record. If you would like to make a public records request, at any time, please reference the link below for the request form and directions:

Comments :

Surveillance was conducted North HWY 3213 to East HWY 61 to South HWY 54, to the Plantation Oaks neighborhood located East of HWY 54 to West HWY 44 to North 3213 on 2/18/2019, 2/19/2019, and 2/25/2019. The MultiRae gas meter listed the VOCs, H2S, SO2 = 0ppm. I completed a file review of Gramercy Holdings L.L.C.- Noranda (AI#1388) and no exceedances/violations indicated. I conducted a facility site visit on 2/19/2019 and a facility tour on 2/25/2019 at Gramercy Holdings L.L.C.-Noranda in response to the continuous odor complaints. During the facility tour no violations noted. Surveillance will continue in the area as the odor incidents are reported. CAG

Comments :

On 7/15/20, I requested via email to Brian Sullivan, Noranda Alumina Environmental Engineer, to provide information that was occurring at the facility at the time of the complaint, if there were any upsets, malfunctions, reportable releases, or permit exceedances. The complainant, Remy Amedee, was contacted, via telephone, and provided an update of the information that I requested from Noranda Alumina. On July 15, 2020, Mr. Brian Sullivan, emailed a response stating that there were no plant upset conditions or other routine maintenance activities that could have been a potential source of odor on July 14, 2020 (see attachment). On July 16, 2020, I conducted surveillance of Noranda Alumina located at 1111 E Airline Highway, Gramercy, St. James Parish, LA. I traveled East along Hwy 44 towards Noranda Alumina to North Hwy 54. Next, I traveled West Hwy 61 to South Hwy 3213 to Hwy 3127. While I conducted surveillance, no particulate emissions were observed from the facility. The LDEQ MultiRae readings were 0 VOCs, 0 CO2, 0 NOx and Oxygen at 20.9%. On July 24, 2020, I left a voicemail to Mr. Amedee, stating the above information. No further action at this time. CAG

Comments :

Mr. Amedee reported a petroleum odor in the air from an unknown facility on 4/10/2019. I conducted air monitoring in the St. John area near Noranda Alumina, Apex Terminals, MPLX, Nalco, and Evonik on 4/12/2019 using the MultiRAE air monitoring hardware. I also conducted air monitoring on Highway 54, the rear side of the facilities, and near the affected neighborhoods. No readings above 0.0 PPM were noted for H2S, SO2, or VOCs. On Monday, 4/15/2019, Christine Greene made a site visit at APEX Terminals in regard to the incidents and previous incidents received. At the time of her site visit no Areas of Concern or Violations were noted. On Tuesday, 4/16/2019, I conducted a site visit to MPLX Terminals. At this time I looked over their transfer logs, maintenance records, and conducted a site tour/odor tour around the facilities tanks and equipment. At the time of inspection no unusual or strong odors were noted at the facility. While a slight odor was noted near a single tank in Pit 2, the odor was not detectable once I moved 10 feet in any direction from the tank. Facility personnel, Jackie Gast, explained their odor protocol, their in house air monitoring program once they are aware of any odor incidents, and spoke of how they brought a 3rd party company in to conduct air monitoring. No Areas of Concern or Violations were noted at the time of this site visit. Due to the frequency of complaints in the area, air monitoring and surveillance will continue. The complainant was contacted and informed of the findings of the investigation. BMS

Comments :

On 01/06/2021, I conducted air monitoring in the St. John area near Noranda Alumina, Louisiana Sugar Refinery, Apex Terminals, MPLX, Nalco, and Evonik using the MultiRAE air monitoring hardware. Air Monitoring was also conducted on Highway 54, Highway 3213 and Highway 61 which is the east/west and rear side of the facilities, and near the affected neighborhoods. No readings above 0.0 PPM were noted for H2S, SO2, or VOCs. On 01/07/2021, Mrs. Charlotte Hooker, Noranda Environmental Manager, was contacted, via email, to respond to the complaint. On 01/08/2021, Mrs. Hooker stated, that the facility, on 01/04/2021, did not have any upsets or malfunctions that would cause an odor. On 01/13/2021, I contacted Remy Amedee, via email, of the above information. CAG

