CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. These efforts have included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer

to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance if the Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62675**

**Commenters noted that the impacts of the DWH oil spill on wetlands, wildlife, birds, communities, and land loss are still felt by this region and in particular, Barataria Basin**

---

**where 95 percent of the oiling occurred. These impacts are exacerbated by decades of saltwater intrusion, sea-level rise, and subsidence.**

**Response ID: 16497**

The impacts of the DWH oil spill were considered in the Draft EIS. For example, Chapter 3, Section 3.6.2 Wetland Loss of the EIS notes the ongoing impact of the DWH oil spill on wetlands, as well as ongoing saltwater intrusion, sea-level rise, and subsidence. Section 3.10.5.2 Key Fish and Shellfish Species of the EIS provides an overview of the adverse impacts of the oil spill on key aquatic species within the Barataria Basin.

The LA TIG agrees with the commenters that the impacts of the DWH oil spill are significant in this region and thus the LA TIG is committed to continuing to plan and implement significant restoration projects like the LA TIG's Preferred Alternative in the Restoration Plan. The LA TIG's Restoration Plan focuses on restoring wetlands, coastal, and nearshore habitats in the Barataria Basin. These habitats are critical components of the broader northern Gulf of Mexico ecosystem and suffered the greatest degree of oiling in Louisiana due to the DWH oil spill.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the

Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Stan Barnes

Dear U.S. Army Corps of Engineers, New Orleans District,

I live in Washington State and recently stayed a week at Malheur Wildlife refuge in Central Oregon. we identified 39 bird species and photographed 20. While we were happy to see that many birds, their numbers were fewer than in recent years.

Bird populations have declined significantly, as many as 3 BILLION lost. They are the literal canaries in our less-coal but still threatened lives.

Please assist the local effort to re-wild the Blitzen and other rivers in and near Malheur.

There is yet more to do:

Louisiana's coast is in crisis, putting birds and coastal communities at risk. More than 400 species of birds call coastal Louisiana home, and 40% of all migratory birds in North America spend a part of their life in coastal Louisiana. The Mid-Barataria Sediment Diversion is essential to rebuild vital habitats on which these birds depend.

I support the preferred alternative as outlined in the draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion. I also support the proposal in the draft Restoration Plan to use funds from the Deepwater Horizon Oil Spill settlement to implement this project, which will help to restore the overall health of the ecosystem that was injured as a result of the oil spill.

With that in mind, I ask the following of the U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group:

\*Select the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

\*Fund the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

As the project advances, I urge federal and state decision-makers to consider the following:

\*Commit to developing a robust adaptive management program that incorporates knowledge gained from monitoring the project over time and also considers input from key stakeholders.

\*Work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation, and to be as detailed and transparent as possible throughout the mitigation planning process.

Thank you for considering my comments.

Sincerely,

Stan Barnes

Mercer Island, WA 98040

**Louisiana's coast is in crisis, putting birds and coastal communities at risk. More than 400 species of birds call coastal Louisiana home, and 40 percent of all migratory birds in North America spend a part of their life in coastal Louisiana.**

**Response ID: 16162**

---

The issues raised by the commenters were considered in the Draft EIS. Past and ongoing adverse human impacts on the Project-area ecosystem are discussed throughout Chapter 3 Affected Environment. The use of Louisiana's coastal habitats by a large diversity of birds is discussed in Chapter 3, Section 3.9.3 in Terrestrial Wildlife of the EIS. The benefits that the Project would provide to birds are discussed in Chapter 4, Sections 4.9 Terrestrial Wildlife and Habitat and 4.12 Threatened and Endangered Species of the EIS.

---

**Concern ID: 61756**

**The proposed MBSD Project sponsors should work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation and be as detailed and transparent as possible throughout the mitigation planning process. Use local non-profits to facilitate any mitigation measures that are decided upon. CPRA and the LA TIG should continue to encourage, accept, and solicit ideas and specific recommendation for mitigation after the June 4 deadline for these comments. The opportunity for continued input to inform the ultimate spending of those funds should also be made very clear publicly. The commenter also urges early action, as possible, before there is damage to mitigate.**

**Response ID: 15891**

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. These efforts have included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance if the Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive

management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project

---

alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 62359**

**Commenter requests assistance with the local effort to re-wild the Blitzen and other rivers in and near Malheur to protect birds.**

**Response ID: 15849**

Comment noted. The scope of this EIS is limited to areas in which the Project is expected to have more than negligible effects on the environment, particularly the Barataria Basin and the Mississippi River birdfoot delta in Louisiana.

**Correspondence ID:34979**

Mary Hogan

Dear U.S. Army Corps of Engineers, New Orleans District,

Louisiana's coast is in crisis, putting birds and coastal communities at risk. More than 400 species of birds call coastal Louisiana home, and 40% of all migratory birds in North America spend a part of their life in coastal Louisiana. The Mid-Barataria Sediment Diversion is essential to rebuild vital habitats on which these birds depend.

I support the preferred alternative as outlined in the draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion. I also support the proposal in the draft Restoration Plan to use funds from the Deepwater Horizon Oil Spill settlement to implement this project, which will help to restore the overall health of the ecosystem that was injured as a result of the oil spill.

With that in mind, I ask the following of the U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group:

\*Select the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

\*Fund the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

As the project advances, I urge federal and state decision-makers to consider the following:

\*Commit to developing a robust adaptive management program that incorporates knowledge gained from monitoring the project over time and also considers input from key stakeholders.

\*Work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation, and to be as detailed and transparent as possible throughout the mitigation planning process.

I am a Catholic Christian who takes the protection of life very seriously. This includes our environment, the home where people live. Birds and other wildlife are an indicator of the health of the environment. They are also a joy to behold, for conservatives and liberals alike. Many conservative-membership hunting and fishing groups support environmental protection for birds and fish and other animals. Protection for wildlife protects the environment, which makes our food supply and farmers livelihoods more secure. As it stands, our food supply is starting to be threatened by loss of pollinators and the dwindling diversity of species caused by lack of care for our environment. The environment is not a partisan issue on the level of individuals, and therefore it should not be a partisan issue in congress. Also, there are many jobs to be had in clean energy and green waste solutions. We support both people and jobs by supporting the environment, and that includes protection of endangered species and migratory birds.

Thank you for considering my comments.

Sincerely,

Mary Hogan

Easton, PA 18040

**Response ID: 15891**

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. These efforts have included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance if the Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

---

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62346**

**Restoring and protecting these wetlands into the future would provide significant positive impacts for birds (in terms of nesting and feeding sites), and humans (in terms of tourism dollars and mental well-being). Projects like these are critical for wildlife and serve as a means to bring people together.**

**Response ID: 15791**

The Draft EIS acknowledged the benefits of the proposed Project to wetlands and birds. See EIS Chapter 4, Section 4.6 Wetlands and Waters of the U.S. and 4.9 Terrestrial Wildlife and Habitat for a description of those benefits. The proposed Project's anticipated effects on communities are discussed in EIS Chapter 4, Section 4.13 Socioeconomics and 4.16, Recreation and Tourism.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. **Correspondence ID:35243**

Marjie Estivill

Dear U.S. Army Corps of Engineers, New Orleans District,

Dear Army Corps of Engineers et alia with reference The Mid-Barataria Sediment Diversion: Here is one more bird-lover weighing in on how you folks use the Deep Horizon Oil Spill settlement funds!

I support the preferred alternative as outlined in the draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

I also support the proposal in the draft Restoration Plan to use funds from the Deepwater Horizon Oil Spill settlement to implement this project, which will help to restore the overall health of the ecosystem that was injured as a result of the oil spill.

With that in mind, I also ask the following of the U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group to consider this point as a priority for administering these habitat rebuilding projects:

Work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation, and to be as detailed and transparent as possible throughout the mitigation planning process.

Watching the Gulf coast ecosystems collapse from development and the oil spill makes me 'go easy into the night,' but my kids are furious that their generation will have to watch the collapse of ecosystems that will bring chaos to natural systems that sustain us.

Sincerely,

Marjorie Estivill

**Concern ID: 62008**

**The commenter expressed concern that the DWH oil spill and development are causing the Gulf Coast ecosystem that sustains us to collapse.**

**Response ID: 16165**

The concerns raised by the commenter were considered in the Draft EIS. Chapter 3, Section 3.1.4 Overview and History of the Project area provides an overview of the adverse impacts that the DWH oil spill and development have had on wetland habitat in the Project area.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision**

---

**making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

---

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

Amy Elliott

Dear U.S. Army Corps of Engineers, New Orleans District,

I am writing today on behalf of the more than 400 species of birds call coastal Louisiana home, and 40% of all migratory birds in North America spend a part of their life in our precious and beloved coastal Louisiana.

The Mid-Barataria Sediment Diversion is essential to rebuild vital habitats on which these birds depend. LETS GET THIS HABIT RESTORED!

I support the PREFERRED ALTERNATIVE as outlined in the draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

I also support the proposal in the draft Restoration Plan to USE FUNDS FROM THE DEEPWATER HORIZON OIL SPILL settlement to implement this project! These funds should be used to heal and restore the injury caused by the as oil spill.

U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group:

As the project advances, I urge federal and state decision-makers to consider the following:

\*Commit to developing a robust adaptive management program that incorporates knowledge gained from monitoring the project over time and also considers input from key stakeholders.

\*Work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation, and to be as detailed and transparent as possible throughout the mitigation planning process.

Thank you for considering my comments. Much love and hope for our children and grandchildren to enjoy the natural wonders of our beautiful United States including the gulf! WE CAN DO THIS! FOR THE BIRDS! FOR CHILDREN! FOR THE USA!

Sincerely, Amy Elliott, [REDACTED]

Sincerely,

Amy Elliott

Durham, NC 27705

**Concern ID: 61756**

**The proposed MBSD Project sponsors should work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation and be as detailed and transparent as possible throughout the mitigation planning process. Use local non-profits to facilitate any mitigation measures that are decided upon. CPRA and the LA TIG should continue to encourage, accept, and solicit ideas and specific recommendation for mitigation after the June 4 deadline for these comments. The opportunity for continued input to inform the ultimate spending of those funds should also be made very clear publicly. The commenter also urges early action, as possible, before there is damage to mitigate.**

**Response ID: 15891**

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment

---

Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. These efforts have included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance if the Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not

know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:36606**

Arlene Steinberg

Dear U.S. Army Corps of Engineers, New Orleans District,

Louisiana's coast is in crisis, putting birds and coastal communities at risk. More than 400 species of birds call coastal Louisiana home, and 40% of all migratory birds in North America spend a part of their life in coastal Louisiana. The Mid-Barataria Sediment Diversion is essential to rebuild vital habitats on which these birds depend.

I STRONGLY support the preferred alternative as outlined in the draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion. I also STRONGLY support the proposal in the draft Restoration Plan to use funds from the Deepwater Horizon Oil Spill settlement to implement this project, which will help to restore the overall health of the ecosystem that was injured as a result of the oil spill.

With that in mind, I ask the following of the U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group:

\*Select the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

\*Fund the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

As the project advances, I urge federal and state decision-makers to consider the following:

\*Commit to developing a robust adaptive management program that incorporates knowledge gained from monitoring the project over time and also considers input from key stakeholders.

\*Work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation, and to be as detailed and transparent as possible throughout the mitigation planning process.

Wildlife, fisheries, and beautiful natural places are at risk of complete collapse without large-scale natural infrastructure restoration projects like the Mid-Barataria Sediment Diversion. Natural infrastructure is engineering with nature-restoring and mimicking natural landscapes like wetlands to provide bird habitat, buffer coastal communities against flooding, and absorb carbon pollution-a win-win-win for birds and people.

This project will build more wetlands than any other individual restoration project in the world. WHAT A GROUNDBREAKING, ADVANCED IDEA! By reconnecting the Mississippi River with its marshes, the sediment diversion will mimic the natural spring floods that once replenished the marshes, benefiting birds, wildlife, and fisheries.

Since the 1930s, the Barataria Basin in southeastern Louisiana in New Orleans has lost nearly 295,000 acres of land, displacing communities, threatening critical infrastructure and jobs, and decimating habitat for birds and other wildlife. This innovative project is a crucial first step in turning the tide on the states land loss crisis and protecting vulnerable communities from hurricanes and sea-level rise, while also ensuring the long-term health of the ecosystem in the face of a changing climate and coast.

Thank you for considering my comments.

Sincerely,

Arlene Steinberg  
Philadelphia, PA 19115

Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Correspondence ID:36918**

Gael Bissell

Dear U.S. Army Corps of Engineers, New Orleans District,

As a retired wildlife biologist who did countless environmental impact reports on scores of projects, I strongly believe in value of public comment. This is an incredible project in an area of great restoration need. Perhaps it will lead to many other future wetland restoration projects in the Mississippi and other major rivers where sediment has been cut off from deltas and shorelines.

I strongly support the Mid-Barataria Sediment Diversion as we need this source of sediment to rebuild wetlands that have been lost to erosion, channelization, development, and rising sea levels. These wetlands are desperately needed to restore habitats for birds plain and simple. Birds are our "canaries in the coal mine" and when their numbers decline, it is clear we are next.

I support the preferred alternative as outlined in the draft Environmental Impact Statement. I also support the proposal to use funds from the Deepwater Horizon Oil Spill settlement to restore wetlands in this impacted ecosystem.

I encourage the Corps and other agencies to consider the following:

1. Developing a robust adaptive management program that incorporates knowledge gained from monitoring the project over time and also considers input from key stakeholders.
- 2 Working proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation, and to be as detailed and transparent as possible throughout the mitigation planning process.

Thank you for considering my comments.

Sincerely,

Gael Bissell

Kalispell, MT 59901

**Response ID: 15891**

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public

through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. These efforts have included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance if the Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section

---

10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement.

The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued.

Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section

---

10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

James Field

Dear U.S. Army Corps of Engineers, New Orleans District,

Eleven years ago, the Deepwater Horizon exploded, killing 11 people and eventually spilling millions of gallons of oil into the Gulf of Mexico. It became the largest environmental disaster in U.S. history that resulted in the deaths of as many as one million birds.

The oil spill exacerbated a dire land-loss crisis. Since the 1930s, the Barataria Basin, an estuary in southeastern Louisiana near New Orleans, has lost nearly 295,000 acres of land, displacing communities, threatening critical infrastructure and jobs, and devastating habitat for birds and other wildlife. Forty percent of North America's migratory bird species depend on this disappearing habitat.

Barataria Basin was also ground zero for the oil spill, causing wetlands to disappear three times faster than the rest of the state. We now have an opportunity to restore some of the damaged habitat.

I strongly support of the Mid-Barataria Sediment Diversion, the single-largest ecosystem restoration project in the history of the U.S.

Wildlife, fisheries, and beautiful natural places are at risk of complete collapse without large-scale natural infrastructure restoration projects like the Mid-Barataria Sediment Diversion. Natural infrastructure is engineering with nature-restoring and mimicking natural landscapes like wetlands to provide bird habitat, buffer coastal communities against flooding, and absorb carbon pollution—a win-win-win for birds and people.

This project will build more wetlands than any other individual restoration project in the world. By reconnecting the Mississippi River with its marshes, the sediment diversion will mimic the natural spring floods that once replenished the marshes, benefiting birds, wildlife, and fisheries.

This innovative project is a crucial first step in turning the tide on the state's land loss crisis and protecting vulnerable communities from hurricanes and sea-level rise, while also ensuring the long-term health of the ecosystem in the face of a changing climate and coast.

U.S. Army Corps of Engineers, I believe that there is overwhelming public support for restoration of Louisiana's Barataria Basin because Louisiana's coast is in crisis, putting birds and coastal communities at risk. More than 400 species of birds call coastal Louisiana home, and 40% of all migratory birds in North America spend a part of their life in coastal Louisiana. The Mid-Barataria Sediment Diversion is essential to rebuild vital habitats on which these birds depend.

I completely support the preferred alternative as outlined in the draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion. I also support the proposal in the draft Restoration Plan to use funds from the Deepwater Horizon Oil Spill settlement to implement this project, which will help to restore the overall health of the ecosystem that was injured as a result of the oil spill.

With that in mind, I ask the following of the U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group:

\*Select the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

\*Fund the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

As the project advances, I urge federal and state decision-makers to consider the following:

\*Commit to developing a robust adaptive management program that incorporates knowledge gained from monitoring the project over time and also considers input from key stakeholders.

\*Work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation, and to be as detailed and transparent as possible throughout the mitigation planning process.

Thank you for considering my comments.

Sincerely,

james field

El Paso, TX 79912

---

**Concern ID: 61756**

**The proposed MBSD Project sponsors should work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation and be as detailed and transparent as possible throughout the mitigation planning process. Use local non-profits to facilitate any mitigation measures that are decided upon. CPRA and the LA TIG should continue to encourage, accept, and solicit ideas and specific recommendation for mitigation after the June 4 deadline for these comments. The opportunity for continued input to inform the ultimate spending of those funds should also be made very clear publicly. The commenter also urges early action, as possible, before there is damage to mitigate.**

**Response ID: 15891**

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. These efforts have included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship

measures that would be implemented as a result of the public involvement and engagement efforts.

In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance if the Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62675**

**Commenters noted that the impacts of the DWH oil spill on wetlands, wildlife, birds, communities, and land loss are still felt by this region and in particular, Barataria Basin**

---

**where 95 percent of the oiling occurred. These impacts are exacerbated by decades of saltwater intrusion, sea-level rise, and subsidence.**

**Response ID: 16497**

The impacts of the DWH oil spill were considered in the Draft EIS. For example, Chapter 3, Section 3.6.2 Wetland Loss of the EIS notes the ongoing impact of the DWH oil spill on wetlands, as well as ongoing saltwater intrusion, sea-level rise, and subsidence. Section 3.10.5.2 Key Fish and Shellfish Species of the EIS provides an overview of the adverse impacts of the oil spill on key aquatic species within the Barataria Basin.

The LA TIG agrees with the commenters that the impacts of the DWH oil spill are significant in this region and thus the LA TIG is committed to continuing to plan and implement significant restoration projects like the LA TIG's Preferred Alternative in the Restoration Plan. The LA TIG's Restoration Plan focuses on restoring wetlands, coastal, and nearshore habitats in the Barataria Basin. These habitats are critical components of the broader northern Gulf of Mexico ecosystem and suffered the greatest degree of oiling in Louisiana due to the DWH oil spill.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the

---

Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Carine Newberry

Dear U.S. Army Corps of Engineers, New Orleans District,

Please take advantage of this amazing opportunity to restore this amazing habitat!!

Thank you !

Carine Newberry

Sincerely,

Carine Newberry

Oakton, VA 22124

---

**Concern ID: 63338**

**The proposed Project would bring back vital habitat along the Gulf Coast, including wetlands that would support a huge variety of birds and other wildlife.**

**Response ID: 16295**

The commenter's support for the proposed Project is noted. Chapter 4, Section 4.9 Terrestrial Wildlife and Habitat of the Draft EIS explained the beneficial (and adverse) impacts of the proposed Project on various avian and terrestrial species. As also explained in the LA TIG's Restoration Plan in Section 3.2.1.6, the proposed Project is intended to improve habitat for birds and other coastal and living marine resources.

---

**Correspondence ID:39045**

Stephanie Enclade

I oppose the Mid-Barataria Sediment Diversion. Just last week our roads were flooded due to strong south winds for days. This project will flood us even more, by the time the roads are raised to accommodate the level of water we will see it will be too late. The houses that are not raised will be flooded by this man made diversion in addition to the flooding caused by mother nature. It will also affect my family directly as my husband is a commercial fisherman with a smaller vessel. He will no longer be able to work in areas close to our house because of this diversion. It is being called a sediment diversion but based on the executive summary it is not a sediment diversion. I am still perplexed that NOAA would allow a diversion such as this that will kill dolphins. Past projects have proven to fail and has created many dead zones. You can't change to name of a diversion to try to "sell" it to property owners and business that will be affected. Please reconsider.

---

**Concern ID: 61863**

**Based on the Executive Summary, the proposed MBSD Project is not a sediment diversion.**

**Response ID: 15933**

Section ES.3 of the Executive Summary describes the proposed Project: "The proposed Project evaluated in this EIS is a controlled sediment and freshwater intake diversion structure in Plaquemines Parish on the right descending bank of the Mississippi River at river mile (RM) 60.7, with a conveyance system that would discharge sediment, fresh water, and nutrients from the Mississippi River into an outfall area within the mid-Barataria Basin in Plaquemines and Jefferson Parishes." The MBSD Project is fully described and discussed in the body of the EIS, particularly Chapter 2, Section 2.8 Action Alternatives Carried Forward for Detailed Analysis where the Project components are described in detail.

---

**Concern ID: 62085**

**Concerns were raised that the proposed MBSD Project would affect fishermen with smaller vessels. Fishermen would have to travel farther towards the Gulf in their boats to catch some species such as speckled trout, and brown and white shrimp. Most inshore fishing vessels are not large enough or equipped to go any further outside the basin.**

**Response ID: 16249**

The impacts raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discusses impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, moderate to major adverse impacts on brown shrimp and oyster fisheries in the Project area are anticipated. Section 4.14.4.2 Applicant's Preferred Alternative discusses the potential adaptive responses of fishermen to changes in species abundance, including the potential for substitution of species and need for gear upgrades, as well as increasing the length of fishing trips. CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS

---

(Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62224**

**Communities like Happy Jack, Lake Hermitage and Myrtle Grove, some of which have homes that are not above the new base flood elevation, already experience some degree of flooding which would be made worse by the diversion. This would affect the ability of residents to access and enjoy their homes and communities.**

**Response ID: 15757**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discuss the anticipated increased flooding impacts outside of federal levee systems to be caused by the operation of the diversion. Final EIS Appendix R1 Mitigation and Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties. In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes, which would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of

---

potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62639**

**The proposed Project is unlikely to succeed because similar types of projects have failed to build land, and have caused a range of other issues, like destroying habitat, exacerbating flooding, and reducing water quality. Specific examples of similar, problematic projects include the Mississippi River Gulf Outlet, Bonnet Carré Spillway, Caernarvon Freshwater Diversion, Davis Pond, West Bay, Baptiste Collette, Fort St. Philip, and Cubits Gap. In fact, data show that the Caernarvon Diversion in particular was unable to show sustained land gains in the face of Hurricane Katrina-driven losses in wetland habitat (Underwood 1994, Kearney et al. 2011). Davis Pond has seen increased land loss inside the diversion compared to a reference area (Couvillion et al. 2017). Fort St. Philip has lost large areas of wetlands (Suir et al. 2014). While the Atchafalaya River is building land in the Atchafalaya and Wax Lake Deltas, the Atchafalaya River carries more sediment than the Mississippi River does currently (Blum and Roberts 2009), and more of the Atchafalaya River is diverted to each of these deltas and marshes farther south. Additionally, one study identified poor performance of diversions due to many periods of inoperation due to socioeconomic uncertainties (Caffey et al. 2014).**

**Response ID: 16631**

The issues raised by the commenters were considered in the Draft EIS. The EIS states in Chapter 2, Section 2.1.1 Overview of Sediment Diversions, that CPRA considered information from other diversions in its assessment of the Project alternatives, but because the projects mentioned by the commenters had been designed to discharge primarily water, not sediment, they are not fully comparable to the proposed Project. As explained in the EIS Chapter 4, Section 4.1.3 (Environmental Consequences, Overview of Delft3D Basinwide Model for Impact Analysis), Delft3D Basinwide Modeling software was used to assess impacts of the Project on hydrology, land gains and losses, water quality, and vegetation in the Barataria Basin and birdfoot delta. Using standard professional practice, this physics-based model was validated to the West Bay Sediment Diversion. The West Bay Sediment Diversion is useful for validating the physical processes of erosion and deposition of sediment because it, like the proposed MBSD Project, is a sediment diversion that extracts relatively more sediment in the river. The other diversions cited were designed to primarily deliver water, not sediment, and are less useful comparisons.

The West Bay Sediment Diversion has successfully deposited large amounts of sediment in the system and, in concert with beneficial uses of dredged material, built land. Kolker et al. (2012) reported, "A majority of the sediment transported through the West Bay Diversion apparently was deposited in the bay, and contributed to sub-aerial land formation, which contrasts with the view presented by Kearney et al. (2011) and Turner et al. (2007) that diversions do not lead to appreciable sediment accumulation" (Kolker, A. S., Miner, M. D. and Weathers, H. D. 2012. Depositional dynamics in a river diversion receiving basin: The case of the West Bay Mississippi River Diversion, *Estuarine, Coastal and Shelf Science*, 2012, <http://dx.doi.org/10.1016/j.ecss.2012.04.005> ).

Comparing diversions outside of physics-based numerical modeling has limited value because diversions and receiving environments often exhibit unique behaviors that correlations do not account for. For that reason, the physics-based Delft modeling, even with its limitations and uncertainties, is a better predictor than anecdotal comparisons to Fort St. Phillip or other sites. Uncertainties associated with the validation and application of the

---

Delft3D Basinwide Modeling conducted for the proposed Project were assessed by the West Bay application, sensitivity tests, and by the use of a Base-to-Plan (No Action Alternative compared to Action Alternatives) comparison method as described in EIS Appendix E Delft3D Modeling and incorporated into the EIS conclusions throughout Chapter 4 Environmental Consequences. While most citations mentioned by commenters were already included in the Draft EIS, the Final EIS has been edited to include Caffey and Petrola (2014) to Chapter 4, Section 4.6.5.1.2.4 Land Accretion.

The likelihood of success of the Project and information from other freshwater diversions was also considered in the LA TIG's Draft Restoration Plan, Sections 3.2.1.4 Likelihood of Success - Alternative 1 and 3.2.2.4 Likelihood of Success - Alternatives 2-6 of the Restoration Plan address the likelihood of success of the Project and other Action Alternatives. The proposed MBSD Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the geomorphological features of the Lower Mississippi River as of 2012, including data from the referenced projects. All citations referenced by the commenters were included in the Final EIS and were considered by the LA TIG in the Final Restoration Plan.

---

**Concern ID: 62782**

**A large number of commenters expressed general opposition to the proposed Project.**

**Response ID: 16364**

The commenter's opposition to the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63628**

**A commenter expressed confusion as to why NOAA would allow a diversion that would kill dolphins.**

**Response ID: 16602**

Chapter 3, Section 3.11.1 Marine Mammals in the Northern Gulf of Mexico of the Final EIS has been revised to discuss the Marine Mammal Protection Act waiver.

The concerns raised by the commenters regarding the impacts to dolphins were considered in the LA TIG's Draft Restoration Plan. The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree collateral injuries, to natural resources injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the Restoration Plan). The intended restoration of freshwater flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, without the proposed Project, there would also be adverse impacts to some of the same species due to large-scale wetland

---

loss over time, as is anticipated from ongoing sea-level rise, subsidence, and other existing stressors, which is anticipated to reduce the suitability of habitat for many of the species that currently occur in Barataria Basin.

The LA TIG must weigh the potential for and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed Project against its potential benefits). The DWH oil spill resulted in the oiling of more than 1,100 kilometers of wetlands, nearly all of which were located in coastal Louisiana (see Section 2.0 [Restoration Planning Process] of the Restoration Plan). The heaviest oiling occurred in the Barataria Basin, resulting in substantial injuries to natural resources in the basin. Recognizing that the resulting loss of marsh productivity affected resources throughout the northern Gulf of Mexico ecosystem, the State of Louisiana and the federal Trustees that negotiated the DWH Natural Resource Damages settlement allocated \$4 billion, almost half of the total settlement amount, to restoring Louisiana's wetland, coastal, and nearshore habitats (see Section 1.1 [Background and Summary of the Settlement] in the Restoration Plan).

The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that creates and maintains wetlands. As described in Section 3.2.1.6 (Benefits Multiple Resources – Alternative 1) of the Restoration Plan, this sustained ecosystem would be expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing deltaic processes, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Restoration Plan because it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

With regard to the Marine Mammal Protection Act (MMPA), the Bipartisan Budget Act of 2018, Public Law 115-123 included a requirement that the Secretary of Commerce, as delegated to the Assistant Administrator of the NMFS, issue a waiver of the MMPA moratorium and prohibition for three projects, including the proposed MBSD Project. Accordingly, NMFS issued the waiver on March 15, 2018.

Since release of the Draft EIS and the LA TIG's Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is

possible, the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized. In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include specific marine mammal response triggers that may affect Project operation mitigation efforts; see Appendix R2 (Monitoring and Adaptive Management [MAM] Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Christopher Leopold

I own 2 properties in Happy Jack, Louisiana: [REDACTED]

Port Sulphur, La. 70083

The projected increase in the average water level/tide can best be mitigated by raising the road

which give us access to my property, Martin Lane. Additionally, raising the homes to the recently

accepted flood elevations would be in lines since I don't think the additional water level projections

were included in the recently accepted flood maps. Docks etc. as well.

Respectfully submitted,

Chris Leopold

Property owner in affected area

---

**Concern ID: 62951**

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates, and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a

---

combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again, community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Joanna Cappiello-Leopold

I humbly ask to reject permitting for the mid-Barataria Diversion plan. It is imperative that a supplemental EIS due to the lack of specificity concerning this proposal to the residence, parish and fishing communities be submitted. There may have been 265 meetings held however; those meetings were conducted with. No question/answer sessions and the residents specifically have just been notified of the impact and possible mitigation. These meetings were held with NO notifications of the possibility of "drowning" our property. If there is no supplemental EIS introduced we personally will lose thousands of dollars as our property will lose its value before we can get it appraised or put on the market. The amount of money that the CPRA has will not be able to compensate proper mitigation for the communities effected.

This is not including the fisheries that will suffer nor the economic impact it will be to Plaquemines Parish as a whole.

Sincerely

Joanna Cappiello-Leopold

---

**Concern ID: 61955**

**Commenters are concerned that all those that are impacted may not be aware of the proposed Project, its impacts, or potential mitigation. There are many people that may not have the knowledge, time, or resources to be deeply involved in these issues, but who also have a stake in what is happening. Consider the needs of these people in making a decision about moving this proposed Project forward. If this proposed MBSD Project and similar projects move forward consider opportunities to better engage people across Louisiana's coast in the value of projects like these and why they are crucial to the future of our region.**

**Response ID: 15900**

Public input is an integral part of the NEPA process, the OPA process, and the DWH oil spill restoration planning effort. USACE and the LA TIG undertook a coordinated and concurrent public review process for the EIS and the LA TIG's Restoration Plan. Allowing submission of comments on either document to the same locations provided commenters a "one-stop shop" and was done to reduce confusion by commenters about where to direct their comments regarding the MBSD Project. Additionally, this ensured the LA TIG reviewed and considered all relevant comments to both the Restoration Plan and the Draft EIS in its decision-making process. All public comments received have been reviewed by both USACE and the LA TIG and will be considered as appropriate under relevant regulations by USACE and by the LA TIG, respectively, as each makes its decision on the proposed MBSD Project.

USACE and the LA TIG conducted public outreach and provided public comment opportunities throughout the development of the Draft EIS and the LA TIG Draft Restoration Plan. Details on USACE's and the LA TIG's outreach activities and the opportunities provided for public participation can be found in Chapter 7 Public Involvement in the Final EIS.

Examples of public outreach provided by USACE for the EIS include providing special public notices for the permit application, the scoping process, and for the Draft EIS through Federal Register notices, press releases, newspapers, mail outs to distribution lists, and provision of

hard copies of the Executive Summary and other materials to local libraries. USACE and the LA TIG also coordinated with the SELA Voice organizations to understand the needs of the local communities regarding the best ways to reach out to these communities prior to the release of the Draft EIS and the LA TIG's Draft Restoration Plan and during the public comment period.

Language interpretation and translation in Spanish, Vietnamese, and Khmer were provided at each of the virtual public meetings on the Draft EIS and the LA TIG's Draft Restoration Plan. Also, the Public Notice to announce the Draft EIS Notice of Availability, the Executive Summary for the Draft EIS, and the Executive Summary for the LA TIG's Draft Restoration Plan, were translated into Spanish and Vietnamese. The consolidated pre-recorded public meeting presentation was also translated into Spanish, Vietnamese, and Khmer and available on the Project webpage.

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area, in an effort to reach out to community groups to gather information related to the proposed MBSD Project. Throughout the public comment period and concurrent with the preparation of the Final EIS and LA TIG's Final Restoration Plan, CPRA has engaged the public through meetings with the communities and groups projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups.

This included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented.

Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts. In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA

had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62009**

**The negative socioeconomic consequences would devastate southeast Louisiana, destroy people's livelihoods, displace people living near the diversion, and destroy property in the areas impacted by the proposed MBSD Project.**

**Response ID: 16207**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.13 Socioeconomics, discusses impacts of the proposed Project on the economy of Louisiana, including impacts on population, property values, and community cohesion. As noted in these sections, the proposed Project would have both beneficial and adverse socioeconomic impacts on the people and communities within the Project area. Minor to moderate, permanent adverse socioeconomic impacts are expected to occur near the immediate outfall area outside of flood protection. Minor to moderate, permanent, beneficial socioeconomic impacts are expected to occur in the west bank New Orleans area north of the diversion. Moderate to major, beneficial, temporary impacts from job creation and economic activity in the proposed Project area are anticipated. In addition, the Socioeconomics Technical Report in Appendix H1 provides additional details on these projected effects.

As part of its restoration planning efforts, the LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. The LA TIG believes the proposed MBSD Project is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net

---

benefits of the proposed Project meet OPA's requirement of restoration, rehabilitation, replacement, or acquisition of the equivalent, of the natural resources injured by the DWH oil spill.

The commenters' concern regarding the potential impacts of the diversion were considered by CPRA and the LA TIG in developing the Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included mitigation to address and offset some of the projected impacts of the Project on fisheries and surrounding communities outside levee protection including providing structural mitigation and stewardship measures for increased water levels that are projected to result due to the Project, such as raising roads or improving bulkheads. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

In communities south of the Project site outside of federal levee protection where the proposed Project is projected to cause increased water levels, CPRA plans to take one of two approaches. In Myrtle Grove, CPRA is planning to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision. By improving this bulkhead, CPRA would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions without the Project. See Table 1 in the Final Mitigation and Stewardship Plan for more details. CPRA plans to acquire a temporary right-of-way to permit improvement of the bulkhead, voluntarily or through eminent domain if necessary, from the property owners in the Myrtle Grove Marina Estates Subdivision.

In other communities south of the Project site outside of federal levee protection, from Woodpark south to the communities of Grand Bayou and Happy Jack, CPRA plans to elevate the portions of public roads outside of levee protection that provide access to each of these communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits

---

prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62013**

**The Myrtle Grove subdivision is a residential neighborhood composed of homes, not camps, many of which may not have access to flood insurance. The proposed MBSD Project would increase flooding of the properties which would severely impact access to property and property values in Myrtle Grove and other affected areas such as Lake Hermitage.**

**Response ID: 16210**

The impacts raised by the commenters were considered in the Draft EIS in Chapter 4, Section 4.13 Socioeconomics, which discusses impacts of the proposed Project on property values, and Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction which discusses flood and storm related impacts due to the Project. The EIS (Section 4.13.5.3 in Socioeconomics) finds that the proposed Project would result in minor to moderate, permanent, adverse impacts on housing and property values in communities near

---

the immediate outfall areas (within 10 miles north and 20 miles south) and outside of flood protection. These affected areas include the communities of Myrtle Grove, Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, Happy Jack, and Grand Bayou, and to a lesser extent portions of Lafitte. In addition, negligible to minor increases in levee overtopping south of the immediate outfall area may occur in future years following delta formation (after approximately 20 years of Project operations) in the outfall area in communities inside levees, with the greatest increases in communities adjacent to the NOV-NFL Levee system.

The Final EIS discusses modeled impacts of the Project on water surface elevations and corresponding tidal inundation in Lafitte, Myrtle Grove, and Grand Bayou. These three communities are generally representative of other communities in the basin, including Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, and Happy Jack (see Figure 4.13-1 in Section 4.13.1 Area of Potential Impacts in Socioeconomics). Lafitte, Myrtle Grove, and Grand Bayou also represent varying levels of exposure to tidal flooding. As explained in Section 4.20.3 Public Health and Safety – Overview of Model for Impact Analysis, Grand Bayou has no structural protection and would experience similar tidal flooding as the unprotected communities of Hermitage, Suzie Bayou North, Suzie Bayou South, and Happy Jack. Myrtle Grove impacts would be similar to the neighborhood of Woodpark. Without implementation of the measures outlined in the Mitigation and Stewardship Plan (Appendix R1), the largest impact on tidal inundation frequency due to the diversion is projected to occur in Myrtle Grove, as this is the community that is closest to the immediate outfall area of the proposed diversion structure outside flood protection and thus is projected to see the greatest increase in water levels.

Section 4.13.5.3 Housing and Property Values has been revised in the Final EIS to provide additional discussion of potential effects of the proposed Project on the availability of flood insurance. The Final EIS concludes that the proposed Project would not impact the availability flood insurance, but may cause an increase in flood insurance premium for some properties in communities projected to experience increases in tidal flooding and storm hazards. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict how flood insurance premiums may change. Since issuance of the Draft EIS, CPRA has expanded and refined the mitigation measures intended to address the inundation projected in the communities south of the proposed Project's immediate outfall area including Myrtle Grove, Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack. CPRA plans to provide a combination of structural improvements (for example, improving bulkheads and raising roads and homes) and non-structural measures.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or

will possess the requisite property interest to undertake the activity proposed in the application.

In Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack, CPRA plans to purchase Project servitudes from landowners. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. See Section 6.3.2 of the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62017**

**Commenter requests a supplemental EIS due to the lack of specificity concerning this proposal to the residence, parish, and fishing communities.**

**Response ID: 16220**

The issues raised by the commenters were considered in the Draft EIS; therefore, no related edits have been made to the Final EIS and a supplemental EIS is not warranted. The EIS includes analysis of socioeconomic impacts, including increased flooding impacts, on affected

---

communities. Sections 4.13 Socioeconomics, 4.14 Commercial Fisheries, 4.15 Environmental Justice, and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction provide detailed analyses of impacts from the proposed MBSD Project. Projected increased flooding in the communities surrounding the diversion is discussed in Section 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction. The Socioeconomics section evaluates impacts on economy, employment and business activity, population, housing, taxes, public services, community cohesion and protection of children in light of the best data available to USACE and the LA TIG to evaluate the impacts over the 50-year analysis period. The EIS also contains separate analysis of impacts on commercial fisheries and on minority and low-income populations, including a table (Table 4.15-1) that summarizes individual communities and the potential impacts. In addition, the Socioeconomics Technical Report in Appendix H provides additional details. Appendix P: Flood and Storm Hazards Evaluation provides additional details on the flood modeling and impacts.

---

**Concern ID: 62951**

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates, and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

---

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again, community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final

EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Judith Stone

Dear U.S. Army Corps of Engineers, New Orleans District,

The Mid-Barataria Sediment Diversion is essential to rebuild vital habitats on which birds depend.

