918	E-880	2020-07-28	USACE Project Website		Kirk Winterrowd	Kirk		Winterrowd	Austin	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X

There is no time to waste. I urge the Corps to act swiftly through all phases of the project. I am a supporter of the Coalition to Restore Coastal Louisiana, the first nonprofit in Louisiana dedicated to coastal restoration. I am writing regarding the permit application for the Mid-Breton Sediment Diversion, which has been submitted by the Louisiana CPRA. This is a critical project necessary to help protect coastal Louisiana and rebuild land that is rapidly being lost. Sediment diversions have been recognized for decades as necessary tools to rebuild land by reconnecting the Mississippi River to wetlands that have been cut off from the sediment, nutrients, and fresh water that built and have historically maintained our coast. In the EIS for this project, please answer the following questions: • What are the impacts to people, wildlife, habitats and fisheries of Breton and Mississippi Sounds if the Mid- Breton Sediment Diversion is or is not built? • How will this project reduce impacts from hurricanes and storms? • How will this project affect other existing or planned coastal restoration and flood protection projects in the area that are included in the state's Coastal Master Plan? Thank you for your consideration of these questions. I urge you to complete this scoping report as thoroughly and quickly as possible. We have no time to lose in protecting coastal Louisiana	1	1	Wildlife & Habitats / Socioeconomics / Storm Protection / General											X	X	X	X			X

The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
938	E-900	2020-07-28	USACE Project Website		Laura Grimball	Laura		Grimball	Houston	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. 947	E-909	2020-07-28	USACE Project Website		Laureen Biczak	Laureen		Biczak	Fort Lauderdale	FL	As a US citizen and someone who cares passionately about saving our unique and precious resources for our own survival as well as for future generations, I am writing to you today. As a Florida resident who is watching our state try to undue the harm that was done over many years to the Everglades in the name of development, I now write to you to urge you to please consider your actions carefully. The Mississippi River Delta is critical to the birds, wildlife, and people of the Gulf of Mexico. I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Just like the Everglades restoration projects, the Mississippi restoration projects are critical to our sustaining the ecosystem.. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. 958	E-920	2020-07-28	USACE Project Website		Leah Gillette-Duke	Leah		Gillette-Duke	Port Saint Lucie	FL	Seriously? This is a question that needs contemplation? Regardless of the circumstances long ago that determined the control now being asserted over you to abrogate your common sense and heart-based actions, free yourself and make the only decision possible. Choose Light. Choose Life. Find the courage within, activate your Divine Mission and Step UP. Be Who You Were Born to Be. Free yourself and the Mississippi River Delta. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	0	0	General								X							
959	E-921	2020-07-28	USACE Project Website		Leah MacKay	Leah		MacKay	Houston	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

979	E-941	2020-07-28	USACE Project Website		Lillyam Barberi	Lillyam		Barberi	Windermere	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

986	E-948	2020-07-28	USACE Project Website		Linda Easterlin	Linda		Easterlin	New Orleans	LA	I support reconnecting the Mississippi River to the delta through sediment diversions to build and sustain land. Louisiana's land loss crisis is urgent and will only worsen unless we act -- and that means ensuring swift, effective implementation of the Mid-Breton Sediment Diversion. We are literally losing the ground beneath our feet. Our state is washing away at an unbelievable rate. The Mid-Breton Sediment Diversion will have major implications for coastal Louisiana and communities, and I want the Army Corps of Engineers to address the following questions in the final Environmental Impact Statement. Are diversions the best method for building and sustaining land in the Breton Basin? Every project to project our coast is important. I urge the Corps to act swiftly through all phases of the project. Please complete the Scoping Report as quickly as possible	1	1	General									X						
987	E-949	2020-07-28	USACE Project Website		Linda Fontina	Linda		Fontina	Pompano Beach	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1000	E-962	2020-07-28	USACE Project Website		Linda Steward	Linda		Steward	Pattison	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1003	E-965	2020-07-28	USACE Project Website		Linda Williams	Linda		Williams	Fort Lauderdale	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project. I support reconnecting the Mississippi River to the delta through sediment diversions to build and sustain land. Louisiana's land loss crisis is urgent and will only worsen unless we act -- and that means ensuring swift, effective implementation of the Mid-Breton Sediment Diversion. Please address the following questions in the final Environmental Impact Statement: * What is the future fate of the ecosystem, wildlife and communities of not constructing and operating the Mid-Breton Sediment Diversion? * How will the effectiveness of existing marsh creation projects, levees and other Coastal Master Plan projects be impacted without the Mid-Breton Sediment Diversion in place? * What are the impacts of the proposed diversion on the long-term fisheries productivity of the area from Breton Sound to Mississippi Sound? * What impact will not constructing this project have on storm surge vulnerability to communities and livelihoods in Louisiana? I urge the Corps to act swiftly through all phases of the project. Please complete the Scoping Report as quickly as possible.	1	1	Wildlife & Habitats / Socioeconomics / Fisheries / Storm Protection / General									X	X	X	X			X