Incident Description :

C-18-119475, Went outside in my back yard and it stunk really bad, my eyes started burning, and i started to get a hard ache after five minutes, so I went back inside my house and filed this complaint. This is not a hydrocarbon smell its a smell i recognized that request comes from Noranda or Rain. This is disgusting that we have to continue to live in these conditions and no seems to be doing nothing. The wind is out of the west south west and i can see lightning flashing in the south/south west sky, MDM

Comments :

Based on the frequency of calls received, air monitoring was conducted on 08/22/2018 and 08/23/2018 on the levy in front of APEX Terminals, Pin Oak Terminals, the surrounding neighborhoods, on LA-54, and the neighborhoods found off of LA-54. Odors were detected while conducting air monitoring; however, no elevated readings were noted for H2S, VOC, or SO2 at the time. Surveillance was also conducted on 08/27/2018. Additional surveillance was conducted 09/17/2018. Although odors were detected, no origination point could be determined at the time. Surveillance was conducted on 09/21/2018 and 09/26/2018, no odors were detected. On 10/05/2018, called and left a message for Mr. Amedee. Surveillance will continue due to the frequency of reports in the area. CAG

Comments :

Due to the ongoing odor complaints, on 11/16/2018 and 11/17/2018, I requested the transfer logs dated 11/15/2018, from MPLX Terminals LLC formally Pin Oak Terminals (AI#144688) and Petroleum Fuel and Terminal Co. (AI#32818). The transfer log received from MPLX, dated 11/15/2018, indicated product was transferred from barge to storage tank. The transfer logs received from Petroleum Fuel and Terminal Co., dated 11/15/2018, indicated product was transferred from barge to the storage tank and a transfer was conducted from tank to barge. Air monitoring using the MultiRAE Air Monitoring system was conducted on 11/16/2018. During the surveillance odor was detected in front of Petroleum Fuel and Terminal Company, on River Road, no readings of H2S, SO2, or VOCs were detected at the time.. On 11/29/2018, a PCI was conducted at Petroleum Fuel & Terminal Company. I conducted a facility tour and walked the Vacuum Tower Bottom/Asphalt transfer line from the storage tanks to the loading dock of the incoming and outgoing products, per the provided transfer log dated 11/15/2018. During the PCI, I observed multiple leaks at valve stems, and at the packing areas. Asphalt was observed in secondary containment and staining of product was observed on the ground in multiple areas along the transfer line from the tanks to the loading dock. On 12/4/2018, a PCI was conducted at MPLX Terminals LLC, formerly Pin Oak. I conducted a facility tour and walked the transfer line of VGO#1 from the loading dock to the tank storage areas in pit #4 and observed the transfer lines between tanks per the transfer log dated 11/15/2018. During the PCI, a small drip was observed from a sample line. The facility capped the sample line and small stain removed while I was onsite. No area of concerns were noted. Surveillance will continue as odor incidents persist. CAG

Source Description

Source Description :

AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. The Louisiana - Tools For Environmental Management And Protection Organizations (LA-TEMPO) is Louisiana's central repository for all facility data and includes permits, surveillance, enforcement, and remediation information.

The NPDES module of the Compliance Information System (CIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring. The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Comments :

Notification received of 50-100 bbls of #6 fuel oil released to the Mississippi River from a failed flange on a 20 inch line at 2300 on 2/10/18. This volume was based on the total volume in the line. Hard boom was deployed immediately. A vacuum truck arrived a little after 3:00AM and relieved pressure in the line, reducing the flow. Based on the volume recovered, the released volume was revised down to approximately 100 gallons. ES&H attempted to launch, however fog prevented their access to the river until mid-day at which time they worked their way up from Bonne Carre but did not discover any recoverable oil. USCG Sector New Orleans conducted an over-flight and shoreline assessment on the morning of 2/11. No recoverable oil was observed; only a light sheen in the middle of the river. I conducted a site visit on 2/12 to observe the state of the facility. The line had been taken out of service. Planned repairs included a section-by-section clean out of the pipe and are projected to be completed on Feb. 28, 2018...MPW