With that in mind, I ask the following of the U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group:

\*Select the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

\*Fund the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

Thank you for considering my comments.

Sincerely,

Judith Stone

Sebastopol, CA 95472

---

**Concern ID: 62892**

**The proposed MBSD Project would create wetlands supportive of birds (bald eagles, spring and fall migrants, waterbirds, and marsh birds) and other wildlife that are experiencing a high rate of coastal land (habitat) loss.**

**Response ID: 16191**

Chapter 4, Section 4.9.4.2 in Terrestrial Wildlife and Habitat of the Draft EIS, discussed the maintenance and creation of marsh that is projected to occur as part of the proposed Project, and identified that the net addition of wetlands would generally be beneficial to area birds. As identified in Section 4.12.3.2 in Threatened and Endangered Species of the Draft EIS, the creation and maintenance of wetlands could affect bald eagle aquatic foraging habitat and prey species, but would likely result in negligible effects on the bald eagle itself.

The potential benefits of the proposed Project to resources in the Gulf, including birds, are also described in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Restoration Plan.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed

Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Plaquemines Parish Government

Mark Cognevich

My name is Mark Cognevich. I am the councilman from district 9 in Plaquemines Parish. I am also the President of the Plaquemines Parish Historical Association. I am 100% against this project. Diversion do not work. I can prove through history that diversion do not work. I have maps from the 1700 and can show you that they do not work. Yes the river did build all of the land we have here now but this is not the same river today. I am willing to sit down and explain what I know through history. You can email me anytime for a meeting. I passed a resolution and was passed unanimously by the council against the diversion.

Thank you

Mark Cognevich

District 9 Councilman

---

**Concern ID: 62433****Commenter noted that a resolution was passed unanimously by the Plaquemines Parish District 9 Council against the diversion.****Response ID: 15946**

The commenter's input is acknowledged. The resolution is included in the Project record.

---

**Concern ID: 62659****The proposed Project is an experiment, and it is not possible to guarantee its alleged benefits.****Response ID: 16632**

The uncertainties associated with the Project's success were considered in the Draft EIS. While the benefits of the Project cannot be guaranteed, the EIS uses state-of-the-art modeling, including but not limited to the Delft3D Basinwide Model, to project the Project's beneficial and adverse impacts. These modeling projections of Project impacts include uncertainties. Following standard professional practice, model uncertainties are clearly stated in the EIS with respect to the model's quantitative results. Uncertainties are incorporated into the EIS impact conclusions and are briefly summarized in EIS Chapter 4, Section 4.1.3.3 Model Limitations and Uncertainty, and in detail in Section 8.0 Model Limitations and Uncertainties of EIS Appendix E Delft3D Modeling.

The likelihood of success of the Project was also considered in the LA TIG's Draft Restoration Plan. While recognizing the innovative nature of the proposed Project, the Restoration Plan discusses in detail the factors that would contribute to the Project's success. More specifically, Sections 3.2.1.4 (Likelihood of Success - Alternative 1) and 3.2.2.4 (Likelihood of Success - Alternatives 2-6) of the Restoration Plan address the likelihood of success of the Project and other Action Alternatives. In addition, such a sediment diversion has been extensively studied over several decades with the objective of designing and operating the proposed Project to provide a combination of land building and ecosystem benefits (see Section 3.2.1.4 [Likelihood of Success - Alternative 1] of the Restoration Plan). The Project would be monitored and adaptatively managed to meet its objectives (see the Monitoring and Adaptive Management Plan, Appendix R2 of the EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62660**

**Commenters stated that the proposed Project will not provide the benefits described in the Draft Restoration Plan and EIS. The proposed Project will not stop the problems of sea-level rise and marsh erosion.**

**Response ID: 16633**

How sea-level rise and marsh erosion would affect the proposed diversion's land-building capability has been considered in the Draft EIS in Chapter 4, Section 4.2.3.2 Operational Impacts in Geology and Soils. In addition, sea-level rise and subsidence are explicitly accounted for in the Delft3D Basinwide Model projection of Project impacts, as described in Sections 3.2.4 and 3.2.3, respectively, of EIS Appendix E (Delft3D Modeling).

The potential benefits of the Project and how those benefits relate to sea-level rise and marsh erosion have also been considered in the LA TIG's Draft Restoration Plan. The LA TIG agrees that the Project would not stop sea-level rise, subsidence or other erosive forces that result in marsh erosion. However, the Project is designed to counteract these forces by transporting sediment from the Mississippi River to create thousands of acres of marsh that would be sustained over decades, even in the face of erosion and rising sea levels (see Section 3.2.1.6 [Benefits Multiple Resources] in the Restoration Plan).

---

**Concern ID: 62659**

**The proposed Project is an experiment, and it is not possible to guarantee its alleged benefits.**

**Response ID: 16632**

The uncertainties associated with the Project's success were considered in the Draft EIS. While the benefits of the Project cannot be guaranteed, the EIS uses state-of-the-art modeling, including but not limited to the Delft3D Basinwide Model, to project the Project's beneficial and adverse impacts. These modeling projections of Project impacts include uncertainties. Following standard professional practice, model uncertainties are clearly stated in the EIS with respect to the model's quantitative results. Uncertainties are incorporated into the EIS impact conclusions and are briefly summarized in EIS Chapter 4, Section 4.1.3.3 Model Limitations and Uncertainty, and in detail in Section 8.0 Model Limitations and Uncertainties of EIS Appendix E Delft3D Modeling.

The likelihood of success of the Project was also considered in the LA TIG's Draft Restoration Plan. While recognizing the innovative nature of the proposed Project, the Restoration Plan discusses in detail the factors that would contribute to the Project's success. More specifically, Sections 3.2.1.4 (Likelihood of Success - Alternative 1) and 3.2.2.4 (Likelihood of Success - Alternatives 2-6) of the Restoration Plan address the likelihood of success of the Project and other Action Alternatives. In addition, such a sediment diversion has been extensively studied over several decades with the objective of designing and operating the proposed Project to provide a combination of land building and ecosystem benefits (see Section 3.2.1.4 [Likelihood of Success - Alternative 1] of the Restoration Plan). The Project would be monitored and adaptively managed to meet its objectives (see the Monitoring and Adaptive Management Plan, Appendix R2 of the EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:39401**

Cacey Wilken

Dear U.S. Army Corps of Engineers, New Orleans District,

This is a critical project that will help so many communities and wildlife. We all need natural spaces to be restored.

Sincerely,

Cacey Wilken

Lincoln, NE 68508

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Correspondence ID:39405**

Jim Tripp

The MBSD as a vital component of any effective Delta restoration program. We strongly support the Mid-Barataria Basin Sediment Diversion (MBSD) as the most important Delta restoration project currently under consideration, designed, as Denise Reed, PhD geomorphologist, so aptly says, to replicate natural processes. The initial draft of Here Today and Gone Tomorrow, released in March 1987 by a diverse group of citizens that became the Coalition to Restore Coastal Louisiana, emphasized the critical importance of this project, at the time referred to as the Myrtle Grove sediment diversion project. It has been a key restoration project in the first three State Coastal Master Plans and virtually every state of Louisiana and Army Corps of Engineers report dealing with Delta restoration over at least the past three decades. For a long time, there has been scientific consensus that sediment diversions such as the MBSD are necessary components of any effective Delta restoration plan.

The Corps, as the federal agency responsible for issuing Clean Water Act Section 404 and 1899 Rivers and Harbors Act Section 408 permits, has prepared a draft Environmental Impact Statement (EIS) in cooperation with NOAA and the TIG agencies that oversee distribution of Deepwater Horizon natural resource damage penalties that have been allocated to Louisiana and Delta restoration. The draft EIS is overall well-written, comprehensive and well-organized, with many tables chock full of data and analyses that are very useful in terms of grasping the range of benefits and impacts of the proposed MBSD.

The Mississippi River (MSR) Delta, the seventh largest in the world, was built up by sediments distributed by several alignments (draft EIS 3.10 at 3-97) over a period of 7,000 years. With the completion of the Lower MSR flood control and navigation levees following the historic flood of 1927, the integrity of the Delta was sacrificed to a state and national flood control and navigation program that has benefited huge numbers of citizens, businesses, municipalities and states in the MSR watershed. However, starved of inputs of sediments of all sizes - sands, silts and clays - - the Delta has been subsiding and eroding. While sediment starvation is not the only cause of deltaic deterioration, with wetlands being converted to open water, it has accentuated the land loss impacts of other causes, including the construction of oil and gas pipeline and equipment canals and development encroachments, in that it has led to widespread structural weakening and thinning of wetlands. The applicable medical term to describe this condition is Delta osteoporosis.

The MBSDs Delta overlapping restoration, levee protection, flood control and navigation benefits. This vast wetland loss has not only significant adverse consequences for Delta ecology and its remarkable fish and wildlife resources, but also for the physical integrity of this flood control and navigation system. As Steve Stockton commented in the last decade when he was serving as the highest civilian employee of the Corps of Engineers: Either we will control the River, or the River will control us.

Sediment diversions as part of a comprehensive restoration program are prerequisites to controlling the Lower Mississippi River. A sediment diversion such as the MBSD contributes to and furthers the three major purposes of Delta restoration and the maintenance of the flood control and navigation functions of the Lower Mississippi River (MSR).

USGS studies have documented the capacity of wetlands relative to open water in the coast to depress storm surge and wave height and energy and thus to buffer levees such as those along the Lower MSR. The continuing loss of Delta wetlands in the Barataria Basin will increase the vulnerability of these Lower MSR levees to storm impacts. The draft EIS mentions a reduction in storm surge of 0.5 to one foot north of the MBSD but could say more about the consequence and benefits of that decrease.

In addition, operation of the MBSD conveying up to 75,000 cfs from the Lower MSR into the Basin during flood stages has the capacity to reduce flood stages and the tendency of the Lower MSR to re-meander through bank caving with attendant benefits for the structural integrity of the levee system both downstream and upstream, including the levees of the greater New Orleans area. These impacts of a properly operated MBSD will thus contribute to the stability of the current alignment of the navigation channel below New Orleans to the mouth. The EIS could be improved by providing quantitative estimates of these stage reductions and attendant benefits in terms of preventing damage to the navigation and flood control levees. The MBSD is also well sited at River Mile 60.7 at a point bar at the inside bend that should result in a beneficial ratio of sediment to water diverted of 1.12 compared to that ratio in the MSR at that location of 1.

The capacity of diversions to restore, strengthen and prevent erosion and collapse of wetlands is evident from the experience in the state of existing diversions, including freshwater diversions such as Davis Pond and Caernarvon, uncontrolled sediment diversions such as Mardi Gras Pass, Fort St. Philip and West Bay, and the Bonnet Carre Spillway as a controlled diversion with a healthy wetland ecosystem in its spillway, sadly coupled with the deplorable waste of huge amounts of sediment that get dumped in Lake Pontchartrain. A physical inspection of the receiving areas for these diversions shows retention of existing and newly created wetlands, sediment deposits and vibrant ecosystems.

With respect to the Davis Pond and Caernarvon diversions that overwhelmingly convey finer-grained silts and clays, the critical importance of those sized sediments is graphically apparent. Since those classes of sediments make up at least two-thirds of the sediments that the MBSD is expected to transport into the Basin (draft EIS Table 2.4-2), these experiences serve as a telling example of what the MBSD will do in terms of strengthening and building up wetlands that can filter and capture the finer-grained sediments that it will convey. While the draft EIS presents data about the quantity of these finer-grained sediments, the discussion about the areal distribution and role of these sediments in terms of maintaining and strengthening wetlands that are deteriorating could be improved.

It may be the case that the projections in the draft EIS of 17,500 acres of new land cover by 2050 (Executive Summary - 7) include not only wetlands that will result from open water elevation buildup by sands but also those wetlands that would be expected to capture fine-grained materials and that would thus be maintained and saved from drowning, but that discussion lacks clarity. It is the total quantity of sediment that is conveyed and distributed that is the key factor. Building up elevation in open-water areas in proximity to the outfall structure with sand is important, but only a modest impact of the anticipated sediment transport. The large fraction of silts and clays that a sediment diversion will convey highlights a marked difference with marsh creation that entails largely the movement and placement of sand that can be readily dredged. That is why sediment diversions are so vital to restoration efforts where they are feasible. Further, since the MBSD will convey silts and clays with the

energy of the River water diverted, it will distribute those sediments and provide support for wetlands over a large area of the Central Barataria Basin, perhaps as distant as Bayou Lafourche.

The historic and future context for assessing the MBSD as a restoration project for purposes of NEPA, the CWA and the MMPA. The central purpose of the MBSD in light of its natural resource damage funding source is to offset damage caused to the Barataria Basin as a result of the Deepwater Horizon oil spill in 2010. However, the draft EIS also notes that an associated purpose is building and protecting wetlands with a view to restoration of parts of the Basin. What does it mean for the MBSD to be a Delta restoration project? A central goal of the federal Clean Water Act, the Section 404 regulations and NEPA is the restoration and maintenance of the chemical, physical and biological integrity of the nations waters, including the Barataria Basin. The Marine Mammal Protection Act recognizes as a key policy that the primary objective of the management of marine mammal species should be to maintain the health and stability of the marine ecosystem. 16 U.S.C.(6). The MBSD is designed to further these goals and objectives.

The draft EIS could highlight the significance of these restoration processes in terms of presenting information about what the Barataria Basin looked like 80 to 100 years ago as well as what it could look like in the future up to 2070. Draft EIS maps indicate that the Basin in the early 1900s had an extensive web of wetlands with only modest pockets of open water and that the Basin has lost 276,000 acres or almost 30% of its wetlands since the 1930s (draft EIS 3-241 and 4-218), but little information is presented about salinity levels and the distribution of a range of shellfish, marine and freshwater fish and other kinds of wildlife that will be impacted by the operation of the MBSD earlier in the 20th century. Without this broad temporal context, the restorative function of the MBSD may not be as clear as it should be. The fact is that, in broad brush, the physical, chemical and biological impacts of the MBSD will be restorative in the sense of making parts of the Basin more like what they were in past decades and retarding the rate of deterioration in terms of loss of wetlands and saltwater intrusion compared to no action.

One could surmise based on recent trends that the salinity levels in the Basin were significantly lower and that the distribution of eastern oysters or brown shrimp in the central Basin that do not respond well to freshwater was markedly different in past decades going back to the Flood Control Act of 1928 from what it is today. What was the distribution of bottlenose dolphins, eastern oysters and brown shrimp in the 1930s and in subsequent decades? The current distribution of these species that responds to todays salinity ranges is likely quite different from what it was earlier in the 20th century and reflects deteriorating wetland and water quality conditions characterized by wetland loss, steadily increasing amounts of open water and saltwater intrusion. Insofar as the MBSD will lower salinity levels and retard saltwater intrusion, it is performing its restorative function. This is not to downplay the socioeconomic consequences to those who depend on or have become accustomed to todays conditions, but it is to place those consequences in a proper historic context.

Thus, while the impacts of sediment and freshwater conveyed by the MBSD on water quality and various species of shell and finfish and dolphins are real, they are, in some cases where those impacts are strongest, returning the distribution of these species back to where they were at various points in the past. In other words, the directionality of impacts is restorative in

nature and in furtherance of the goals of the Clean Water Act, NEPA and the Marine Mammal Protection Act.

While the draft EIS quantifies the likely magnitude of acres of wetlands that will result from the operation of the MBSD, it is also clear that the amount of wetland loss in the 2020-70 period under the No Action alternative of 298,000 acres (draft EIS 4-219) as wetland acreage goes from 371,000 acres in 2020 to 72,800 acres in 2070 (draft EIS 4-220 and Table 4.6-2) is huge and that the MBSD will prevent only a very modest amount of that loss. Given those estimates, it would be useful to see what a more aggressive operational regime for the 75,000 cfs MBSD, such as opening it up to its full capacity at a MSR flow regime well below one million cfs could achieve, perhaps not immediately, but gradually after a few years of operation.

Design of an effective socioeconomic impact mitigation plan. It is our understanding that oil-spill natural resource damage funds may be used to implement a mitigation plan. If that is not the case, then other funds would have to be made available. The question is what socioeconomic impacts should be mitigated as a matter of basic fairness and environmental justice, and what institutional shape that mitigation program should take.

In that the MBSD is likely to change the distribution of certain species of fish, such as eastern oysters and brown shrimp, it is reasonable to anticipate that the impacts of the MBSD on commercial fishermen and shell fishermen and perhaps other identifiable groups will be real and changing over time. By way of example, some fishermen may adjust by focusing on different species with appropriate freshwater tolerances. Others may have to go further afield from their accustomed catch areas to maintain their harvests. Perhaps some may need larger and faster vessels with increased freezing storage capacity. A comprehensive mitigation plan would analyze in detail, based on various scenarios over time, what the costs of such adjustments would likely be. The plan could devise estimates of the cost of mitigating pertinent socioeconomic impacts over different periods of time. It should be recognized that maintaining a thriving commercial fishing operation in the Barataria Basin is culturally as well as economically desirable in terms of maintaining the soul of the Delta.

The question then becomes the institutional design of an effective and credible mitigation program that is intended to address such incremental costs to individual commercial fishermen and others who may experience significant dislocation costs. CPRA or some other state agency, some federal agency, a for-profit entity or one or more not-for-profit organizations could play central roles in designing and implementing such a mitigation plan, the centerpiece of which would be the provision of financial assistance to those who will be adversely affected by projected ecological and water quality/salinity changes over time. Since the ecological and water quality conditions are dynamic due to ongoing wetland loss and saltwater intrusion, together with the sediment and water impacts of the MBSD, the details of the mitigation plan in terms of a financial assistance program will have to be dynamic.

We doubt that for-profit entities could carry out this sensitive, community-level financial planning and assistance task cost effectively. While the state clearly has a key role to play in terms of provision of funds and overseeing the integrity of the program, it is likewise doubtful that the state, let alone a federal agency, would want to or would be effective at working with individual commercial fishermen, for example, who have legitimate financial assistance needs to allow for necessary and deserving adjustments as part of a fair mitigation process.

Looking to not-for-profit community-based organizations that are steeped in the workings and needs of communities of fishermen may be an effective strategy - effective in terms of facilitating the distribution of financial assistance where it is truly needed and legitimate in the least bureaucratic manner feasible. A good existing example of this kind of organization is the Coastal Communities Coalition. It has experience in working with and providing financial and other kinds of assistance to its constituencies. It appears to be lean, non-bureaucratic and knowledgeable. If some groups of commercial fishermen are not currently constituents of this coalition, then the Coastal Communities Coalition could expand its operations or, alternatively, one or more not-for-profit community-based organizations with a similar structure could be established. Any such organization must be trusted by and knowledgeable about the legitimate needs of deserving constituents.

If this kind of mitigation planning and implementation strategy were to be pursued, the question is how natural resource damage mitigation funds would be most effectively provided to any such not-for-profit organization with the CCC perhaps as a model. CPRA or any other state agency may not be ideally suited to play this role directly. Although government agencies do make grants directly to not-for-profits for specific purposes, typically the role of funding, evaluating and overseeing funded work of not-for-profit organizations falls to foundations. With the TIG natural resource damages as the source of funding, one could imagine various foundation scenarios to carry out this mitigation grant-making role, including a dedicated division of the National Fish and Wildlife Foundation, a special role for an existing foundation such as the Greater New Orleans Foundation or a whole new foundation dedicated to funding one or more not-for-profit community-based organizations that would design and implement mitigation plans. Any such foundation would have to have the capacity to evaluate the effectiveness and audit the programs of not-for-profit community organizations.

Jim Tripp

These supersede previous comments I submitted, with important corrections and some supplementary material. Please allow them to replace the other file submitted.

The MBSD as a vital component of any effective Delta restoration program. We strongly support the Mid-Barataria Basin Sediment Diversion (MBSD) as the most important Delta restoration project currently under consideration, designed, as Denise Reed, PhD geomorphologist, says, to replicate natural processes. The initial draft of Here Today and Gone Tomorrow, released in March 1987 by a diverse group of citizens that became the Coalition to Restore Coastal Louisiana, emphasized the critical importance of this project, at the time referred to as the Myrtle Grove sediment diversion project. It has been a key restoration project in the first three State Coastal Master Plans and virtually every state of Louisiana and Army Corps of Engineers report dealing with Delta restoration over at least the past three decades. For a long time, there has been scientific consensus that sediment diversions such as the MBSD are necessary components of any effective Delta restoration plan.

The Corps, as the federal agency responsible for issuing Clean Water Act Section 404 and 1899 Rivers and Harbors Act Section 408 permits, has prepared a draft Environmental Impact Statement (EIS) in cooperation with NOAA and the TIG agencies that oversee distribution of Deepwater Horizon natural resource damage penalties that have been allocated to Louisiana and Delta restoration. The draft EIS is overall well-written, comprehensive and well-organized, with many tables chock full of data and analyses that are very useful in terms of grasping the range of benefits and impacts of the proposed MBSD.

The Mississippi River (MSR) Delta, the seventh largest in the world, was built up by sediments distributed by several alignments (draft EIS 3.10 at 3-97) over a period of 7,000 years. With the completion of the Lower MSR flood control and navigation levees following the historic flood of 1927, the integrity of the Delta was sacrificed to a state and national flood control and navigation program that has benefited huge numbers of citizens, businesses, municipalities and states in the MSR watershed. However, starved of inputs of sediments of all sizes - sands, silts and clays - - the Delta has been subsiding and eroding. While sediment starvation is not the only cause of deltaic deterioration, with wetlands being converted to open water, it has accentuated the land loss impacts of other causes, including the construction of oil and gas pipeline and equipment canals and development encroachments, in that it has led to widespread structural weakening and thinning of wetlands. The applicable medical term to describe this condition is Delta osteoporosis.

The MBSDs Delta overlapping restoration, levee protection, flood control and navigation benefits. This vast wetland loss has not only significant adverse consequences for Delta ecology and its remarkable fish and wildlife resources, but also for the physical integrity of this flood control and navigation system. As Steve Stockton commented in the last decade when he was serving as the highest civilian employee of the Corps of Engineers: Either we will control the River, or the River will control us.

A sediment diversion such as the MBSD contributes to and furthers the three major purposes of Delta restoration and the maintenance of the flood control and navigation functions of the Lower Mississippi River (MSR). USGS studies have documented the capacity of wetlands

relative to open water in the coast to depress storm surge and wave height and energy and thus to buffer levees such as those along the Lower MSR. The continuing loss of Delta wetlands in the Barataria Basin will increase the vulnerability of these Lower MSR levees to storm impacts. The draft EIS mentions a reduction in storm surge of 0.5 to one foot north of the MBSD but could say more about the consequence and benefits of that decrease.

In addition, operation of the MBSD conveying up to 75,000 cfs from the Lower MSR into the Basin during flood stages has the capacity to reduce MSR flood stages and the tendency of the Lower MSR to re-meander through bank caving with attendant benefits for the structural integrity of the levee system both downstream and upstream of the MBSD, including the levees of the greater New Orleans area. These impacts of a properly operated MBSD will thus contribute to the stability of the current alignment of the navigation channel below New Orleans to the mouth. The EIS could be improved by providing quantitative estimates of these stage reductions and attendant benefits in terms of preventing damage to the navigation and flood control levees. The MBSD is also well sited at River Mile 60.7 at a point bar at the inside bend that should result in a beneficial ratio of sediment to water diverted of 1.12 compared to that ratio in the MSR at that location of 1.

The capacity of diversions to restore, strengthen and prevent erosion and collapse of wetlands is evident from the experience in the state of existing diversions, including freshwater diversions such as Davis Pond and Caernarvon, uncontrolled sediment diversions such as Mardi Gras Pass, Fort St. Philip and West Bay, and the Bonnet Carre Spillway as a controlled diversion with a healthy wetland ecosystem in its spillway, sadly coupled with the deplorable waste of huge amounts of sediment that get dumped in Lake Pontchartrain. A physical inspection of the receiving areas for these diversions shows retention of existing and newly created wetlands, sediment deposits and vibrant ecosystems.

With respect to the Davis Pond and Caernarvon diversions that overwhelmingly convey finer-grained silts and clays, the critical importance of those sized sediments is graphically apparent. Since those classes of sediments make up at least two-thirds of the sediments that the MBSD is expected to transport into the Basin (draft EIS Table 2.4-2), these experiences serve as a telling example of what the MBSD will do in terms of strengthening and building up wetlands that can filter and capture the finer-grained sediments that it will convey. While the draft EIS presents data about the quantity of these finer-grained sediments, the discussion about the areal distribution and role of these sediments in terms of maintaining and strengthening wetlands that are deteriorating could be improved.

It may be the case that the projections in the draft EIS of 17,500 acres of new land cover by 2050 (Executive Summary - 7) include not only wetlands that will result from open water elevation buildup by sands but also those wetlands that would be expected to capture fine-grained materials and that would thus be maintained and saved from drowning, but that discussion lacks clarity. It is the total quantity of sediment that is conveyed and distributed that is the key factor. Building up elevation in open-water areas in proximity to the outfall structure with sand is important, but only a modest impact of the anticipated sediment transport. The large fraction of silts and clays that a sediment diversion will convey highlights a marked difference with marsh creation that entails largely the movement and placement of sand that can be readily dredged. That is why sediment diversions are so vital to restoration efforts where they are feasible. Further, since the MBSD will convey silts and clays with the energy of the River water diverted, it will distribute those sediments and provide support for

wetlands over a large area of the Central Barataria Basin, perhaps as distant as Bayou Lafourche.

The historic and future context for assessing the MBSD as a restoration project for purposes of NEPA, the CWA and the MMPA. The central purpose of the MBSD based on its natural resource damage funding source is to offset damage caused to the Barataria Basin as a result of the Deepwater Horizon oil spill in 2010. However, the draft EIS also notes that an associated purpose is building and protecting wetlands with a view to restoration of parts of the Basin. What does it mean for the MBSD to be a Delta restoration project? A central goal of the Clean Water Act, the Section 404 regulations and NEPA is the restoration and maintenance of the chemical, physical and biological integrity of the nations waters, including the Barataria Basin. The Marine Mammal Protection Act states as a key policy that the primary objective of the management of marine mammal species should be to maintain the health and stability of the marine ecosystem. 16 USC(6). The MBSD is designed to further these goals.

The draft EIS could highlight the significance of these restoration processes in terms of presenting information about what the Barataria Basin looked like 80 to 100 years ago as well as what it could look like in the future up to 2070. Draft EIS maps indicate that the Basin in the early 1900s had an extensive web of wetlands with only modest pockets of open water and that the Basin has lost 276,000 acres or almost 30% of its wetlands since the 1930s (draft EIS 3-241 and 4-218), but little information is presented about salinity levels and the distribution of a range of shellfish, marine and freshwater fish and other kinds of wildlife that will be impacted by the operation of the MBSD earlier in the 20th century. Without this broad temporal context, the restorative function of the MBSD may not be as clear as it should be. The fact is that, in broad brush, the physical, chemical and biological impacts of the MBSD will be restorative in the sense of making parts of the Basin more like what they were in past decades and retarding the rate of deterioration in terms of loss of wetlands and saltwater intrusion compared to no action.

One could surmise based on recent trends that the salinity levels in the Basin were significantly lower and that the distribution of eastern oysters or brown shrimp in the central Basin that do not respond well to freshwater was markedly different in past decades going back to the Flood Control Act of 1928 from what it is today. What was the distribution of bottlenose dolphins, eastern oysters and brown shrimp in the 1930s and in subsequent decades? The current distribution of these species that responds to todays salinity ranges is likely quite different from what it was earlier in the 20th century and reflects deteriorating wetland and water quality conditions characterized by wetland loss, steadily increasing amounts of open water and saltwater intrusion. Insofar as the MBSD will lower salinity levels and retard saltwater intrusion, it is performing its restorative function. This is not to downplay the socioeconomic consequences to those who depend on or have become accustomed to todays conditions, but it is to place those consequences in a proper historic context. Thus, while the impacts of MBSD-conveyed sediment and freshwater on water quality and various species of shell and finfish and dolphins are real, they are returning the distribution of these species back to where they were at various points in the past. In other words, the directionality of impacts is restorative in nature and in furtherance of the goals of the Clean Water Act, NEPA and the Marine Mammal Protection Act.

While the draft EIS quantifies the likely magnitude of acres of wetlands that will result from the operation of the MBSD, it is also clear that the amount of wetland loss in the Basin in the 2020-70 period under the No Action alternative of 298,000 acres (draft EIS 4-219) as wetland acreage goes from 371,000 acres in 2020 to 72,800 acres in 2070 (draft EIS 4-220 and Table 4.6-2) is huge and that the MBSD will prevent only a very modest amount of that loss. Given those estimates, it would be useful to see what a more aggressive operational regime for the 75,000 cfs MBSD, such as opening it up to its full capacity at a MSR flow regime well below one million cfs, not immediately, but gradually after a few years of operation, could achieve.

Design of an effective socioeconomic impact mitigation plan. It is our understanding that oil-spill natural resource damage funds may be used to implement a mitigation plan. If that is not the case, then other funds would have to be made available. The question is what socioeconomic impacts should be mitigated as a matter of basic fairness and environmental justice, and what institutional shape that mitigation program should take.

In that the MBSD is likely to change the distribution of certain species of fish, such as eastern oysters and brown shrimp, it is reasonable to anticipate that the impacts of the MBSD on commercial fishermen and shell fishermen and perhaps other identifiable groups will be real and changing over time. By way of example, some fishermen may adjust by focusing on different species with appropriate freshwater tolerances. Others may have to go further afield from their accustomed catch areas to maintain their harvests. Perhaps some may need larger and faster vessels with increased freezing storage capacity. A comprehensive mitigation plan would analyze in detail, based on various scenarios over time and in collaboration with fishermen and fisheries-servicing organizations, what the costs of such adjustments would likely be. The plan could devise estimates of the cost of mitigating pertinent socioeconomic impacts over different periods of time. It should be recognized that maintaining a thriving commercial fishing operation in the Barataria Basin is culturally as well as economically desirable in terms of maintaining the soul of the Delta.

The question then becomes the institutional design of an effective and credible mitigation program that is intended to address such incremental costs to individual commercial fishermen and others who may experience significant dislocation costs. CPRA or some other state agency, a federal agency, a for-profit entity or one or more not-for-profit organizations could play central roles in designing and implementing such a mitigation plan, the centerpiece of which would be the provision of financial, technical or other material assistance to those who will be adversely affected by projected ecological and water quality/salinity changes over time. Additionally, local citizens organizations should be encouraged to offer new mitigation suggestions as the process unfolds. Since the ecological and water quality conditions due to wetland loss and saltwater intrusion, coupled with the sediment and water impacts of the MBSD, will be dynamic, the details of the plan in terms of financial assistance programs and other mitigation efforts will have to be dynamic.

We doubt that for-profit entities could carry out this sensitive, community-level financial planning and assistance task cost effectively. While the state has a key role to play in terms of providing funds and overseeing the programs integrity, it is likewise doubtful that the state or a federal agency would want to or would be effective at working with individual commercial fishermen, for example, who have legitimate financial assistance needs to allow for necessary and deserving adjustments as part of a fair mitigation process grounded in environmental justice.

Looking to not-for-profit community-based organizations that are steeped in the workings and needs of communities of fishermen may be an effective strategy in terms of facilitating the distribution of financial and technical assistance where it is truly needed in the least bureaucratic manner feasible. A good existing example of this kind of organization is Coastal Communities Consulting, Inc (CCC). It has experience in providing disaster support, business adaptation and technical assistance, skills training and environmental education to its constituencies. It appears to be lean, non-bureaucratic and knowledgeable. If some groups of commercial fishermen do not currently work with CCC, then CCC could expand its operations or, alternatively, or one or more not-for-profit community-based organizations with a similar structure could be established or may already exist. Any such organization must be trusted by and knowledgeable about the legitimate needs of deserving constituents.

If this kind of mitigation planning and implementation strategy were to be pursued, the question is how natural resource damage mitigation funds would be most effectively provided to any such not-for-profit organization. CPRA or any other state agency may not be ideally suited to play this role directly. Although government agencies do make grants directly to not-for-profits for specific purposes, typically the role of funding, evaluating and overseeing funded work of not-for-profit organizations falls to foundations. With the TIG natural resource damages as the source of funding, one could imagine various foundation scenarios to carry out this mitigation grant-making role, including a dedicated division of the National Fish and Wildlife Foundation, a special role for an existing foundation such as the Greater New Orleans Foundation or a whole new foundation dedicated to funding one or more not-for-profit community-based organizations that would design and implement mitigation plans. Any such foundation would have to have the capacity to evaluate the effectiveness and audit the programs of not-for-profit community organizations. This implementation structure would allow commercial fishing businesses to be adequately compensated while ensuring that community-based organizations are able to implement mitigation measures flexibly and effectively.

**Concern ID: 64020**

**A comprehensive plan for operating the diversion is lacking. Diversion operations should not be based solely on when flows in the Mississippi River exceed 450,000 cfs or only operate at maximum capacity when Mississippi River flows reach 1,000,000 cfs, but instead should rely on multiple factors for determining when to operate the diversion. The comprehensive plan should also include some flexibility in operations including triggers for water releases and for closing the diversion. The design should be modified to allow continued use after significant sea-level rise.**

---

**Response ID: 16012**

CPRA would operate the proposed MBSD Project in accordance with the Operations Plan which can be found in Appendix F2 Preliminary Operations Plan of the Final EIS. Chapter 2, Section 2.4.2 in Step 2: Evaluation of Operational Alternatives – Location, Operational Trigger, Capacity, and Base Flow of the Draft EIS described the evaluation of various operational triggers during the alternatives analysis. It was determined that the 450,000 cfs operational trigger would best meet the purpose and need and would be the standard operations trigger (see Chapter 2, Section 2.4.2.1 Application of Additional Considerations to

---

On/Off Trigger Scenarios). Additionally as stated in Chapter 2, Section 2.4.3.2 Application of Additional Considerations to Capacity Alternatives, flow in a sediment diversion is variable. When the diversion is operating, the flow rate through a diversion is controlled by the difference in water surface elevation between the Mississippi River and the Barataria Basin (the head differential). When the Mississippi River flow and stage are high, this high head differential would push a higher volume of water and sediment through the diversion into the Barataria Basin. When the Mississippi River flow and stage are low, there would be less energy to push water and sediment through the diversion. Thus, depending upon the flow rate in the Mississippi River and the head differential, flow in the diversion would be variable, up to a defined maximum capacity.

The diversion is designed for passive operation rather than active operation. Once opened, the head differential determines the flow rather than pumps or another active feature.

Full operations (with the exception of a base flow up to 5,000 cfs) would cease when the river discharge falls below 450,000 cfs or when certain emergency triggers are met (such as in advance of hurricanes or when a spill of hazardous substances occurs in the river).

Triggers for closing the structure when river discharge is above 450,000 cfs include spills and other hazardous discharges, navigation impediments, climatic conditions such as tropical depressions or named storms, diversion structure damage or emergency, and public safety.

As stated in the Chapter 4, Section 4.4.4.2.4 Sediment Transport in Section 4.4 in Surface Water and Coastal Processes, sediment transported by the Mississippi River is primarily comprised of fine sediments, with higher river flows (typically occurring in the spring) suspending more coarse-grained sediment that are important in delta building (see Chapter 3, Section 3.4 Surface Water and Coastal Processes). Fine-sediment transport through the diversion would be generally proportional to water flow in the river. The intake channel was modeled and designed to divert a high sediment-to-water ratio while minimizing energy loss (to maintain flow and sediment transport through the diversion complex) and impacts on the river. The amount of sediment carried through the diversion would vary by year, depending on flow rates in the river and the corresponding variation of diversion operations. The operation plan allows for diversion operations that capture the high sediment loads associated with rapidly rising river discharges and effectively addresses relative sea-level rise.

If the proposed Project is implemented and once operational, CPRA would consider potential ways to optimize diversion operations based on Project performance and success as part of the adaptive management and monitoring process. Refer to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 of the Final EIS.

The Project MAM Plan in the Final EIS Appendix R2 provides examples of possible outfall management actions, such as spoil bank gapping or construction of water-directing features, that CPRA may consider in the future as potential adaptive management actions aimed at improving Project effectiveness and limiting ecological and/or human impacts when possible. This will be based on assessment of Project performance and monitoring data and recommendations of the CPRA's Project Adaptive Management Team to CPRA's Project Operations Management Team.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of

---

publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62163**

**The commenter noted that in addition to Project impacts on wetland creation, the Project would also capture fine-grained sediments and that would maintain existing wetlands, but that discussion lacks clarity. The EIS should more clearly explain that the Project would distribute silts and clays that would provide support for wetlands perhaps as distant as Bayou Lafourche.**

**Response ID: 16167**

The impacts raised by the commenter were considered in the Draft EIS. As described in Chapter 4, Section 4.2.3 Geology, Topography, and Geomorphology of the EIS, sand and coarser-grained sediments would be deposited in the outfall area within 0.5-mile of the diversion, while finer-grained sediment would be deposited farther gulfward in the basin. Land gains associated with the Project would primarily occur within 5.0 to 10.0 miles from the mouth of the diversion structure (see Chapter 4, Figures 4.2-2 through 4.2-4). To clarify, Chapter 4, Sections 4.2.3 Geology, Topography, and Geomorphology and 4.6.5.1 in Wetland Resources and Waters of the U.S. have been revised in the Final EIS to further address the importance of fine-grained sediments for marsh building and sustenance.

---

**Concern ID: 62308**

**The Draft EIS mentions a reduction in storm surge of 0.5 to one foot north of the Project but could say more about the consequence and benefits of that decrease.**

**Response ID: 15803**

Additional information on the consequence and benefits of decreased storm surge north of the delta formation area was provided in Draft EIS Chapter 4, Section 4.13 Socioeconomics, 4.13.5 Operational Impacts. These benefits include reduced pressure of outmigration from

affected coastal communities and beneficial impacts on housing, property values, and property tax revenue.

---

**Concern ID: 62309**

**Operation of the MBSD has the capacity to reduce MR flood stage, reduce the tendency of the Lower MR to re-meander through bank caving, with attendant benefits for the structural integrity of the levee system and the navigation channel. The EIS could be improved by providing quantitative estimates of these stage reductions and attendant benefits in terms of preventing damage to the navigation and flood control levees.**

**Response ID: 15816**

Section 4.4 Surface Water and Coastal Processes of the Final EIS has been updated to include additional information regarding the effects of the proposed Project on river stage. The average predicted water level drop at Belle Chasse, caused by operation of proposed Project, is approximately 0.7 foot, when the river was flowing at 1.00 million cfs.

---

**Concern ID: 62331**

**The EIS is comprehensive and well-prepared, and used the best available information and data.**

**Response ID: 15782**

Acknowledged.