I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1020	E-982	2020-07-28	USACE Project Website		Lisa Steiger	Lisa		Steiger	Palmer	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1040	E-1002	2020-07-28	USACE Project Website		Lynn Kifer	Lynn		Kifer	Harker Heights	TX	We need a restoration project - we must protect the wildlife-all important for our ecosystem!! The coast line is disappearing- this can't happen!! PROTECT!! As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X	
1065	E-1027	2020-07-28	USACE Project Website		Marian Ryan	Marian		Ryan	Winter Haven	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X	

Mid-Breton Sediment Diversion EIS

1085	E-1047	2020-07-28	USACE Project Website		Mark Johnston	Mark		Johnston	Houston	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1106	E-1068	2020-07-28	USACE Project Website		Marvin Reinhart	Marvin		Reinhart	Ormond Beach	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General		X	X	X	X		X	
1126	E-1088	2020-07-28	USACE Project Website		Mary Shabbott	Mary		Shabbott	Punta Gorda	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X	
1146	E-1108	2020-07-28	USACE Project Website		Melissa Norman	Melissa		Norman	Gainesville	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1161	E-1123	2020-07-28	USACE Project Website		Michael Tuvim	Michael		Tuvim	Houston	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1162	E-1124	2020-07-28	USACE Project Website		Michael Weisensee	Michael		Weisensee	Venice	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1165	E-1127	2020-07-28	USACE Project Website		Michele Thomas	Michele		Thomas	St. Augustine	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1179	E-1141	2020-07-28	USACE Project Website		Monika Butler	Monika		Butler	Houston	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X

The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X		
1183	E-1145	2020-07-28	USACE Project Website		Nadia Spencer	Nadia		Spencer	Key Largo	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. 1203	E-1165	2020-07-28	USACE Project Website		Nara Wood	Nara		Wood	Leonard	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X

I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1224	E-1186	2020-07-28	USACE Project Website		Pamela Mann	Pamela		Mann	Saint Augustine	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General							X	X	X	X			X		
1244	E-1206	2020-07-28	USACE Project Website		Patricia Sakowicz	Patricia		Sakowicz	Orlando	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General							X	X	X	X			X		

Mid-Breton Sediment Diversion EIS

1252	E-1214	2020-07-28	USACE Project Website		Patrick Judge	Patrick		Judge	New Orleans	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project. I support reconnecting the Mississippi River to the delta through sediment diversions to build and sustain land. Louisiana's land loss crisis is urgent and will only worsen unless we act -- and that means ensuring swift, effective implementation of the Mid-Breton Sediment Diversion. Please address the following questions in the final Environmental Impact Statement: * What is the future fate of the ecosystem, wildlife and communities of not constructing and operating the Mid-Breton Sediment Diversion? * How will the effectiveness of existing marsh creation projects, levees and other Coastal Master Plan projects be impacted without the Mid-Breton Sediment Diversion in place? * What are the impacts of the proposed diversion on the long-term fisheries productivity of the area from Breton Sound to Mississippi Sound? * What impact will not constructing this project have on storm surge vulnerability to communities and livelihoods in Louisiana? I urge the Corps to act swiftly through all phases of the project. Please complete the Scoping Report as quickly as possible.	1	1	Wildlife & Habitats / Socioeconomics / Storm Protection / General									X	X	X	X			X