Comments :

On 10/04/2019, Jackie Velazquez, employee of MPLX LP, reported an unknown sheen located at 4006 Hwy 44 in Mount Airy, Louisiana. The amount of material released is unknown. Sheen was discovered by a MPLX LP employee during the construction of a new dock.. The sheen was described to be 10 feet in length and had a rainbow color. Based on the description of the sheen, the material released is likely below Reportable Quantity and non-recoverable.

Comments :

On 01/19/2018, an unknown sheen was reported by Samuel Colon of Pin Oak Terminals. The sheen was located at 4006 Hwy 44 in Mount Airy, Louisiana. The responsible suspected party is unknown. Mr. Colon stated that a dock worker noticed a sheen at mile marker 144 in the Mississippi River (AI# 91412). The sheen was described to be rainbow in color, and approximately 100 feet long and 10 feet in width. Based on the description of the sheen, the amount of material released is likely below reportable quantity and non-recoverable. JPR

Comments :

On 6/5/18 surveillance was conducted in and around the complainant's neighborhood, a slight petroleum odor was detected during the time of surveillance. I spoke with the complainant, Jeffery Arceneaux, via telephone, who said that the odor can be strong at times and often occurs at night and early morning. Following the surveillance I visited Pin Oak Terminal and met with Craig Ellington, Terminal Manager, Tom Malik, Safety/Compliance Manager and Mark Ourso, Environmental; we discussed the odor complaint and the terminal operations. At the time operations were normal with no upsets, releases, spills or unusual occurrences happening in the recent past; They are in the process of constructing 9 new storage tanks however no unusual odors would be expected from that activity. Currently they are storing VGO (vacuum gas oil), fuel oil and methanol. A tour was conducted of the facility, a slight odor was detected downwind of the VGO tanks, Mr. Ellington suggested it was normal breathing losses due to the ambient summer temperature. I also visited the Petroleum Fuel and Terminal Co. (Apex Terminals), just up river of Pin Oak. I met with Robert Moreau, Terminal Manager, to discuss the complaint and terminal operations. Mr Moreau explained that they are in the process of cleaning tank 203 of the heals remaining from storing "Canadian Sand Oil". In the previous several months they have cleaned tank 117 and 207 also, which entails the cutting open the side of the tank and mucking out the remaining heals. At the time of the visit a strong petroleum odor was detected down wind of the operations at tank 203. Mr Moreau said that the cleaning operations should be completed by 6/15/18. I contacted the complainant and explained the results of the investigation and invited him to call back if odors continue to cause problems. Follow-up surveillance will continue.

Incident Date Time :	2019-09-19 11:09:00
Type of Incident :	FIXED
Incident Cause :	EQUIPMENT FAILURE
Incident DTG :	OCCURRED
Incident Location :	MOUNT AIRY TERMINAL
Sequence Number :	1258677
Potential Flag :	N
Description of Incident :	CALLER IS REPORTING A DISCHARGE OF 0.25 GALLONS OF HYDRAULIC OIL INTO THE MISSISSIPPI RIVER AT THE INCIDENT LOCATION. DISCHARGE WAS FROM A RUPTURED HYDRAULIC HOSE ON A VIBRATION HAMMER.
Last Date in Agency List :	2019-10-30

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

The NPDES module of the Compliance Information System (CIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description

Source Description :

In accordance with the federal Clean Air Act (CAA), EPA establishes fuel quality standards to help protect public health and the environment from harmful gas and particulate matter emissions from motor vehicles and engines. The Office of Transportation and Air Quality (OTAQ) has developed the registration and DC fuels online applications, implemented through EPA's Central Data Exchange (CDX), which provides online applications to assist the fuel manufacturing community with registration and compliance with reporting requirements.