---

**Concern ID: 62637**

**The proposed Project will benefit habitat, fish and wildlife, levee protection, flood control and navigation. These benefits will help protect coastal resources and communities in Louisiana.**

**Response ID: 16647**

The potential benefits of the Project were considered in the Draft EIS. As described in Chapter 4 (Environmental Consequences), the proposed Project would result in both beneficial and adverse effects on habitat, fish and wildlife, levee protection, flood control, and navigation, depending on the specific characteristics of the species or location involved (for example, a species' life history or salinity preferences, or a levee's height).

The potential benefits of the Project were also considered in the LA TIG's Draft Restoration Plan. As described in Section 3.2.1.6 (Benefits Multiple Resources) of the Restoration Plan, the proposed Project is expected to benefit multiple resources in the Barataria Basin and the northern Gulf of Mexico, including nearshore marine ecosystems, water column resources (including fish and invertebrates), birds, and terrestrial wildlife. The LA TIG also anticipates that the Project would provide public health and safety benefits to the populated areas north of the diversion through increased wetland acreage that would decrease storm surge and wave height.

---

**Concern ID: 62669**

**While the proposed Project would harm the aquatic wildlife (for example, shellfish, finfish and dolphins) that currently reside in the Mid-Barataria Basin, that wildlife only resides in the area due to human interventions that cut the basin off from the Mississippi River. The EIS and Restoration Plan should place the impacts in historical context and thereby demonstrate that the Project is truly restorative because it is**

---

---

**returning the basin to the conditions that were typical prior to the extensive flood control efforts of the 20th century.**

**Response ID: 16628**

The historic conditions of the Barataria Basin, and how this relates to potentially impacted resources, was considered in the Draft EIS. For example, Chapter 3 (Affected Environment) of the EIS describes existing conditions within the Project area and Section 3.1.4 (Overview and History of the Project Area) in the Introduction provides an overview and history of the Project area. See for example, Figure 3.2-1, Land Area Change in Project Area (1932 to 2016); Section 3.6.2 Wetland Loss; Section 3.6.2.2. Causes of Wetland Loss; Figure 3.6-2 Marsh Type Change in the Project Area, 1968 through 2013. These existing conditions were factored into the impact analysis in Chapter 4 (Environmental Consequences) of the EIS.

Shellfish and finfish historically resided in the Barataria Basin prior the 1930s. Due to land loss over the 20<sup>th</sup> century, as noted in Section 3.6.2 Wetland Loss of the EIS and Section 3.10.1 Historical Context of the Final EIS, Barataria Bay and surrounding waterbodies have expanded as marsh has given way to open water and more saline conditions have shifted slightly north, creating more suitable habitat for oysters and other species benefiting from brackish or saline waters, such as dolphins, in the mid to lower basin.

The proposed Project is not anticipated to restore the basin to its historic conditions. As noted in Section 3.4.1.2 (Barataria Basin), land loss in the Barataria Basin from 1932 to 2016 resulted in a net loss of 276,036 acres, accounting for 29.1 percent of the land area in the basin (Couvillion et al. 2017). The proposed Project is anticipated to create and/or maintain 12,700 acres of wetlands in the basin by the year 2070 when compared with the No Action Alternative.

The historical context of the Project has also been considered in the LA TIG's Draft Restoration Plan. More specifically, Section 3.2.1.5.3 (Resources with a High Level of Expected Collateral Injury from Alternative 1) of the Restoration Plan notes that the area that would be affected by the proposed Project has been severed from its historical hydrological connection to the Mississippi River, resulting in higher salinity in an area that historically experienced regular freshwater and sediment inputs. The intended restoration of this area would result in collateral injury to species that depend on the current higher-salinity conditions in the basin.

---

**Concern ID: 62741**

**The EIS should present not only the anticipated future conditions of the Barataria Basin, but also the salinity levels and distribution of shellfish, finfish, and other wildlife that were present 80 to 100 years ago. This past description will highlight that the proposed Project would return parts of the basin to more historic conditions and retard the rate wetland loss and saltwater intrusion compared to the No Action Alternative.**

**Response ID: 16119**

Multiple sections within Chapter 3 Affected Environment of the Final EIS have been supplemented to further discuss the past conditions of the Barataria Basin, including Chapter 3, Sections 3.1.4.2 Barataria Basin, 3.2.1.1 in Geology and Soils, 3.9.1 in Terrestrial Wildlife and Habitat, and 3.10.1 in Aquatic Resources.

---

**Concern ID: 63131**

---

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF

---

2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63132**

**Organizations, such as GNO, Inc., Coastal Communities Consulting, and community-based organizations should serve as connectors between CPRA, other state and federal agencies, and fishers and the seafood industry to plan and implement mitigation, and to ensure mitigation reflects environmental, economic, and community needs and changes over time. Mitigation should include funding for community-based organizations to provide this support in developing and carrying out mitigation.**

**Response ID: 16516**

CPRA engaged the fishing community potentially impacted by the Project through public meetings to solicit input on mitigation strategies. Further, CPRA engaged community-based organizations including Coastal Communities Consulting to assist in engaging minority fishers in reviewing and commenting on the Draft EIS, and soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded. CPRA also plans to

---

create outreach materials in easy to read and understand formats for distribution to the public. This would include translated materials for members of the community who do not speak or read English.

CPRA's Mitigation and Stewardship Plan does not currently provide for use of community-based organizations to distribute mitigation funds or to implement mitigation and stewardship measures. However, community-based organizations have been engaged to assist in providing information to community members regarding available programs, to assist in developing eligibility criteria, and to assist in completing any application processes. CPRA will continue to coordinate with community-based organizations in implementing the Final Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54

---

and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63387**

**The central purpose of the proposed MBSD Project based on its Natural Resource Damage funding source is to offset damage caused to the Barataria Basin as a result of the DWH oil spill in 2010. However, the Draft EIS also noted that an associated purpose is building and protecting wetlands with a view to restoration of parts of the basin. A central goal of the CWA, the Section 404 regulations, and NEPA is the restoration and maintenance of the chemical, physical, and biological integrity of the nation's waters, including the Barataria Basin. The MMPA states as a key policy that the primary objective of the management of marine mammal species should be to maintain the health and stability of the marine ecosystem. The proposed MBSD Project is designed to further these goals.**

**Response ID: 16349**

The commenter's support for the proposed Project is noted. The burden to comply with NEPA is on the federal decision-making agencies, not on the project itself. USACE will evaluate the proposed Project for its compliance with the CWA Section 404(b)(1) guidelines; that evaluation is underway and is not complete. The LA TIG also intends to rely on the Draft EIS to inform its decision under OPA and to fulfill the requirements of the federal Trustees under NEPA. A discussion of the MMPA can be found in Chapter 3, Section 3.11.1 Marine Mammals in the Northern Gulf of Mexico of the Final EIS.

As described in Chapter 1, Section 1.4 Purpose and Need of the EIS, the purpose of the proposed MBSD Project is to restore for injuries caused by the DWH oil spill and to reconnect and reestablish sustainable deltaic processes between the Mississippi River and the Barataria Basin through the delivery of sediment, fresh water, and nutrients to support the long-term viability of existing and planned coastal restoration efforts.

---

**Concern ID: 63615**

**While marsh creation projects are powerful at building land in strategic locations, at the end of the day they fail to sustainably address one of the causes of land loss (lack of continued sediment input), and the scale is severely limited due to restricted amounts of suitable borrow material. In addition, the types of sediment that a sediment diversion will convey highlights a marked difference with marsh creation. Therefore, it is not the case that marsh creation projects provide the same benefits as diversions.**

**Response ID: 15840**

The commenters' support for the Project is acknowledged. Table 2.3-1 in EIS Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives describes whether various alternatives, including a large-scale sediment diversion into Barataria Basin and a large-scale marsh creation project, met the screening criteria for the proposed Project. Additional information related to the marsh creation alternative has been added to Section 2.3.5 Large-Scale Marsh Creation for the Final EIS.

---

**Concern ID: 64196**

**With respect to the Davis Pond and Caernarvon Diversions that overwhelmingly convey finer-grained silts and clays, the critical importance of those sized sediments is**

---

---

**graphically apparent. Since those classes of sediments make up at least two-thirds of the sediments that the proposed MBSD Project is expected to transport into the basin (Draft EIS Chapter 2, Section 2.4 Step 2: Evaluation of Operational Alternatives - Location, Operational Trigger, Capacity, and Base Flow, Table 2.4-2), these experiences serve as a telling example of what the proposed MBSD Project would do in terms of strengthening and building up wetlands that can filter and capture the finer-grained sediments that it would convey. While the Draft EIS presented data about the quantity of these finer-grained sediments, the discussion about the areal distribution and role of these sediments in terms of maintaining and strengthening wetlands that are deteriorating could be improved.**

**Response ID: 16072**

As described in Chapter 4, Section 4.2.3 in Geology and Soils of the EIS, sand and coarser-grained sediments would be deposited in the immediate outfall area while finer-grained sediment would be deposited farther gulfward in the basin. Land gains associated with the proposed Project would primarily be in the immediate outfall area (see Chapter 4, Figures 4.2-2 through 4.2-4 in Geology and Soils). Chapter 4, Sections 4.2.3.2.2.1 Geology and 4.6.5.1.2.4 Land Accretion have been revised in the Final EIS to further address the importance of fine-grained sediments for marsh building and sustenance.

---

**Correspondence ID:39422**

John Gasquet

Mid-Barataria Diversion

Pro and Cons

Cons;

1. Only lower storm surge 6 to 12 in thirty years north of Diversion
2. Create only 17,300 acres of land at a cost of \$114,000 or more per acre while destroying the salt water marsh and decreasing Hurricane Protection
3. Kill more bottlenose dolphins and endanger sea turtles then the BP Oil spill did with BP monies
4. Destroy brown shrimp, oysters, crab, saltwater sports fishing industry
5. Create the largest (red tide) dead zone in the history of the Gulf of MEXICO with polluted waters and fertilizer run off from the Mississippi River
6. Destroy the communities, of Happy Jack, Grand Bayou, Lake Hermitage, Suzzie Bayou, Deer Range, Woodpark and Myrtle Grove.
7. Cemeteries of Deer Range and Lake Hermitage will be under water
8. No plan to compensate affected communities or raise affected communities to protect them from rising waters of 2 to 5 about normal tides
9. Zero Hurricane Protection
10. Reduce tax collects for the Plaquemines Parish, School Board, Sheriff Office and our Local Parish Government by reducing values of properties in affected areas
11. Change our culture for ever
12. No land gain in the first 20 years
13. Kill the two most productive estuaries in America that provide 25% of the entire countrys domestic seafood production and drive Louisianas seafood-based tourism/hospitality eco
14. Actually cause land loss further out from the structure and also destroy the brackish/saline marsh grasses which provide storm surge protection and replace them with less surge-resistant freshwater plants
15. Kill the immense dolphins (estimated will kill 600, BP Oil Spill killed 91) stock that lives in these estuaries and has already suffered immeasurably from effects of the BP oil spill (the projects have already had to obtain a sneaky Congressional waiver to environmental reviews that would prevent them from receiving a permit);
16. Cause immense toxic algal blooms and dead zones directly in the estuaries
17. Cause 100s of millions of dollars in economic loss annually to no less than 3 other Gulf Coast states (TX and its shrimping industry, MS and its tourism/fisheries, and AL and its seafood processing/distribution industry)
18. CPRA has no mitigation plan in place
19. Lower Plaquemines Parish could experience increased water levels, tidal flooding and greater exposure to hurricane impacts

Pros;

1. None
2. This is what CPRA has to offer
3. CPRA uses slick soundbites and marketing to push these projects forward to convince the Louisiana public and Legislature to allow them to dole out contracts for over \$2 billion in precious and limited coastal restoration dollars on these projects (100 million dollars already spend only paper to show for the funds no coast build).
4. Over recent decades, Louisiana has averaged losing a football field of land every 100 minutes. What has the CPRA to stop this?
5. Lakefront Airport was build by dredging in 1930
6. Diversion going to take 8 years to build and 20 years to build 17,400 acres of land. Meanwhile the state will have lost 147,168 football fields of coastline land waiting on this project. Roughly 195,000 acres Wow!!
7. CPRA Mr. Chip Kline job is to sell this project and hes a slick salesmen.
8. Mr. Kline bolsters his position with some made man diversion but, what have they done to lower hurricane storm surge? None
9. Life of project 50 years
10. A recent study from the University of St. Andrews in Scotland warned fresh water from the river would also make bottlenose dolphins functionally extinct in a large portion of the bay.

---

**Concern ID: 61776**

**The commenter expressed concern that over recent decades, Louisiana has averaged losing a football field of land every 100 minutes. The proposed Project would take 8 years to construct and 20 years to build 17,400 acres of land. Meanwhile, the state would have lost 147,168 football fields (about 195,000 acres) of coastline waiting on this proposed Project.**

**Response ID: 16176**

The commenter's concerns regarding the pace of land loss occurring in the region and the acres projected to be created by the proposed Project over the 50-year analysis period were considered in the Draft EIS. To provide further insight into these tradeoffs, a discussion has been added to clarify currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to proposed diversion operations. This discussion has been added to the Executive Summary, Section ES.4.1 Geology and Soils and to Chapter 4, Section 4.2.3.2.2.1 Geology of the Final EIS. Additionally, as stated in Chapter 2, Section 2.8.1.3 Project Construction Activities, the proposed Project is expected to require 5 years to construct.

---

**Concern ID: 61812**

**Commenters expressed concern that the proposed Project would have adverse water quality impacts in the Barataria Basin due to the introduction of nitrate and phosphate from the Mississippi River. Several commenters questioned whether the proposed Project would create harmful algal blooms and hypoxia in the Barataria Basin similar to the hypoxic "dead zone" in the Gulf of Mexico that exists due to nutrients in Mississippi River waters. One commenter expressed concern that the EIS does not**

---

**adequately assess the potential for the proposed Project to create algal blooms and hypoxia in the basin, other than acknowledging it.****Response ID: 16425**

The impacts raised by the commenters were considered in the Draft EIS. As discussed in the EIS, Chapter 4, Section 4.5 Surface Water and Sediment Quality, while increases in both nitrogen and phosphorus concentrations in the Barataria Basin are projected by the Delft3D Basinwide Model to occur as a result of proposed Project operations, monthly dissolved oxygen concentrations are not projected to fall below the water quality criterion of 5 mg/L at the six stations evaluated in the basin over the 50-year analysis period.

According to USEPA's Mississippi River/Gulf of Mexico Hypoxia Task Force "Hypoxia 101" webpage, hypoxic waters have dissolved oxygen concentrations of less than 2 to 3 mg/L. Hypoxia can be caused by a variety of factors, including excess nutrients and waterbody stratification (layering) due to saline or temperature gradients. The hypoxic zone in the Gulf of Mexico is a result of excess nutrients from the Mississippi/Atchafalaya River and seasonal stratification (layering) of waters in the Gulf. As nutrient-laden water from the Mississippi flows into the Gulf, this fresh water is less dense and remains above the denser saline seawater. In addition to the saline gradient caused where the fresh water and saline water meet, the fresh water is warmer than the deeper ocean water, further contributing to the stratification. This stratification prevents the mixing of oxygen-rich surface water with oxygen-poor water on the bottom of the Gulf. Without mixing, oxygen in the bottom water is limited and the hypoxic condition remains. In the Gulf hypoxic zone "water near the bottom of the Gulf contains less than two parts per million of dissolved oxygen" (<https://www.epa.gov/ms-htf/northern-gulf-mexico-hypoxic-zone#:~:text=The%20hypoxic%20zone%20in%20the,condition%20referred%20to%20as%20hypoxia.>)

Dissolved oxygen concentrations associated with the Applicant's Preferred Alternative are projected to generally increase in the Barataria Basin during the modeled period as compared to the No Action Alternative, which would decrease the potential for hypoxia to occur. Further, vegetative growth projected by the Delft3D Basinwide Model to occur due to Project operations is expected to utilize the nutrients diverted from the Mississippi River, resulting in lower concentrations of nutrients occurring in the Barataria Basin and reaching the Gulf through Barataria Bay than would reach the Gulf through the Mississippi River. As mentioned in Section 4.5.5.1 in Surface Water and Sediment Quality of the EIS, the majority of the Barataria Basin is shallow and not typically prone to stratification that promotes hypoxic conditions. The shallow nature of the Barataria Basin allows for full water column mixing by wind and tidal action, reducing the opportunity for algae to establish to the extent that would cause hypoxia. The Delft3D Basinwide Model's dissolved oxygen results do not suggest that Project implementation would result in oxygen concentrations below the 5 mg/L water quality criterion in Barataria Basin. To make this clearer in the Final EIS, language indicating that the Delft 3D Basinwide Model results do not suggest that a significant hypoxic zone will form in Barataria Basin due to project implementation has been added to Section 4.5.5.2 Applicant's Preferred Alternative in Surface Water and Sediment Quality of the Final EIS. Furthermore, as explained in Section 4.25.5.2 of the Cumulative Impacts section of the EIS, if the Mid-Breton Sediment Diversion is permitted, the combined impact of Mississippi River

---

diversions operating simultaneously may reduce nutrient flow from the river to the Gulf, having a beneficial impact on the Gulf of Mexico hypoxic zone.

Aquatic resource impacts associated with algal blooms (caused by excess nutrients such as nitrate and phosphate) are addressed in Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS. A reference to this section is included in Section 4.5.5.3 in Surface Water and Sediment Quality and has been added to Section 4.5.5.4.2 Applicant's Preferred Alternative of the Final EIS. Finally, the EIS acknowledges the potential for major adverse Project impacts from harmful algal blooms to occur, and that the formation of these blooms is not well understood by the scientific community (see Section 4.26.4 in Additional Considerations in Planning).

Appendix R2 Monitoring and Adaptive Management (MAM) Plan of the EIS includes monitoring of nutrients, as well as phytoplankton species composition (including harmful cyanobacterial/algal bloom species) if warranted, in the Barataria Basin during Project operations to guide CPRA's management actions.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61852**

**The cost per acre of marsh creation by the diversion is far higher than a corresponding alternative of marsh creation through the use of dredged material. Marsh creation through a diversion takes 50 years unlike marsh creation through dredging. In addition, brackish/salt marshes (which would be created by dredging) are more**

---

**resilient than freshwater marshes, and thus marsh created through dredging would be a more sound investment of restoration funding than a sediment diversion.**

**Response ID: 16617**

The timing of marsh benefits created by the proposed diversion was considered in the Draft EIS in Chapter 4, Section 4.6.5 Wetland Resources, Operational Impacts. In response to these comments, additional detail has been added regarding the resiliency of fresh marsh compared to brackish marsh in the Final EIS, Sections 4.6.5.1.2.3 Soil Shear Strength and 4.6.5.1.2.4 Land Accretion. Under relevant NEPA regulations, a cost-benefit analysis is not required for the EIS unless such an analysis is relevant to the agency's decision. USACE generally assumes that a permit applicant has undertaken its own economic evaluation of a proposed project and therefore, does not require a financial cost-benefit accounting for its decision. As part of its permitting decision, USACE conducts a public interest review, which weighs the probable harms of a project against its prospective benefits.

While the commenters suggest that marsh creation through dredging would cost less than the proposed Project, the LA TIG does not believe that comparing the costs of a sediment diversion to marsh creation projects using dredged material is relevant for several reasons. Most importantly, as explained in the LA TIG's Restoration Plan, the goal of the Project is to create a long-term sustainable ecosystem through the reestablishment of deltaic process. Marsh creation through the use of dredged material would not bring fresh water or nutrients to the basin on an ongoing basis. The benefits of marsh created with dredged material would diminish over time without maintenance in the form of additional pumping events due to subsidence and sea-level rise; thus, the temporal nature of Project benefits in the absence of periodic maintenance would also be very different. The costs and benefits of the Project were fully considered by the LA TIG and are discussed in the Draft Restoration Plan in Section 3.2.1.2 Cost to Carry Out the Alternative.

---

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable alternatives, which is a requirement that the Draft EIS does not meet. Consider analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern

---

Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of "marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats" (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG's Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

---

**Concern ID: 61908**

**Commenters suggested that there will be detrimental impacts on the tourism economy and on restaurants, which are partly dependent on fisheries in the Barataria Basin. Commenters express concerns about adverse effects on Louisiana's attractiveness as a fishing area and place for swamp tours and authentic seafood.**

**Response ID: 16238**

EIS Chapter 4, Section 4.16.5.2 in Recreation and Tourism describes how the MBSD Project would impact the tourism economy that is dependent on fisheries. Relative to the No Action Alternative, the proposed Project would cause minor, permanent, adverse impacts on recreational fishing for spotted seatrout and moderate, permanent, beneficial impacts on recreational fishing for red drum, which are the most targeted species by recreational anglers in the basin (targeted in 87 percent of angler trips between 2014 and 2018). Other species that are targeted include southern flounder, largemouth bass, sheepshead, black drum, sand seatrout, gafftopsail catfish, and blue crab. Both adverse and beneficial impacts on these species are anticipated over time relative to the No Action Alternative, but are anticipated to have negligible effects on angling effort in the basin, as these species are targeted in less than 2 percent of angling trips. As described in the EIS, these changes would not substantially impact the broad tourism economy, which includes more than fisheries.

While availability of shrimp and oysters from the basin would decrease with the Project, shrimp and oysters from Louisiana would continue to be available to restaurants, potentially at higher prices. Restaurants willing to pay a premium for local seafood would likely do so, and additional importing would likely also occur. Under both the Applicant's Preferred Alternative and the No Action Alternative, consumers in Louisiana would experience higher prices for locally caught seafood, or would consume additional imported shrimp over time. However, impacts would occur decades sooner under the Applicant's Preferred Alternative than under the No Action Alternative.

This discussion has been added to Section 4.14 Commercial Fisheries in the Final EIS.

---

**Concern ID: 62009**

**The negative socioeconomic consequences would devastate southeast Louisiana, destroy people's livelihoods, displace people living near the diversion, and destroy property in the areas impacted by the proposed MBSD Project.**

**Response ID: 16207**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.13 Socioeconomics, discusses impacts of the proposed Project on the economy of Louisiana, including impacts on population, property values, and community cohesion. As noted in these sections, the proposed Project would have both beneficial and adverse socioeconomic impacts on the people and communities within the Project area. Minor to moderate, permanent adverse socioeconomic impacts are expected to occur near the immediate outfall area outside of flood protection. Minor to moderate, permanent, beneficial socioeconomic impacts are expected to occur in the west bank New Orleans area north of the diversion. Moderate to major, beneficial, temporary impacts from job creation and economic activity in the proposed Project area are anticipated. In addition, the Socioeconomics Technical Report in Appendix H1 provides additional details on these projected effects.

As part of its restoration planning efforts, the LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. The LA TIG believes the proposed MBSD Project is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on

coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net benefits of the proposed Project meet OPA's requirement of restoration, rehabilitation, replacement, or acquisition of the equivalent, of the natural resources injured by the DWH oil spill.

The commenters' concern regarding the potential impacts of the diversion were considered by CPRA and the LA TIG in developing the Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included mitigation to address and offset some of the projected impacts of the Project on fisheries and surrounding communities outside levee protection including providing structural mitigation and stewardship measures for increased water levels that are projected to result due to the Project, such as raising roads or improving bulkheads. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

In communities south of the Project site outside of federal levee protection where the proposed Project is projected to cause increased water levels, CPRA plans to take one of two approaches. In Myrtle Grove, CPRA is planning to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision. By improving this bulkhead, CPRA would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions without the Project. See Table 1 in the Final Mitigation and Stewardship Plan for more details. CPRA plans to acquire a temporary right-of-way to permit improvement of the bulkhead, voluntarily or through eminent domain if necessary, from the property owners in the Myrtle Grove Marina Estates Subdivision.

In other communities south of the Project site outside of federal levee protection, from Woodpark south to the communities of Grand Bayou and Happy Jack, CPRA plans to elevate the portions of public roads outside of levee protection that provide access to each of these communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits

prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62014**

**The proposed MBSD Project would reduce tax revenue for the parishes located in the impacted area and the funds to support vital services in these areas.**

**Response ID: 16211**

The EIS considers and describes impacts on tax revenue in Chapter 4, Section 4.13.4 and 4.13.5 in Socioeconomics. There is also a discussion of Public Services and Utilities in this chapter (Section 4.13 Socioeconomics). As described, the proposed Project construction would have minor to moderate short-term benefits on sales and use taxes in local jurisdictions and the state associated with construction spending. Negligible to minor permanent adverse impacts on tax revenues from sales and use taxes, including associated with impacts on commercial fishing activities, as well as property tax collections associated with reduced property values are anticipated in Plaquemines Parish due to operation of the proposed

---

Project. Potential adverse effects on utilities associated with reduced property taxes are also anticipated during the operations phase of the proposed Project.

---

**Concern ID: 62071**

**The proposed MBSD Project would negatively impact the seafood industry, including shrimp, crab, and oyster fisheries. Commercial fisheries are directly linked to the favorable conditions of the estuary and its resources being healthy, abundant, and consistently available but that would be forever changed by the introduction of polluted Mississippi River water.**

**Response ID: 16241**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated under the Applicant's Preferred Alternative.

The LA TIG's Final Restoration Plan also acknowledges these impacts, and notes that such impacts are also anticipated under the No Action Alternative, but on a longer timeline. The Restoration Plan also notes that some benefits to the blue crab fishery and some finfish are anticipated.

CPRA has developed a plan to mitigate the potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to public comments, CPRA has expanded and refined the Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take

---

advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62078**

**The proposed MBSD Project would cause the loss of Louisiana shrimp, oyster, crab and finfish production which would impact the seafood based supply chain of southern Louisiana, including corresponding impacts on restaurants in New Orleans and southern Louisiana.**

**Response ID: 16243**

The impacts raised by the commenters were considered in the Draft EIS. The EIS acknowledges in Chapter 3, Section 3.14.7 in Commercial Fisheries that the seafood industry represents a major source of jobs and income in Louisiana, which includes commercial harvesters, seafood processors and dealers, seafood wholesalers and distributors, and retail sales. Chapter 4, Section 4.14 Commercial Fisheries discusses regional economic impacts and community impacts on the shrimp, oyster, crab, and finfish fisheries, noting that communities with a high reliance on these landings may be most heavily impacted, and that indirect effects may include impacts to fish license holders, crew, dealers, suppliers, and seafood processors. While availability of shrimp and oysters from the basin would decrease with the Project, shrimp and oysters from Louisiana would continue to be available to restaurants, potentially at higher prices. Restaurants willing to pay a premium for local seafood would likely do so, and additional importing would likely also occur. Under both the

---

Applicant's Preferred Alternative and the No Action Alternative, consumers in Louisiana would experience higher prices for locally caught seafood, or would consume additional imported shrimp over time. However, impacts would occur decades sooner under the Applicant's Preferred Alternative than under the No Action Alternative. This discussion has been added to Section 4.14 Commercial Fisheries in the Final EIS.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures

contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62084**

**Commenters believe that the proposed MBSD Project would cause economic loss annually to other Gulf Coast states. The Mississippi Gulf Coast seafood and fishing industry would be devastated.**

**Response ID: 16248**

Chapter 3, Section 3.1.1 Project Area of the Draft EIS identifies the analysis area for the EIS. This is the area in which the Project is anticipated to have discernable effects. For socioeconomic impacts, the EIS identifies the area of potential impacts as the 10-parish Project area due to indirect socioeconomic impacts. Most impacts would likely be concentrated in Plaquemines, Lafourche and Jefferson Parishes, Louisiana. For Commercial Fisheries, the Project area includes two basins (the Barataria Basin and a portion of the Mississippi River Basin). The proposed Project is not anticipated to have discernable effects on aquatic resources outside of the Project area. Commercial fishermen that travel to Barataria Basin to fish for species that would be adversely affected, particularly shrimp and oysters, could also be adversely affected by the proposed Project. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Final EIS has been revised to acknowledge this. Those commercial fishermen would be eligible to participate in the fishery mitigation programs discussed in the Mitigation and Stewardship Plan (Appendix R1 to the EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA

---

permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project. Impacts related to subsistence activities are discussed in Section 4.15 Environmental Justice.

---

**Concern ID: 62221**

**The Project would not provide substantial protection from hurricanes or storm surge, nor would storm surge protection be provided in a timely manner. The area most likely to experience some increase in protection would be subject to increased water levels from diversion operations. The current diversion Project needs to be reengineered to create meaningful storm surge protection. The Project is a misuse of funds based on what the diversion would do versus what it purports to do, in part due to the Mississippi River not having enough sediment to build substantial land.**

**Response ID: 15756**

While the proposed Project would impact storm surge, the purpose and need of the Project is not storm surge protection. As described in the Draft EIS in Chapter 1, Section 1.4 Purpose and Need, the purpose of the Project is to restore injuries caused by the DWH oil spill and help restore habitat and ecosystem services injured by the spill by reestablishing deltaic processes. However, as described in the Draft EIS in Chapter 4, Section 4.20.4 Public Health and Safety, the Project would have the ancillary benefit of storm damage risk reduction on communities north of the diversion due to the creation and maintenance of wetland habitat within the delta formation area; the increase in topography and land acreage would induce greater hydraulic friction and resistance, reducing the inland extent of storm surge and limiting wave heights in some communities north of the diversion, as compared to the No Action Alternative. The EIS acknowledges that storm surge and wave height reduction benefits for some communities north of the diversion would not be instantaneous, but that these benefits would increase over time as more land is created and maintained within the delta formation area. The EIS also acknowledges that some of the same communities that would experience storm surge reduction benefits, such as Lafitte, would experience an increase in non-storm inundation frequency due to increased water levels from diversion operations. At the same time, operation of the Project would have permanent, minor to moderate, adverse impacts on storm hazards in communities south of the diversion, with anticipated increases in storm surge of up to 1.7 feet near Myrtle Grove (as compared to the No Action Alternative). Section 4.20.4.2.2.2 in Public Health and Safety of the Final EIS has been revised to include additional information and figures further explaining the impacts of the Project on storm surge and wave height.

The EIS recognizes the role of sediment load in land building. The river still carries a massive sediment load, but not as massive as it historically carried. As explained in Chapter 3, Section 3.4.2.5 in Surface Water and Coastal Processes, the river formerly carried over 400

---

million tons of sediment annually, but a more than 50 percent reduction in annual sediment load has occurred since the early 1900s. Studies show that from 1968 through 2007 the overall annual sediment reduction has been more gradual, with the rate estimated as a loss of 1.1 million metric tons per year. The possible causes of the diminished sediment load include trapping by dams, hardening of banklines, improved farming practices, and other processes as described in Section 3.4.2.5 Sediment Transport. The Delft3D Basinwide Model used Mississippi River sediment loads when computing the sediment load that would be delivered to the Barataria Basin. This is described in detail in the EIS, Appendix E Delft3D Modeling, Section 5.2.2.

---

**Concern ID: 62282**

**Diversion impacts, including land loss in the birdfoot delta, would make lower Plaquemines more vulnerable to storms.**

**Response ID: 15805**

Draft EIS Chapter 4, Section 4.6.5 in Wetlands and Waters of the U.S. described the projected acceleration of wetland loss in the birdfoot delta caused by the proposed Project and Section 4.20.4.2 in Public Health and Safety acknowledged lower Plaquemines' increased vulnerability to storm hazards that would result from operation of the proposed Project. While the Draft EIS acknowledged the role that land loss plays in increased storm hazards, it did not explicitly acknowledge the role this accelerated land loss in the birdfoot delta could play in increased storm hazards. Section 4.20.4.2.2.2 in Public Health and Safety has been edited in the Final EIS to include acknowledgement that this accelerated loss of wetlands in the birdfoot could increase storm hazard vulnerability depending on the storm path and intensity.

In the LA TIG's Draft Restoration Plan, the LA TIG recognized the potential collateral injuries associated with the Project, including potential land loss in the birdfoot delta. In selecting the Applicant's Preferred Alternative, the LA TIG evaluated a reasonable range of alternatives under the factors outlined in 15 CFR §990.54. The LA TIG strove to identify an alternative that would provide what it believed to be the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, avoiding collateral injury, benefiting multiple resources, and protecting public health and safety. See Sections 3.2.4.7, 3.2.1.5, and 3.2.2.5 of the Final Restoration Plan for more information about the LA TIG's selection of the Applicant's Preferred Alternative.

---

**Concern ID: 62493**

**The proposed Project operations will flood two cemeteries in the towns of Lake Hermitage and Deer Range, Louisiana.**

**Response ID: 16451**

The potential flooding impacts raised by the commenters were considered in the Draft EIS. According to the Louisiana State Historic Preservation Office (LA SHPO) database, the Lake Hermitage cemetery is identified as the Bieber Cemetery and the Deer Range Cemetery in Suzy Bayou is identified as the Deer Range Cemetery. As compared to the No Action Alternative, operation of the proposed Project would increase tidal flooding and storm surge in communities outside of federal levees within 20 miles of the outfall area, including the towns of Lake Hermitage and Suzie Bayou South (Deer Range) in which these cemeteries are located. Such events may result in sediment deposition (burial) and/or erosion of soils at

each of these cemeteries. Chapter 4, Section 4.4.4 in Surface Water and Coastal Processes and Section 4.13.3.1 in Socioeconomics detail these impacts.

---

**Concern ID: 62665**

**Commenters suggested that the proposed Project would achieve some benefits relative to the No Action Alternative, but that even if the modeling is correct (which it probably is not), the projected benefits provided by the Project would be very small compared to amount of habitat that is expected to be lost in the Barataria Basin over 50 years. If the models used for the EIS turn out to be accurate, more than 43 percent of the land in the Barataria Basin will have disappeared even with the Project in 30 years. During that time, 105,000 acres of land will be lost, with the Project sustaining only 17,300 more acres than the No Action Alternative (5 percent of the basin's current land area). Because of this background of large land loss, the proposed Project could only be considered a stop-gap measure. Further, commenters cited sources indicating ongoing debate about the effectiveness of large-scale sediment diversions as a land-building strategy and recommended those uncertainties be addressed in the Draft EIS (Blaskey, 2020; Blum and Roberts, 2009; Chamberlain et al., 2018; DeLaune et al., 2013; Suir et al., 2014; Turner et al., 2019).**

**Turner R.E., M. Layne, Y. Mo, and E.M. Swenson. 2019. Net land gain or loss for two Mississippi River diversions: Caernarvon and Davis Pond. Restoration Ecology 27(6):1231-1240.**

**Response ID: 16624**

The issues raised by the commenters were considered in the Draft EIS. For example, the proposed Project's long-term influence on land building and wetland creation has been modeled extensively through engineering and design and the impacts (beneficial and adverse) are described in Sections 4.2 (Geology and Soils), 4.4 (Surface Water and Coastal Processes) and 4.6 (Wetland Resources and Waters of the U.S.) of the EIS. With regard to modeling conducted to determine impacts of the proposed Project, the Delft3D Basinwide

---

Model projections of Project impacts include uncertainties. Uncertainties are briefly summarized in the Draft EIS in Chapter 4, Section 4.1.3.3 (Model Limitations and Uncertainty), and in detail in Appendix E (Delft3D Modeling, Section 8.0 Model Limitations and Uncertainties). Uncertainty in model results is recognized in Table 4.2-4 found in Section 4.2.3.2.2.1 Geology, which indicates that land areas are considered accurate within +/- 200 acres and that the error in land gains is +/-300 acres.

As part of developing the EIS, the USACE, together with members of the LA TIG (including cooperating agencies and CPRA), reviewed the Delft3D Basinwide Model, including its parameters, methods of validation and calibration, inputs for the alternative production runs used in the EIS, and outputs, and concluded that the Delft3D Basinwide production runs and outputs were adequate and sufficient to inform the MBSD EIS impacts analysis of the alternatives. The cited studies were reviewed and included in relevant analyses in the Draft EIS.

The LA TIG acknowledges the commenters' concerns. As described in the LA TIG's Draft Restoration Plan, the Project would reestablish deltaic processes that deliver sediment, fresh water, and nutrients; improve the function of existing habitats; and develop deltaic habitats that connect nearshore and offshore ecosystems. The LA TIG expects that the Project would result in the creation of a maximum of 17,300 acres of land in the Barataria Basin by year 30 of operations; after 50 years of operation, the Project would result in the loss of 3,000 acres of land in the birdfoot delta but would create approximately 13,400 acres of land in the Barataria Basin, representing about 20 percent of the land remaining in the Barataria Basin at that time (see Section 3.2.1.1 [Alternative 1 Description] of the Restoration Plan). The LA TIG agrees that, with or without the Project, coastal Louisiana and the Barataria Basin would experience tremendous land loss. However, the LA TIG believes this background of large land loss makes the habitat created by the proposed Project even more important. Relative to other types of incremental approaches (for example, marsh creation through the application of dredged sediment), the Project would reconnect and reestablish sustainable deltaic processes and support the long-term viability of existing and planned coastal restoration efforts. All citations referenced by the commenters were included in the Final EIS and thus were considered by the LA TIG in the Final Restoration Plan.

---

**Concern ID: 62708**

**The release of polluted river water into the Barataria Basin would create harmful algal blooms and/or large areas of low dissolved oxygen that could negatively affect aquatic fauna including mortality of adults and juveniles that may not be able to escape impacted areas.**

**Response ID: 16086**

As discussed in Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS, the input of nutrients from the Mississippi River is generally anticipated to be beneficial to the food web, although there is an acknowledged potential for harmful algal blooms. As mentioned in Section 4.5.5.1 in Surface Water and Sediment Quality of the EIS, the majority of the Barataria Basin is shallow and well-mixed by wind and tidal action, such that it is not typically prone to stratification that promotes hypoxic (dissolved oxygen of less than 2 to 3 mg/L) conditions. Further, as discussed in Section 4.10.4.4 in Aquatic Resources, the Delft3D Basinwide Model's dissolved oxygen results do not suggest that Project implementation

---

would result in oxygen concentrations below 5 mg/L on an average monthly basis; therefore, although sporadic and limited areas of low dissolved oxygen may occur, mainly in the summer months, no large or prolonged periods/layers of low dissolved oxygen are projected by the Delft3D Basinwide Model, nor anticipated based on the Barataria Basin's identification as a largely well-mixed estuary. To make this clearer in the Final EIS, language indicating that the Delft 3D Basinwide Model results do not suggest that a significant hypoxic zone will form in Barataria Basin due to Project implementation has been added to Section 4.5.5.5.2 in Dissolved Oxygen of the Final EIS.

The Monitoring and Adaptive Management (MAM) Plan (Appendix R2), which has been updated for the Final EIS in response to public comments, includes CPRA's plan to implement a monitoring program for phytoplankton species composition, including harmful cyanobacterial/algal bloom species (and associated toxins) (see Sections 3.7.3.10 and 3.7.3.11 of Appendix R2 of the Final EIS).