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1266	E-1228	2020-07-28	USACE Project Website		Paulette Gale	Paulette		Gale	New Orleans	LA	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General		X	X	X	X		X	
1267	E-1229	2020-07-28	USACE Project Website		Pauline Gillham	Pauline		Gillham	Miami	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1280	E-1242	2020-07-28	USACE Project Website		Phyllis Gresham	Phyllis		Gresham	Sanibel	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1300	E-1262	2020-07-28	USACE Project Website		Rebecca Ham	Rebecca		Ham	Fort Worth	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1325	E-1287	2020-07-28	USACE Project Website		Rikke Goldhirsh	Rikke		Goldhirsh	Hallettsville	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. 1345	E-1307	2020-07-28	USACE Project Website		Robert Schoonmaker	Robert		Schoonmaker	Melbourne Beach	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1346	E-1308	2020-07-28	USACE Project Website		Robert Stark	Robert		Stark	Houston	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1366	E-1328	2020-07-28	USACE Project Website		Rose Gansle	Rose		Gansle	Corpus Christi	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General							X	X	X	X			X		
1386	E-1348	2020-07-28	USACE Project Website		Sandie McCarthy-Brown	Sandie		McCarthy-Brown	New Orleans	LA	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project. I support the Mid-Breton Diversion! Keeping things the way they are now is not an option. Every attempt to limit land loss and rebuild wetlands will have a cost. But we must weigh the benefits against the cost. The Mid-Breton Diversion is long-term, sustainable strategy and I support it.	1	1	Wildlife & Habitats / Socioeconomics / Wetlands, Water / Fisheries / General								X	X	X	X			X	
1401	E-1363	2020-07-28	USACE Project Website		Sandy Smyth	Sandy		Smyth	Naples	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1411	E-1373	2020-07-28	USACE Project Website		Sarah Tunks	Sarah		Tunks	Dallas	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General		X	X	X	X		X	
1431	E-1393	2020-07-28	USACE Project Website		Shelly White	Shelly		White	Dallas	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1451	E-1413	2020-07-28	USACE Project Website		Sophie Tredor	Sophie		Tredor	Saint Augustine	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1471	E-1433	2020-07-28	USACE Project Website		Steve Jordan	Steve		Jordan	Garland	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. 1491	E-1453	2020-07-28	USACE Project Website		Susan Edmunds	Susan		Edmunds	New Iberia	LA	Now is the time to act to slow our coastal land loss and build new habitat. It would s the ast time for us to act! As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1512	E-1474	2020-07-28	USACE Project Website		Suzanne Cerniglia	Suzanne		Cerniglia	Lake Worth	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. 1532	E-1494	2020-07-28	USACE Project Website		Ted Bahn	Ted		Bahn	Pensacola	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1550	E-1512	2020-07-28	USACE Project Website		Thomas Adam	Thomas		Adam	Austin	TX	We must protect the habitat for our birds because they are an integral part of the life cycle for all of us! As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X

I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1563	E-1525	2020-07-28	USACE Project Website		Timothy Hissam	Timothy		Hissam	Pflugerville	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1589	E-1551	2020-07-28	USACE Project Website		Valerie Van Haltern	Valerie	Van	Haltern	Melbourne Beach	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1609	E-1571	2020-07-28	USACE Project Website		Wayne Walker	Wayne		Walker	Madison	AL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General

1627	E-1589	2020-07-28	USACE Project Website		Winnie Perez	Winnie		Perez	Gainesville	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X

The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project. Louisiana's land loss crisis is urgent and will only worsen unless we act -- and that means ensuring swift, effective implementation of the Mid-Breton Sediment Diversion. Please address the following questions in the final Environmental Impact Statement: * What is the future fate of the ecosystem, wildlife and communities of not constructing and operating the Mid-Breton Sediment Diversion? * How will the effectiveness of existing marsh creation projects, levees and other Coastal Master Plan projects be impacted without the Mid-Breton Sediment Diversion in place? * What are the impacts of the proposed diversion on the long-term fisheries productivity of the area from Breton Sound to Mississippi Sound? * What impact will not constructing this project have on storm surge vulnerability to communities and livelihoods in Louisiana? I urge the Corps to act swiftly through all phases of the project. Please complete the Scoping Report as quickly as possible.	1	1	Wildlife & Habitats / Socioeconomics / Storm Protection / General								X	X	X	X					X