Comments :

Based on the frequency of calls received, air monitoring was conducted on 08/22/2018 and 08/23/2018 on the levy in front of APEX Terminals, Pin Oak Terminals, the surrounding neighborhoods, on LA-54, and the neighborhoods found off of LA-54. Odors were detected while conducting air monitoring; however, no elevated readings were noted for H2S, VOC, or SO2 at the time. Surveillance was also conducted on 08/27/2018. BMS The originating source of the odors could not be determined at this time; however, surveillance will continue. BMS

Comments :

I attempted to contact the complainant Mr. Hopkins by telephone on 6/7/2018 at 0640 hours concerning his odor complaint and received no answer. I drove to the Mt. Airs vicinity where Mr. Hopkins lives and at 0930 hours stopped at the first facility Petroleum Fuel and Terminal Company (APEX) up river from his home. I met Mr. Robert Moreau Terminal Manager and we conducted a facility tour. At the time of the facility tour the facility was cleaning and removing slop tank bottoms from one of the three # 6 oil Tanks 207, 117 & 203. The bottoms are mixing with fly ash to solidify the product via removal by frontend loader to transport trucks to a non-hazardous waste facility landfill. Slight odors were detected at the entrance of one of the tanks being cleaned, and on the surface of the frontend loader bucket. The odors were very mild more like an asphalt type odor. No concerns noted at the time of this facility investigation. Mr. Moreau/Apex Manager mentioned that tank cleaning process will be finished hopefully on 6/15/2018.

Comments :

On 04/11/2019, a release of 4,275 lbs "Sweet Pipeline Natural Gas" occurred due to a contractor depressurizing the wrong line. The gas was non-odorized, and was not detected until read by a 4-gas meter used by facility personnel. Once the facility was aware of the release, the tap was immediately shut off. Although the facility exceeded the 1000 lb reportable quantity set by LAC 33.V.10111 for reporting to State Police and the Department of Public Safety, they did not exceed the reportable quantity of 42,000 lbs set by LAC 33.I.3931.B. The facility reported the incident to State Police and the Department of Public Safety as required, and provided a courtesy notification to Louisiana DEQ even though the reportable quantity of 42,000 lbs was not exceeded. Comments :	Non-Toxic bentonite was spilled during a horizontal directional drilling job to establish a petroleum transfer line. The bentonite drill mud escaped the boring and spilled on the ground. Approximately 200 gallons of drill mud was spilled. The facility placed sediment fencing around the spill area and utilized a Vac Truck to recover the bentonite mud.

SPILLS - LA (*cont.*)

Comments :

On 10/26/2018, Greg Moore, employee of Mount Airy Terminal LLC, reported a spill located at 4006 LA Hwy 44 in Mount Airy, Louisiana. The spill occurred on 02/03/2018. Approximately 700 barrels of fuel oil was released. I contacted Mr. Moore on 10/31/2018 and 11/16/2018. The released was due to a leaking pipe while off loading a barge into a tank. The incident was reported late due a ownership change. Mount Airy Terminals LLC recently took ownership of the facility, in mid-October 2018, from Pin Oak Terminals LLC. Mr. Moore explained, when they were notified that the release on 02/03/2018 was not properly reported, they reported the incident. No oil escaped secondary containment or entered any waterways. The area was cleaned. JPR.

Source Description

Source Description :

AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring. The Louisiana - Tools For Environmental Management And Protection Organizations (LA-TEMPO) is Louisiana's central repository for all facility data and includes permits, surveillance, enforcement, and remediation information.