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result

---

in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62791**

**Thus far, CPRA has not done anything to lower storm surge or slow the rate of wetland loss.**

**Response ID: 16372**

CPRA was formed in 2005 to address Louisiana's coastal crisis by implementing projects for a sustainable coast and reducing hurricane surge risks for its residents. Since 2007, CPRA

---

has partnered on the implementation of hundreds of miles of levees to protect residents, visitors, and property; created tens of thousands of acres of marshes; and rebuilt Louisiana's barrier island system. Louisiana's Coastal Master Plan for a Sustainable Coast provides the roadmap for coastal restoration and every year the public can review the CPRA Annual Plan to understand the progress. Several of these past and current projects were considered as part of the cumulative impact analysis in Chapter 4, Section 4.25 Cumulative Impacts of the Draft EIS. CPRA's actions to address storm surge and wetland loss outside of the proposed Project area (defined in Chapter 3 Affected Environment to include the Barataria Basin and the Mississippi River birdfoot delta), are outside the scope of this EIS.

---

**Concern ID: 62792**

**CPRA is using soundbites and marketing to convince the Louisiana public and legislature to allow them to dole out contracts for over \$2 billion in limited coastal restoration dollars on these projects. In reality, Barataria Bay is already connected to the river with existing diversions at Davis Pond, West Pointe á la Hache, and Naomi.**

**Response ID: 16373**

The commenter's opposition to the proposed Project is noted. As discussed in Chapter 1, Section 1.6 Scope of the EIS, the Draft EIS assesses the environmental and socioeconomic impacts of the proposed Project. To the extent construction spending would serve as an economic driver, those anticipated impacts are discussed in Chapter 4, Section 4.13.4.2 Economy, Employment, Business, and Industrial Activity. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Delft3D Basinwide Model, which was used in developing the proposed MBSD Project EIS, accounts for the existing diversions at Davis Pond, West Pointe a la Hache, and Naomi (see Appendix E [Delft3D Modeling], Section 5.1.1 of the EIS).

The USACE is neither a proponent nor an opponent of the proposed Project. It will make its decisions regarding the proposed Project based on the evaluations in the EIS and considering public comments and its determinations with respect to the public interest review, compliance with the CWA Section 404(b)(1) guidelines, compliance with other laws and Executive Orders, whether the Project would affect the ability of Corps projects to meet their authorized purposes and whether the project is injurious to the public interest. USACE's decisions will not be based in any respect on CPRA's public communications regarding the proposed Project.

---

**Concern ID: 62951**

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates,**

---

**and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the

---

landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again, community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section

10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63018**

**The proposed Project would cause land loss further out from the diversion structure and also destroy the brackish/saline marsh grasses, which provide storm surge protection, and replace them with less surge-resistant freshwater plants.**

**Response ID: 16030**

Chapter 4, Section 4.6.5.1 in Wetland Resources and Waters of the U.S. of the Draft EIS acknowledged that the fresh water transported by the diversion may result in the loss of some wetlands in the immediate outfall area due to inundation during the initial period following commencement of operations. Further, the Delft3D Basinwide Model projects inundation depths in the critical vegetation parameters to simulate vegetation losses and gains as a result of the diversion, as well as other sources of inundation (such as subsidence and sea-level rise).

However, salt- and brackish marsh vegetation would not be subjected to direct mortality due to the lower salinity of transported water. While saline and brackish species are associated with salinity ranges of greater than 18 ppt and between 18 and 5 ppt, respectively (see Chapter 3, Section 3.6.1.2 in Estuarine Wetlands of the Draft EIS), brackish marsh can fluctuate from fresh to saline conditions depending on tidal movement, and species such as *Spartina alterniflora* are common in both salt and brackish marsh (Conner and Day 1987). Salt is a stressor affecting osmosis and cell structure. Plants occurring in saline and brackish marshes have developed adaptations to either exclude uptake or excrete salt; however even salt marsh species grow better at lower salinities (Mitsch and Gosselink 2000; Teal et al. 2012). However, as described in Chapter 4, Section 4.6.5.1.2.1 Salinity of the Final EIS, in some areas of the Barataria Basin, the seasonal change in salinity due to operation of the diversion above base flow (primarily during spring and early summer) and lower-flow conditions during fall and winter months would be large enough to temporarily change the wetland hydrology from a brackish to fresh or from a saline to brackish system. In the southern basin, where salt marsh predominates, peak salinities would be within the range for salt marsh vegetation under the No Action and Applicant's Preferred Alternatives. Additional analysis regarding the potential impact of hurricanes and saltwater inundation on the extent of wetlands in the Project area during operations has been added to Chapter 4, Section 4.6.5.1.2 Applicant's Preferred Alternative of the Final EIS.

The MAM Plan includes monitoring for inundation related effects on marsh vegetation in the Project area. The MAM Plan provided in the Draft EIS Appendix R was submitted by CPRA and represents a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the

measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63070**

**A recent study suggests that the proposed Project would not only prevent the recovery of the BBES Stock, but it would result in the functional extinction of dolphins in the West, Central, and Southeast strata of the stock area (Thomas et al., 2021). The only dolphins remaining in the basin would live adjacent to the barrier islands, and even this group would become severely reduced over the 50-year planning horizon of the proposed Project. Additionally, an expert elicitation (Booth and Thomas, 2021) building on previous studies (Garrison et al., 2020; Schwacke et al., 2017; Thomas et al., 2021) suggests that while dolphins can endure some periods of exposure to low salinity, the period of tolerable exposure shortens for dolphins exposed to acute changes in salinity, and the median time to death is 22 days with continuous exposure to water with salinity levels below 5 ppt.**

**Booth, C., and L. Thomas. 2021. An expert elicitation of the effects of low-salinity water exposure on bottlenose dolphins. *Oceans* 2(1):179-192.**

**Garrison, L.P, J. Litz, and C. Sinclair. 2020. Predicting the effects of low salinity associated with the Mid-Barataria Sediment Diversion Project on resident common bottlenose dolphins (*Tursiops truncatus*) in Barataria Bay, Louisiana. NOAA Technical Memorandum NOAA NMFS- SEFSC-748. 97 pages.**

**Schwacke, L.H., L. Thomas, R.S. Wells, W.E. McFee, A.A. Hohn, K.D. Mullin, E.S. Zolman, B.M. Quigley, T.K. Rowles, and J.H. Schwacke. 2017. Quantifying injury to common bottlenose dolphins from the Deepwater Horizon oil spill using an age-, sex- and class-structured population model. *Endangered Species Research* 33:265-279.**

---

**Sediment Diversion Project on bottlenose dolphins in the Barataria Bay Estuarine System Stock.****Response ID: 16593**

The Draft EIS included an analysis of the impacts to marine mammals, including BBES dolphins in Chapter 4, Section 4.11.5.2 Barataria Bay Estuarine Stock. This analysis incorporated the Booth and Thomas (2021), Garrison et al. (2020), and Schwacke et al. (2017) studies, and the Final EIS includes additional analyses that were completed by Thomas et al. (2021) after the Draft EIS was released for public comment. The impact conclusions in the Draft EIS were based in large part on Garrison et al. (2020), which predicts that only a remnant population of dolphins would continue to exist in Barataria Basin after diversion operations commenced. The conclusion of major, permanent, adverse impact to bottlenose dolphins is also supported by Thomas et al. (2021), which built on these earlier studies and concludes that, after 1 year of operation of the Applicant's Preferred Alternative, there would be 61 percent fewer dolphins in the Central stratum than under the No Action Alternative, 35 percent fewer in the West stratum, 12 percent fewer in the Southeast stratum, and 2 percent fewer in the Island stratum, with 25 percent fewer overall. Thomas, et al. further concluded that after 10 years of operation, there would be 100 percent reduction in the populations of dolphins in the Central and West strata, an 82 percent reduction in the population of the Southeast stratum dolphins, and a 34 percent reduction in the population of the Island stratum dolphins as compared against the No Action Alternative, with an overall difference in population of 78 percent. (Note that Thomas, et al. 2022 slightly refined some of these projections.) After 50 years of operation, in three out of the four strata, dolphins are predicted to be functionally extinct (defined as less than or equal to dolphin in Thomas, et al. 2022) under the Applicant's Preferred Alternative, with the remaining Island stratum being 85 percent lower [95 percent CI -28 -- -99] under the Applicant's Preferred Alternative than under the No Action Alternative. Overall, by the year 2076, the median predicted stock size across all of Barataria Bay under the Applicant's Preferred Alternative is projected to be 143 dolphins (95 percent CI 11-706) compared to a predicted 3,363 dolphins (95 percent CI 2,831-4,289) predicted to inhabit the Barataria Bay under the No Action Alternative. In other words, the BBES dolphin stock is projected to be 96 percent smaller (95 percent CI -80 -- -100) under the Applicant's Preferred Alternative than then No Action Alternative. Chapter 4, Section 4.11 Marine Mammals of the Final EIS has been updated to reflect the results of Thomas et al. (2021).

Booth and Thomas (2021) evaluated multiple scenarios with different salinity changes, and in one of those scenarios' where bottlenose dolphins experience a change in salinity within 0 to 5 days from typical salinity environment (that is, mean 15 to 25 ppt) down to an atypical environment with salinity below 5 ppt for an extended period, the median time to death would be 22 days.

---

**Concern ID: 63080**

**The Corps and the TIG have circumvented a legal process intended to conserve marine mammals and protect ecosystems by obtaining a Congressionally-mandated MMPA waiver for the proposed Project. The waiver does not establish a quota for how many dolphins can be taken by the proposed Project, and it is clear that the level of take for this stock will be grossly unsustainable, in clear violation of the MMPA (absent BBA-18). The legislative waiver, quite simply, provided Congressional permission to break**

---

**the law. It is critical for the protection of marine mammals that such a legislative waiver be a one-off occurrence.**

**Response ID: 16599**

The U.S. Army Corps had no role in seeking a Marine Mammal Protection Act waiver for this Project from Congress, nor did any federal agencies on the LA TIG. CPRA sought the waiver. Title II, section 20201 of the Bipartisan Budget Act of 2018 provides: “(a) In recognition of the consistency of the Mid-Barataria Sediment Diversion, Mid-Breton Sound Sediment Diversion, and Calcasieu Ship Channel Salinity Control Measures projects, as selected by the 2017 Louisiana Comprehensive Master Plan for a Sustainable Coast, with the findings and policy declarations in section 2(6) of the Marine Mammal Protection Act (16 U.S. C. 1361 et seq., as amended) regarding maintaining the health and stability of the marine ecosystem, within 120 days of the enactment of this section, the Secretary of Commerce shall issue a waiver pursuant to section 101(a)(3)(A) and this section to Section 101(a) and Section 102( a) of the Act, for such projects that will remain in effect for the duration of the construction, operations and maintenance of the projects. No rulemaking, permit, determination, or other condition or limitation shall be required when issuing a waiver pursuant to this section. (b) Upon issuance of a waiver pursuant to this section, the State of Louisiana shall, in consultation with the Secretary of Commerce: (1) To the extent practicable and consistent with the purposes of the projects, minimize impacts on marine mammal species and population stocks; and (2) Monitor and evaluate the impacts of the projects on such species and population stocks.”

The National Marine Fisheries Service issued the waiver in March 2018. Since that waiver in 2018, CPRA has not requested any additional waivers for coastal restoration projects. More information on the waiver can be found at <https://www.fisheries.noaa.gov/action/marine-mammal-protection-act-waiver-select-louisiana-coastal-master-plan-projects>.

---

**Concern ID: 63106**

**The proposed Project would kill more sea turtles than did the DWH oil spill with BP monies.**

**Response ID: 16204**

Chapter 4, Section 4.12.2.2 Sea Turtles of the EIS, determined that the proposed Project would have negligible to minor adverse impacts on hawksbill and leatherback sea turtles, but minor to moderate adverse impacts on Kemp’s ridley, green, and loggerhead sea turtles due to the potential for increased interactions between sea turtles and commercial shrimp fishing efforts.

In compliance with the Endangered Species Act of 1973, as amended (16 U.S.C. §§ 1531 et. seq.), the NMFS’ Biological Opinion on the proposed Project (included in the Final EIS as Appendix O4) concludes the proposed Project is not likely to jeopardize the continued existence of sea turtles and authorizes “take” for the Project, which is defined as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect, or attempt to engage in any such conduct. In its Biological Opinion, the NMFS authorizes the incidental take of 783 sea turtles per year, including 370 Kemp’s ridley sea turtles (including up to 38 mortalities), 319 loggerhead sea turtles (including up to 10 mortalities), and 94 green sea turtles (including up to 9 mortalities). Over the 50-year Project life, this could equate to a take of 39,150 sea turtles (including up to 2,850 sea turtles mortalities). This can be compared to the lower-end

---

estimate of 4,900 large juvenile/adult, 56,000 juvenile, and 35,000 hatchling sea turtles killed by the DWH oil spill (NMFS 2020).

---

**Concern ID: 63129**

**The proposed Project would have no land gain in the first 20 years.**

**Response ID: 16277**

Land gains and losses are discussed in Chapter 4, Section 4.2.3 in Geology and Soils of the EIS. As reported in this section, the proposed Project would introduce significant volumes of sediment into the Barataria Basin, most of which is expected to be retained. Further, as discussed, the Delft3D Basinwide Model suggests that an expected net addition of 53 mcy of sediment would be retained in the proposed Project area (Barataria Basin and birdfoot delta) by 2030 and 310 mcy by 2070, which would result in the net creation of 4,980 acres (7.8 square miles) of land by 2030, and 17,300 acres (27.0 square miles) by 2050. The Executive Summary and Section 4.2.3.2.2.1 Geology of the Final EIS have been revised to clarify ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to proposed Project operations.

---

**Concern ID: 63181**

**CPRA has no real mitigation plan.**

**Response ID: 16558**

The Draft EIS contained CPRA's Mitigation and Stewardship Plan in Appendix R1.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, have been provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

---

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 64057**

**The socioeconomic impacts would affect southeast Louisiana and the area impacted by the proposed MBSD Project for generations and ensure the end to the traditions and culture of south Louisiana and its families.**

**Response ID: 16230**

The EIS discusses impacts on the local communities and various quantitative and qualitative impacts from the proposed Project in Chapter 4, Section 4.13 Socioeconomics, including Community Cohesion (Section 4.13.5.6). Consistent with the concern of the commenter, the EIS does find potential minor to moderate, long-term adverse impacts on community cohesion from the proposed Project compared to the No Action Alternative.

---

**Correspondence ID:39429**

Alliance for Affordable Energy

Logan Burke

Hello, I'd like to offer my support for the preferred alternative in the Draft Environmental Impact Statement for the Mid- Barataria Sediment Diversion. I encourage the use of Deepwater Horizon settlement dollars to fund this project, as is outlined in the Restoration Plan. Please also consider community needs in all mitigation and stewardship efforts, as it is community that makes Louisiana what it is. Finally, as climate change continues, sea levels rise, and man-made structures continue to limit the natural development of vital wetlands and coastal rebuilding along the majority of Louisiana's sole, please commit to developing a real adaptive management plan to prepare for the future. We simply must not fail to act to protect Louisiana's land, wetlands, and waterways.

Thank you,

Logan Burke, Alliance for Affordable Energy

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the

---

Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from

---

the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Teryn Romaine

Dear U.S. Army Corps of Engineers, New Orleans District,

I presume you have read the comments and support evidence for the Mid-Barataria Sediment Diversion. I just want to add that for too long we have turned a blind eye to the damage we are bringing to the natural world around us. There is no going back to the world that existed before the human population and the technologies started expanding uncontrollably, but here is an opportunity to recover from one very big catastrophe, and this may be an example for the future, ensuring that there will be a world to pass along to future generations.

Thank you for considering my comments.

Sincerely,

Teryn Romaine

Blairsville, GA 30512

---

**Concern ID: 63332****A large number of commenters expressed general support for the proposed Project.****Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Belinda Gaile

I own a house in Myrtle Grove Marina Estates. I'm very concerned about the flooding that will occur in my subdivision when the diversion is running. Will the residents be notified prior to the diversion being turned on to allow us to make plans to leave so we're not trapped in the subdivision or not able to get back in. I'm also concerned about what damage my house will sustain from the regular flooding as well as to what will happen to my property value. I've attended a couple of meetings concerning this diversion and haven't heard any definite plans about mitigation measures. This is very worrisome. I'm at a point in my life where I cannot continue to clean and repair flood damage to my property. I don't want the stress of never knowing when the diversion will be turned on. My husband and I built our home in 2004. It was supposed to be a weekend getaway with friends and families. The diversion will pretty much put an end to those plans.

---

**Concern ID: 62013**

**The Myrtle Grove subdivision is a residential neighborhood composed of homes, not camps, many of which may not have access to flood insurance. The proposed MBSD Project would increase flooding of the properties which would severely impact access to property and property values in Myrtle Grove and other affected areas such as Lake Hermitage.**

**Response ID: 16210**

The impacts raised by the commenters were considered in the Draft EIS in Chapter 4, Section 4.13 Socioeconomics, which discusses impacts of the proposed Project on property values, and Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction which discusses flood and storm related impacts due to the Project. The EIS (Section 4.13.5.3 in Socioeconomics) finds that the proposed Project would result in minor to moderate, permanent, adverse impacts on housing and property values in communities near the immediate outfall areas (within 10 miles north and 20 miles south) and outside of flood protection. These affected areas include the communities of Myrtle Grove, Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, Happy Jack, and Grand Bayou, and to a lesser extent portions of Lafitte. In addition, negligible to minor increases in levee overtopping south of the immediate outfall area may occur in future years following delta formation (after approximately 20 years of Project operations) in the outfall area in communities inside levees, with the greatest increases in communities adjacent to the NOV-NFL Levee system.

The Final EIS discusses modeled impacts of the Project on water surface elevations and corresponding tidal inundation in Lafitte, Myrtle Grove, and Grand Bayou. These three communities are generally representative of other communities in the basin, including Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, and Happy Jack (see Figure 4.13-1 in Section 4.13.1 Area of Potential Impacts in Socioeconomics). Lafitte, Myrtle Grove, and Grand Bayou also represent varying levels of exposure to tidal flooding. As explained in Section 4.20.3 Public Health and Safety – Overview of Model for Impact Analysis, Grand Bayou has no structural protection and would experience similar tidal flooding as the unprotected communities of Hermitage, Suzie Bayou North, Suzie Bayou South, and Happy Jack. Myrtle Grove impacts would be similar to the neighborhood of Woodpark. Without implementation of the measures outlined in the Mitigation and Stewardship Plan (Appendix

R1), the largest impact on tidal inundation frequency due to the diversion is projected to occur in Myrtle Grove, as this is the community that is closest to the immediate outfall area of the proposed diversion structure outside flood protection and thus is projected to see the greatest increase in water levels.

Section 4.13.5.3 Housing and Property Values has been revised in the Final EIS to provide additional discussion of potential effects of the proposed Project on the availability of flood insurance. The Final EIS concludes that the proposed Project would not impact the availability flood insurance, but may cause an increase in flood insurance premium for some properties in communities projected to experience increases in tidal flooding and storm hazards. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict how flood insurance premiums may change. Since issuance of the Draft EIS, CPRA has expanded and refined the mitigation measures intended to address the inundation projected in the communities south of the proposed Project's immediate outfall area including Myrtle Grove, Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack. CPRA plans to provide a combination of structural improvements (for example, improving bulkheads and raising roads and homes) and non-structural measures.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

In Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack, CPRA plans to purchase Project servitudes from landowners. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. See Section 6.3.2 of the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures

contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62224**

**Communities like Happy Jack, Lake Hermitage and Myrtle Grove, some of which have homes that are not above the new base flood elevation, already experience some degree of flooding which would be made worse by the diversion. This would affect the ability of residents to access and enjoy their homes and communities.**

**Response ID: 15757**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discuss the anticipated increased flooding impacts outside of federal levee systems to be caused by the operation of the diversion. Final EIS Appendix R1 Mitigation and Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties. In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes, which would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to

purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62951**

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for**

---

**lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates, and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties

---

and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again, community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be

implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63094**

**There should be a website that shows if the diversion is running and at what capacity.**

**Response ID: 16646**

In response to public and agency comments, CPRA would develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

This dashboard has been added to the Monitoring and Adaptive Management (MAM) Plan included in the Final EIS (Appendix R2). The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63102**

---

**Commenters expressed concern that they will not be able to use their property if the Project proceeds. Commenters believe that the amount of funds proposed for mitigation is insufficient.**

**Response ID: 16640**

The commenters' concern regarding the adequacy of the funding for mitigation measures was considered by CPRA and the LA TIG in developing CPRA's Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included proposals to address and partially offset some of the projected impacts of the Project on surrounding communities outside levee protection, including potential mitigation measures to address increased water levels due to the Project. In response to comments, CPRA further expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

The mitigation and stewardship measures would vary by community. In Myrtle Grove, CPRA would improve the bulkhead around the Myrtle Grove Marina Estates Subdivision to reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the Project. In other communities from Woodpark to Happy Jack south of the Project site outside levee protection, CPRA would elevate the roadways and make other infrastructure improvements to maintain access and the utilities of those communities. Also in these communities, CPRA plans to acquire Project servitudes from landowners. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances. Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

Details regarding the funding that will be available for aquatic/fisheries mitigation and stewardship measures is set forth in the Final Mitigation and Stewardship Plan, Appendix R1. Details regarding other mitigation and stewardship measures (e.g., mitigation for tidal flooding impacts) is also set forth in the Final Mitigation and Stewardship Plan, Appendix R1; however,

---

final estimated costs for those measures continues under development. CPRA has stated that the total estimated cost of all mitigation and stewardship measures set forth in the Final Mitigation and Stewardship Plan exceeds \$300 million dollars. Details regarding the cost for the monitoring and adaptive management are set forth in Section 9 of the Final MAM Plan, Appendix R2. Section 3.2.1.2 of the Draft Restoration Plan includes estimates of project costs, including the cost for project design and construction and project monitoring. Updated cost estimates will be provided as part of the Final Restoration Plan, including project monitoring and stewardship measures.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63210**

**Concern was expressed about whether residents will be notified before the diversion is turned on.**

**Response ID: 16577**

The Draft EIS did not address whether or how residents would be notified regarding Project operations. In response to public comments, CPRA's Monitoring and Adaptive Management (MAM) Plan (Appendix R2 in the Final EIS) states that it would develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship,

---

monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Correspondence ID:39543**

James Davis

I would suggest adding salt injection points directly downstream of the river sediment flow before it gets into the basin so that the volume of fresh water is reduced.

This may assist in less stress on salt reliant fish, shellfish and dolphins.

---

**Concern ID: 61896**

**Add salt injection points directly downstream of the river sediment flow before it gets into the basin so that the volume of fresh water is reduced.**

**Response ID: 15990**

This outfall feature alternative was considered in the Draft EIS but was not fully evaluated because it does not meet purpose and need for the Project because it does not restore the natural delatic process between the Mississippi River and Barataria Basin through the introduction of fresh water, sediment, and nutrients from the Mississippi River into the Basin. Refer to the Eliminated Alternatives Matrix in Appendix D2 of the EIS. Additionally, the basin will experience periodic introduction of more saline water naturally through tidal processes and storm events. Potential impacts associated with changes in salinity are addressed in Chapter 4, Section 4.5 Surface Water and Sediment Quality.

Myrtle Grove Homeowner Association

Randy Gegenheimer

Myrtle Grove Homeowners Association Comments on Draft Restoration Plan and Draft Environmental Impact Statement ("EIS")

CPRA recognizes the diversion will impact Myrtle Grove (and other communities)

- Draft Restoration Plan Page ES-2: "increases in intensity and duration of flooding impacts for next 50 years."

- Draft Restoration Plan Page 3-16: \$268,318,000 budgeted for land acquisition

- Draft Restoration Plan Page 3-48: "diversion would serve to accelerate tidal flooding impacts."

- EIS page 4-453: "minor to moderate, adverse impacts upon housing and property values" followed by "impacts to Myrtle Grove would be more substantial."

o Comment: How will the affected communities be compensated for the adverse impact of the diversion?

#### Water Levels

December 18, 2019: Diversion Presentation by Brad Barth and Brian Lezina. Brian presented a graph showing maximum increase of water up to 2 feet. He also said it is a significant increase and it is being study and will be addressed.

April 2020: In an article in the New Orleans Advocate. Brian Lezina stated the water level will increase 2.5 feet at the Wilkinson Canal and everything is on the table including elevation at the bulkheads and elevating roads if the diversion is built.

Early 2021: CPRA conducted meetings in Port Sulphur and had a continuous presentation showing the water levels will increase at Myrtle Grove .5 to 2 feet. CPRA stated they will assist property owners by:

- Elevating homes and structures on the property.
- Upgrade septic / sewer and other utilities.
- Elevating roadways and utilities; and
- Pay for losses in property value.

April 2021 CPRA conducted a meeting in Lake Hermitage and again a different water level for Myrtle Grove <1.0 - 1.3 feet

EIS Executive Summary Page ES-8: Operational impacts on water levels in the Bartaria Basin from the project would be permanent, adverse, and range from major to minor, depending on the location in the Basin, with minimal increase of 1.1 feet in the immediate outfall area. Higher water levels would primarily occur when the diversion is flowing above base flow (greater than 25,000 cfs and up to 75,000 cfs).

EIS Executive Summary Page ES-14: The operation of the proposed project could lead to long term, minor to major, adverse impact on communities not protected by Federal Levees from acceleration of increase flooding and storm hazards.

EIS Table 4.20-2: Shows an increase of 119 days of more tidal flooding under Applicants Preferred Alternative in Myrtle Grove 2020-decade days with the project.

- Comment: 119 days is approximately one third of a calendar year. The result of the diversion will be that Myrtle Grove owners will only be able to enjoy the use of their property two-thirds of the year.

EIS page 4-694, Figure 4-20-3: Shows Myrtle Grove flooding twice as much in 2030 (inundated two-thirds of the year).

- Comments: These figures are inconsistent. What will be the actual impact upon Myrtle Grove?

#### Property Values

EIS Page 4-554: There are 532 residential properties in the affected communities that had an assessed value of \$5.9 Million and then said this is the property value for these properties.

Appendix H Table 2-6: Myrtle Grove has one marina, 76 homes and 231 undeveloped properties valued at \$52 million.

- Comments: Reconcile \$52 Million for Myrtle Grove and \$5.9 Million for Myrtle Grove and all the other affected communities

- Assessed value is not market value.

Appendix H Page 125: Impacts of the diversion:

- The operation of the project under Applicants Preferred Application is expected to have permanent, moderate, adverse impacts on land use and property values.

- Operation of the project is expected to increase the frequency and duration of tidal flooding in communities outside of the flood protection in and near the outfall.

- These temporary more frequent occurrence in flooding may lead to reduction in property values over time.

- As a result, operation of the project is expected to have permanent, minor, adverse impacts on the land uses and property values in the outfall area.

Chapter 4 4.13.3.3 Sedimentation: If additional dredging is not undertaken adverse impacts in addition property values for properties that rely on access to those channels could be adversely affected.

Loss of use of Wilkinson Canal (Appendix R page 19): If Wilkinson Canal impacted, CPRA MAY (emphasis added) take one or more actions such as adjust operations, conduct maintenance dredging, provide alternative boat access for Myrtle Grove. In EIS page 4-454, it states the loss of the Canal would result in "moderate, permanent adverse reduction in property values in Myrtle Grove."

- Comment: Why is this not a duty for CPRA in the event Wilkinson Canal is impacted rather than just something CPRA MAY do?

#### Mitigation

Appendix R Page 6.3.2 Property Impacts: CPRA is evaluating the area that could be exposed to project induction and researching regulatory and policy issues that pertain to powder lands and tidelands in the project area. A comprehensive inventory of the potentially affected

properties and land services planning is progressing under an assumption that CPRA would mitigate for inundation caused by the project to properties which could take the forms of:

- Monitoring and adaptive management of operations
- Assisting property owners to elevate homes and other structures on private property.
- Property right acquisition (e.g., Flowage Easement fee acquisition, or others) CPRA would prefer to acquire easement rather than acquiring full ownership of affected properties.
- Structural mitigation (e.g., elevation public roadways, utilities, water control structures or other structural measures to offset additional induction
- The draft EIS for the Upper Barataria Bay has a Real Estate Plan for the affected communities.

o Why is there not a Real Estate Plan for Myrtle Grove and the other affected communities?

- Sire selection mitigation could occur at the site of the impact, or other locations where structural measures would reduce inundation, or through property rights agreements.

o Comment: Every Flowage Easement found on the Corps of Engineers website contains an express prohibition against human habitation (homes) in the Flowage Easement. How can this be a preferred remedy since it would result in no one being able to live in Myrtle Grove and the other affected communities?

#### Land Building

Executive Summary Page ES-10: The project is expected to cause moderate, permanent, adverse impacts on the wetlands in the Birdfoot Delta where wetlands would be lost due to reduced sediment and freshwater inputs. By year 2070, wetlands in Birdfoot Delta reduced to 3,510 acres without the project Birdfoot Delta 2070 would be 6,410.

EIS Figure 4.2-6: This graph shows in 2030 Basin acres is 300,000 acres including < 10,000 acres created. In 2070, total acres in the Basin will be 60,000 acres with just a little more than 10,000 acres.

- Additional Comments: This information contradicts what was shown in the amount of land created by 2070 in the December 18, 2019 presentation.

- The EIS does not have a reduction in land building in the event of hurricanes which can have a significant impact on any build-up of land.

#### Diversion Operation

EIS Table 4.1-1: Shows the rivers in first decade of operation 158 days above 450,000 cfs and by 2070 224 days above 450,000 cfs.

EIS Page 4.13.3.3 Sedimentation: Operation of the Diversion would lead to an increase in sedimentation in channels and canals in outfall area that are important to both recreational boaters and commercial fishers.

EIS Appendix H 3.6.2 Construction Impacts: Construction of the project is expected to cause negligible impact on non-federal maintained canals.

EIS Appendix H 3.6.3 Operational Impacts: Because of uncertain ties associated with DELFT and GIS modeling results and the number of variables need to estimate cost of dredging a range of cost were estimated to dredge only the Wilkinson Canal.

## Dolphins

EIS Appendix N provides all the marine species affected by the diversion but does not cover dolphins. While it is recognized that a waiver was obtained for the dolphins, the dolphins should have been studied and the adverse effects published to allow an appeal of the waiver due to the harm to dolphins. We believe the knowledge regarding the number of dolphins to be killed because of the diversion will result in a public outcry.

## Additional Comments on the EIS

- Throughout the EIS, it states multiple times the project will cause permanent, minor to major adverse impacts to the land use and property values and commercial fisheries in the Barataria Basin.
- With Global Climate Change the EIS used river hydrology information from as early as 1964 and no later than 2011. Current information was not used. The EIS should contain a hydrology report and the report should be based upon recent data.
- From several resources (CPRA presentation, newspaper articles, EIS) increased water levels range from .5 to 2.5 feet. The information is not consistent on water levels.
- The only alternatives in the EIS are diversions at different flow rates. They have not listed other possible methods on building land in the Basin. One alternative is to study the creation of barrier islands and compare the result with the diversion.
- The purpose of the diversion is to build land. However, the EIS Figure 4-2.6 is a graph showing the Barataria Basin has 300,000 acres with less than 10,000 acres created and 2070 with 60,000 acres with just over 10,000 acres created. This does not justify the cost of the diversion.

CONCLUSION: CPRA is condemning the property in Myrtle Grove and other communities outside the levee protection for the benefit of the State of Louisiana. While understandable from a State's perspective, the owners in Myrtle Grove and the other affected communities need to be fully compensated for the taking of their property (i.e., paid fair market value for their property and homes)

---

### Concern ID: 61772

**The commenter pointed out that Figure 4.2-6 in Chapter 4, Section 4.2 Geology and Soils indicates that by 2070, total acres created by the Project in the basin would be about 10,000 acres. The commenter expressed concern that this contradicts the amount of land created by the Project as stated in the December 18, 2019 presentation by CPRA to the Myrtle Grove Homeowners Association.**

### Response ID: 16173

The total acres projected to be created by the proposed Project were considered in the Draft EIS. The EIS contains projections derived from the most recent modeling efforts available by the Water Institute of the Gulf, and these projections may differ from those of earlier modeling efforts. A detailed overview of the modeling conducted to project land creation and land-loss impacts of the proposed MBSD Project is provided in Appendix E Delft3D Modeling of the EIS. To help further address these concerns, a discussion to clarify currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost

---

due to proposed diversion operations has been added to the Executive Summary, Section ES.4.1 Geology and Soils and to Chapter 4, Section 4.2.3.2.2.1 Geology of the Final EIS.

---

**Concern ID: 61787**

**The EIS used river hydrology information from as early as 1964 and no later than 2011. Current information was not used. The EIS should contain a hydrology report and the report should be based upon recent data.**

**Response ID: 16417**

The issue raised by the commenter was considered in the Draft EIS. The Mississippi River hydrologic boundary conditions used in the Delft3D Basinwide Model included continuous 50-year historical Tarbert Landing records from 1964 to 2013. For the Delft3D Basinwide Model hydrodynamic simulations, representative hydrographs were selected to represent each decade. The selection was the product of a statistical analysis performed by the Water Institute of the Gulf, as described in Draft EIS Appendix E Delft3D Modeling, Section 5.1.1. In addition, four additional Mississippi River annual hydrographs were selected to represent specific statistical characteristics including the 2011 hydrograph, as the commenter mentioned. It was selected because it represented a particular type of hydrograph - a high discharge, late spring flood. Later years, including those available when the modeling was performed, were considered but did not meet the selection criteria. No related edits have been made to the Final EIS.

---

**Concern ID: 61852**

**The cost per acre of marsh creation by the diversion is far higher than a corresponding alternative of marsh creation through the use of dredged material. Marsh creation through a diversion takes 50 years unlike marsh creation through dredging. In addition, brackish/salt marshes (which would be created by dredging) are more resilient than freshwater marshes, and thus marsh created through dredging would be a more sound investment of restoration funding than a sediment diversion.**

**Response ID: 16617**

The timing of marsh benefits created by the proposed diversion was considered in the Draft EIS in Chapter 4, Section 4.6.5 Wetland Resources, Operational Impacts. In response to these comments, additional detail has been added regarding the resiliency of fresh marsh compared to brackish marsh in the Final EIS, Sections 4.6.5.1.2.3 Soil Shear Strength and 4.6.5.1.2.4 Land Accretion. Under relevant NEPA regulations, a cost-benefit analysis is not required for the EIS unless such an analysis is relevant to the agency's decision. USACE generally assumes that a permit applicant has undertaken its own economic evaluation of a proposed project and therefore, does not require a financial cost-benefit accounting for its decision. As part of its permitting decision, USACE conducts a public interest review, which weighs the probable harms of a project against its prospective benefits.

While the commenters suggest that marsh creation through dredging would cost less than the proposed Project, the LA TIG does not believe that comparing the costs of a sediment diversion to marsh creation projects using dredged material is relevant for several reasons. Most importantly, as explained in the LA TIG's Restoration Plan, the goal of the Project is to create a long-term sustainable ecosystem through the reestablishment of deltaic process. Marsh creation through the use of dredged material would not bring fresh water or nutrients to the basin on an ongoing basis. The benefits of marsh created with dredged material would

diminish over time without maintenance in the form of additional pumping events due to subsidence and sea-level rise; thus, the temporal nature of Project benefits in the absence of periodic maintenance would also be very different. The costs and benefits of the Project were fully considered by the LA TIG and are discussed in the Draft Restoration Plan in Section 3.2.1.2 Cost to Carry Out the Alternative.

---

**Concern ID: 61970**

**The only alternatives in the EIS are diversions at different flow rates. The EIS has not listed other possible methods on building land in the Barataria Basin. One alternative is to study the creation of barrier islands and compare the result with the diversion alternative. Also consider fortifying the barrier islands with sheet piles, boulders, and rocks, and dam all pipeline canals and washed-out marsh openings with concrete dams.**

**Response ID: 15972**

The Draft EIS considered barrier islands as a functional alternative to the proposed Project. This alternative was determined not to meet the purpose and need. Refer to Chapter 2, Section 2.3.4 in Step 1: Evaluation of Functional Alternatives of the EIS for details on why this alternative was eliminated from further analysis in the EIS. While barrier islands play a critical role in reducing land loss, they are not intended or designed to transport sediment, fresh water, or nutrients.

Past investments through a multitude of restoration programs have resulted in the restoration of every major barrier island in the Barataria Basin. CPRA's Coastal Master Plan includes programmatic barrier island restoration to support future maintenance of the restored islands. However, CPRA has stated that fortifying barrier islands with hard structures is not feasible.

---

**Concern ID: 62010**

**Sediment transported by the diversion into the basin would cause the main waterways to have increased shoaling, become too shallow to pass through, and would require dredging in order to access personal properties. This plan should address the potential loss of access for homes, camps, and businesses due to the increased shoaling.**

**Response ID: 16208**

The impacts raised by the commenters were considered in the Draft EIS; therefore, no related edits have been made to the Final EIS. The EIS describes impacts on marine transportation and maintenance dredging in Chapter 4, 4.21 Navigation. This section also describes potential impacts on access due to delays when dredging. In addition, refer to Section 4.13 Socioeconomics for a discussion of socioeconomic impacts due to potential sedimentation in Barataria Basin navigation channels and canals. The proposed Project would have moderate, intermittent but permanent, adverse impacts on marine traffic efficiency and safety for shallow-draft vessels. The proposed Project would also cause minor to moderate, permanent, adverse impacts in dredging requirements for portions of the Mississippi River Navigation Channel and the birdfoot delta due to Project-induced changes to typical shoaling patterns and locations. As stated in Chapter 4, Section 4.21 Navigation, the USACE would continue to maintain federal navigation channels in the proposed Project area during Project operations. In acknowledgement of commenters' concerns regarding sediment and shoaling impacting navigation, the Mitigation and Stewardship Plan in Appendix R1 in the Final EIS

includes measures to mitigate impacts on navigation in the basin resulting from operation of the Project, including monitoring and dredging or other measures for certain non-federal navigation channels including Wilkinson Canal (see Appendix R1 [Mitigation and Stewardship Plan] to the Final EIS for additional details).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62018**

**Commenters noted inconsistencies in the property values presented in the EIS and Appendices. Specifically, comments highlighted a need to reconcile the property value of \$52 Million for Myrtle Grove in Appendix H compared to the value of \$5.9 Million for Myrtle Grove and all the other affected communities in Chapter 4, Section 4.13.5.3 in Socioeconomics of the main body of the EIS.**

**Response ID: 16214**

The commenter's concern with the consistency of property valuation in the EIS is acknowledged. The issues raised by the commenters were considered in the Draft EIS. Appendix H1 Socioeconomics Technical Report and Chapter 4, Section 4.13.5.3 Housing and Property Values in Socioeconomics present different statistics about housing values. Specifically, Table 2-6 in Appendix H1 Socioeconomics Technical Report presents total property values based on estimated online fair market estimates in Myrtle Grove. Section 4.13.5.3 Housing and Property Values in Socioeconomics presents the assessed value of properties as reported by the Plaquemines Parish Assessor. Per the Plaquemines Parish Assessor, the assessed value is calculated as 15 percent of the fair market value for all

---

commercial improvements, and 10 percent of the fair market value for all residential improvements and all land. For clarity, edits have been made to Section 4.13.5.3 and Appendix H1 Socioeconomics Technical Report of the Final EIS.