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1655	E-1617	2020-07-29	USACE Project Website		Archie Wilson	Archie		Wilson	Van Horn	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1667	E-1629	2020-07-29	USACE Project Website		Barbara Shalaew	Barbara		Shalaew	Ocala	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1673	E-1635	2020-07-29	USACE Project Website		Bethany Aiudi	Bethany		Aiudi	Citrus Springs	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General							X	X	X	X			X		
1678	E-1640	2020-07-29	USACE Project Website		Bonnie DePoi	Bonnie		DePoi	Scott	LA	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1703	E-1665	2020-07-29	USACE Project Website		Cecelia Pinnock	Cecelia		Pinnock	Loxahatchee	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1715	E-1677	2020-07-29	USACE Project Website		Christine Jubinsky	Christine		Jubinsky	Tallahassee	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X	
1716	E-1678	2020-07-29	USACE Project Website		Christine Norman	Christine		Norman	Cocoa	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Dunkle	Orlando	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X

I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X	
1749	E-1711	2020-07-29	USACE Project Website		Dennis Toll	Dennis		Toll	Sanibel	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1763	E-1725	2020-07-29	USACE Project Website		Dorothy Robbins	Dorothy		Robbins	High Springs	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1764	E-1726	2020-07-29	USACE Project Website		Doug Galbraith	Doug		Galbraith	West Palm Beach	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General							X	X	X	X			X		
1767	E-1729	2020-07-29	USACE Project Website		Dr. William M. Smith, Jr.	William	M.	Smith, Jr.	Lake Placid	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1787	E-1749	2020-07-29	USACE Project Website		Ethel Anne Keeble	Ethel	Anne	Keeble	Mobile	AL	As someone who lives on the Gulf Coast and cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X

The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1807	E-1769	2020-07-29	USACE Project Website		Greg Lussier	Greg		Lussier	Lake City	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1829	E-1791	2020-07-29	USACE Project Website		Jack Cushman	Jack		Cushman	Dunnellon	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1841	E-1803	2020-07-29	USACE Project Website		Jane Blythe	Jane		Blythe	Bradenton	FL	Having once lived in that area, I am someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I PLEAD WITH AND URGE the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * DETAO: the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X	
1842	E-1804	2020-07-29	USACE Project Website		Jane Finneran	Jane		Finneran	New Braunfels	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1853	E-1815	2020-07-29	USACE Project Website		Jeanette Mayer	Jeanette		Mayer	Pinellas Park	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1854	E-1816	2020-07-29	USACE Project Website		Jennifer Condo	Jennifer		Condo	Deland	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1865	E-1827	2020-07-29	USACE Project Website		Joe McCain	Joe		McCain	Vestavia	AL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1866	E-1828	2020-07-29	USACE Project Website		Joe Rogers	Joe		Rogers	Austin	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X				
1879	E-1841	2020-07-29	USACE Project Website		Joseph Guariglia	Joseph		Guariglia	Sarasota	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1901	E-1863	2020-07-29	USACE Project Website		Karyn Roberts	Karyn		Roberts	Tallahassee	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1912	E-1874	2020-07-29	USACE Project Website		Kathryn Lemoine	Kathryn		Lemoine	West Monroe	LA	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project. I support reconnecting the Mississippi River to the delta through sediment diversions to build and sustain land. Louisiana's land loss crisis is urgent and will only worsen unless we act -- and that means ensuring swift, effective implementation of the Mid-Breton Sediment Diversion. Please address the following questions in the final Environmental Impact Statement: * What is the future fate of the ecosystem, wildlife and communities of not constructing and operating the Mid-Breton Sediment Diversion? * How will the effectiveness of existing marsh creation projects, levees and other Coastal Master Plan projects be impacted without the Mid-Breton Sediment Diversion in place? * What are the impacts of the proposed diversion on the long-term fisheries productivity of the area from Breton Sound to Mississippi Sound? * What impact will not constructing this project have on storm surge vulnerability to communities and livelihoods in Louisiana? I urge the Corps to act swiftly through all phases of the project. Please complete the Scoping Report as quickly as possible.	1	1	Wildlife & Habitats / Socioeconomics / Fisheries / Storm Protection / General										X	X	X	X			X

Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X		
1914	E-1876	2020-07-29	USACE Project Website		Kathy Flocco-McMaster	Kathy		Flocco-McMaster	Clearwater	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X		
1934	E-1896	2020-07-29	USACE Project Website		Laurie Champion	Laurie		Champion	Holiday	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	
1954	E-1916	2020-07-29	USACE Project Website		Luciana Barros	Luciana		Barros	Margate	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X	
1974	E-1936	2020-07-29	USACE Project Website		Marla Green	Marla		Green	Grapevine	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

1995	E-1957	2020-07-29	USACE Project Website		Maryrose Cimino	Maryrose		Cimino	Dallas	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General

I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X	

Mid-Breton Sediment Diversion EIS
Scoping Comment Matrix
November 10, 2020

2007	E-1969	2020-07-29	USACE Project Website		Michael McCarty	Michael		McCarty	Valrico	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General								X	X	X	X			X

The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X						
2027	E-1989	2020-07-29	USACE Project Website		Nancy Small	Nancy		Small	Corpus Christi	TX	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General									X	X	X	X			X			
2028	E-1990	2020-07-29	USACE Project Website		Nancy Thompson	Nancy		Thompson	Holiday	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. For thousands of years the Mississippi River has maintained itself through natural processes until humans interfered. I recently saw a documentary on how much land has already been lost and I couldn't believe what I was seeing. There is no time to waste on re-establishing the river delta. The delta provides shelter and critical support to birds, other wildlife and humans. It helps to absorb energy from hurricanes and supports local fisherman in addition to it supporting both native and migrating birds. I live about 1/3 of a mile from the Gulf in Central Florida near the Anclote River and our local government has turned a blind eye to the importance of maintaining habitat here putting wildlife and humans in peril. You must work to re-establish critical lands in the delta. I have to leave the science of the project to the experts, but I hope that the input from those scientists carries significant weight in any restoration project. It is bad enough to have this happen in the first place and worse to do it wrong. I may not live on the delta, but I recognize it's importance. Please do everything you can to restore and protect it. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. * I would also add, the regular and consistent review of the project (possibly by an outside entity) to ensure that the work is on par with the goals that have been set and that contractors are providing a high standard of completion of those goals. There is no time to waste. I urge the Corps to act swiftly through all phases of the project. Thank you.	1	1	Wildlife & Habitats / Socioeconomics / General											X	X	X	X			X

Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time. I urge the U.S. Army Corps of Engineers (Corps) to: * Ensure all analyses of the Diversion and its effects on the Breton Basin consider the effects of NOT building this project, such as continued land loss that threatens our communities, birds, wildlife, fisheries, and culture. The analyses should also include impacts to existing marsh creation projects, levees, and other Coastal Master Plan projects. * Detail the impacts of not building the Diversion on bird and wildlife species of concern. * Be transparent by regularly sharing information with the public and other stakeholders. * Ensure the operation of the Diversion provides as much flexibility as possible to modify operations over time in response to changing environmental conditions and what we learn from monitoring the project. * Incorporate 30 years of existing research and resources into this Scoping Report and the subsequent Environmental Impact Study. There is no time to waste. I urge the Corps to act swiftly through all phases of the project.	1	1	Wildlife & Habitats / Socioeconomics / General							X	X	X	X			X		
2047	E-2009	2020-07-29	USACE Project Website		Paula Benshoff	Paula		Benshoff	Sarasota	FL	As someone who cares deeply about the Mississippi River Delta and its importance to the birds, wildlife, and people of the Gulf of Mexico, I support reconnecting the Mississippi River to the delta through projects like the Mid-Breton Sediment Diversion (Diversion) to build and sustain land. Louisiana's land loss crisis affects the entire Gulf region and will only worsen unless we act--and that means ensuring swift, effective implementation of the Diversion. I understand that this vital project will reconnect the river with nearby wetlands, and deliver sediment to build and maintain almost 16,000 acres of land over time.