FRS **(cont.)**

The NPDES module of the Compliance Information System (CIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Comments :

Incident initiated with a call to Mr. Amedee at 2:00pm on 8/27/2008. This has been an ongoing problem. There were no unusual events at CII Carbon, they reported a particulates release due to bucket elevator problems, but nothing to cause an odor. This incident is linked to incident#106962. A visit to check out the tank farm will be made. RFT I visited the tank farm-Petroleum Fuel and Terminal (AI32818) on 9/17/2008. I talked to Mr. Claude Phelps, Manager. They are only a storage facility for #6 fuel oil. They receive the oil by truck and send it out by truck, and would only be doing transfers. They have a steam boiler to heat the lines. This facility is located in at 4084 Hwy 44 in Mt. Airy, La. 70051, St. John Parish and is covered by SERO. They have minor source air permit. They could not be the source of Mr. Amedee's odor. I called Mr. Amedee to update him on my findings. RFT

Comments :

On 11/15/2018, I conducted a review of all odor incidents in the Garyville/Mt. Airy, La. vicinity for 2018. After review of the odor incidents, on 11/16/2018, I requested transfer logs, dated 11/15/2018, from Pin Oak Terminals and Petroleum Fuel and Terminal Co. The transfer log received from Pin Oak, dated 11/15/2018, indicated product was transferred from barge to storage tank. The transfer logs received from Petroleum Fuel and Terminal Co., dated 11/15/2018, indicated product was transferred from barge to the storage tank and a transfer was conducted from tank to barge. On 11/16/2018, I conducted surveillance with the MultiRae meter and traveled Airline Highway to Highway 54, the neighborhood of the complainant, and to River Road. A mild hydrocarbon odor was present in the complainant's garage. The MultiRae meter registered 0 ppm of VOC, H2S, and SO2 in the garage where odor was present. Along River Road in-between Pin Oak Terminals and Petroleum Fuel and Terminal Company a strong hydrocarbon odor was present and the MultiRae meter registered 0 ppm of VOC, H2S, and SO2. Due to ongoing odor complaints in the area surveillance will continue. CAG

Comments :

Based on the frequency of calls received, air monitoring was conducted on 08/22/2018 and 08/23/2018 on the levy in front of APEX Terminals, Pin Oak Terminals, the surrounding neighborhoods, on LA-54, and the neighborhoods found off of LA-54. Odors were detected while conducting air monitoring; however, no elevated readings were noted for H2S, VOC, or SO2 at the time. Surveillance was also conducted on 08/27/2018. The originating source of the odors could not be determined at this time; however, surveillance will continue. BMS

Comments :

On 10/10/04 at 3:30 am at Petroleum Fuel and Terminal Co, a spill occurred while No. 6 fuel oil was being transferred from tank 215 into tank 204. An estimated 150 barrels of fuel oil contaminated the soil within the grounds of the facility. However, fuel oil did not migrate beyond the fire protection wall of the facility and there was no offsite impact. ICI was contracted for clean up activities and began their work on 10/11/04. The contaminated soil was excavated and the free liquid was picked up using a vacuum truck. A site visit was conducted on 10/18/04 to observe completed clean up activities. Eagle Environmental will conduct additional remediation activities to ensure that the site meets RECAP standards. KF

Comments :

Magnolia Marine was transferring oil from a barge at the Mt Airy Fuel Dock. The tanker who was an employee of Adams Land and Marine was on the barge conducting the transfer. Approximately 5 gallons of oil was released during the transfer (Incident originally was reported as 1/2 gallon to 1bbl). The oil went into the water between the two barges. Boom was placed at the ends of each barge to contain the oil. No dispersants were used to dissolve the oil as reported in incident. Pads were used to pick up the oil on the surface water. Pads were placed in drums and disposed. Phone call was made to the Terminal Manager, Mr Claude Phelps. Mr Phelps stated that he spill was cleaned by Magnolia Marine. Mr Phelps also stated that the Coast Guard required Magnolia Marine to clean the residual oil on the exterior of the barge. Incident closed.