---

**Concern ID: 62150**

**The land-building results of the Project presented in Chapter 4, Section 4.2 Geology and Soils should include consideration of potential reductions in land building due to hurricanes, which can have a significant impact on any build-up of land.**

**Response ID: 16178**

The commenter's concerns related to the effects of hurricanes and tropical storms on projected future land loss were considered in the Draft EIS; therefore, no related updates have been made to the Final EIS. The EIS includes extensive ADCIRC/SWAN modeling of storm surge and wave height elevation simulations based on historical hurricanes and tropical storms over the Project area for the 50-year analysis period. The details of these modeling efforts and the assumptions involved are provided in Chapter 4, Section 4.20 Public Health and Safety, including Flood and Storm Hazard Risk Reduction and in Appendix P (Flood and Storm Hazards Evaluation). Additional analysis regarding the potential impact of hurricanes on the extent of wetlands in the proposed Project area during operations is included in Chapter 4, Section 4.6.5.1 in Wetland Resources and Waters of the U.S. of the EIS.

---

**Concern ID: 62236**

**The commenter asserts that information provided in several sections of the Draft EIS and in presentations are inconsistent and would like to know what the actual impact to Myrtle Grove would be.**

**Response ID: 15822**

The USACE acknowledges the commenters' concerns regarding the consistency and accuracy of the reported projections. USACE is the lead agency for development of this EIS, which contains the results from the Delft3D Basinwide Model regarding the projected effects of the Project on water levels in Barataria Basin, including areas close to the diversion outfall (within a 20-mile radius). The estimated flooding impacts in Myrtle Grove are described in Chapter 4, Sections 4.20.4.2.1.2 and 4.20.4.2.2.2 in Public Health and Safety. USACE is not familiar with other numbers that may have been reported by CPRA. Readers of the EIS should not consider the model outputs as absolute values or predictions of actual future conditions. Section 4.1.3 Overview of Delft3D Basinwide Model for Impact Analysis of the Draft EIS acknowledged that the outputs of the model are projections generated using defined inputs, often based on historical conditions. Because it is not possible to precisely predict future conditions such as weather patterns and degree of sea-level rise, the model inputs are necessarily based on trends, averages, and best professional judgment as well as reasonable assumptions about future conditions. Uncertainties are briefly summarized in the Draft EIS in Chapter 4, Section 4.1.3.3 (Model Limitations and Uncertainty), and in detail in Appendix E (Delft 3D Modeling, Section 8.0 Model Limitations and Uncertainties).

---

**Concern ID: 62951**

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for**

---

**lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates, and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties

---

and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again, community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be

implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62968**

**If operation of the diversion causes infill of various canals used to access surrounding communities, who will be responsible for dredging to maintain access? For example, if Wilkinson Canal is filled with silt then the canal cannot be used and waterfront property owners with boat lifts in Myrtle Grove will not be able to get out using their boats; the EIS does not require a remedy or provide a funded maintenance plan for this issue (including who would pay for dredging).**

**Response ID: 16642**

The impacts raised by the commenters were considered in the Draft EIS. As stated in Chapter 4, Section 4.21 Navigation, the USACE would continue to maintain federal navigation channels in the Project area during Project operations.

In acknowledgement of commenters' concerns regarding maintenance of non-federal navigation channels and canals impacted by sedimentation of the proposed diversion, the Mitigation and Stewardship Plan includes measures to mitigate impacts on navigation resulting from operation of the Project, including monitoring and dredging or other measures for certain non-federal navigation channels including Wilkinson Canal (see Appendix R1 [Mitigation and Stewardship Plan] to the Final EIS for additional details).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the Final Mitigation and Stewardship Plan and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section

---

10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63069**

**The Draft EIS did not include detailed information about the potential impacts of the proposed Project on bottlenose dolphins.**

**Response ID: 16592**

The Draft EIS included an analysis of the impacts to marine mammals, including bottlenose dolphins, in Chapter 4, Section 4.11 (Marine Mammals). The EIS quantifies the impact on dolphin survival rates (the percentage of existing dolphins that would survive from one year to the next year) for different populations of dolphins (Table 4.11-5) from the most pronounced stressor, salinity, but also includes a qualitative assessment on other impacts such as wetland shifts, prey species impacts, HABs, water temperature, and other impacts. The Final EIS includes the incorporation of additional population impact analysis that was completed by Thomas et al. (2021) after the Draft EIS was released for public comment.

---

**Concern ID: 63092**

**Further development of the Mitigation Plan is needed for properties that would be impacted by flooding caused by Project operations. Multiple commenters made specific requests for how their property should be handled (for example, through sales or easements), while others wondered why a more detailed, "real estate plan" for impacted communities was not available.**

**Response ID: 16511**

The Draft Mitigation and Stewardship Plan included with the Draft EIS (Appendix R1) included CPRA's initial framework for mitigation and stewardship measures to assist property owners in these communities impacted by increased tidal flooding and to address the Project impacts of Project operations on water levels. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

CPRA states that it is interested in assisting affected communities to remain in place as long as they would like. Mitigation would include a combination of structural measures (for example, raising roads, boat houses, docks and utilities) and non-structural measures. Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

Where the proposed Project would cause increased water levels and/or increased incidence of flooding, CPRA plans to acquire the right to add and/or increase water flow on landowners'

properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. As an alternative to purchasing a flowage servitude, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property (rather than a servitude) would be made on a case-by-case basis depending on the particular circumstances.

A complete listing of the mitigation and stewardship measures that CPRA would implement if the proposed Project is approved and funded is included in CPRA's Mitigation and Stewardship Plan included in the Final EIS (Appendix R1).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for**

---

**acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or

---

will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

\*\*\* photo attached

Brad,

[REDACTED] Port Sulphur, LA 70083

Today there were news articles and stories on television about the high tide / wind event, where they showed lots of coastal properties' docks and roads underwater. Please note in the attached picture, that my dock and property is still dry. As we discussed, I trucked in many loads of dirt, and constructed my dock and bulkhead to be high enough to be dry during the majority of these events. As per our discussion, an additional foot and a half of water would put my dock and land under.

Thank you.

Tommy

**Concern ID: 62224**

**Communities like Happy Jack, Lake Hermitage and Myrtle Grove, some of which have homes that are not above the new base flood elevation, already experience some degree of flooding which would be made worse by the diversion. This would affect the ability of residents to access and enjoy their homes and communities.**

**Response ID: 15757**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discuss the anticipated increased flooding impacts outside of federal levee systems to be caused by the operation of the diversion. Final EIS Appendix R1 Mitigation and Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties. In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes, which would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures

---

(collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Ilsabe Urban

Dear U.S. Army Corps of Engineers, New Orleans District,

The Mid-Barataria Sediment Diversion is essential to rebuild vital bird habitats.

I support the preferred alternative as outlined in the draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion and the proposal in the draft Restoration Plan to use funds from the Deepwater Horizon Oil Spill settlement .

Thank you.

Sincerely,

Ilsabe Urban

Rockville, MD 20850

---

**Concern ID: 62892**

**The proposed MBSD Project would create wetlands supportive of birds (bald eagles, spring and fall migrants, waterbirds, and marsh birds) and other wildlife that are experiencing a high rate of coastal land (habitat) loss.**

**Response ID: 16191**

Chapter 4, Section 4.9.4.2 in Terrestrial Wildlife and Habitat of the Draft EIS, discussed the maintenance and creation of marsh that is projected to occur as part of the proposed Project, and identified that the net addition of wetlands would generally be beneficial to area birds. As identified in Section 4.12.3.2 in Threatened and Endangered Species of the Draft EIS, the creation and maintenance of wetlands could affect bald eagle aquatic foraging habitat and prey species, but would likely result in negligible effects on the bald eagle itself.

The potential benefits of the proposed Project to resources in the Gulf, including birds, are also described in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Restoration Plan.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from

---

the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Randy Gegenheimer

Diversion DEIS

I oppose the Barataria Diversion for various reason listed below

Theres no doubt we need to rebuild land in the Barataria Basin but not with a plan that has adverse impacts to the Basin. Reading the DEIS it states numerous times throughout the document the project will have adverse impacts and some will be permanent to the Barataria Basin

C Minor to major permanent impact to the fisheries

- Minor to major adverse impacts on the property values on the impacted communities
- Tidal water in affected areas will be permanent, adverse range from major to minor

The purpose of the diversion is to build land. Chapter 4 figure 4.2-6 is a graph

- 2030 Basin has 300,000 acres including <10,000 acres created
- 2070 Basin will be 60,000 acres with just a little more than 10,000 acres created

This graphs contradicts what stated about buldling land in the Executive Summary. The project will move the coast line from where it is to further inland. Need to rebuild the barrier island and protect all of Plaquemine Parish not just the northern end , Jefferson and New Orleans.

Executive Summary

Should the project be permitted the amount of sediment will be reduced in the Birdfoot Delta. By2070 the Birdfoot Delta will be reduced approximately 3,000 acres. The diversion is designed for storm protection in Upper Plaquemine and other parishes. Reducing the acreage in the Birdfoot Delta reduces storm protection in Lower Plaquemine.

No doubt we have climate change and sea level rise but some of the problems in Barataria Basin is the lost of Barries islands and subsidence,when the south winds blow we have increase in tides not sea level rise all the way to the north end of the Basin

DEIS have multiple alternatives and they are all diversions. They do not have alternate plan other than diversions in the DEIS. There are other methods that have been successful to rebuilding land other than the diversion.

Appendix O Biological Study did not studied all species impacted by the diversion. Just studied spices on the endangered, threaten, and proposed threaten. They failed to include oysters, shrimp, dolphins, speckled trout, etc

Appendix O Biological Study Table ES - 1

Green Sea Turtle - likely to adversely affect

Hawksbill Sea Turtle - may affect, not likely to adversely affect

Kemps Ridley Sea Turtle - likely to adversely affect

Leatherback Sea Turtle - may affect, not likely to adversely affect

Loggerhead Sea Turtle - likely to adversely affect

Appendix R Mitigation / Mammal

4.8 - congress passed the Bipartisan Budget Act of 2018, Public Law 115-123 (BBA-18). BBA -18 included a requirement that the Secretary of Commerce as delegate to the Assistant Administrator of the NMFS to issue a waiver of the MMPA Moratorium and Prohibition for the project.

CPRA was not granted a waiver on the mammals NMFS were required by law to issue a waiver. Need further study on the impact to the dolphins

#### Appendix R 6.3.6 Marine Mammal

- C Immediate and permanent, major, adverse impact on survival
- C Adverse affects on health and reproduction from multiple stressors
- C Based on estimated decrease survival rate there may be a substantial

reduction in population numbers

#### Mitigation Plan

-Enhance rapid response to live stranded dolphins

- C Program to increase quality and quantity of data that can be collected from dead stranded dolphins by decreasing decomposing time on the beach

#### Appendix N Aquatic Resources

Report from Confluence Environmental Company reported on various species in the Barataria Basin but failed to report on the dolphins. This is probably the first time since the Marine Mammal Act that projects are put ahead studying the impact of the dolphins. We should not wait to see what the results will be five years from now. At this point it will be too late to address what the diversion has done to the Barataria Basin.

In the New Orleans Advocate dated May 19, 2021 an article was published on the affects on the dolphins in the Bartaria Basin. Should the diversion be approved the dolphins in the Basin will be functionally extinct in 50 years as per a new study by the University of St. Andrews in Scotland, SMRU Consulting and National Marine Mammal Foundation at the request of the federal Marine Mammal Commission. Without the diversion the study concludes that the dolphins will see a steady 3% increase a year.

In a 2018 Budget Bill H.R. 1892 in Washington D. C. a last minute item added to the bill requiring by law to give a waiver to the Mid- Barataria Basin Sediment Diversion project a waiver to the Marine Mammal Protection Act rather than study the affects to the dolphins as any other project would have to complete. This waiver was pushed knowingly they would not get a waiver if filed for through the Marine Mammal Protection Act.

Just concerned how much time and studies were completed on other fisheries in the Basin. With additional studies we may find the DEIS information is incorrect and ruin all the fisheries in the Basin including the endangered turtles

CPRA is not consistent when reporting the water levels at Myrtle Grove. My concern is that CPRA does not know what the water levels will be during operation of the diversion

- C December 18, 2019 Diversion Presentation by Brad Barth and Brian Lezina presented a graph indicating the water level will increase by 2 feet

C April 2020 an article in the New Orleans Advocate Brian Lezina stated the water levels will increase by 2.5 feet

C Early 2021 CPRA conducted meetings at Port Sulphur showed a presentation showing the water level at Myrtle Grove would be .2 - 2 feet

C April 21, 2021 CPRA conducted a meeting at Lake Hermitage and showed a slide indicating the water level will increase <1.0 - 1.3 feet

C While reading through the DEIS they reported various increase water levels at Myrtle Grove.

C Have zero confidence with CPRA knowing what the water level will be. What will the increase water levels be at Myrtle Grove???

CPRA says the Diversion will replicate what the river did 100 years ago before the levee were built. Today's river does not carry the sediment it carried 100 years ago due to projects on the northern river and tributaries. Northern states built dams and soil conservation projects reduced the amount of sediment. Today's river also carries pollutants that were not there 100 years ago. Every year the Gulf of Mexico has a dead zone due to the water from the Mississippi River. Should the Diversion be permitted we will have dead zones in the Barataria Basin

---

**Concern ID: 61782**

**Commenters expressed concern that there's not enough sediment in the river to achieve wetland and land creation goals of the proposed Project.**

**Response ID: 16412**

The commenter's concerns regarding the sediment load of the river and whether the river carries sufficient sediment to achieve the land projected to be built during diversion operation were considered in the Draft EIS. The Mississippi River carries much less sediment than it did in the past. It still carries a massive sediment load, but not as massive as before. As explained in Chapter 3, Section 3.4.2.5 Sediment Transport, the river formerly carried over 400 million tons of sediment annually, but a more than 50 percent reduction in annual sediment load has occurred since the early 1900s. Studies show that from 1968 through 2007 the overall annual sediment reduction has been more gradual, with the rate estimated as a loss of 1.1 million metric tons per year. The possible causes of the diminished sediment load include trapping by dams, hardening of banklines, improved farming practices, and other processes. Quantifying the relative contributions of multiple factors to the diminished sediment load is beyond the scope of the Draft EIS. The Draft EIS (Appendix E Delft3D Modeling, Delft3D Modeling Section 5.2.2) takes this diminished sediment load into account when computing the sediment that would be delivered to the Barataria Basin. To help clarify currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to proposed diversion operations, discussion has been added to the Executive Summary, Section ES.4.1 Geology and Soils and to Chapter 4, Section 4.2.3.2.2.1 Geology of the Final EIS.

---

**Concern ID: 61812**

**Commenters expressed concern that the proposed Project would have adverse water quality impacts in the Barataria Basin due to the introduction of nitrate and phosphate from the Mississippi River. Several commenters questioned whether the proposed Project would create harmful algal blooms and hypoxia in the Barataria Basin similar to**

---

**the hypoxic “dead zone” in the Gulf of Mexico that exists due to nutrients in Mississippi River waters. One commenter expressed concern that the EIS does not adequately assess the potential for the proposed Project to create algal blooms and hypoxia in the basin, other than acknowledging it.**

**Response ID: 16425**

The impacts raised by the commenters were considered in the Draft EIS. As discussed in the EIS, Chapter 4, Section 4.5 Surface Water and Sediment Quality, while increases in both nitrogen and phosphorus concentrations in the Barataria Basin are projected by the Delft3D Basinwide Model to occur as a result of proposed Project operations, monthly dissolved oxygen concentrations are not projected to fall below the water quality criterion of 5 mg/L at the six stations evaluated in the basin over the 50-year analysis period.

According to USEPA’s Mississippi River/Gulf of Mexico Hypoxia Task Force “Hypoxia 101” webpage, hypoxic waters have dissolved oxygen concentrations of less than 2 to 3 mg/L. Hypoxia can be caused by a variety of factors, including excess nutrients and waterbody stratification (layering) due to saline or temperature gradients. The hypoxic zone in the Gulf of Mexico is a result of excess nutrients from the Mississippi/Atchafalaya River and seasonal stratification (layering) of waters in the Gulf. As nutrient-laden water from the Mississippi flows into the Gulf, this fresh water is less dense and remains above the denser saline seawater. In addition to the saline gradient caused where the fresh water and saline water meet, the fresh water is warmer than the deeper ocean water, further contributing to the stratification. This stratification prevents the mixing of oxygen-rich surface water with oxygen-poor water on the bottom of the Gulf. Without mixing, oxygen in the bottom water is limited and the hypoxic condition remains. In the Gulf hypoxic zone “water near the bottom of the Gulf contains less than two parts per million of dissolved oxygen” (<https://www.epa.gov/ms-htf/northern-gulf-mexico-hypoxic-zone#:~:text=The%20hypoxic%20zone%20in%20the.condition%20referred%20to%20as%20hypoxia.>)

Dissolved oxygen concentrations associated with the Applicant’s Preferred Alternative are projected to generally increase in the Barataria Basin during the modeled period as compared to the No Action Alternative, which would decrease the potential for hypoxia to occur. Further, vegetative growth projected by the Delft3D Basinwide Model to occur due to Project operations is expected to utilize the nutrients diverted from the Mississippi River, resulting in lower concentrations of nutrients occurring in the Barataria Basin and reaching the Gulf through Barataria Bay than would reach the Gulf through the Mississippi River. As mentioned in Section 4.5.5.1 in Surface Water and Sediment Quality of the EIS, the majority of the Barataria Basin is shallow and not typically prone to stratification that promotes hypoxic conditions. The shallow nature of the Barataria Basin allows for full water column mixing by wind and tidal action, reducing the opportunity for algae to establish to the extent that would cause hypoxia. The Delft3D Basinwide Model’s dissolved oxygen results do not suggest that Project implementation would result in oxygen concentrations below the 5 mg/L water quality criterion in Barataria Basin. To make this clearer in the Final EIS, language indicating that the Delft 3D Basinwide Model results do not suggest that a significant hypoxic zone will form in Barataria Basin due to project implementation has been added to Section 4.5.5.2 Applicant’s Preferred Alternative in Surface Water and Sediment Quality of the Final EIS. Furthermore, as explained in Section 4.25.5.2 of the Cumulative Impacts section of the EIS, if

---

the Mid-Breton Sediment Diversion is permitted, the combined impact of Mississippi River diversions operating simultaneously may reduce nutrient flow from the river to the Gulf, having a beneficial impact on the Gulf of Mexico hypoxic zone.

Aquatic resource impacts associated with algal blooms (caused by excess nutrients such as nitrate and phosphate) are addressed in Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS. A reference to this section is included in Section 4.5.5.3 in Surface Water and Sediment Quality and has been added to Section 4.5.5.4.2 Applicant's Preferred Alternative of the Final EIS. Finally, the EIS acknowledges the potential for major adverse Project impacts from harmful algal blooms to occur, and that the formation of these blooms is not well understood by the scientific community (see Section 4.26.4 in Additional Considerations in Planning).

Appendix R2 Monitoring and Adaptive Management (MAM) Plan of the EIS includes monitoring of nutrients, as well as phytoplankton species composition (including harmful cyanobacterial/algal bloom species) if warranted, in the Barataria Basin during Project operations to guide CPRA's management actions.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61862**

**The estimates of land gain in the Executive Summary do not match what is stated in Chapter 4, Environmental Consequences.**

**Response ID: 15935**

---

The estimates of land gain were reviewed for discrepancies in both the Executive Summary and Chapter 4, Environmental Consequences of the Draft EIS and have been determined to be accurate in both instances. However, to help address these concerns, the EIS has been revised to add a discussion to clarify currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to proposed diversion operations. This discussion has been added to the Geology and Soils section of the Executive Summary and to Chapter 4, Section 4.2.3.2.2.1 Geology, of the Final EIS.

---

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable alternatives, which is a requirement that the Draft EIS does not meet. Consider analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated

---

Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of "marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats" (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG's Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

---

**Concern ID: 61970**

**The only alternatives in the EIS are diversions at different flow rates. The EIS has not listed other possible methods on building land in the Barataria Basin. One alternative is to study the creation of barrier islands and compare the result with the diversion alternative. Also consider fortifying the barrier islands with sheet piles, boulders, and rocks, and dam all pipeline canals and washed-out marsh openings with concrete dams.**

**Response ID: 15972**

The Draft EIS considered barrier islands as a functional alternative to the proposed Project. This alternative was determined not to meet the purpose and need. Refer to Chapter 2, Section 2.3.4 in Step 1: Evaluation of Functional Alternatives of the EIS for details on why this alternative was eliminated from further analysis in the EIS. While barrier islands play a critical role in reducing land loss, they are not intended or designed to transport sediment, fresh water, or nutrients.

Past investments through a multitude of restoration programs have resulted in the restoration of every major barrier island in the Barataria Basin. CPRA's Coastal Master Plan includes programmatic barrier island restoration to support future maintenance of the restored islands. However, CPRA has stated that fortifying barrier islands with hard structures is not feasible.

---

**Concern ID: 62202**

**A contributing factor to rising water levels in the basin is the wind that blows from the south that increases tides all the way up to the northern end of the basin. The loss of the barrier islands and subsidence contribute to the south winds' increasing tides.**

**Response ID: 16419**

The commenter's concern about wind was considered in the Draft EIS. The USACE agrees that wind is an important factor in the estuary. The Delft3D Basinwide Model simulations conducted for the EIS included wind as described in EIS Appendix E Delft3D Modeling, Section 3.2.2. Likewise, subsidence was explicitly included in the model simulations as described in Appendix E Delft3D Modeling, Section 3.2.3.

---

**Concern ID: 62236**

**The commenter asserts that information provided in several sections of the Draft EIS and in presentations are inconsistent and would like to know what the actual impact to Myrtle Grove would be.**

**Response ID: 15822**

The USACE acknowledges the commenters' concerns regarding the consistency and accuracy of the reported projections. USACE is the lead agency for development of this EIS, which contains the results from the Delft3D Basinwide Model regarding the projected effects of the Project on water levels in Barataria Basin, including areas close to the diversion outfall (within a 20-mile radius). The estimated flooding impacts in Myrtle Grove are described in Chapter 4, Sections 4.20.4.2.1.2 and 4.20.4.2.2.2 in Public Health and Safety. USACE is not familiar with other numbers that may have been reported by CPRA. Readers of the EIS should not consider the model outputs as absolute values or predictions of actual future conditions. Section 4.1.3 Overview of Delft3D Basinwide Model for Impact Analysis of the Draft EIS acknowledged that the outputs of the model are projections generated using defined inputs, often based on historical conditions. Because it is not possible to precisely predict future conditions such as weather patterns and degree of sea-level rise, the model inputs are necessarily based on trends, averages, and best professional judgment as well as reasonable assumptions about future conditions. Uncertainties are briefly summarized in the Draft EIS in Chapter 4, Section 4.1.3.3 (Model Limitations and Uncertainty), and in detail in Appendix E (Delft 3D Modeling, Section 8.0 Model Limitations and Uncertainties).

---

**Concern ID: 62282**

**Diversion impacts, including land loss in the birdfoot delta, would make lower Plaquemines more vulnerable to storms.**

**Response ID: 15805**

Draft EIS Chapter 4, Section 4.6.5 in Wetlands and Waters of the U.S. described the projected acceleration of wetland loss in the birdfoot delta caused by the proposed Project and Section 4.20.4.2 in Public Health and Safety acknowledged lower Plaquemines' increased vulnerability to storm hazards that would result from operation of the proposed Project. While the Draft EIS acknowledged the role that land loss plays in increased storm hazards, it did not explicitly acknowledge the role this accelerated land loss in the birdfoot delta could play in increased storm hazards. Section 4.20.4.2.2.2 in Public Health and Safety has been edited in the Final EIS to include acknowledgement that this accelerated loss of wetlands in the birdfoot could increase storm hazard vulnerability depending on the storm path and intensity.

In the LA TIG's Draft Restoration Plan, the LA TIG recognized the potential collateral injuries associated with the Project, including potential land loss in the birdfoot delta. In selecting the Applicant's Preferred Alternative, the LA TIG evaluated a reasonable range of alternatives

under the factors outlined in 15 CFR §990.54. The LA TIG strove to identify an alternative that would provide what it believed to be the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, avoiding collateral injury, benefiting multiple resources, and protecting public health and safety. See Sections 3.2.4.7, 3.2.1.5, and 3.2.2.5 of the Final Restoration Plan for more information about the LA TIG's selection of the Applicant's Preferred Alternative.

---

**Concern ID: 62634**

**The proposed Project would cause excessive harm to fisheries (for example, oysters and brown shrimp), dolphins, communities and recreational uses, which is unacceptable and would make its implementation a clear violation of OPA. OPA regulations states that proposed restoration actions should be evaluated by “the extent to which each alternative will prevent future injury as a result of the incident, and avoids collateral injury as a result of implementing the alternative”. Because the Project would injure species that were harmed by the Deepwater Horizon oil spill, it should not be implemented, even if it does benefit some habitats and species. Some commenters argued it was also inconsistent or in violation of the 2013 U.S. Court Consent Decree and the BP plea agreement relevant to the National Fish & Wildlife Foundation (NFWF) funds.**

**Response ID: 16650**

As explained in Section 2.0 of this Appendix B2 DEIS Public Review and Public Meetings, USACE is not evaluating the proposed Project for compliance with OPA and not involved in the process to restore damages caused by the DWH oil spill. Response content pertaining to the LA TIG's Draft Restoration Plan, OPA, or NRDA processes represent solely the views of the LA TIG, not USACE.

The potential collateral injuries of the proposed Project were considered in the LA TIG's Draft Restoration Plan.

OPA requires that Trustees develop and implement a plan for restoration, rehabilitation, replacement, or acquisition of the equivalent, of the injured natural resources under their trusteeship. See 33 U.S.C. § 2706(c). OPA further requires federal agencies to propose regulations for the “assessment of natural resource damages.” See § 2706(e). Under 2707(e)(2), any assessment of natural resource damages made in accordance with these regulations creates a rebuttable presumption on behalf of a Trustee in any administrative or judicial proceeding under the Act.

As required by OPA 2706(e), NOAA developed regulations outlining a process for the assessment of natural resource damages. These regulations (hereinafter “NRDA regulations” at 15 CFR Part 990) also include a process for restoration planning, including the development and evaluation of restoration alternatives.

The 2016 U.S. Consent Decree with BP provides that monies received under the settlement for natural resource damages will be spent as outlined in restoration plans adopted by the Trustees consistent with 15 CFR 990. See Paragraph 19, and Appendix 2. The LA TIG's Restoration Plan is consistent with 15 CFR 990.

Title 15 CFR §990.54 of the regulations outlines a number of areas in which a reasonable range of alternatives should be evaluated to select the preferred alternative. Recognizing that almost all restoration comes with some potential for collateral injury, one factor for evaluation

is the extent to which each alternative will prevent future injury and avoid collateral injury. The potential for collateral injury does not preclude an alternative from selection, rather the Trustees must evaluate each alternative under multiple factors, and select a preferred alternative to meet the outlined restoration objectives.

The LA TIG, in selecting the Preferred Alternative in the Restoration Plan, evaluated a reasonable range of alternatives under the factors outlined in 15 CFR §990.54. The LA TIG strove to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, avoiding collateral injury, benefiting multiple resources, and protecting public health and safety. See Sections 3.2.4.7 (Identification of a Preferred Alternative), 3.2.1.5 (Alternative 1 – Avoids Collateral Injury), and 3.2.2.5 (Alternatives 2–6 – Avoids Collateral Injury) of the Restoration Plan. A project can harm species also harmed by the spill and still be an appropriate project. This is especially true for projects like sediment diversions that seek to reestablish deltaic processes that shaped the historic delta ecosystems and necessarily entails reverting the current ecosystem to a more natural state that was altered when Mississippi River flows were cut off by construction of levees. However, without the proposed Project, there would also be adverse impacts to some of the same species due to large-scale wetland loss over time, as is anticipated from ongoing sea-level rise, subsidence, and other existing stressors, which is anticipated to reduce the suitability of habitat for many of the species that currently occur in Barataria Basin.

The LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. Given these tradeoffs, the LA TIG selected Alternative 1 as the Preferred Alternative in the Restoration Plan.

The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that more closely resembles historic conditions. As described in Section 3.2.1.6 (Alternative 1 – Benefits Multiple Resources) of the Restoration Plan, this sustained ecosystem is expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing deltaic processes, the proposed Project is expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as the Preferred Alternative in the Restoration Plan because it believes it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net benefits of the proposed Project would meet OPA's requirement of restoration, rehabilitation, replacement, or acquisition of the equivalent, of the natural resources injured by the spill.

The BP Plea Agreement as it applies to NFWF funds is not relevant here as the LA TIG is not authorizing the use of those funds for this Project. Even if it were applicable, the criminal plea agreement expressly contemplates the use of criminal penalties for sediment diversion in Louisiana.

---

**Concern ID: 62661**

**The Mississippi River is currently not capable of building land as it used to, in part because it does not carry as much sediment as it used to, and thus the proposed Project will fail. If it were capable of building land, there would be a large land mass at its current outlet.**

**Response ID: 16634**

The capability of the Mississippi River to support land building has been considered in the Draft EIS. For example, Chapter 3, Section 3.4.2.5 Sediment Transport discusses the available sediment in the Mississippi River, noting that studies had shown downward trends in sediment supply in the river through the 1990s, but that since then the volume of sediment (coarse and fine) in the water column has remained fairly constant. The river still carries a massive sediment load, but not as massive as before. The possible causes of the diminished sediment load include trapping by dams, hardening of banklines, improved farming practices, and other processes as described in the EIS in Chapter 3, Section 3.4.2.5 Sediment Transport. The EIS takes this diminished sediment load into account when computing the sediment load that would be delivered to the Barataria Basin via the proposed diversion. This is described in detail in Section 5.2.2 (River Discharge and Sediment Rating Curve) of Appendix E (Delft3D Modeling) to the EIS.

The LA TIG acknowledges the comment and understands the commenters' concern, and this was considered in the LA TIG's Draft Restoration Plan. The Mississippi River does carry a large plume of sediment into the Gulf of Mexico each year. A large delta exists at the mouth of the river, often requiring dredging to maintain navigation. Crevasses have been used to supplement land building in the birdfoot delta, confirming the ability of the river to build and maintain land. The size of the delta is limited by a number of factors, including the depth of the water at the mouth of the Mississippi River and the constant erosive forces affecting the Gulf of Mexico. By comparison, the Project is proposed to be constructed at RM 60.7 of the Mississippi River because this location is capable of capturing and retaining the sediments transported into the Barataria Basin by the Project (see EIS Chapter 2, Section 2.4.1.3 Application of Additional considerations to Potential Alternative Locations in Upper, Middle, or Lower Barataria Basin). As noted above, these issues and analyses are included in the EIS, and are also considered by the LA TIG in its identification of its Preferred Alternative in the Restoration Plan.

---

**Concern ID: 62727**

**Appendix O does not include impacts to the general biological communities of the basin.**

**Response ID: 16105**

Appendix O1 (Biological Assessment) of the EIS is the assessment of impacts to federally listed threatened and endangered species, prepared as part of the Endangered Species Act consultation between USACE and NMFS and USFWS. Impacts on the general biological communities in the Barataria Basin are discussed in Chapter 4, Sections 4.9 Terrestrial

Wildlife and Habitat, 4.10 Aquatic Resources, and 4.11 Marine Mammals of the EIS. Because these issues were addressed in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 62728**

**Additional studies may determine that the fisheries impacts identified in the Draft EIS are incorrect and that all the fisheries in the Barataria Basin would be ruined.**

**Response ID: 16106**

USACE and the LA TIG considered the best information and data available to them in drafting the EIS. No changes to the Final EIS have been made.

---

**Concern ID: 63070**

**A recent study suggests that the proposed Project would not only prevent the recovery of the BBES Stock, but it would result in the functional extinction of dolphins in the West, Central, and Southeast strata of the stock area (Thomas et al., 2021). The only dolphins remaining in the basin would live adjacent to the barrier islands, and even this group would become severely reduced over the 50-year planning horizon of the proposed Project. Additionally, an expert elicitation (Booth and Thomas, 2021) building on previous studies (Garrison et al., 2020; Schwacke et al., 2017; Thomas et al., 2021) suggests that while dolphins can endure some periods of exposure to low salinity, the period of tolerable exposure shortens for dolphins exposed to acute changes in salinity, and the median time to death is 22 days with continuous exposure to water with salinity levels below 5 ppt.**

**Booth, C., and L. Thomas. 2021. An expert elicitation of the effects of low-salinity water exposure on bottlenose dolphins. *Oceans* 2(1):179-192.**

**Garrison, L.P, J. Litz, and C. Sinclair. 2020. Predicting the effects of low salinity associated with the Mid-Barataria Sediment Diversion Project on resident common bottlenose dolphins (*Tursiops truncatus*) in Barataria Bay, Louisiana. NOAA Technical Memorandum NOAA NMFS- SEFSC-748. 97 pages.**

**Schwacke, L.H., L. Thomas, R.S. Wells, W.E. McFee, A.A. Hohn, K.D. Mullin, E.S. Zolman, B.M. Quigley, T.K. Rowles, and J.H. Schwacke. 2017. Quantifying injury to common bottlenose dolphins from the Deepwater Horizon oil spill using an age-, sex- and class-structured population model. *Endangered Species Research* 33:265-279.**

**Thomas, L., Marques, T., Booth, C., Takeshita, R., and L. Schwacke. 2021. Predicted population consequences of low salinity associated with the proposed Mid-Barataria Sediment Diversion Project on bottlenose dolphins in the Barataria Bay Estuarine System Stock.**

**Response ID: 16593**

The Draft EIS included an analysis of the impacts to marine mammals, including BBES dolphins in Chapter 4, Section 4.11.5.2 Barataria Bay Estuarine Stock. This analysis incorporated the Booth and Thomas (2021), Garrison et al. (2020), and Schwacke et al. (2017) studies, and the Final EIS includes additional analyses that were completed by Thomas et al. (2021) after the Draft EIS was released for public comment. The impact conclusions in the Draft EIS were based in large part on Garrison et al. (2020), which predicts that only a remnant population of dolphins would continue to exist in Barataria Basin after

diversion operations commenced. The conclusion of major, permanent, adverse impact to bottlenose dolphins is also supported by Thomas et al. (2021), which built on these earlier studies and concludes that, after 1 year of operation of the Applicant's Preferred Alternative, there would be 61 percent fewer dolphins in the Central stratum than under the No Action Alternative, 35 percent fewer in the West stratum, 12 percent fewer in the Southeast stratum, and 2 percent fewer in the Island stratum, with 25 percent fewer overall. Thomas, et al. further concluded that after 10 years of operation, there would be 100 percent reduction in the populations of dolphins in the Central and West strata, an 82 percent reduction in the population of the Southeast stratum dolphins, and a 34 percent reduction in the population of the Island stratum dolphins as compared against the No Action Alternative, with an overall difference in population of 78 percent. (Note that Thomas, et al. 2022 slightly refined some of these projections.) After 50 years of operation, in three out of the four strata, dolphins are predicted to be functionally extinct (defined as less than or equal to dolphin in Thomas, et al. 2022) under the Applicant's Preferred Alternative, with the remaining Island stratum being 85 percent lower [95 percent CI -28 -- -99] under the Applicant's Preferred Alternative than under the No Action Alternative. Overall, by the year 2076, the median predicted stock size across all of Barataria Bay under the Applicant's Preferred Alternative is projected to be 143 dolphins (95 percent CI 11-706) compared to a predicted 3,363 dolphins (95 percent CI 2,831-4,289) predicted to inhabit the Barataria Bay under the No Action Alternative. In other words, the BBES dolphin stock is projected to be 96 percent smaller (95 percent CI -80 -- -100) under the Applicant's Preferred Alternative than then No Action Alternative. Chapter 4, Section 4.11 Marine Mammals of the Final EIS has been updated to reflect the results of Thomas et al. (2021).

Booth and Thomas (2021) evaluated multiple scenarios with different salinity changes, and in one of those scenarios' where bottlenose dolphins experience a change in salinity within 0 to 5 days from typical salinity environment (that is, mean 15 to 25 ppt) down to an atypical environment with salinity below 5 ppt for an extended period, the median time to death would be 22 days.

---

**Concern ID: 63080**

**The Corps and the TIG have circumvented a legal process intended to conserve marine mammals and protect ecosystems by obtaining a Congressionally-mandated MMPA waiver for the proposed Project. The waiver does not establish a quota for how many dolphins can be taken by the proposed Project, and it is clear that the level of take for this stock will be grossly unsustainable, in clear violation of the MMPA (absent BBA-18). The legislative waiver, quite simply, provided Congressional permission to break the law. It is critical for the protection of marine mammals that such a legislative waiver be a one-off occurrence.**

**Response ID: 16599**

The U.S. Army Corps had no role in seeking a Marine Mammal Protection Act waiver for this Project from Congress, nor did any federal agencies on the LA TIG. CPRA sought the waiver. Title II, section 20201 of the Bipartisan Budget Act of 2018 provides: "(a) In recognition of the consistency of the Mid-Barataria Sediment Diversion, Mid-Breton Sound Sediment Diversion, and Calcasieu Ship Channel Salinity Control Measures projects, as selected by the 2017 Louisiana Comprehensive Master Plan for a Sustainable Coast, with the findings and policy

---

declarations in section 2(6) of the Marine Mammal Protection Act (16 U.S. C. 1361 et seq., as amended) regarding maintaining the health and stability of the marine ecosystem, within 120 days of the enactment of this section, the Secretary of Commerce shall issue a waiver pursuant to section 101(a)(3)(A) and this section to Section 101(a) and Section 102( a) of the Act, for such projects that will remain in effect for the duration of the construction, operations and maintenance of the projects. No rulemaking, permit, determination, or other condition or limitation shall be required when issuing a waiver pursuant to this section. (b) Upon issuance of a waiver pursuant to this section, the State of Louisiana shall, in consultation with the Secretary of Commerce: (1) To the extent practicable and consistent with the purposes of the projects, minimize impacts on marine mammal species and population stocks; and (2) Monitor and evaluate the impacts of the projects on such species and population stocks.”

The National Marine Fisheries Service issued the waiver in March 2018. Since that waiver in 2018, CPRA has not requested any additional waivers for coastal restoration projects. More information on the waiver can be found at <https://www.fisheries.noaa.gov/action/marine-mammal-protection-act-waiver-select-louisiana-coastal-master-plan-projects>.