Mailing Address : 4084 Hwy 44, Garyville, LA 70051

Comments :

Originally estimated 30-40 bbls ammended to ~60 bbls #6 oil released to pump pad and secondary containment due to a crack in pump housing during barge off-loading into tank 116. Southern Environmental Management Specialty Inc. is OSRO. Oil-water mix was removed and filled 2-70 bbl and 1-50 bbl vacuum truck. ~3 in. of contaminated soil was dug out and removed from the affected area including ~250ft. of ditch. This filled 8 roll-off boxes. Absorbent boom was left in place to recover any product that seeps up during rain events...MPW

Comments :

Solid Waste Issues o I found evidence that past spills of hydrocarbons had not been cleaned up properly as detailed in this report. o I observed evidence of pump pad secondary containment overflows as detailed in this report. o I did not observe any evidence that waste chemicals had been buried at the facility. Asbestos Issues o The facility does not use asbestos insulation and no evidence of asbestos insulation was found at the facility. Water Issues o Effluent samples were taken at the facility. All analysis results were under permit limitations as detailed under the separate report written by Ms. Zoila Osteicochea. o No evidence was found to support the complainants allegation that the facility dock loading arm and dock drains drip material into the Mississippi River. o No evidence was found to support the complainants allegation that the dock bathroom is actually a bucket that is dumped into the river. o Areas of concern not related to the complaint were found during the inspection. These areas of concern are detailed under the separate report written by Ms. Osteicochea. This facility will be referred to enforcement. krc

Waste Activity Monitoring

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your Envirosite account representative for a complimentary site report containing all of the details available.

Report Cycle :	2019
Hazardous Waste Page Number :	1
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	IGNITABLE ORGANIC DISTILLATE FROM MANUFACTURE OF DIALLYL DIMETHYL AMMONIUM CHLORIDE
Primary NAICS :	325110 - Petrochemical Manufacturing
Source Code :	G08 - Removal of spent process liquids or catalysts (bulk removal of wastes from chemical manufacturing or processing, etc.)
Form Code :	W202 - Concentrated halogenated (e.g., chlorinated) solvent
Management Method :	H040 - Incineration - thermal destruction other than use as a fuel (includes any preparation prior to burning)
Generation Tons :	60.48
Managed Tons :	0
Shipped Tons :	60.48
Received Tons :	0
Receiver ID :	ARD069748192
Receiver State :	AR
Shipper ID :	LAD050901669
Shipper State :	LA
Waste Minimization :	A - Cont. initiative to reduce qty and/or toxicity
Waste Code List :	D001
Waste Code Group :	D001 - IGNITABLE WASTE

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description

Source Description :

AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring. The Louisiana - Tools For Environmental Management And Protection Organizations (LA-TEMPO) is Louisiana's central repository for all facility data and includes permits, surveillance, enforcement, and remediation information.

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

FRS (cont.)

The RMP database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed. TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description :

The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.

Preparer of Incident Report :	Carrier
Description of Events :	Driver was doing a pretrip inspection of a loaded cargo tank that he was picking up at the shipper. He noticed a drip coming from the area where the internal valve bolts to the tank. He put a bucket under the slow drip until the product could be offloaded back into the customers tank a short time later. It was never out on the roadway.

Recommendations/Actions Taken :

The cargo tank was washed and checked over by our maintenance shop. They replaced the internal valve gasket and fuse plug. It then passed a vacuum test. There was no evidence of any problem before this incident. The cargo tank had passed its annual testing last May.

 Preparer of Incident Report : Facility

Description of Events :

1. ON 6/6/2012 AT 04:20 APPROXIMATELY 42 000 POUNDS OF HAN WAS TRANSFERRED FROM A TANK TRAILER TO THE STORAGE TANK. WHEN THE TRANSFER WAS COMPLETE THE OPERATOR APPARENTLY DISCONNECTED THE HOSE FROM THE TRAILER WHILE THE PUMP WAS RUNNING TO EMPTY THE HOSE AND TRANSFER LINES. THIS METHOD OF EMPTYING HOSES AND LINES IS NOT AN ACCEPTED PRACTICE NOR INCLUDED IN OUR OPERATING PROCEDURES. HE RELEASED THE TRAILER AND LEFT THE AREA WITHOUT CLOSING VALVES AND STOPPING THE PUMP. THE RUNNING PUMP PREVENTED THE OIL FROM BACKFLOWING FROM THE STORAGE TANK. 2. DURING A STORM EVENT AT 18:20 A SHORT ELECTRICAL POWER OUTAGE CAUSED THE PUMP TO STOP ALLOWING THE OIL TO BACKFLOW FROM THE STORAGE TANK. 3. THE MAJORITY OF THE OIL FLOWED INTO AN ADJACENT CONSTRUCTION HOLE. A SMALL QUANTITY OF THE OIL WAS COLLECTED IN OUR STORMWATER SUMP.

Recommendations/Actions Taken :

1. OUR TANK TRUCK LOADING AND UNLOADING PROCEDURE WILL BE REVIEWED WITH ALL OPERATORS. PROPER HOSE AND LINE CLEARING PROCEDURES WILL BE STRESSED. 2. THE OPERATOR RESPONSIBLE FOR THIS INCIDENT WILL BE DISCIPLINED.

Description of Events :

1. Hose failure while unloading anhydrous ammonia from Hercules trailer to storage tank (T-1304). 2. Emergency stops activated to prevent loss of material from trailer and storage tank. 3. Hose and unloading line allowed to depressurize. 4. Water fog used to suppress vapors. 5. The ammonia that was released either evaporated or was absorbed into water. 6. All water used to suppress ammonia vapor was treated in our wastewater treatment unit.

Recommendations/Actions Taken :

1. Before the next shipment of ammonia is received the storage tank and its associated lines will be inspected. 2. The next unloading event will be observed by management personnel to identify any anomalies. 3. Other transporter companies are being evaluated.

Reporter Name :	Bob McCormick
Organization Name :	CNIC Railroad
Organization Address :	LA
Mailing Address :	3628 Hwy 44, Garyville, LA 70051

Comments :

Upon investigation of this spill, it was found to be a false alarm. A full railroad tank car of acrylamide was loaded at Nalco Chemical in Garyville and traveling through CNIC Railroad yard in Harahan when a switchmen observed liquid coming from the bottom of the railcar. Precautions were taken to isolate the car & examine the leak. However, it was found to be water condensation which was trapped between the cylinder and the jacket. Nalco and CNIC officials used refraction meters & pH meters to verify the product as water. Therefore, there was no spill of product and no impact to the environment.

Comments :	The reporting party, Mr. Noel Ganay, was contacted by phone on 09/18/2007 in response to incident # 99480. Mr. Ganay stated that a steel tote carrying a flammable product EC6554A had a pinhole leak on the bottom. It leaked less than two ounces. Garner Environmental was contacted to bring new totes in to transfer the rest of the product.

Comments :

Douglas Mertz helped me with this investigation. He had Nadine Chauvin test a small quantity of the material to see if it was the super polymer that was formerly manufactured by Nalco and is now manufactured by Stockhausen on an adjacent property. The material turned out to be hydrophobic and simply floated on distilled water. A further examination of the material did not tell us anything more about it. There had been no process upsets on the day that the material appeared on the complainant's home. The origin or nature of the material could not be determined. Nalco's products are mostly water soluble and normally handled in a liquid form. JHS

Comments :

I conducted an incident investigation on 6/07/2012. According to Mr. Rodnet Bourgeois with Nalco Company this incident involved the release of heavy aromatic naphtha inside the Nalco Garyville facility and there was no known off site impact. According to Nalcos written notification all of the material was captured in an adjacent construction hole; none left our site. The recoverable oil was pumped to a manufacturing vessel and the contaminated dirt was excavated and sent off-site for disposal. The Nalco Company preliminary investigation indicates a valve was left open after a delivery of heavy aromatic naphtha was made. The release is considered an unauthorized discharge as defined in LAC 33:I. Chapter 39 and is an Area of Concern with regard to LAC 33:III.501.C.4. and LAC 33:III.537.A (Louisiana Air Emission Permit General Conditions).

Comments :

Facility verbally notified and submitted notification in accordance with LAC 33:I.3925. The release is not considered to be preventable due to unforeseen equipment failure, and no human error is suspected at this time. Upon further investigation (7-day letter), this release did exceed a reportable quantity of 100 lbs of anhydrous ammonia. Amount released was 135 lbs which lost either by evaporation or absorbed into water by (water fog) application. All water used for clean up was treated at facility's wastewater treatment unit.