---

**Concern ID: 63109**

**Additional studies should be conducted to determine the impacts of the proposed Project on biota (including sea turtles).**

**Response ID: 16206**

In compliance with the Endangered Species Act of 1973, as amended (16 U.S.C. §§ 1531 et. seq.), the NMFS prepared a Biological Opinion on the proposed Project (Appendix O4 of the Final EIS), which authorizes the incidental take of 783 sea turtles per year, including 370 Kemp’s ridley sea turtles (including up to 38 mortalities), 319 loggerhead sea turtles (including up to 10 mortalities), and 94 green sea turtles (including up to 9 mortalities). Over the 50-year Project life, this could equate to a take of 39,150 sea turtles (including up to 2,850 sea turtles mortalities).

In addition, Section 8.3 of the NMFS’ Biological Opinion requires that the federal action agencies ensure that the Project proponent monitor brown shrimp fishing effort in the action area; fund, implement, and annually report on a salinity monitoring program in Barataria Bay; and funds and implements a monitoring plan targeting the distribution, health, and habitat use of sea turtles in the Barataria Basin.

**Correspondence ID:39695**

Milton Danos

To Whom it May Concern,

I am 86 years old and have fished the Barataria area since I was 8 years old.

I have seen first-hand what the Corps of Engineers projects can do to our coast. The Mr. Go is one example of failure. Another is the cutting of a channel from Barataria to Grand Isle, destroying some beautiful high ridge land, which allows the high tide to come in and out of the Lafitte area much quicker. This has caused more soil erosion.

Please do not cause another fiasco with the Mid-Barataria Diversion. Dredging, rather than diversion, builds land.

Sincerely,

Milton Danos

by Marsha Danos, wife

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the

Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62784**

**Prior or proposed diversions and diversion-like projects (including the Caernarvon Diversion, MRGO, Mardi Gras Pass, Maurepas Bonnet Carré Spillway openings) did not work or caused adverse impacts on area resources.**

**Response ID: 16366**

The commenter's concern regarding the effectiveness and adverse impacts of existing diversions and diversion-like structures is noted. A summary of select natural and man-made diversions (and diversion-like structures) in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary, which includes discussions on the Caernarvon Diversion, MRGO, Mardi Gras Pass, and Bonnet Carré Spillway, is available in Appendix U of the Final EIS. The Maurepas Diversion is subject to an ongoing NEPA analysis, which is anticipated to be finalized in 2022.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The referenced projects all had unique goals, and, where goals existed, each of those projects have achieved their goals. Those achievements increase confidence in the ability of the LA TIG to set goals and select approaches appropriate for achieving those

goals. The proposed Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the current geomorphological features of the Lower Mississippi River, as well as data and knowledge gained from the referenced projects.

---

**Correspondence ID:39699**

Thomas Halko

I have read and reviewed your ambitious and extensively researched Project. I would like to state that I support the science and therefore the entirety of the project.

I am eight miles east of the proposed Project. I own 1.5 acres of mixed use residential and commercial buildings representing my home and business. It is also a historical and archaeological significant site at the confluence of Goose Bayou (Bayou des Oies) and Bayou Barataria.

It is difficult to turn around three centuries of political and industrial degradation of our environment coupled with the global rising seas. I am uncertain as to whether there are sufficient safeguards in place that respect the culture and history of the greater Lafitte-Barataria-Crown Point community. I trust that the body politic of the region will continue to mitigate the adverse effects of both the proposed Project as well as the Southwest Closure Protection Complex. The two projects represent the largest public works projects of their kind in the world, and both have me and my community in their cross hairs. I believe in some sacrifice for the good of the whole. I also believe in the continued sustainability of the communities negatively impacted.

With best regards, I am yours respectfully,

Tom Halko

---

**Concern ID: 63183**

**Commenter supports the Project but believes that there needs to be protection for cultural resources in the area. Commenters noted specific sites such as those in Bayou des Oies and a need for safeguards that respect the culture and history of the Lafitte Barataria-Crown Point community in a way that promotes the continued sustainability of that community.**

**Response ID: 16560**

The commenter's support for the Project is acknowledged. The EIS discusses impacts to the local communities and various quantitative and qualitative impacts from the proposed Project in Chapter 4, Section 4.13 Socioeconomics, including Community Cohesion (Section 4.13.5.6). Consistent with the concern of the commenter, the EIS does find potential minor to moderate, long-term adverse impacts on community cohesion from the proposed Project compared to the No Action Alternative.

CPRA's Final Mitigation and Stewardship Plan includes various mitigation and stewardship measures to address projected adverse impacts of the proposed Project, including mitigation and stewardship measures for increased flooding in some communities and for adverse impacts to fisheries. For example, CPRA's Final Mitigation and Stewardship Plan includes measures intended to help preserve community cohesion in Grand Bayou and Ironton. For a complete listing of measures that would be taken, see the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS. If implemented, these measures could help to preserve affected communities and their histories/cultures.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures

---

(collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, have been provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

The Save Louisiana Coalition

Wendy Marullo

Re: Mid-Barataria Sediment Diversion Draft Environmental Impact Statement

To Whom It May Concern:

These comments are on behalf of the Save Louisiana Coalition, and the hundreds of members of the commercial and recreational fishing industries, as well as concerned coastal community residents we represent.

The Save Louisiana Coalition is in total opposition of this project, and the following comments are in direct response to the Draft Environmental Impact Statement.

The EIS states the project's purpose and need is to "restore for injuries caused by the DWH oil spill by implementing a large-scale sediment diversion in the Barataria Basin through the delivery of sediment, fresh water, and nutrients to support the long-term viability of existing and planned coastal restoration efforts. The proposed project is needed to restore habitat and ecosystem services injured in the northern Gulf of Mexico as a result of the DWH oil spill."

As noted in the EIS, this project will not restore damages caused by BP, but would actually cause further damage to wildlife habitat, dolphins, brown shrimp, and oysters. The legality of using fines meant mitigate damages to the environment and wildlife to further harm the same comes into question.

The discharge of water from the Mississippi River, which is classified as the second most polluted River in the U.S., during the 2019 Bonnet Carre Spillway opening, caused a declared fishery disaster in Louisiana of \$258 million. The Spillway was opened for a total of 123 days. It

also resulted in the deaths of over 300 dolphins, causing NOAA to declare an Unusual Mortality Event, (UME), citing fresh water lesions as the cause of the necropsy evaluated deaths of these animals.

According to the planned operational regime of the Mid-Barataria Diversion, had it been operating, according to this same river flow, it would have operated at maximum 75,000 cfs for 201 days. This would have resulted in as much river water as the spillway opening, causing just as many millions of dollars of adverse impacts.

The EIS describes the project's likelihood of "severe, permanent adverse impacts on the natural environment". and yet, the vague figure of \$300 million for mitigation to this damage is laughable. Brown Shrimp landings alone in Barataria Bay in 2018 totaled over \$11 million dollars. I would also like to point out that these are landings values, which are usually 1/4 of retail value.

The EIS also points out severe, permanent, adverse impacts to the socioeconomic well-being of affected coastal communities. These communities are dependent on harvesting and processing of the seafood resources that will be devastated by this project. This harvesting is directly linked to the favorable conditions of the estuary that will be forever changed by the introduction of polluted river water. This project will undoubtedly cause economic harm on businesses, families, and individuals.

The land building capabilities of this project are highly exaggerated, and the EIS supports previous findings that the project may actually accelerate land loss, increasing flood risks. The depletion of historic sediment loads of the Mississippi River is well documented. Given the projected 2000-3000-acre land loss in the Birdsfoot Delta cited in the EIS, the projected land building acres' exaggeration is obvious. The Corps own Engineer Research and Development Center, (ERDC), conclude that: "diversion-induced inundation results in a reduction in plant productivity, which induces acceleration of land loss".

The EIS also note that the project will raise water levels in Barataria Bay by as much as 1-2 feet, prolonging inundation, and causing flooding issues to the communities in proximity to this project, i.e., Lafitte, Happy Jack, Myrtle Grove, and putting further stress on these communities' levee systems.

CPRA has a history of mis-operation of existing diversions, as well as neglect in maintaining previous salinity control structures, i.e., the Naomi Siphon, Bayou Lamoque, and the Bohemia Control Structure, which is now known as Mardi Gras Pass.

The mitigation for damages to our estuary, water quality, brown shrimp, oysters, dolphins, coastal communities, as well as loss of jobs will run in the BILLIONS of dollars, not millions, and where is an actual figure stated in the EIS?

The Parish Councils of both St. Bernard and Plaquemines have passed formal resolutions against this project.

Given the specific references in the EIS to the major, adverse, permanent, negative impacts, the speculated, exaggerated long term benefits do not justify the permitting of this project.

Sincerely,

Wendy Marullo

---

**Concern ID: 61917**

**Commenters expressed concerns over CPRA's potential for mishandling of the operation and long-term maintenance of the proposed MBSD Project, particularly pointing to CPRA's past inadequate operations and maintenance of other diversions.**

**Response ID: 16004**

CPRA would operate the proposed MBSD Project as detailed in the Operations Plan, which is found in Appendix F2 Preliminary Operations Plan in the Final EIS. In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated proposed Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

---

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62159**

**The land-building capabilities of this Project are highly exaggerated, and the EIS supports previous findings that the Project may actually accelerate land loss, increasing flood risks. The depletion of historic sediment loads of the Mississippi River is well documented. Given the projected 2000 to 3000-acre land loss in the birdfoot delta cited in the EIS, the projected land-building capabilities of the proposed Project is obviously exaggerated.**

**Response ID: 16181**

The Draft EIS has considered the commenter's concerns regarding the rates of land loss and land projected to be built during diversion operations. To help address these concerns, a discussion has been added to clarify currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to proposed diversion operations. This discussion has been added to the Executive Summary, Section ES.4.1 Geology and Soils and to Chapter 4, Section 4.2.3.2.2.1 Geology of the Final EIS.

Although the Mississippi River is carrying much less sediment than it did in the past, it still carries a massive sediment load. As explained in Chapter 3, Section 3.4.2.5 in Surface Water and Coastal Processes, the river formerly carried over 400 million tons of sediment annually, but a more than 50 percent reduction in annual sediment load has occurred since the early 1900s. Studies show that from 1968 through 2007 the overall annual sediment reduction has been more gradual, with the rate estimated as a loss of 1.1 million metric tons per year.. The possible causes of the diminished sediment load include trapping by dams, hardening of banklines, improved farming practices, and other processes. The Draft EIS Appendix E Delft3D Modeling Section 5.2.2 took this diminished sediment load into account when computing the sediment load that would be delivered to the Barataria Basin.

---

**Concern ID: 62224**

**Communities like Happy Jack, Lake Hermitage and Myrtle Grove, some of which have homes that are not above the new base flood elevation, already experience some degree of flooding which would be made worse by the diversion. This would affect the ability of residents to access and enjoy their homes and communities.**

**Response ID: 15757**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discuss the anticipated increased flooding impacts outside of federal levee systems to be caused by the operation of the diversion. Final EIS Appendix R1 Mitigation and Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and

adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties. In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes, which would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section

10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62666**

**It would be inappropriate, and contrary to the stated purpose of restoring injured resources, to use DWH settlement funds to implement a project that would harm the same wildlife (for example, shrimp, oysters, bottlenose dolphins, *Spartina alterniflora*) and ecological services that were negatively affected by the oil spill.**

**Response ID: 16625**

USACE is not evaluating the proposed Project for compliance with the OPA and is not involved in the process to restore the damage caused by the DWH oil spill. USACE's involvement with the proposed Project is limited to its permitting decisions and associated NEPA and other evaluations of the proposed Project under the CWA Section 404 and RHA Sections 10 and 14 (33 USC Section 408). USACE is not executing any DWH restoration actions under the OPA. As explained in the Restoration Plan, the LA TIG is responsible for deciding the appropriate use of NRDA funds to restore natural resources injured by the DWH spill in the Louisiana Restoration Area. As explained in the Final EIS, Appendix B2 DEIS Public Review and Public Meetings, Section 2.0 Agency Roles in the Responses to Public Comments, response content pertaining to the LA TIG's Draft Restoration Plan, the OPA and/or NRDA processes or other Trustee Planning was developed by the LA TIG and states only the LA TIG's views.

In the Restoration Plan, the LA TIG explained that the DWH oil spill resulted in the oiling of more than 1,100 kilometers of wetlands, nearly all of which were located in coastal Louisiana (DWH NRDA Trustees, 2016). The heaviest oiling occurred in the Barataria Basin, resulting in substantial injuries to natural resources in the basin (DWH NRDA Trustees, 2016).

Recognizing that the resulting loss of marsh productivity affected resources throughout the northern Gulf of Mexico ecosystem, the State of Louisiana and the federal Trustees that negotiated the DWH Natural Resource Damages settlement allocated \$4 billion, almost half of the total settlement amount, to restoring Louisiana's wetland, coastal, and nearshore habitats.

The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree of collateral injuries, to natural resources injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the LA TIG's Restoration Plan). The intended restoration of freshwater flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, as noted in the LA TIG's Restoration Plan, without the proposed Project, sea-level rise, subsidence, and other existing stressors would result in

---

additional marsh loss over time reducing the suitability of habitat for many of the same species.

The LA TIG must weigh the potential and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed Project against its potential benefits). The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that more closely resembles historic conditions. As described in Section 3.2.1.6 (Benefits Multiple Resources) of the Restoration Plan, this sustained ecosystem is expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing a deltaic process, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Final Restoration Plan because the LA TIG believes it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the NRDA Trustee's Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

In its Strategic Restoration Plan for Barataria Basin (2018), the LA TIG evaluated the potential and extent of collateral injury for a range of restoration techniques. Unfortunately, almost all large-scale restoration comes with some potential for collateral injury. The LA TIG evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54. In the Restoration Plan, the LA TIG strives to identify an alternative that would provide what it considers the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. Again, see Section 3.2.4 of the Restoration Plan for a discussion of how the LA TIG came to its decision.

In recognition of the potential for collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, the LA TIG has designed and CPRA will implement a suite of stewardship measures (see Section 3.2.1.1.5 [Associated Stewardship Measures] of the Restoration Plan and Appendix R1 to the EIS). The LA TIG is also committed through these measures to continuing efforts to restore the resources that would be adversely affected by the diversion, many of which were also injured by the DWH oil spill.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects

without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62780**

**Although the proposed MBSD Project would provide some benefits, the adverse impacts described in the EIS outweigh those benefits.**

**Response ID: 16362**

The commenter's opposition to the proposed Project, even considering the projected beneficial impacts, is noted. The beneficial and adverse effects of the proposed Project were discussed throughout Chapter 4 Environmental Consequences. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

To address adverse Project impacts, CPRA would implement a series of mitigation and adaptive management measures if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures

---

contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62782**

**A large number of commenters expressed general opposition to the proposed Project.**

**Response ID: 16364**

The commenter's opposition to the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. **Concern ID: 63067**

**The majority of the bottlenose dolphin population of this area will be destroyed... not just killed but sentenced to a horrific death. Freshwater releases at Bonnet Carré Spillway in 2019 resulted in an unusual mortality event (UME), demonstrating the harm that freshwater releases can cause to dolphins. A study by the Galveston Bay Dolphin Research Program also found that dolphins in upper Galveston Bay developed skin lesions after flooding from Hurricane Harvey. Additional studies further support the harm that the diversion could cause by demonstrating negative impacts to dolphins from exposure to low-salinity conditions (Deming and Garrison, 2021; Duignan et al., 2020; McClain et al., 2020).**

**Response ID: 16590**

---

The Draft EIS included an analysis based on extensive literature and soon-to-be published data (now published) demonstrating the impacts of low-salinity conditions on dolphins. These data were considered as part of an Expert Elicitation (a garnering of expert opinions to determine or quantify an unknown) that resulted in dose-response curves (Booth et al. 2020) and summarized in Chapter 4, Section 4.11.3 (Marine Mammals - Overview of Impact Analysis Approach) of the EIS. While Deming and Garrison (2021) was presented after the release of the Draft EIS, the presentation was based on data that were fully considered in the Draft EIS, including as part of the Expert Elicitation. Along with other relevant data (for example, BBES tagging studies), the analysis contained in the Draft EIS determined that there would be a significant, adverse, permanent impact on the BBES Stock. Further, the analysis in the Draft EIS concluded that if the 75,000 cfs Alternative were implemented, impacts would be immediate and only a remnant population would be likely to exist near the barrier islands after 50 years of operation.

After release of the Draft EIS, at the request of the Marine Mammal Commission, the National Marine Mammal Foundation and University of St. Andrews released a population impact projection based on the information presented in the Draft EIS (including annual survival rates from Garrison et al. 2020) coupled with an updated population model for BBES dolphins (Schwacke et al. 2022, Thomas et al. 2021). This new, additional analysis has been incorporated into the Final EIS in Chapter 4, Sections 4.11.5.2 Barataria Bay Estuarine Stock and supports the original determination in the Draft EIS of major, permanent, adverse impacts on the BBES dolphin population. The research presented in the McClain et al. (2020) study cited by commenters was considered in the Draft EIS [cited at the time as McClain et al. (in prep)]; the research presented by Duignan et al. (2020) is consistent with the established literature and does not change the conclusions of the Draft EIS, but this study has been incorporated in Chapter 4, Section 4.11.5.2.2.1 General Effects on Dolphin Health of the Final EIS. Similarly, the information included in the Deming and Garrison presentation was considered in the Draft EIS, is consistent with the conclusions of the Draft EIS, and the presentation has now been cited in Section 4.11.5.2.2.

Since release of the Draft EIS and the LA TIG's Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible, the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized. In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include specific marine mammal response triggers that may affect Project operation mitigation efforts; see Appendix R2 (Monitoring and Adaptive Management [MAM] Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in these Plans, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63182**

**Proposed mitigation is insufficient and not guaranteed, and the amount of funding for mitigation is not clearly stated.**

**Response ID: 16559**

Details regarding the funding that will be available for aquatic/fisheries mitigation and stewardship measures is set forth in the Final Mitigation and Stewardship Plan, Appendix R1. Details regarding other mitigation and stewardship measures (e.g., mitigation for tidal flooding impacts) is also set forth in the Final Mitigation and Stewardship Plan, Appendix R1; however, final estimated costs for those measures continues under development. CPRA has stated that the total estimated cost of all mitigation and stewardship measures set forth in the Final Mitigation and Stewardship Plan exceeds \$300 million dollars. Details regarding the cost for the monitoring and adaptive management are set forth in Section 9 of the Final MAM Plan, Appendix R2. Section 3.2.1.2 of the Draft Restoration Plan includes estimates of project costs, including the cost for project design and construction and project monitoring. Updated cost estimates will be provided as part of the Final Restoration Plan, including project monitoring and stewardship measures.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review,

---

Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, have been provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63726**

**Some commenters felt that the amounts allocated for mitigation were insufficient, while others felt that no amount of mitigation would suffice, for example for the more senior fishers who won't be in a good position to adapt to the changing environment.**

**Response ID: 16702**

The Draft EIS considered how changes in the commercial fisheries, both with and without implementation of the proposed Project, would impact more senior fishers in Chapter 4, Section 4.14.4 in Commercial Fisheries. In response to public comments and resource agency input about the proposed mitigation efforts, CPRA has expanded and refined its fisheries mitigation and stewardship measures. CPRA's mitigation and stewardship strategies and associated expenditures would focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for fisheries in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to fisheries in the early years of the Project's operational life. The provisions of the fishery mitigation and stewardship plan, valued at approximately \$54 million, would help to achieve that goal and to mitigate the impacts of the proposed Project on oyster fishers. While not mitigation for the Project impacts, examples of other restoration/fishery improvement actions include: the LA TIG's funding of \$10 million in public and private oyster reef enhancement through the Living Coastal and Marine Resources funding allocation, the

LA TIG's funding of \$9.7 million in oyster broodstock reef enhancement through the Living Coastal and Marine Resources funding allocation, CPRA's allocation of \$2 million in adaptive management funding to support off-bottom oyster culture, the LA TIG's allocation of \$5.8 million in Living Coastal and Marine Resources funds to support the operations of the Voisin Hatchery and the LA TIG's allocation of \$38 million in recreational use funds to support subsistence and recreational fisheries. The Final Mitigation and Stewardship Plan is included in Appendix R1 to the Final EIS.

The comments of more senior fishers who expressed concern about their ability to adapt to changing fishery conditions are acknowledged. If permitted by USACE and funded by the LA TIG, it would take CPRA approximately 5 years to complete construction of the proposed Project and to begin operations. This relatively long period provides those affected with the time and opportunity to decide how they want to go forward, ranging from taking advantage of the adaptation opportunities offered through the Mitigation and Stewardship Plan (Appendix R1 to the EIS) to transitioning out of the fishing industry or retiring.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

F/SER4:RH/PW

JUN 26 2013

Ms. Elizabeth L. Davoli  
Coastal Protection and Restoration Authority  
Environmental Section  
[Redacted]  
Baton Rouge, Louisiana 70804-4027

Dear Ms. Davoli:

NOAA's National Marine Fisheries Service (NMFS) received the Solicitation of Views request transmitted by your letter dated May 22, 2013. The Coastal Protection and Restoration Authority (CPRA) of Louisiana proposes to undertake the design, construction, operation, and maintenance of the Mid-Barataria Sediment Diversion (MBSD) project included as a component in the 2012 Louisiana Master Plan. According to information transmitted with your letter, the MBSD would divert 50,000 to 75,000 cubic feet per second (cfs) of Mississippi River water into the mid-Barataria basin. It is anticipated the diversion would be operated when the Mississippi River discharge exceeds 600,000 cfs. CPRA requested NMFS provide views, comments, and concerns regarding implementation of this project. CPRA staff also indicated potential benefits and impacts from the diversion would be evaluated in a regulatory Environmental Impact Statement (EIS), pursuant to requirements of the National Environmental Policy Act.

NMFS supports efforts to ameliorate coastal wetland loss in Louisiana to maintain socio-economic, storm protection, and ecological services these habitats provide. Most coastal restoration efforts can benefit nursery and foraging functions supportive of a wide variety of economically important marine fishery species. However, the proposed diversion may have adverse impacts to economically important estuarine/marine fisheries and their habitats. NMFS is concerned the MBSD could (1) displace marine fishery species from currently productive habitats to less supportive habitats, (2) reduce marine fishery productivity, (3) convert essential fish habitat (EFH) to areas no longer supportive of some federally managed marine fishery species or their prey items, (4) render wetlands impacted by diversions more susceptible to erosion from storms, (5) degrade water quality, and (6) cause socio-economic hardship to those involved in the commercial and recreational fishing industries. To allow for informed decision-making, these issues should be thoroughly evaluated by methods acceptable to NMFS and the results incorporated into the planned EIS.

Areas within the influence of the proposed diversion are designated as EFH under provisions of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; P.L. 104-297). Categories of EFH in the Barataria basin include emergent wetlands; mangrove

wetlands; submerged aquatic vegetation; mud, sand, and shell (e.g., oyster reefs) substrates; and estuarine water column. Impacts may extend to the nearshore Gulf of Mexico and marine categories of EFH potentially impacted include water column and non-vegetated bottom. Wetlands and water bottoms in the Barataria basin have been designated as EFH for a variety of life stages of white shrimp, brown shrimp, red drum, dog snapper, lane snapper, and gray snapper. Portions of Barataria Bay near the Gulf of Mexico also serve as EFH for various life stages of bonnethead shark, Atlantic sharpnose shark, and blacknose shark. In addition to being designated as EFH for a variety of federally managed species, water bodies and wetlands in the project area provide nursery and foraging habitats supportive of a variety of economically important marine fishery species, such as American oyster, Atlantic croaker, Gulf menhaden, spotted seatrout, sand seatrout, black drum, southern flounder, blue crab, and striped mullet. Some of these species serve as prey for other fish species managed under the Magnuson-Stevens Act (e.g., mackerels, snappers, and groupers) and highly migratory species managed by NMFS (e.g., billfishes and sharks).

According to your letter, the MBSD would be operated whenever river discharge at Belle Chasse exceeds 600,000 cfs. Based upon a review of river flow stages exceeding 600,000 cfs by month for the 1964 to 2012 time period, the MBSD would likely be open most years during February through June. Although hydrologic modeling results are unavailable at this time, NMFS believes the anticipated flow rates from the MBSD could result in the freshening of most of the Barataria basin. Freshening substantial portions of the basin and localized lowering of water temperature for five months of the year from the MBSD would affect a broad range of fishery species during a variety of life stages and their prey. As an example, these months overlap the migration of brown shrimp into and out of the estuary and the initiation of immigration of white shrimp into the Barataria basin estuary. Displacement of shrimp from nursery and refugia habitat to less supportive habitats could result in decreases in shrimp production in the Barataria basin potentially without offsetting increases elsewhere. Displacement and decreases in shrimp production should be expected to have impacts on other valuable species that prey upon shrimp, such as seatrout, red drum, and red snapper, as well as to have socio-economic repercussions on commercial fishing and related industries. The proposed operations also could have substantive impacts on American oyster populations and production, especially if both the spring and fall spat set are at risk by freshwater kills of pre-spawning adults or if there are deficiencies of shell substrate for spat set in suitable salinity regimes in the lower estuary. Some examples of other economically important marine fishery species which could be impacted by MBSD include Atlantic croaker, sand seatrout, spotted seatrout, and black drum. Consequently, NMFS believes robust analyses should be undertaken for inclusion in the EIS which evaluate (1) diversion related changes in isohalines and water temperature within the Barataria basin and nearshore Gulf of Mexico, (2) species-specific variations in marine fishery resources, and (3) socioeconomic impacts to fishery user groups. The means to assess impacts to fisheries should be coordinated with NMFS and should include species-specific projections of marine fishery production both with, and without, implementation of diversions included in the Louisiana Master Plan. It should be noted the Magnuson-Stevens Act requires mitigation to offset adverse impacts to EFH. The CPRA should also include in the EIS an evaluation of alternatives to mitigate impacts to EFH for any federally managed fishery species determined to be adversely impacted by the MBSD.

The EIS should include a discussion of adverse impacts to wetland health and productivity. A variety of research findings have suggested nutrient loads in Mississippi River waters, combined with low salinity levels, could reduce soil shear strength and make affected marsh habitats more susceptible to wind and hydrologic forces associated with the passage of storm fronts. Prolonged flooding of the soil surface associated with diversion operations also could reduce the health of plants in the marsh community. Finally, Mississippi River waters contain elevated levels of atrazine, a herbicide frequently utilized for agricultural purposes. CPRA should conduct and submit a thorough, scientifically-based evaluation of the likely impacts of nutrients, atrazine, and freshwater on marsh health and susceptibility to erosion.

There is a risk the potential for diversions to reduce wetland loss and rebuild coastal habitats may be overestimated given the constraints of present and projected sediment loads in the river, man's ability to engineer a structure to efficiently divert a significant portion of the river's sediment load to the appropriate places in the receiving basin, subsidence, and sea level rise. It has been documented the sediment load of the river is less than half of the historic levels, which initially created Louisiana's coastal wetlands. When sediment supply is taken into consideration in combination with on-going and projected accelerating future relative sea level rise, the 300 square mile estimate of net land change outlined in the Louisiana Master Plan associated with the use of multiple river diversions deserves further scrutiny. Failure of diversions to provide the projected level of benefits could result in undercompensated impacts to EFH. Therefore, NMFS believes it is important for an independent scientific body to evaluate models being used to determine the potential for wetland benefits likely to occur from the MBSD project, as well as the associated risks to EFH and living marine resources.

The U.S. Army Corps of Engineers' ongoing Mississippi River Hydrodynamic Study (MRHS) is evaluating a number of issues related to diversions and their siting on the river. Details provided by your letter suggest CPRA plans to pursue a proposed location and alignment for the MBSD without the benefit of using the results of MRHS to inform the selection of an efficient diversion location. There is the potential for multiple diversions from the Mississippi River to affect the performance of any one project. However, to date, no models have been completed to determine how the MBSD would perform in combination with other diversions proposed in the Louisiana Master Plan. NMFS believes all diversions proposed for implementation by CPRA should be modeled individually, and in combination, using up-to-date site specific information, to ensure they are located and sized to best fulfill the project purpose, and unintended consequences do not result from their operations. NMFS believes the MRHS would be the best option for evaluating MBSD siting alternatives and cumulative impacts of operating multiple diversions.

The impacts of diversions on water quality should also be evaluated. Past operations of the Bonnet Carre Spillway have resulted in algae blooms in Lake Pontchartrain. NMFS recommends CPRA evaluate the likely impacts of nutrients contained in diverted river water on algae blooms and resultant water quality. Other river water contaminants and the risk of bioaccumulation in the receiving basin should also be assessed and included in the EIS.

Considering the myriad potential impacts to marsh health, fishery resources, water quality, and fishery user groups, NMFS believes a monitoring and adaptive management plan (MAMP) should be developed for inclusion in the EIS, in consultation with scientists, natural resource

agencies, and the public. The MAMP should (1) clearly identify variables and issues to be monitored, (2) describe the monitoring plan, and (3) detail the responsible party for funding, implementing and overseeing monitoring. The MAMP should identify specific adaptive management options (e.g., including alternative flow amounts, or differing the frequency, timing and duration of structure openings) to be implemented if monitoring identifies diversion operations are not supplying the desired results, or are resulting in unexpected impacts to resources of concern. The MAMP should identify an interagency group which would be responsible for overseeing diversion operations.

The proposed diversion structures would also impact the Mississippi River and Tributaries Levee Project. Wetlands and waters in the Barataria basin, floodside of the New Orleans to Venice (NOV) and Plaquemines Non-Federal Levee (NFL) are tidally influenced, designated as EFH, and are supportive of estuarine-dependent fishery resources. Impacts to these tidal habitats from the diversion structure and enlargement of the levee to offset increased water stage from the diversion should be minimized to the extent practicable and mitigated. NMFS has no comments on the bridge, railroad, and levee impacts between the Mississippi River and the protected side of the NOV and NFL because NOAA trust resources would not be adversely affected.

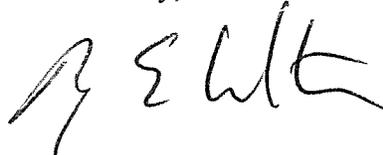

There may also be protected species concerns under the Endangered Species Act (ESA) and Marine Mammal Protection Act (MMPA) requiring further coordination. In particular, a small resident estuarine population of bottlenose dolphins in Barataria Bay (<http://www.nmfs.noaa.gov/pr/pdfs/sars/ao2012dobn-gmxb.pdf>) may be negatively impacted by freshwater influx to the bay. NOAA and partners have been investigating an ongoing marine mammal Unusual Mortality Event in the northern Gulf and evaluating the long-term impacts of the Deepwater Horizon oil spill on dolphins in the Gulf of Mexico. Studies show the resident dolphins in Barataria Bay are severely ill (<http://www.gulfspillrestoration.noaa.gov/2012/03/study-shows-some-gulf-dolphins-severely-ill/>). The freshwater influx to the bay from this project may further stress Barataria Bay dolphins from resulting prey changes, impacts to water quality, and potential algal blooms from nutrients in diverted water. Algal blooms are a known cause of Unusual Mortality Events in bottlenose dolphins in the southeast U.S. In addition, prolonged exposure to freshwater can be detrimental to dolphins, causing skin lesions, compromising their health, and ultimately resulting in death. Depending on the nature of construction activities associated with the project, short- or long-term impacts to dolphins may also occur and could require potential preventative mitigation measures to reduce these impacts. We recommend further coordination with NMFS Southeast Region Protected Resources Division on these potential impacts and ways to reduce them. An MMPA authorization may be needed if take of dolphins is possible during this project. More information can be found on our NMFS Headquarters' Marine Mammal Permits and Authorization web page: [http://www.nmfs.noaa.gov/pr/permits/mmpa\\_permits.htm](http://www.nmfs.noaa.gov/pr/permits/mmpa_permits.htm)

Early and frequent interagency coordination among CPRA, NMFS, and other federal and state resource agencies is requested for the impending planning and permit review process. Methods to assess environmental and socio-economic impacts to fisheries should be coordinated with, and deemed acceptable by, NMFS and other interested natural resource and regulatory agencies. All agencies should be provided the opportunity and time to review and comment on proposed

scopes of work for the environmental analyses and how these analyses will be incorporated into the EIS.

We appreciate your consideration of our comments. If you wish to discuss this project further or have questions concerning our recommendation, please contact Richard Hartman or Patrick Williams at ( [REDACTED] )

Sincerely,

A handwritten signature in black ink, appearing to read 'R E Crabtree', written in a cursive style.

**One commenter provided a link to NMFS correspondence submitted in response to CPRA's 2013 Solicitation of Views request from the early stages of Project planning.**

**Response ID: 16488**

NMFS submitted a response to CPRA's Solicitation of Views in 2013.

NMFS has participated as a cooperating agency in the development of the EIS for the proposed Project, providing information and technical analysis throughout the EIS development. Impact analyses associated with NMFS' trust resources, which are living marine resources generally including certain marine mammals, sea turtles, marine fish and anadrmous fish, shellfish, critical habitat, EFH, and aquatic habitat, can be found in Chapter 4, Section 4.6 Wetland Resources and Waters of the U.S., Section 4.10 Aquatic Resources, Section 4.11 Marine Mammals, Section 4.12 Threatened and Endangered Species, and Section 4.14 Commercial Fisheries of the EIS.

---

Environmental Defense Fund

Rachel Rhode

Mr. Laborde and Mr. Landry:

I support the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion- -I write today to urge adoption of the Preferred Alternative in the Corps' Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's (TIG) Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2.

The Mississippi River has been altered and confined by levees for over 100 years leading to the extensive land loss crisis that has seen over 2,000 square miles already disappear into the Gulf of Mexico. But the "Muddy Mississippi" is also the very tool that can start to rebuild wetlands and habitat, provide a line of defense to storms and sea level rise, and provide sustainability for communities including our beloved bayou communities and New Orleans.

I also understand that changing the ecosystem to a more natural state will mean unfortunate impacts to some resources that have benefited from the artificially created estuary over the past decades, such as oysters, brown shrimp and dolphins. We appreciate your efforts to address those impacts with stewardship measures and funding and encourage you to continue to take a holistic approach to address citizen concerns. No matter where we are in the country, we can enjoy the bounty of Louisiana's seafood and who doesn't have an affinity for dolphins. But I also understand that by not reconnecting the Mississippi River, these precious resources may suffer even greater impacts in the future, along with the ecology, economy, communities and culture. Restoring a more natural state to the Louisiana delta will not be easy but is fundamentally essential if future generations want to enjoy the bounty and culture of the region.

We have no time to lose to reconnect the sediment, nutrients and freshwater of the Mississippi River to its wetlands and start to rebuild our coast. The future of New Orleans, the bayou communities, the fisheries and wildlife and Louisiana's amazing culture desperately depend on it.

Thank you for your tireless efforts for our generation and for the generations to come

---

**Concern ID: 61870**

**If no action is taken, the resources may suffer even greater impacts in the future, along with the local ecology, economy, communities, and culture.**

**Response ID: 15941**

The concerns raised by the commenters were considered in the Draft EIS. The EIS evaluates anticipated conditions in the Barataria Basin if no action is taken. Within the EIS, the No Action Alternative enables a comparison of anticipated future conditions without the proposed Project to anticipated future conditions with the proposed Project and the alternatives. Refer to Chapter 4 Environmental Consequences of the EIS, for a description of anticipated conditions under the No Action Alternative for each of the resource areas evaluated. The Delft3D Basinwide Model was used to forecast conditions that would occur under the No Action Alternative which helped to inform the analysis in Chapter 4.

---

**Concern ID: 63179**

---

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

**Correspondence ID:39739**

Levees.org

Sandy Rosenthal

I've been deeply engaged coastal projects ever since the levee breach event in New Orleans during Hurricane Katrina. I am writing to show my organization's strong support for the preferred alternative of a 75,000 cfs sediment diversion to provide a sustainable solution to our on-going land loss crisis.

---

**Concern ID: 63334**

**The proposed MBSD Project would maintain and restore coastal lands and should move forward.**

**Response ID: 16291**

The commenter's statement of support is acknowledged. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Michael Rotolo

My name is Michael Rotolo. We need to make a conveyor belt from the Mississippi River, 3 miles to South Port Sulfur, conveyor belt sand from the Mississippi settlement downriver. My boss off-loaded, below Port Sulphur here, which from the river to the marsh is not more than 2000 yards wide. We could off-load sand out here and start pushing it wherever we would like, no water involved, just sand on a conveyor belt. Then we can have a bulldozers pushing sand out further and further until we get enough sand that's steadily, constantly coming from barges from down river like Pass a Loutre, that's full of sand, all the sand you want. Please call me back [REDACTED]

---

**Concern ID: 61897**

**Consider alternatives that transport more sediment and sand and less water, such as a conveyor belt or barge and utilizing a processing plant that removes the sediment from the Mississippi River to filter and neutralize the sediment before transport.**

**Response ID: 15991**

This suggested alternative would not meet the goals and objectives as stated in the purpose and need as described in Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives. CPRA's intent is to reestablish sustainable deltaic processes between the Mississippi River and Barataria Basin through the introduction of fresh water, sediment, and nutrients from the Mississippi River into the Basin. Additionally, in light of the volume and nature of the material that would need to be transported, a conveyor belt is not feasible. In addition, as described in Chapter 2, Section 2.4 Step 2: Evaluation of Operational Alternatives - Location, Operational Trigger, Capacity, and Base Flow the proposed Project is designed to maximize sediment bed load transport. Previous studies of the Mississippi River have documented the positive correlation between river discharge and sediment load, demonstrating that higher river discharge levels are generally correlated with higher sediment loads. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

**Correspondence ID:39755**

Mark Schatzel

I love the Louisiana coast. My family is from Houma and the coast is part of us. I see it in their eyes and smiles (even when I out fish them). Sadly when we go fishing with our young children, we see and discuss many examples of the land fading around out. Dead oak groves that were once beautiful, now dead from salt water as we boat by them with our fishing rods.

Unfortunately, my children will not have the same experience that you have had. Consider yourself fortunate, as this national blessing is slowly eroding away due to man made efforts. We can see examples all around us.

The land protects our family from the wrath of storms, it bonds us to one another through recreation and tradition, and provides great bounty to the community and economy. The land must be saved.

The money from the Deepwater Horizon settlement, must be used as outlined in the draft Restoration Plan. It is the right thing to do.

The river must be used to rebuild the wetlands, it is the smart and effective thing to do. It is the only option that makes sense. We need the benefits of the Mississippi to help rebuild.

I support the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

I support centering community needs in planned mitigation and stewardship efforts.

We should commit to developing a robust adaptive management program.

This is an incredibly important moment for the future of our children. Lets not lose this opportunity as Louisiana has already lost too much.