Comments :	A delivery driver for Quality Distribution was unloading sulfuric acid at the boiler room storage tank when approximately 1 pint spilled from the bleeder valve into the secondary containment. The drain valves were closed. The acid remained in the containment. The product was washed into the wastewater drainage which is routed to the industrial wastewater treatment plant. Sulfuric acid is often used to adjust the pH of the wastewater in the treatment system.

Comments :

I spoke to Herbert Hymel with Ondeal Nalco and he informed me that the spill clean up was completed. The tank truck driver went to the wrong company in Ondeal Nalco yard. He started filling the wrong Sodium Hydroxide tank and did not pay attention and the tank overflowed. The majority of the material stayed inside the concrete diked area but some material did splash outside the containment area. The material that was contained in the dike was pumped into the wastewater plant and then the waste water plant had to be adjusted to the correct pH. The material that spilled outside the dike was scraped up and sealed into drums for disposal in the future. An acidic material was also used to neutralize any material left in the shells. The area will be monitored in the future after rains for any remaining material.

Comments :

This was in response to a diesel spill located at I-10 East bound mile marker 15, on 11/12/14 at 2:35 pm. The spill occurred due to a punctured fuel tank on a Nalco Company truck. Approximately 25 gallons of diesel was lost. DEQ personnel contacted Sgt. LaGrand of the St. Martin Parish sheriff department at 3pm, Sgt. Legrand stated that the DOT put absorbent to contain the diesel and that no water way was impacted. DEQ arrived on site at 4:30 pm, and contacted Jerome Gaspard of OMI Environmental. OMI Environmental removed the diesel stained vegetation to dirt. Bagged the vegetation for disposal. Slight scraping with shovels to reveal the dept of the impacted soil. On 11/20/14 DEQ personnel met with Ryan Barnett of OMI Environmental for dirt removal and soil samples. A roll off box was present for the removal of the impacted soil. A preremoval sample, a post removal sample and a neutral sample was taken. The roll off box was removed for proper disposal. Sample results were received 12/9/14 and the post removal soil appears to adequate requirements.

Q3 Flood Data

HYDROLOGIC UNIT

Hydrologic Unit Maps

USGS

The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI

City Directory Report

Envirosite's City Directory report is a screening tool designed to assist in evaluating a subject property and possible adjacent properties resulting from past activities. It includes a search and abstract of available city directories and cross reference directories at five year intervals or the closest available intervals. Public map sources are reviewed to determine possible adjoining properties to the front, back, left and right of the property.

RESEARCH SUMMARY:

The following research sources were consulted in the preparation of this report:

SOURCE:

YEAR:

Property Archives	2018, 2013, 2010, 2006, 2001, 1998
New Orleans Suburban Directory	1992, 1987, 1982, 1977, 1972, 1966, 1964

Property Archives is a proprietary and comprehensive database of over one billion commercial and residential records, business names and occupant records for every city and town in the United States. This database is owned by Property Archives, LLC.

This report was prepared by Property Archives, LLC for Envirosite Corporation

SUBJECT PROPERTY:

US Hwy. 61 (Airline Hwy.) , Garyville, LA 70051

ADJOINING PROPERTIES:

325 - 557 Daffodil St, Mount Airy, LA

325 - 557 Daffodil St, Mt Airy, LA

100 - 300 Marigold St, Mount Airy, LA

100 - 300 Marigold St, Mt Airy, LA

Fire Insurance Maps No Coverage Statement

Site Location

Maurepas Diversion Corridor
US Hwy. 61 (Airline Hwy.)
Garyville, LA

HIG Project #

2051864

Client Project #

56307

Date Created

06/09/2021

Requested by

Envirosite Corporation
2 Corporate Drive, Suite 450
Shelton, CT

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIM), real estate atlases and similar maps for the site location and adjoining properties. No FIMs or similar maps were identified for the site location and/or adjacent properties.