---

**Concern ID: 61740**

**Over time, Louisiana's natural environment is continuing to be destroyed by humans.**

**Response ID: 16161**

The issues raised by the commenters were considered in the Draft EIS. Past and ongoing adverse human impacts on the Project-area ecosystem are discussed throughout Chapter 3 Affected Environment of the EIS. Past, present, ongoing, and reasonably foreseeable actions and trends in the Project area are discussed throughout Chapter 4, Section 4.25 Cumulative Impacts, including how those actions have and may continue to affect Louisiana's natural environment. The proposed Project is a restoration action intended to restore and sustain wetlands in the Barataria Basin and compensate for damages to natural resources that resulted from anthropogenic causes, for example, the DWH oil spill.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts

---

a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63366**

**The commenter supports centering community needs in planned mitigation and stewardship efforts.**

**Response ID: 16328**

CPRA has conducted meetings in communities that would be affected by the proposed Project. CPRA's coordination with the affected communities and industries is described in Chapter 7 Public Involvement and Appendix R1 (Mitigation and Stewardship Plan) of the EIS, which have been revised in response to public comments in the Final EIS.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Logan Asevado

Hi, my name is Logan Asevado, I grew up in a family of commercial and recreational fisherman down in Hopedale Louisiana. I'm now working in the oil and gas industry, but still carry on my family's legacy of fishing and hunting the marshes off our coast. I'm hoping to reach out with my concerns of the Mid-Barataria sediment diversion. My concerns are that I do not believe the river carries as much sediment as it once has. Also, I believe introducing such polluted water to our estuary at such a volume will be detrimental to our coastline and marine life. I did believe a lot of money was spent on years of research on solving this problem, but frankly I think it was also a huge waste of funds.

I'll start by saying this, the root of the problem is the levees, the same levees that were built to protect our communities. I don't believe I should have to explain this to a group that pays engineers millions to figure these things out but I'd like to have my opinion heard. Before a time of levees the river flooded and when the water retreated back to the river it carried high amounts of sediment, the sediment flowed down river and created our unique delta. With levees there is not flooding of land, therefore the river does not carry the sediment that it once did. I don't mean to be stubborn, but you'll never convince me it does, because if it does they'd have mountains of land being built in the delta outside of Venice LA. Instead, the delta outside of Venice is flourishing with green vegetation, but it is slowly sinking.

Secondly, the pollution! The Mississippi River is the most polluted river in America. I'm not much of an environmentalist, I work in the oil and gas industry, but why would you introduce the most polluted river into such of an alive ecosystem that we have here. I'd like for my kids to be able to enjoy the fishery, water sports, and learn the lifestyle that I grew up on. Fish kills and algae blooms will be an annual occurrence once we start introducing this polluted water into our brackish estuary. It happens every time we open the Bonne Carrie Spillway, and every year off the coast of Venice, we are not immune to this problem, it will happen every year!

Sorry, but I feel like all the data that had been researched by your engineers who have no idea what our locals go through every year, should probably go back to the drawing board on this one. Dredging is a quick fix and with the use of rock and sand we can fix these problems nearly overnight compared to 50 years of polluted river water. As a local to Saint Bernard parish, and the affected waters, I hope my message is heard. And I don't speak for myself, I speak for many others just like me. We are uncertain of your ideas to "help" our problems. We see the bigger picture, and we see it everyday because we live in it, we make our income from it, and we use it recreationally with our families. We are out here seeing what works and what hurts, every single day, 24/7. I hope my message is read in full, and heard. Thank you for your time.

---

**Concern ID: 61782**

**Commenters expressed concern that there's not enough sediment in the river to achieve wetland and land creation goals of the proposed Project.**

**Response ID: 16412**

The commenter's concerns regarding the sediment load of the river and whether the river carries sufficient sediment to achieve the land projected to be built during diversion operation were considered in the Draft EIS. The Mississippi River carries much less sediment than it

---

did in the past. It still carries a massive sediment load, but not as massive as before. As explained in Chapter 3, Section 3.4.2.5 Sediment Transport, the river formerly carried over 400 million tons of sediment annually, but a more than 50 percent reduction in annual sediment load has occurred since the early 1900s. Studies show that from 1968 through 2007 the overall annual sediment reduction has been more gradual, with the rate estimated as a loss of 1.1 million metric tons per year. The possible causes of the diminished sediment load include trapping by dams, hardening of banklines, improved farming practices, and other processes. Quantifying the relative contributions of multiple factors to the diminished sediment load is beyond the scope of the Draft EIS. The Draft EIS (Appendix E Delft3D Modeling, Delft3D Modeling Section 5.2.2) takes this diminished sediment load into account when computing the sediment that would be delivered to the Barataria Basin. To help clarify currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to proposed diversion operations, discussion has been added to the Executive Summary, Section ES.4.1 Geology and Soils and to Chapter 4, Section 4.2.3.2.2.1 Geology of the Final EIS.

---

**Concern ID: 61819**

**Commenters expressed concern that the proposed Project would have adverse impacts on Barataria Basin's water quality, wetlands, fisheries, recreational uses, and eroding coastlines due to chemicals, oil and hazardous waste, and/or pollutants in the Mississippi River that would be routed to the Barataria Basin via the proposed diversion.**

**Response ID: 16429**

The impacts raised by the commenters were considered in the Draft EIS. As discussed in Chapter 3, Section 3.5.1.1 in Surface Water and Sediment Quality of the Draft EIS, the segment of the Mississippi River where the proposed diversion river intake structure would be located (subsegment LA070301\_00) fully supports its designated uses. Designated uses for this subsegment include swimming, boating, fishing, and drinking water supply. LDEQ's water quality assessment indicates that regulated substances are not present in concentrations that would cause a water quality impairment at the location of the intake structure. In response to this concern expressed by commenters, a new subsection has been added to Chapter 4, Section 4.5 Surface Water and Sediment Quality clarifying the potential impacts of nearby industrial facilities on river water routed to the basin during proposed Project operations. The new section is called 4.5.5.11 Hazardous Spills from Industrial Sites.

As described in the EIS, Chapter 2, Section 2.8.1.4 in Action Alternatives Carried Forward for Detailed Analysis and in Appendix F MBSD Design Information, in the event of oil spills and other hazardous discharges into the Mississippi River upstream of the proposed MBSD intake structure, the diversion structure would be closed.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has**

---

**numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.****Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve

---

and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process. CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62360**

**A lot of money was wasted on researching and solving this problem.**

**Response ID: 15850**

Comment noted.

---

**Concern ID: 62362**

**The residents of the impacted communities see what helps and what hurts because they live it every day.**

**Response ID: 15882**

All public comments on the EIS will be considered by the USACE and by the LA TIG. All public comments on the Restoration Plan will be considered by the LA TIG. A summary of public engagement meetings and other outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS.

---

**Concern ID: 62661**

**The Mississippi River is currently not capable of building land as it used to, in part because it does not carry as much sediment as it used to, and thus the proposed Project will fail. If it were capable of building land, there would be a large land mass at its current outlet.**

**Response ID: 16634**

The capability of the Mississippi River to support land building has been considered in the Draft EIS. For example, Chapter 3, Section 3.4.2.5 Sediment Transport discusses the available sediment in the Mississippi River, noting that studies had shown downward trends in sediment supply in the river through the 1990s, but that since then the volume of sediment (coarse and fine) in the water column has remained fairly constant. The river still carries a massive sediment load, but not as massive as before. The possible causes of the diminished sediment load include trapping by dams, hardening of banklines, improved farming practices, and other processes as described in the EIS in Chapter 3, Section 3.4.2.5 Sediment Transport. The EIS takes this diminished sediment load into account when computing the sediment load that would be delivered to the Barataria Basin via the proposed diversion. This is described in detail in Section 5.2.2 (River Discharge and Sediment Rating Curve) of Appendix E (Delft3D Modeling) to the EIS.

The LA TIG acknowledges the comment and understands the commenters' concern, and this was considered in the LA TIG's Draft Restoration Plan. The Mississippi River does carry a large plume of sediment into the Gulf of Mexico each year. A large delta exists at the mouth of the river, often requiring dredging to maintain navigation. Crevasses have been used to supplement land building in the birdfoot delta, confirming the ability of the river to build and maintain land. The size of the delta is limited by a number of factors, including the depth of

---

the water at the mouth of the Mississippi River and the constant erosive forces affecting the Gulf of Mexico. By comparison, the Project is proposed to be constructed at RM 60.7 of the Mississippi River because this location is capable of capturing and retaining the sediments transported into the Barataria Basin by the Project (see EIS Chapter 2, Section 2.4.1.3 Application of Additional considerations to Potential Alternative Locations in Upper, Middle, or Lower Barataria Basin). As noted above, these issues and analyses are included in the EIS, and are also considered by the LA TIG in its identification of its Preferred Alternative in the Restoration Plan.

---

**Correspondence ID:39768**

Gary Guidry

As a native of Louisiana I spent many days on its bayous ,in its forests and on its beautiful wetlands. My family hunted and fished not only to enjoy the land and the camaraderie, but also to provide for the dinner table. As a young boy, there was nothing more exciting than going out to fish and hunt in Louisiana's wetlands. It was also a great pleasure and privilege to be able to share that experience with children and grandchildren. Over the past30 years I have seen dramatic changes in the wetlands. Shorelines no longer exist in some areas that were prime spots for redfish, drum, flounder and speckled trout fishing. Changes in this habitat have adversely affected birds and other wildlife. Coastal Louisiana preservation and restoration are essential in order to continue to provide habitat, protect communities, and provide a source of recreation not only for our State residents but also for many other visitors from around the World.

---

**Concern ID: 63340a**

**Coastal preservation and restoration activities are essential in order to continue providing habitat for fish and wildlife, to protect communities, and to provide a source of recreation to residents and visitors.**

**Response ID: 16298a**

The commenter's support for coastal restoration is noted. As discussed in Chapter 1, Section 1.4 Purpose and Need, the purpose of the proposed Project is to implement a large-scale diversion that would provide and support the long-term viability of existing and planned coastal restoration efforts. As discussed in Chapter 2 Alternatives of the Draft EIS, an alternatives analysis was conducted to identify viable alternatives for the proposed action that would meet the proposed Project's stated purpose and need. The impacts (both beneficial and adverse) of the proposed Project on the extent of wetlands (including as fish and wildlife habitat), protection from storm events, and the economy, depending on the wetland area, community, and industry are considered in the EIS; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.9 Terrestrial Wildlife and Habitat, 4.10 Aquatic Resources, 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Louisiana Shrimp Association

Acy Cooper Jr

WRITTEN COMMENTS REGARDING

CEMVN-ODR-E, MVN-2012-2806-EOO

May 26, 2021

U.S. Army Corps of Engineers, New Orleans District,

Attn: CEMVN-ODR-E, MVN-2012-2806-EOO

7400 Leake Avenue, New Orleans, LA 70118

The Louisiana Shrimp Association (LSA) is a nonprofit organization formed by commercial shrimpers throughout the State of Louisiana. Membership consists of commercial shrimp fisherman, wholesale and retail seafood dealers, statewide merchants, and individuals concerned about issues related to domestic seafood and shrimp production, as well as the preservation of the culture and heritage of the traditional Louisiana shrimper.

As President of Louisiana Shrimp Association (LSA) I am submitting comments on behalf of the members of Louisiana Shrimp Association.

LSAs members OPPOSE the Mid-Barataria Sediment Diversion (MBSD).

We do agree that it is a necessity to preserve our communities though coastal restoration but we do not believe the way to do this is with a large scale diversion such as the MBSD. The CPRA does not list dredging as an alternative method for this project as suggested by many concerned citizens throughout the state. The CPRA has totally ignored this suggestion because as they stated something similar to it just wont work. As fishermen of the Louisiana Coast we have witnessed what dredging and piping sediment can create along our coast in land building. We are highly in favor of dredging and building this project area with sediment. We are in favor of coastal restoration 100%. We are NOT in favor of the MBSD.

After viewing the Draft EIS, the CPRA has proved our argument.

The MBSD will infiltrate our estuaries with polluted freshwater /hypoxia, this same polluted water that has formed the hypoxic zone/dead zone in the Gulf of Mexico. This polluted river water continuously flowing into our estuaries will have a devastating effect to marine life throughout coastal Louisiana. The direct effect of hypoxia includes fish kills, which depletes valuable fisheries and disrupt ecosystems. This is a proven fact but despite it being proven, the CPRA and other agencies involved demand that this MBSD project will be created.

In the EIS Executive Summary 1.3 Proposed Project it states: The proposed Project consists of a controlled sediment and freshwater intake diversion structure in Plaquemines Parish on the right descending bank of the Mississippi River at RM 60.7, with a conveyance channel that would discharge sediment, fresh water, and nutrients from the Mississippi River into the mid-Barataria Basin in Plaquemines and Jefferson Parishes.

The truth is that the proposed project will consist of highly polluted hypoxic water that will continuously flow into our estuaries killing our marine life.

The state of Louisiana was declared a fishery disaster in 2019 of \$258 million due to the opening of the Bonnet Carre Spillway being opened for 123 days. This same water that the EIS states , when operational, could discharge up to 75,000 cfs of sediment, fresh water, and

nutrients into the mid-Barataria Basin during periods when Mississippi River flows are 450,000 cfs or greater at Belle Chasse, Plaquemines Parish, Louisiana. The structure is designed to discharge 75,000 cfs when the Mississippi River flow is at 1,000,000 cfs. When Mississippi River flows are below 450,000 cfs at Belle Chasse, the proposed MBSD Project would maintain a background (base) flow of up to 5,000 cfs to protect, sustain, and maintain newly vegetated or recently converted fresh, intermediate, and brackish marsh near the diversion outflow.

The truth is that we will have a constant flow at all times of polluted river water into our estuaries that will cause low or no oxygen: hypoxia, and kill our marine life.

The shrimp industry in Louisiana alone accounts for 15,000 jobs and an annual impact of \$1.3 billion. The MBSD EIS presents a summary of the average annual shrimp fishing activity in the Project area by area fished between 2014 and 2018. As shown, the total average activity for shrimp caught in the Project area was approximately 30.6million pounds, with a value of \$41.5 million. During 2014 to 2018, shrimp activity in the Project area accounted for 32 percent of total Louisiana shrimp landings by weight and 30 percent of total value from shrimp landings in Louisiana.

The Barataria Basin is not only vital for shrimp but it is also habitat for:

" Finfish-the top three saltwater finfish species (excluding menhaden) landed commercially in the Project area include black drum, red mullet and sheepshead: a value of \$1.8 million between 2014 and 2018 in the project area. There are many other species of finfish in this basin that depend greatly on these estuaries.

" Oysters -a value of \$32,680,076 between 2014 and 2018 in the project area

" Crabs -a value of \$12.1 million between 2014 and 2018 in the project area

" Dolphins- A Protected Species: A new National Marine Fisheries Service study indicates the low salinity levels caused by the proposed Mid-Barataria Sediment Diversion could result in a 34% loss of dolphins in Barataria bay. A waiver was requested for the Marine Mammal Protection Act: <https://www.mmc.gov/wp-content/uploads/18-03-12-Oliver-Gulf-Restoration-Waiver.pdf>

This Basin as it is today is vital for our economy, vital to our communities and vital to the fishermen that depend on it greatly to survive. The average age of a commercial fisherman today is 50 plus years old. As it stands today, the environment and climate dictates where we make our livings. When the river is high we have to travel to the east or to the west which is Barataria Basin and Breton Sound. Without these options, we will not be able to work. Most inshore fishing vessels are not large enough or equipped to go any further.

The Barataria Basin alone is one of the most productive estuaries in the world. This EIS describes the future affects due to the MBSD as severe, permanent adverse impacts on the natural environment.

This proposed man-made disaster; the Mid-Barataria Sediment Diversion is unacceptable. We strongly oppose any project that will disrupt our livelihood, our culture and our way of life.

Sincerely,

Acy J. Cooper Jr.

President

Louisiana Shrimp Association  
[REDACTED]

---

**Concern ID: 61812**

**Commenters expressed concern that the proposed Project would have adverse water quality impacts in the Barataria Basin due to the introduction of nitrate and phosphate from the Mississippi River. Several commenters questioned whether the proposed Project would create harmful algal blooms and hypoxia in the Barataria Basin similar to the hypoxic “dead zone” in the Gulf of Mexico that exists due to nutrients in Mississippi River waters. One commenter expressed concern that the EIS does not adequately assess the potential for the proposed Project to create algal blooms and hypoxia in the basin, other than acknowledging it.**

**Response ID: 16425**

The impacts raised by the commenters were considered in the Draft EIS. As discussed in the EIS, Chapter 4, Section 4.5 Surface Water and Sediment Quality, while increases in both nitrogen and phosphorus concentrations in the Barataria Basin are projected by the Delft3D Basinwide Model to occur as a result of proposed Project operations, monthly dissolved oxygen concentrations are not projected to fall below the water quality criterion of 5 mg/L at the six stations evaluated in the basin over the 50-year analysis period.

According to USEPA’s Mississippi River/Gulf of Mexico Hypoxia Task Force “Hypoxia 101” webpage, hypoxic waters have dissolved oxygen concentrations of less than 2 to 3 mg/L. Hypoxia can be caused by a variety of factors, including excess nutrients and waterbody stratification (layering) due to saline or temperature gradients. The hypoxic zone in the Gulf of Mexico is a result of excess nutrients from the Mississippi/Atchafalaya River and seasonal stratification (layering) of waters in the Gulf. As nutrient-laden water from the Mississippi flows into the Gulf, this fresh water is less dense and remains above the denser saline seawater. In addition to the saline gradient caused where the fresh water and saline water meet, the fresh water is warmer than the deeper ocean water, further contributing to the stratification. This stratification prevents the mixing of oxygen-rich surface water with oxygen-poor water on the bottom of the Gulf. Without mixing, oxygen in the bottom water is limited and the hypoxic condition remains. In the Gulf hypoxic zone “water near the bottom of the Gulf contains less than two parts per million of dissolved oxygen” (<https://www.epa.gov/ms-htf/northern-gulf-mexico-hypoxic-zone#:~:text=The%20hypoxic%20zone%20in%20the,condition%20referred%20to%20as%20hypoxia.>)

Dissolved oxygen concentrations associated with the Applicant’s Preferred Alternative are projected to generally increase in the Barataria Basin during the modeled period as compared to the No Action Alternative, which would decrease the potential for hypoxia to occur. Further, vegetative growth projected by the Delft3D Basinwide Model to occur due to Project operations is expected to utilize the nutrients diverted from the Mississippi River, resulting in lower concentrations of nutrients occurring in the Barataria Basin and reaching the Gulf through Barataria Bay than would reach the Gulf through the Mississippi River. As mentioned in Section 4.5.5.1 in Surface Water and Sediment Quality of the EIS, the majority of the Barataria Basin is shallow and not typically prone to stratification that promotes hypoxic

---

conditions. The shallow nature of the Barataria Basin allows for full water column mixing by wind and tidal action, reducing the opportunity for algae to establish to the extent that would cause hypoxia. The Delft3D Basinwide Model's dissolved oxygen results do not suggest that Project implementation would result in oxygen concentrations below the 5 mg/L water quality criterion in Barataria Basin. To make this clearer in the Final EIS, language indicating that the Delft 3D Basinwide Model results do not suggest that a significant hypoxic zone will form in Barataria Basin due to project implementation has been added to Section 4.5.5.5.2 Applicant's Preferred Alternative in Surface Water and Sediment Quality of the Final EIS. Furthermore, as explained in Section 4.25.5.2 of the Cumulative Impacts section of the EIS, if the Mid-Breton Sediment Diversion is permitted, the combined impact of Mississippi River diversions operating simultaneously may reduce nutrient flow from the river to the Gulf, having a beneficial impact on the Gulf of Mexico hypoxic zone.

Aquatic resource impacts associated with algal blooms (caused by excess nutrients such as nitrate and phosphate) are addressed in Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS. A reference to this section is included in Section 4.5.5.3 in Surface Water and Sediment Quality and has been added to Section 4.5.5.4.2 Applicant's Preferred Alternative of the Final EIS. Finally, the EIS acknowledges the potential for major adverse Project impacts from harmful algal blooms to occur, and that the formation of these blooms is not well understood by the scientific community (see Section 4.26.4 in Additional Considerations in Planning).

Appendix R2 Monitoring and Adaptive Management (MAM) Plan of the EIS includes monitoring of nutrients, as well as phytoplankton species composition (including harmful cyanobacterial/algal bloom species) if warranted, in the Barataria Basin during Project operations to guide CPRA's management actions.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA

TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain

adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)

- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Concern ID: 62085**

**Concerns were raised that the proposed MBSD Project would affect fishermen with smaller vessels. Fishermen would have to travel farther towards the Gulf in their boats**

---

**to catch some species such as speckled trout, and brown and white shrimp. Most inshore fishing vessels are not large enough or equipped to go any further outside the basin.**

**Response ID: 16249**

The impacts raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discusses impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, moderate to major adverse impacts on brown shrimp and oyster fisheries in the Project area are anticipated. Section 4.14.4.2 Applicant's Preferred Alternative discusses the potential adaptive responses of fishermen to changes in species abundance, including the potential for substitution of species and need for gear upgrades, as well as increasing the length of fishing trips. CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact

---

determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62709**

**The 2019 opening of the Bonnet Carré Spillway caused significant impacts to aquatic fauna from the release of river water, and resulted in a declared fisheries disaster of at least \$58 million.**

**Response ID: 16087**

A summary of select natural and man-made diversions in southeastern Louisiana, including the Bonnet Carré Spillway, has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment, including area fisheries. This summary is available in Appendix U of the Final EIS. However, it is important to note that the Bonnet Carré Spillway is an emergency flood control structure that is not operated for ecological purposes. The anticipated impacts of the proposed Project on aquatic fauna from the release of river water is discussed in detail in Chapter 4, Section 4.10 Aquatic Resources.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would

decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62782**

**A large number of commenters expressed general opposition to the proposed Project.**

**Response ID: 16364**

The commenter's opposition to the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

**Thomas, L., Marques, T., Booth, C., Takeshita, R., and L. Schwacke. 2021. Predicted population consequences of low salinity associated with the proposed Mid-Barataria Sediment Diversion Project on bottlenose dolphins in the Barataria Bay Estuarine System Stock.**

**Response ID: 16593**

The Draft EIS included an analysis of the impacts to marine mammals, including BBES dolphins in Chapter 4, Section 4.11.5.2 Barataria Bay Estuarine Stock. This analysis incorporated the Booth and Thomas (2021), Garrison et al. (2020), and Schwacke et al. (2017) studies, and the Final EIS includes additional analyses that were completed by Thomas et al. (2021) after the Draft EIS was released for public comment. The impact conclusions in the Draft EIS were based in large part on Garrison et al. (2020), which predicts that only a remnant population of dolphins would continue to exist in Barataria Basin after diversion operations commenced. The conclusion of major, permanent, adverse impact to bottlenose dolphins is also supported by Thomas et al. (2021), which built on these earlier studies and concludes that, after 1 year of operation of the Applicant's Preferred Alternative, there would be 61 percent fewer dolphins in the Central stratum than under the No Action Alternative, 35 percent fewer in the West stratum, 12 percent fewer in the Southeast stratum, and 2 percent fewer in the Island stratum, with 25 percent fewer overall. Thomas, et al. further concluded that after 10 years of operation, there would be 100 percent reduction in the populations of dolphins in the Central and West strata, an 82 percent reduction in the population of the Southeast stratum dolphins, and a 34 percent reduction in the population of the Island stratum dolphins as compared against the No Action Alternative, with an overall difference in population of 78 percent. (Note that Thomas, et al. 2022 slightly refined some of these projections.) After 50 years of operation, in three out of the four strata, dolphins are predicted to be functionally extinct (defined as less than or equal to dolphin in Thomas, et al.

---

2022) under the Applicant's Preferred Alternative, with the remaining Island stratum being 85 percent lower [95 percent CI -28 -- -99] under the Applicant's Preferred Alternative than under the No Action Alternative. Overall, by the year 2076, the median predicted stock size across all of Barataria Bay under the Applicant's Preferred Alternative is projected to be 143 dolphins (95 percent CI 11-706) compared to a predicted 3,363 dolphins (95 percent CI 2,831-4,289) predicted to inhabit the Barataria Bay under the No Action Alternative. In other words, the BBES dolphin stock is projected to be 96 percent smaller (95 percent CI -80 -- -100) under the Applicant's Preferred Alternative than then No Action Alternative. Chapter 4, Section 4.11 Marine Mammals of the Final EIS has been updated to reflect the results of Thomas et al. (2021).

Booth and Thomas (2021) evaluated multiple scenarios with different salinity changes, and in one of those scenarios' where bottlenose dolphins experience a change in salinity within 0 to 5 days from typical salinity environment (that is, mean 15 to 25 ppt) down to an atypical environment with salinity below 5 ppt for an extended period, the median time to death would be 22 days.

---

**Concern ID: 64171**

**Comments were received suggesting that the MBSD would have negative impacts on the fishing industry due to further accelerations in exits from the industry especially for older members of the workforce for whom job retraining may not be as easily undertaken and the fact that there are less young fisherman coming into the fishing industry to replace the aging fisherman. The invaluable traditional ecological knowledge that has been passed down from generations could be lost.**

**Response ID: 16267**

Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discusses impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, moderate to major adverse impacts to shrimp and oyster fisheries in the Project area are anticipated. Section 4.14.4.2 Applicant's Preferred Alternative discusses the potential behavioral responses of fishermen to changes in species abundance, including the potential for substitution of species and need for gear upgrades, increasing the length of fishing trips, as well as exiting the industry.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)

- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Correspondence ID:39790**

Sherald &amp; Jane Buras

We searched 3 years for a location to purchase or build a second home on the water to enjoy during our retirement years. Our primary goal was to fish and entertain family and friends. We looked at the Mississippi Gulf Coast and several locations in Louisiana. We also purchased a 22 boat 3 years ago that we store at the Myrtle Grove Marina to primarily fish in Barataria Bay. In March 2020, unaware of the Diversion, we purchased 2 lots in the Myrtle Grove Marina Phase I Subdivision because of the close proximity to our main home, the well-maintained subdivision, the newly renovated Marina, and the superb fishing in Barataria Bay. We worked with an architect during COVID and finalized our plans in July 2020 to build a 3-bedroom 3-bath home with a double boat lift. Then, we worked with a contractor on pricing. Construction prices were on the rise due to COVID so we proceeded cautiously due to the cost of construction being higher than comparable existing home values in Myrtle Grove. In December 2020, we received an insurance quote from an agent who we found out was a member of CPRA where he warned us of the Diversion. Needless to say, we stopped the project and waited for the issuance of the Draft EIS.

We were devastated to read in the Draft EIS

" that the Diversion would be 1.5 miles north of the Myrtle Grove Marina Subdivision

" that tidal flooding in Myrtle Grove would increase by at least 119 days per year putting silt and sludge on our property with no access by car to our Myrtle Grove home for one-third of the year or more

" that silt in the Wilkerson Canal would make it impossible to leave our Myrtle Grove home by boat to fish in Barataria Bay because there is no guarantee that CPRA will maintain the canals and the Marina would probably close

" that the flow of fresh water would totally change the fishing in Barataria Bay from salt water to fresh water as well as kill dolphins and no telling what else considering the content of the Mississippi River

" that the \$305 million mitigation plans are weak and basically gave us no confidence that the U.S. Corps nor CPRA addressed the nearby communities. Just for Myrtle Grove streets, some houses, and most boat docks would need to be raised; utilities would need to be reconstructed; lots would need to be filled and driveways would need to be replaced to meet the new height of the streets; and canals would need to be maintained by CPRA

How could a 1,000 page report be issued with no specific plans on how to protect a well-established, well maintained, unique Subdivision with a Marina located 1.5 miles from the Diversion with the average home price of \$500,000? There is no way that we will give permission to the U.S. Corp to intentionally flood our property. We purchased the lots well aware of natural flooding but not man-made intentional flooding.

With the issuance of the Draft EIS the property values in Myrtle Grove have dropped! The Diversion will have a permanent detrimental effect to Myrtle Grove Subdivision and Marina. Who would buy a lot or house in Myrtle Grove now?! Why should we build now?! Would you build?!

This is a \$2 billion project that proposes to create only 21 square miles of new land over 50 years and as a result destroy nearby economy, communities, and culture. South Louisiana

can not wait for 50 years and there is more than 21 square mile of coast that needs attention. The Mississippi River has been flowing south forever and there is no large land mass at the southern tip so theoretically it doesnt sound reasonable that this Diversion will create anything of substance in 50 years.

Our life is on hold due to this project along with incurring cost to maintain 2 lots that we may never be able to build on. The virtual meetings and community meetings were pretty much worthless. CPRA wanted us to tell them what to do. Really?! Your team is filled with engineers and you know what effect there will be. You need to propose to us what to do. Myrtle Grove Subdivision and Marina needs to be presented with a plan sooner than later.

---

**Concern ID: 61865**

**Commenters asked why the location was chosen as the site for the proposed MBSD Project, since it so close to and impacts the Myrtle Grove Subdivision.**

**Response ID: 15936**

Chapter 2, Section 2.4.1 Evaluation of Location Alternatives under Step 2: Evaluation of Operational Alternatives - Location, Operational Trigger, Capacity, and Base Flow in the Draft EIS, detailed the evaluation of alternatives based on geographic location and the reasoning for selecting the proposed location for the MBSD Project. Consideration for the location of the proposed MBSD Project took into account the proximity of the diversion intake to a point bar in the Mississippi River that could serve as a continuous, long-term sediment source for the diversion in combination with the outfall location and receiving basin being well suited to gain benefits from a sediment diversion, the potential for accretion of sediment in the Barataria Basin, and the creation, maintenance, and sustainability of existing and future wetlands and marshes. In addition, previous studies have considered several general locations for a sediment diversion from the Mississippi River into the Barataria Basin, including the upper, middle and lower parts of the basin and were used in the evaluation in the EIS. The impacts of the proposed MBSD Project and its alternatives, particularly on Myrtle Grove, can be found in Chapter 4 Environmental Consequences under each of the Project's resources.

---

**Concern ID: 62013**

**The Myrtle Grove subdivision is a residential neighborhood composed of homes, not camps, many of which may not have access to flood insurance. The proposed MBSD Project would increase flooding of the properties which would severely impact access to property and property values in Myrtle Grove and other affected areas such as Lake Hermitage.**

**Response ID: 16210**

The impacts raised by the commenters were considered in the Draft EIS in Chapter 4, Section 4.13 Socioeconomics, which discusses impacts of the proposed Project on property values, and Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction which discusses flood and storm related impacts due to the Project. The EIS (Section 4.13.5.3 in Socioeconomics) finds that the proposed Project would result in minor to moderate, permanent, adverse impacts on housing and property values in communities near the immediate outfall areas (within 10 miles north and 20 miles south) and outside of flood protection. These affected areas include the communities of Myrtle Grove, Hermitage, Suzie

---

Bayou North, Suzie Bayou South, Woodpark, Happy Jack, and Grand Bayou, and to a lesser extent portions of Lafitte. In addition, negligible to minor increases in levee overtopping south of the immediate outfall area may occur in future years following delta formation (after approximately 20 years of Project operations) in the outfall area in communities inside levees, with the greatest increases in communities adjacent to the NOV-NFL Levee system.

The Final EIS discusses modeled impacts of the Project on water surface elevations and corresponding tidal inundation in Lafitte, Myrtle Grove, and Grand Bayou. These three communities are generally representative of other communities in the basin, including Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, and Happy Jack (see Figure 4.13-1 in Section 4.13.1 Area of Potential Impacts in Socioeconomics). Lafitte, Myrtle Grove, and Grand Bayou also represent varying levels of exposure to tidal flooding. As explained in Section 4.20.3 Public Health and Safety – Overview of Model for Impact Analysis, Grand Bayou has no structural protection and would experience similar tidal flooding as the unprotected communities of Hermitage, Suzie Bayou North, Suzie Bayou South, and Happy Jack. Myrtle Grove impacts would be similar to the neighborhood of Woodpark. Without implementation of the measures outlined in the Mitigation and Stewardship Plan (Appendix R1), the largest impact on tidal inundation frequency due to the diversion is projected to occur in Myrtle Grove, as this is the community that is closest to the immediate outfall area of the proposed diversion structure outside flood protection and thus is projected to see the greatest increase in water levels.

Section 4.13.5.3 Housing and Property Values has been revised in the Final EIS to provide additional discussion of potential effects of the proposed Project on the availability of flood insurance. The Final EIS concludes that the proposed Project would not impact the availability flood insurance, but may cause an increase in flood insurance premium for some properties in communities projected to experience increases in tidal flooding and storm hazards. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict how flood insurance premiums may change. Since issuance of the Draft EIS, CPRA has expanded and refined the mitigation measures intended to address the inundation projected in the communities south of the proposed Project's immediate outfall area including Myrtle Grove, Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack. CPRA plans to provide a combination of structural improvements (for example, improving bulkheads and raising roads and homes) and non-structural measures.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

In Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack, CPRA plans to purchase Project servitudes from landowners. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. See Section 6.3.2 of the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62226**

**The diversion would destroy the property in which commenters have made substantial investment.**

**Response ID: 15750**

Draft EIS Chapter 4 Section 4.13.5.3 in Socioeconomics discussed impacts of the proposed Project on property values. Final EIS Appendix R1 Mitigation and Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to

---

mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties.

In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitude. A Project servitude would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be

implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62227**

**The diversion would flood access roads, damage vehicles, cause siltation/sludge, cause cancellation of flood insurance, inundate cemeteries, stress levees, impact provision of emergency services, and increase the cost to raise homes, slabs and wharves.**

**Response ID: 15820**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discusses the increased flooding impacts outside of federal levee systems, including road inundation and infrastructure damage, anticipated to be caused by the operation of the diversion. Sections 4.13.5.1.2.1 and 4.13.5.3.2.1 in Socioeconomics of the Final EIS has been updated to include potential impacts such as vehicle damage, accumulation of siltation and sludge, cemetery inundation and interruption of emergency services. Recognizing the potential for these impacts, CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties.

In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes. A Project servitude would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits

---

prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Final EIS concludes that the proposed Project would not have impact on the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62661**

**The Mississippi River is currently not capable of building land as it used to, in part because it does not carry as much sediment as it used to, and thus the proposed**

---

**Project will fail. If it were capable of building land, there would be a large land mass at its current outlet.**

**Response ID: 16634**

The capability of the Mississippi River to support land building has been considered in the Draft EIS. For example, Chapter 3, Section 3.4.2.5 Sediment Transport discusses the available sediment in the Mississippi River, noting that studies had shown downward trends in sediment supply in the river through the 1990s, but that since then the volume of sediment (coarse and fine) in the water column has remained fairly constant. The river still carries a massive sediment load, but not as massive as before. The possible causes of the diminished sediment load include trapping by dams, hardening of banklines, improved farming practices, and other processes as described in the EIS in Chapter 3, Section 3.4.2.5 Sediment Transport. The EIS takes this diminished sediment load into account when computing the sediment load that would be delivered to the Barataria Basin via the proposed diversion. This is described in detail in Section 5.2.2 (River Discharge and Sediment Rating Curve) of Appendix E (Delft3D Modeling) to the EIS.

The LA TIG acknowledges the comment and understands the commenters' concern, and this was considered in the LA TIG's Draft Restoration Plan. The Mississippi River does carry a large plume of sediment into the Gulf of Mexico each year. A large delta exists at the mouth of the river, often requiring dredging to maintain navigation. Crevasses have been used to supplement land building in the birdfoot delta, confirming the ability of the river to build and maintain land. The size of the delta is limited by a number of factors, including the depth of the water at the mouth of the Mississippi River and the constant erosive forces affecting the Gulf of Mexico. By comparison, the Project is proposed to be constructed at RM 60.7 of the Mississippi River because this location is capable of capturing and retaining the sediments transported into the Barataria Basin by the Project (see EIS Chapter 2, Section 2.4.1.3 Application of Additional considerations to Potential Alternative Locations in Upper, Middle, or Lower Barataria Basin). As noted above, these issues and analyses are included in the EIS, and are also considered by the LA TIG in its identification of its Preferred Alternative in the Restoration Plan.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of

---

the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62783**

**Commenters noted that the cost of designing and building the proposed MBSD Project is too high for the small amount of land anticipated to be built.**

**Response ID: 16365**

The commenter's opposition to the cost of the proposed Project is noted. Under NEPA, a cost-benefit analysis is not required for the EIS unless such an analysis is relevant to the agency's decision. USACE generally assumes that the permit applicant has conducted its own economic evaluation of a proposed project. Consequently, a cost-benefit analysis is not relevant to USACE's permitting decisions. As part of evaluating the proposed Project, the LA TIG considered the costs associated with developing, constructing, and managing the Applicant's Preferred Alternative consistent with the Restoration Plan alternatives evaluation criteria in 15 CFR §990.54. This discussion is in Chapter 3, Section 3.2.1.2 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan.

---

**Concern ID: 62951**

---

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates, and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove

---

Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again, community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department

of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62968**

**If operation of the diversion causes infill of various canals used to access surrounding communities, who will be responsible for dredging to maintain access? For example, if Wilkinson Canal is filled with silt then the canal cannot be used and waterfront property owners with boat lifts in Myrtle Grove will not be able to get out using their boats; the EIS does not require a remedy or provide a funded maintenance plan for this issue (including who would pay for dredging).**

**Response ID: 16642**

The impacts raised by the commenters were considered in the Draft EIS. As stated in Chapter 4, Section 4.21 Navigation, the USACE would continue to maintain federal navigation channels in the Project area during Project operations.

In acknowledgement of commenters' concerns regarding maintenance of non-federal navigation channels and canals impacted by sedimentation of the proposed diversion, the Mitigation and Stewardship Plan includes measures to mitigate impacts on navigation resulting from operation of the Project, including monitoring and dredging or other measures for certain non-federal navigation channels including Wilkinson Canal (see Appendix R1 [Mitigation and Stewardship Plan] to the Final EIS for additional details).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the Final Mitigation and Stewardship Plan and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued.

---

Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Laura Ledet

I fully support the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

I support funding the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

I support centering community needs in planned mitigation and stewardship efforts.

We should commit to developing a robust adaptive management program.

We cannot afford to lose any more of our unique and beautiful land. We have to protect our wetlands and our communities however we can.

---

**Concern ID: 63332****A large number of commenters expressed general support for the proposed Project.****Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 62801****State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.****Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of

---

publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of

---

wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Gary Rebstock

I am a life long resident of S. Lafourche Parish in S. Louisiana. At age 70, I've been traveling in the marshes, bayous, & along the Gulf coastline my entire adolescent & adult life & have seen the dramatic & heartbreaking loss of our wetlands & coastline.

Where there was once small (& usually manmade) canals within verdant marsh, there is now open water with very little marsh. Area highways (La 1 S. of Golden Meadow, LA comes to mind) that once only flooded during Storm surges, now are regularly threatened during strong S. winds & high tides.

The causes for this destruction & coastline decay are many & have been outlined by environmental scientists. There is no need for me to delineate these further. It's known science.

What is also known are the solutions & mitigations needed "To turn back the Tide" so to speak:

**APPROVE THE MID-BARATARIA SEDIMENT DIVERSION PROJECT!!!!**

I'm certainly not an authority on the details of this Project & I am aware of the criticism from areas which will be impacted, I do get the sense that the Project addresses these criticisms & has mechanisms to mitigate the impact to these communities & the people living there.

Here's what I do know: We are 40 years late in addressing Land Loss in S Louisiana & if we don't start doing something NOW there will be no Land to debate about & I-10 in Louisiana will become a scenic coastline drive & our beloved way of life will become a fanciful memory. So:

**PLEASE ACT NOW & APPROVE THE MID-BARATARIA SEDIMENT DIVERSION PROJECT!!!!**

Thank you & God Speed!

---

**Concern ID: 61740****Over time, Louisiana's natural environment is continuing to be destroyed by humans.****Response ID: 16161**

The issues raised by the commenters were considered in the Draft EIS. Past and ongoing adverse human impacts on the Project-area ecosystem are discussed throughout Chapter 3 Affected Environment of the EIS. Past, present, ongoing, and reasonably foreseeable actions and trends in the Project area are discussed throughout Chapter 4, Section 4.25 Cumulative Impacts, including how those actions have and may continue to affect Louisiana's natural environment. The proposed Project is a restoration action intended to restore and sustain wetlands in the Barataria Basin and compensate for damages to natural resources that resulted from anthropogenic causes, for example, the DWH oil spill.

---

**Concern ID: 63332****A large number of commenters expressed general support for the proposed Project.****Response ID: 16288**

---

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63367**

**Commenters noted that there is criticism from impacted communities and industries; however, the proposed Project proponent addresses these criticisms and has mechanisms to mitigate the impacts.**

**Response ID: 16329**

CPRA's coordination with the affected communities and industries is described in Chapter 7 Public Involvement and Appendix R1 (Mitigation and Stewardship Plan) of the EIS, which have been revised in response to public comments in the Final EIS.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Good afternoon,

*This email is to introduce you to an innovative solution to many water diversion issues...I would be happy to answer any questions or present a virtual Lunch and Learn to show the versatility of Muscle Wall!*

See how some of our current customers use Muscle Wall:

[Muscle Wall Versatility](#)

Muscle Wall is...a flood Barrier company that uses durable, hollow walls that can be quickly moved into place to protect homes, businesses, municipalities, and help construction companies deal with the devastating and costly impact of flooding.

[Case Studies-Engineering info](#) to learn more.

**Top 5 Attributes of Muscle Wall**

1. Height Range 2ft to 8ft per wall
2. 4ft Wall - 120lbs empty...1,600lbs filled with water

- 3. Replaces 1,000s of sandbags in a fraction of the time
- 4. No heavy equipment required - Reusable, Reliable, Rapidly deployed
- 5. Patented "L" shape design utilizes the weight of the water to help anchor the walls in place!

Recent Stream diversion in Colorado

Muscle Wall has been used by the Army Corp of Engineers, the NY Port Authority, the state of CA, and many more!

Let me know if you have questions...I'd look forward to discussing at your convenience,

Thank you,

*Ed*

**Concern ID: 63291**

**The Project should consider the use of muscle walls to protect homes, businesses, municipalities from flooding.**

**Response ID: 16615**

The Draft EIS did not consider the use of muscle walls as a potential flooding mitigation measure. While CPRA has updated the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA has not made final decisions regarding the materials that would be used for the structural mitigation measures.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

John Lea

See 5 points and suggested alternative solution below.

The MBSD project should be stopped, and the Louisiana Trustee Implementation Group (Trustees) and Coastal Protection and Restoration Authority (CPRA) be required to define a Restoration Plan that focuses on restoring for the injuries caused by DWH oil spill (DWH). The MBSD does not achieve its specific objective to restore for injuries to the oyster industry. Oyster production in the Barataria Basin will be severely reduced if not completely destroyed by the MBSD flood waters.

The Trustees have the authority to stop the current project. Wisely planned, the Trustees and the CPRA could combine storm protection with the expansion of the oyster industry.

**Point One**

The Trustees were overly ambitious in choosing the Comprehensive Integrated Ecosystem Restoration Alternative (Alternative A) as their response to the DWH. Alternative A seeks to restore for coastal land loss due to subsidence, saltwater intrusion, levees, canals, and the DWH. In the context of coastal land loss, the DWH seems to be a minor factor of coastal land loss. Proper use of the funds due to the DWH should be focused on restoring for injuries due to the DWH. The Trustees should have chosen an alternative that focuses on the impacts of the DWH.

**Point Two**

The Comprehensive Alternative does a poor job in addressing the five overarching goals the Trustees set for the restoration effort. Those goals are:

1. Goal: restore and conserve habitat. Restoration Types: wetlands, coastal, and nearshore habitats; habitat projects on federally managed lands.
2. Goal: restore water quality. Restoration Types: nutrient reduction; water quality.
3. Goal: replenish and protect living coastal and marine resources. Restoration Types: fish and water column invertebrates; sturgeon; submerged aquatic vegetation (SAV); oysters; sea turtles; marine mammals; birds; mesophotic and deep benthic communities.
4. Goal: provide and enhance recreational opportunities. Restoration Types: provide and enhance recreational opportunities.
5. Goal: provide for monitoring, adaptive management, and administrative oversight to support restoration implementation.

- By diverting Mississippi river water into the coastal zone, the chosen Alternative A damages water quality (salinity and chemical content) and destroys habitat essential to living coastal and marine resources.

- The adaptive management plan is not feasible. See Table 4.5-2 of the Trustees' Draft Phase II Restoration Plan #3. The Table shows that expected salinities would not support oyster culture in the Barataria Basin, except at Barataria Pass at Grand Isle. The proposed "adaptive management" would require actions to maintain the existing salinity pattern in the

project area, that is, undoing the impact of the freshwater diversion. This action is not contemplated by chosen Alternative A.

#### Point Three

The Trustees Strategic Restoration Plan and Environmental Assessment #3 stated that The Incident resulted in over 1,100 kilometers of wetland oiling Gulf-wide. Approximately 95% of this marsh oiling occurred in coastal Louisiana, with the heaviest oiling in the Barataria Basin. The heaviest oiling occurred in marshes dominated by *Spartina alterniflora*. The Restoration Plan pointed out the importance of the marsh edge and *Spartina* for the productivity of the region. Yet, the freshwater diversions in Alternative A will destroy *Spartina* marsh and build freshwater wetlands. The Trustees should define a Restoration Plan that focuses on building *Spartina* marsh to help restore for the injuries caused by the DWH.

#### Point Four

The current project design (Alternative A) is a misuse of the DWH funds. As mentioned above, the Trustees' Draft Phase II Restoration Plan #3 Table 4.5-2 shows how oyster culture will be incompatible with the expected salinity regime caused by the freshwater diversion. Since the project will harm oysters, brown shrimp, and bottle nose porpoises, it is inconsistent with the 2013 US Court decree which required the funds be used "for the purpose of creating, preserving, and restoring coastal habitat." It is also inconsistent with the plea agreement relevant to the National Fish & Wildlife Foundation (NFWF) funds. This plea agreement states, in part: "to remedy harm to resources where there has been injury to, or destruction of, loss of, or loss of use of those resources resulting from the Macondo oil spill." Since Alternative A attempts a Comprehensive Integrated Ecosystem Restoration, it is using DWH funds for projects beyond the injuries "resulting from the Macondo oil spill." Since the project harms oysters, it cannot be said that it restores for injuries caused to the oyster industry by the DWH oil spill. The funds are being misused.

#### Point Five

Consider the inequality of allowing the River to destroy farms and businesses in southern Louisiana when that would certainly not be allowed in northern Louisiana or anywhere else upriver. The MBSD unjustly places the burden of poor coastal policy implementation on Louisiana's coastal fishers--who have planned their lives on the assumption the government levees would hold.

With our levees, we've cut the River off from thousands, perhaps, millions of acres of levee-protected flood plains upriver from NOLA. The Delta in northern Louisiana would receive annual deposits of sediment if it were not protected by the levee. Government would rush to rebuild levees and indemnify the people hurt by a breach of the levees anywhere along the existing levee, from Louisiana to "Minnesota." But here, when the levee breached at Mardi Gras Pass, nothing was done to re-protect the mostly African American oyster farmers and fishers whose oyster farms in Breton Sound were destroyed by the freshwater from Mardi Gras Pass.

#### An Alternative Solution

The problems with the current diversion design are the freshwater flood and the dispersion of the sediment. The flood disrupts existing ecology and renewable resource industries, like the oyster industry. The dispersion of the sediment provides low-quality storm protection. A

diversion design which diverts river water and sediment into leveed reservoirs would resolve both problems.

When the River is in flood, sediment dredged from the River would be pumped into the reservoirs. The US Congress would pay for the dredging as part of its commitment to maintain navigation in the River. Sediment captured up-river would not have to be dredged from down-river locations, such as the navigation channels at the mouth of the River. After the River returns to normal levels, the water captured in the surge reservoirs would be released back into the River. The freshwater would not harm brackish water ecologies.

The leveed reservoirs receiving the freshwater and sediment would provide "immediate" dryland storm protection by their levees and additional long-term storm protection by the dryland being built within the leveed cells. This follows the example of the Dutch polders which created dryland for farms and towns by first building levees around portions of the sea and managing the development of dryland within the leveed cells. For another example, see *Turning Water Into Land. How New Orleans Created the Lakefront Neighborhoods, 1926-1934*, by Richard Campanella, *New Orleans Times-Picayune*, April 13, 2018.

If the parishes were given the \$1.4 billion dollars, they would probably build dryland storm protection. They would not likely use it to build wetland. The parishes may decide to build dryland to be used for economic development of agriculture, industry, or housing. This use of the funds could combine storm protection with the expansion of the oyster industry. This would "restore for injuries" caused by the DWH.

This email has been blind-copied to a large number of coastal stakeholders.

---

**Concern ID: 61883**

**Define a Plan that focuses on building Spartina marsh to help restore for the injuries caused by the DWH oil spill.**

**Response ID: 15838**

USACE is not evaluating the proposed Project for compliance with the OPA and is not involved in the process to restore the damage caused by the DWH oil spill. As explained in the Restoration Plan, the LA TIG is responsible for deciding the appropriate use of NRDA funds to restore natural resources injured by the DWH oil spill in the Louisiana Restoration Area. As explained in the Final EIS, Appendix B2 Draft EIS Public Review: Public Meetings Summary and Responses to Public Comments, Section 2.0 Agency Roles in the Responses to Public Comments, response content pertaining to the LA TIG's Draft Restoration Plan, the OPA and/or NRDA processes or other Trustee Planning was developed by the LA TIG and states only the LA TIG's views.

With respect to the Restoration Plan, the commenter is correct in noting the extensive injury to Spartina from the DWH oil spill and the importance of marsh edge and Spartina in wetland productivity. However, the overall injury in Louisiana and the Barataria Basin from the DWH

---

oil spill impacted shorelines as well as many of the species of flora and fauna that rely on those shorelines. To address the scale of ecosystem-level injury and current state of ecosystem decline in the Barataria Basin, in its “Strategic Restoration Plan and Environmental Assessment #3: Restoration of Wetlands, Coastal, and Nearshore Habitats in the Barataria Basin, Louisiana” (LA TIG 2018) the LA TIG selected for further development a large-scale sediment diversion to reconnect and reestablish sustainable deltaic processes between the Mississippi River and the Barataria Basin and contribute to the ecosystem-level restoration necessary in Barataria Basin, beyond restoring for only *Spartina* marsh. By implementing the proposed Project, the MBSD is expected to make ecosystem-level improvements, including benefits to *Spartina* marsh wetlands ecosystems broadly.

Louisiana Trustee Implementation Group (LA TIG). 2018. Final Strategic Restoration Plan and Environmental Assessment #3: Restoration of Wetlands, Coastal, and Nearshore Habitats in the Barataria Basin, Louisiana. Available online at:

[http://www.gulfspillrestoration.noaa.gov/sites/default/files/2018\\_03\\_LA\\_TIG\\_Final\\_SRP\\_EA\\_508-Compliant.pdf](http://www.gulfspillrestoration.noaa.gov/sites/default/files/2018_03_LA_TIG_Final_SRP_EA_508-Compliant.pdf). Accessed: March 15, 2018.

---

**Concern ID: 61895**

**Commenters suggest using a sediment diversion to selectively build land by directing sediment to a contained area, such as a colmates system or large-scale marsh creation containment area. A controlled system of dredging to create dry land coupled with a system to contain sediment-infused river water in specific areas outside of the levee protection system would be most beneficial to create more land exactly where it’s needed.**

**Response ID: 15988**

This method of sediment transport and/or sediment containment and land building would not meet the proposed Project’s purpose and need of reconnecting and reestablishing sustainable deltaic process between the Mississippi River and the Barataria Basin. A colmate or other means of large-scale marsh creation using dewatered sediment would allow for sediment to be transported from the Mississippi River to the Barataria Basin and deposited into a location confined by containment berms, which would create an impoundment where the suspended sediment would settle out of the water column over time to create a marsh platform. Once the area dewatered and the platform stabilizes at an appropriate marsh elevation, the berms would be degraded or gapped to allow fish passage and hydrologic exchange. While this type of system would create marsh, it would not be a passive system and would require active management and maintenance, including potentially pumps to ensure sediment transport, mechanical gapping/degrading of the retention berms and periodic lifts to combat the effects of subsidence. It would not reestablish natural deltaic processes. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

---

**Concern ID: 61930**

**The proposed MBSD Project is an inequitable use of public funds because its negative impacts fall most directly on marginalized ethnic groups, including African American, Native American, Latin American, Asian American, Canary Islander American (Islenos), and Croatian American and unjustly places the burden on Louisiana’s coastal fishers.**

---

**Risks often fall disproportionately on low-income or minority communities due to ongoing institutional injustices. These low-income and minority communities, including homes, cultures, and livelihoods of Indigenous people and other people of color are often sacrificed for the benefit of the “greater good”, particularly for the larger tax bases upstream of the proposed MBSD Project. For example, when the levee breached at Mardi Gras Pass, nothing was done to re-protect the mostly African American oyster farmers and fishers whose oyster farms in Breton Sound were destroyed by the fresh water from Mardi Gras Pass. But a levee breach anywhere else along the Mississippi River would be quickly rebuilt and the impacted people would be indemnified. Also, the most effective flood risk reduction solutions, like home buyouts, are not offered to low-income populations in areas south of New Orleans. Both the Draft EIS and the LA TIG’s Draft Restoration Plan would benefit from additional reflections on the natural and human history of the Project geography that resulted in such fundamental changes to the landscape and set us on the course of the land-loss crisis that Louisiana faces today. The EIS should describe historic, systemic inequities affecting communities with environmental justice concerns in the Project area to provide authentic and more complete context for the discussions.**

**Response ID: 16281**

The Draft EIS (including Section 4.15 Environmental Justice and Appendix H, Socioeconomics Technical Report at Chapter 2) included a discussion of communities with low-income and minority populations, including information about factors that have contributed to historic and systemic inequities in southeast Louisiana. As discussed in the EIS, the Project may have disproportionately high and adverse, long-term impacts on some low-income and minority populations in communities engaged in commercial and subsistence fishing and dependent on adversely impacted fisheries, as well as communities located near the immediate outfall area (within approximately 10 miles north and 20 miles south) and outside of federal levee protection. In addition, negligible to minor, adverse impacts related to increased risk of levee overtopping during certain 1 percent storm events south of the immediate outfall area may occur, which may impact the community of Ironton. Commenters also raised concerns about Mardi Gras Pass; however, the closure of Mardi Gras Pass is outside of the scope of the EIS.

CPRA has expanded and refined the Mitigation and Stewardship Plan, Appendix R1 to the Final EIS, since publication of the Draft EIS and LA TIG’s Draft Restoration Plan based on community and resource agency input. The mitigation and stewardship measures now provide additional detail regarding specific efforts targeted at assisting low-income and minority populations in addressing the potential impacts of the Project.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in

---

the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62634**

**The proposed Project would cause excessive harm to fisheries (for example, oysters and brown shrimp), dolphins, communities and recreational uses, which is unacceptable and would make its implementation a clear violation of OPA. OPA regulations states that proposed restoration actions should be evaluated by “the extent to which each alternative will prevent future injury as a result of the incident, and avoids collateral injury as a result of implementing the alternative”. Because the Project would injure species that were harmed by the Deepwater Horizon oil spill, it should not be implemented, even if it does benefit some habitats and species. Some commenters argued it was also inconsistent or in violation of the 2013 U.S. Court Consent Decree and the BP plea agreement relevant to the National Fish & Wildlife Foundation (NFWF) funds.**

**Response ID: 16650**

As explained in Section 2.0 of this Appendix B2 DEIS Public Review and Public Meetings, USACE is not evaluating the proposed Project for compliance with OPA and not involved in the process to restore damages caused by the DWH oil spill. Response content pertaining to the LA TIG's Draft Restoration Plan, OPA, or NRDA processes represent solely the views of the LA TIG, not USACE.

The potential collateral injuries of the proposed Project were considered in the LA TIG's Draft Restoration Plan.

OPA requires that Trustees develop and implement a plan for restoration, rehabilitation, replacement, or acquisition of the equivalent, of the injured natural resources under their trusteeship. See 33 U.S.C. § 2706(c). OPA further requires federal agencies to propose regulations for the “assessment of natural resource damages.” See § 2706(e). Under 2707(e)(2), any assessment of natural resource damages made in accordance with these regulations creates a rebuttable presumption on behalf of a Trustee in any administrative or judicial proceeding under the Act.

As required by OPA 2706(e), NOAA developed regulations outlining a process for the assessment of natural resource damages. These regulations (hereinafter “NRDA regulations”

---

at 15 CFR Part 990) also include a process for restoration planning, including the development and evaluation of restoration alternatives.

The 2016 U.S. Consent Decree with BP provides that monies received under the settlement for natural resource damages will be spent as outlined in restoration plans adopted by the Trustees consistent with 15 CFR 990. See Paragraph 19, and Appendix 2. The LA TIG's Restoration Plan is consistent with 15 CFR 990.

Title 15 CFR §990.54 of the regulations outlines a number of areas in which a reasonable range of alternatives should be evaluated to select the preferred alternative. Recognizing that almost all restoration comes with some potential for collateral injury, one factor for evaluation is the extent to which each alternative will prevent future injury and avoid collateral injury. The potential for collateral injury does not preclude an alternative from selection, rather the Trustees must evaluate each alternative under multiple factors, and select a preferred alternative to meet the outlined restoration objectives.

The LA TIG, in selecting the Preferred Alternative in the Restoration Plan, evaluated a reasonable range of alternatives under the factors outlined in 15 CFR §990.54. The LA TIG strove to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, avoiding collateral injury, benefiting multiple resources, and protecting public health and safety. See Sections 3.2.4.7 (Identification of a Preferred Alternative), 3.2.1.5 (Alternative 1 – Avoids Collateral Injury), and 3.2.2.5 (Alternatives 2–6 – Avoids Collateral Injury) of the Restoration Plan. A project can harm species also harmed by the spill and still be an appropriate project. This is especially true for projects like sediment diversions that seek to reestablish deltaic processes that shaped the historic delta ecosystems and necessarily entails reverting the current ecosystem to a more natural state that was altered when Mississippi River flows were cut off by construction of levees. However, without the proposed Project, there would also be adverse impacts to some of the same species due to large-scale wetland loss over time, as is anticipated from ongoing sea-level rise, subsidence, and other existing stressors, which is anticipated to reduce the suitability of habitat for many of the species that currently occur in Barataria Basin.

The LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. Given these tradeoffs, the LA TIG selected Alternative 1 as the Preferred Alternative in the Restoration Plan.

The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that more closely resembles historic conditions. As described in Section 3.2.1.6 (Alternative 1 – Benefits Multiple Resources) of the Restoration Plan, this sustained ecosystem is expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing deltaic processes, the proposed Project is expected to enhance

the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as the Preferred Alternative in the Restoration Plan because it believes it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net benefits of the proposed Project would meet OPA's requirement of restoration, rehabilitation, replacement, or acquisition of the equivalent, of the natural resources injured by the spill.

The BP Plea Agreement as it applies to NFWF funds is not relevant here as the LA TIG is not authorizing the use of those funds for this Project. Even if it were applicable, the criminal plea agreement expressly contemplates the use of criminal penalties for sediment diversion in Louisiana.

---

**Concern ID: 62666**

**It would be inappropriate, and contrary to the stated purpose of restoring injured resources, to use DWH settlement funds to implement a project that would harm the same wildlife (for example, shrimp, oysters, bottlenose dolphins, *Spartina alterniflora*) and ecological services that were negatively affected by the oil spill.**

**Response ID: 16625**

USACE is not evaluating the proposed Project for compliance with the OPA and is not involved in the process to restore the damage caused by the DWH oil spill. USACE's involvement with the proposed Project is limited to its permitting decisions and associated NEPA and other evaluations of the proposed Project under the CWA Section 404 and RHA Sections 10 and 14 (33 USC Section 408). USACE is not executing any DWH restoration actions under the OPA. As explained in the Restoration Plan, the LA TIG is responsible for deciding the appropriate use of NRDA funds to restore natural resources injured by the DWH spill in the Louisiana Restoration Area. As explained in the Final EIS, Appendix B2 DEIS Public Review and Public Meetings, Section 2.0 Agency Roles in the Responses to Public Comments, response content pertaining to the LA TIG's Draft Restoration Plan, the OPA and/or NRDA processes or other Trustee Planning was developed by the LA TIG and states only the LA TIG's views.

In the Restoration Plan, the LA TIG explained that the DWH oil spill resulted in the oiling of more than 1,100 kilometers of wetlands, nearly all of which were located in coastal Louisiana (DWH NRDA Trustees, 2016). The heaviest oiling occurred in the Barataria Basin, resulting in substantial injuries to natural resources in the basin (DWH NRDA Trustees, 2016).

Recognizing that the resulting loss of marsh productivity affected resources throughout the northern Gulf of Mexico ecosystem, the State of Louisiana and the federal Trustees that negotiated the DWH Natural Resource Damages settlement allocated \$4 billion, almost half of the total settlement amount, to restoring Louisiana's wetland, coastal, and nearshore habitats.

The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree of collateral injuries, to natural resources injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the LA TIG's Restoration Plan). The intended

---

restoration of freshwater flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, as noted in the LA TIG's Restoration Plan, without the proposed Project, sea-level rise, subsidence, and other existing stressors would result in additional marsh loss over time reducing the suitability of habitat for many of the same species.

The LA TIG must weigh the potential and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed Project against its potential benefits). The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that more closely resembles historic conditions. As described in Section 3.2.1.6 (Benefits Multiple Resources) of the Restoration Plan, this sustained ecosystem is expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing a deltaic process, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Final Restoration Plan because the LA TIG believes it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the NRDA Trustee's Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

In its Strategic Restoration Plan for Barataria Basin (2018), the LA TIG evaluated the potential and extent of collateral injury for a range of restoration techniques. Unfortunately, almost all large-scale restoration comes with some potential for collateral injury. The LA TIG evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54. In the Restoration Plan, the LA TIG strives to identify an alternative that would provide what it considers the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. Again, see Section 3.2.4 of the Restoration Plan for a discussion of how the LA TIG came to its decision.

In recognition of the potential for collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, the LA TIG has designed and CPRA will implement a suite of stewardship measures (see Section 3.2.1.1.5 [Associated Stewardship Measures] of the Restoration Plan and Appendix R1 to the EIS). The LA TIG is also committed through these measures to continuing efforts to restore the resources that would be adversely affected by the diversion, many of which were also injured by the DWH oil spill.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures

(collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62668**

**The Project fails to meet the five objectives that Trustees articulated in the PDARP/PEIS. By diverting Mississippi River water into the coastal zone, the proposed Project would damage water quality and destroy habitat essential to living coastal and marine resources.**

**Response ID: 16627**

USACE is not evaluating the proposed Project for compliance with the OPA and is not involved in the process to restore the damage caused by the DWH oil spill. As explained in the Restoration Plan, the LA TIG is responsible for deciding the appropriate use of NRDA funds to restore natural resources injured by the DWH oil spill in the Louisiana Restoration Area. As explained in the Final EIS, Appendix B2 DEIS Public Review and Public Meetings, Section 2.0 Agency Roles in the Responses to Public Comments, response content pertaining to the LA TIG's Draft Restoration Plan, the OPA and/or NRDA processes or other Trustee Planning was developed by the LA TIG and states only the LA TIG's views. The ability of the Project to meet LA TIG objectives was considered in the LA TIG's Draft Restoration Plan. In preparing the LA TIG's Restoration Plan, the LA TIG developed the goals and objectives for the proposed Project through an iterative restoration planning process, beginning with the restoration goals in the Final PDARP/PEIS, then developing SRP/EA #3 for the restoration of habitat and services in the Barataria Basin, and ending with Project-specific goals. The LA TIG notes that while the commenter asserts that the proposed Project would fail to meet the goals of the PDARP/PEIS, the PDARP/PEIS in fact included a large-scale sediment diversion as a key restoration technique (see Section 5.5.2.2 [Strategy to Achieve Goals] of the PDARP/PEIS).

The proposed MBSD Project has been developed to address the specific goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type. More specifically, the proposed Project has been designed to (1) restore a variety of interspersed and ecologically connected coastal habitats, (2) restore for injuries to habitats in geographic areas where the injuries occurred, while considering approaches that provide resilience and sustainability, and (3) restore habitats and their ecological functions in appropriate combinations.

In developing restoration alternatives, the LA TIG evaluated the proposed Project according to the OPA evaluation criteria, including the extent to which alternatives would prevent future injury as a result of the oil spill and avoid collateral injury, which could include a threat of compromised water quality from the introduction of Mississippi River water into the receiving Barataria Basin (see Section 3.2 [OPA Evaluation of the Alternatives] in the Restoration Plan). That OPA evaluation, as well as related evaluation of impacts to surface water quality evaluated in the EIS, finds that species with a wide range of salinity tolerance (for example, flounder) are not likely to be affected by the water quality changes resulting from operations of the diversion, but could experience minor collateral injuries due to temporary shifts in prey composition and distribution or suboptimal salinity affecting early life stages (see Section 3.2.1.5 [Avoids Collateral Injury] of the Restoration Plan and Chapter 4, Section 4.10.4.5 in Aquatic Resources of the EIS). Indirect impacts on bottlenose dolphins in the Barataria Basin could occur as water quality (for example, HABs, contaminants) habitat and food web dynamics shift over time. Overall, the operation of the diversion would be expected to have permanent minor to moderate changes in salinity, water temperatures, seasonal trends in total nitrogen and total phosphorus, dissolved oxygen trends, sulfate concentrations, and fecal coliform concentrations in the Barataria Basin (see Section 3.2.1.1 [Alternative 1 Description] of the Restoration Plan and Chapter 4, Section 4.5 Surface Water and Sediment Quality, Table 4.5-4 of the EIS).

Collateral injury and impacts to essential fish habitat are also included as part of the OPA and NEPA evaluation. The proposed Project would be expected to increase the overall coverage and biomass of SAV in the basin once salinity regimes stabilize and new freshwater or intermediate communities become established (see Section 3.2.1.6 [Benefits Multiple Resources – Alternative 1] of the Restoration Plan and Chapter 4, Section 4.10.4.1 in Aquatic Resources of the EIS). SAV is managed as essential fish habitat in the Barataria Basin, providing structured habitat that is of greater value for fish and crustaceans than unstructured habitats, such as soft bottoms (see Section 4.10.4.4 of the EIS). From the proposed Project, the Barataria Basin is projected to retain a diversity of marsh habitat types by 2050, with a projected acreage of approximately 207,000 acres of freshwater/intermediate marsh, 16,600 acres of brackish marsh, and 10,400 acres of saline marsh (see Section 3.2.1.6 [Benefits Multiple Resources] of the Restoration Plan and Chapter 4, Section 4.6 Wetland Resources and Waters of the U.S., Table 4.6-3 in the EIS). These wetlands provide ecosystem services, including essential fish habitat for fish and crustaceans and other aquatic species as described in Section 3.2.1.6 (Benefits Multiple Resources) of the Restoration Plan.

By reestablishing deltaic processes, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem. The proposed MBSD Project is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected

northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

---

**Concern ID: 62798**

**A commenter questioned the scale of the goals and objectives of comprehensive integrated ecosystem restoration in response to the DWH oil spill, noting it is overly ambitious. They suggested that DWH restoration focus on the impacts from the oil spill and not on comprehensive ecosystem restoration.**

**Response ID: 16496**

USACE is not evaluating the proposed Project for compliance with the OPA and is not involved in the process to restore the damage caused by the DWH oil spill. As explained in the Restoration Plan, the LA TIG is responsible for deciding the appropriate use of NRDA funds to restore natural resources injured by the DWH spill in the Louisiana Restoration Area. As explained in the Final EIS, Appendix B2 DEIS Public Review and Public Meetings, Section 2.0 Agency Roles in the Responses to Public Comments, response content pertaining to the LA TIG's Draft Restoration Plan, the OPA and/or NRDA processes, or other Trustee Planning was developed by the LA TIG and states only the LA TIG's views. With respect to the Restoration Plan, the Record of Decision for the Final PDARP/PEIS, published on March 29, 2016, documented the selection of Alternative A: Comprehensive Integrated Ecosystem Alternative as the preferred restoration alternative that would provide ecosystem-scale restoration to partially offset ecosystem-scale losses. Alternative A in the PDARP/PEIS was not selected for the principal purpose of addressing coastal land loss. Rather, as explained in detail in the PDARP/PEIS, Alternative A was selected because the Trustees determined that the best approach to addressing the ecosystem-wide injuries resulting from the spill was to take an ecosystem approach to restoration. One key reason for this was that it was not possible to evaluate with certainty injuries to all of the species that were injured by the spill or to ascertain with precision the extent of injury to each species. The restoration strategy in Alternative A addressed those uncertainties by emphasizing restoration of habitat types that are critical to the ecosystem that supports the species injured by the spill (including both known and unknown injuries), as well as restoring critical habitat such as coastal marsh that also was injured by the spill, particularly in Barataria Basin. In light of the basis for Alternative A in the PDARP/PEIS, the Project is a particularly appropriate means of implementing that preferred alternative because the restoration of deltaic processes builds marsh and sustains and enhances other existing marshlands, thus strengthening the key habitats that are the basis for the rich nearshore ecosystem that extends into the northern Gulf of Mexico.

Although the LA TIG recognizes the concern by the commenter that they would have preferred a different alternative for the Final PDARP/PEIS, the selection of Alternative A is not being reconsidered in the LA TIG's Restoration Plan. Given the previous selection of Alternative A in 2016, the LA TIG has the responsibility to identify restoration projects that would further the goals of comprehensive, integrated ecosystem restoration as described in the Final PDARP/PEIS. The LA TIG has done this through a series of plans, including the current plan being evaluated for a Mid-Barataria Sediment Diversion. The evaluation of the nexus between the Project and the injury that resulted from the DWH oil spill is presented in Section 2 of the Restoration Plan.

---

**Concern ID: 63311**

---

**No amount of adaptive management will ensure the continued support of oyster culture in the Barataria Basin.****Response ID: 16684**

The Draft EIS discussed anticipated impacts to oyster fisheries in Section 4.14.4.2 (Operational Impacts, Applicant's Preferred Alternative, Eastern Oyster Fishery) in Commercial Fisheries and found that the proposed Project would have major, permanent, adverse impacts on Eastern oyster fisheries in the Project area.

The concerns expressed by the commenter were considered by CPRA and the LA TIG in preparing the Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the Draft EIS). LA TIG acknowledges that operation of the Project would likely reduce oyster abundance in the Barataria Basin (see Section 4.14.4.2 [Commercial Fisheries - Operational Impacts] of the Final EIS). However, specific MAM and mitigation activities have been proposed to understand and mitigate impacts to oyster production. As described in the MAM Plan (Appendix R2 to the Final EIS), if the data collected through MAM activities suggests that sustaining oyster populations in the basin is no longer viable, the CPRA would implement some of the actions outlined in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), such as the relocation of seed grounds to more environmentally suitable areas or the establishment of broodstock reefs to address larval supply, in areas outside of Barataria Basin. The Mitigation and Stewardship Plan (Appendix R1 to the EIS) includes additional oyster mitigation measures totaling \$32 million. Table 4.27-2 in Section 4.27 (Mitigation Summary) shows which of these oyster mitigation measures are new and which are augmentation of existing or proposed programs.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

---

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
REGION 6

May 26, 2021

Brad LaBorde  
Regulatory Project Manager  
New Orleans District - CEMVN-ODR-E  
U.S. Army Corps of Engineers  
7400 Leake Ave  
New Orleans, Louisiana 70118

Dear Mr. LaBorde:

The U.S. Environmental Protection Agency (EPA) has reviewed the U.S. Army Corps of Engineers (USACE) Draft Environmental Impact Statement (EIS) for the Mid-Barataria Sediment Diversion Project, Plaquemines Parish, Louisiana (CEQ Number 20210025). The Draft EIS was reviewed pursuant to the National Environmental Policy Act (NEPA), the Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500 - 1508), and EPA's NEPA review authority under Section 309 of the Clean Air Act.

The Coastal Protection and Restoration Authority Board of Louisiana, through the Coastal Protection and Restoration Authority (CPRA), submitted a Joint Permit Application to the Department of the Army under the provisions of Section 404 of the Clean Water Act, Section 10 of the Rivers and Harbors Appropriation Act of 1899 and a permission request under Section 408 of the Rivers and Harbors Act of 1899 to the USACE, New Orleans District, for CPRA's proposed Mid-Barataria Sediment Diversion (MBSD). The Proposed Action consists of the placement of a sediment diversion through a portion of the federal Mississippi River and Tributaries Project mainline levee on the right descending bank of the Mississippi River at approximately River Mile 60.7 and through the future New Orleans to Venice (NOV) Hurricane Protection Levee, extending into the Mid-Barataria Basin in Plaquemines Parish, Louisiana.

EPA served as a Cooperating Agency and reviewed and provided technical comments on the Draft EIS during its development. We appreciate participating on issues of importance to the Agency including climate change considerations and evaluation of the climate resiliency and adaptation aspects of the proposed project. In addition, EPA acknowledges the proactive approach taken to incorporate technical suggestions and factoring a changing climate into the overall modeling for the project regarding greenhouse gas emissions and climate change. We also acknowledge that this approach was out of recognition that this effort is different from other infrastructure projects in that the proposed action itself is an adaptation/resiliency feature.

In addition, we appreciate working with USACE, CPRA, and the other agencies on the key issues of environmental justice and impact mitigation throughout development of the Draft EIS. The Draft EIS acknowledges in Chapter 4 that the proposed project may have disproportionately high and adverse impacts on the project affected area for minority and low-income residents and users of the resources in the area. According to the models, this may include periodic flooding of some residences and businesses during the operation of the MBSD. It may also include storm hazards and changes in the composition of fishery species. EPA encourages and supports the ongoing efforts to effectively address the identified

environmental justice impacts in the development of the Draft Mitigation Plan provided in Appendix R. EPA strongly recommends that the Final Mitigation Plan include measures to specifically address disproportionately high and adverse impacts related to commercial shrimp and oyster fishing, tidal flooding, and storm hazards identified in the proposed project area. The mitigation measures should include elements designed to consider any unique vulnerabilities and help ensure an equitable distribution of benefits to minority and low-income populations that would be impacted by the proposed project. EPA commends CPRA for holding outreach meetings with minority and low income people in the area to discuss impacts of the proposed project and related mitigation measures.

Thank you for the opportunity to review this Draft EIS. EPA looks forward to the receipt and review of the Final EIS. If you have any questions, please contact Michael Jansky, the project review lead, at

[REDACTED]

Sincerely,

Jonna Polk  
Director  
Office of Communities, Tribes, and  
Environmental Assessment

cc: Louisiana Trustee Implementation Group Representatives

**Concern ID: 62960**

The U.S. Environmental Protection Agency (USEPA) has reviewed the U.S. Army Corps of Engineers (USACE) Draft Environmental Impact Statement (EIS) for the Mid-Barataria Sediment Diversion Project, Plaquemines Parish, Louisiana (CEQ Number 20210025). The Draft EIS was reviewed pursuant to the National Environmental Policy Act (NEPA), the Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500 - 1508), and USEPA's NEPA review authority under Section 309 of the Clean Air Act.

USEPA served as a cooperating agency and reviewed and provided technical comments on the Draft EIS during its development. We appreciate participating on issues of importance to the agency including climate change considerations and evaluation of the climate resiliency and adaptation aspects of the proposed Project. In addition, USEPA acknowledges the proactive approach taken to incorporate technical suggestions and factoring a changing climate into the overall modeling for the proposed Project regarding greenhouse gas emissions and climate change. We also acknowledge that this approach was out of recognition that this effort is different from other infrastructure projects in that the proposed action itself is an adaptation/resiliency feature.

In addition, we appreciate working with USACE, CPRA, and the other agencies on the key issues of environmental justice and impact mitigation throughout development of the Draft EIS. The Draft EIS acknowledged in Chapter 4 that the proposed Project may have disproportionately high and adverse impacts on the Project affected area for minority and low-income residents and users of the resources in the area. According to the models, this may include periodic flooding of some residences and businesses during the operation of the proposed MBSD Project. It may also include storm hazards and changes in the composition of fishery species. USEPA encourages and supports the ongoing efforts to effectively address the identified environmental justice impacts in the development of the Draft Mitigation and Stewardship Plan provided in Appendix R1. USEPA strongly recommends that the Final Mitigation and Stewardship Plan include measures to specifically address disproportionately high and adverse impacts related to commercial shrimp and oyster fishing, tidal flooding, and storm hazards identified in the proposed Project area. The mitigation measures should include elements designed to consider any unique vulnerabilities and help ensure an equitable distribution of benefits to minority and low-income populations that would be impacted by the proposed Project. USEPA commends CPRA for holding outreach meetings with minority and low-income people in the area to discuss impacts of the proposed Project and related mitigation measures.

**Response ID: 15886**

Thank you for your comments. If a permit is issued, CPRA would be required to obtain all applicable federal, state, and local permits before starting construction of the proposed MBSD Project.

---

**Concern ID: 63179**

---

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Correspondence ID:39838**

Fernell Cryar

The Mid-Barataria Sediment Diversion is necessary. We continue to lose land in coastal Louisiana and this will continue with more and more land loss if the diversion is not done. I know there will be consequences to those who live in the area. Therefore there should be mitigation and help for those affected. I do not live on the coast, but more and more land loss will affect where I live eventually. More land will mitigate storm impacts which does cause issues here. Please continue with the diversion.

---

**Concern ID: 63185****Additional development of mitigation plans and accountability for mitigation commitments is needed.****Response ID: 16562**

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, have been provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63365****The proposed Project is necessary to stop land loss and mitigate storm impacts; however, impacts on the local populations should be mitigated.****Response ID: 16327**

---

The commenter's support for the proposed Project is noted. CPRA expanded and refined its Mitigation and Stewardship Plan (Appendix R1) for the Final EIS in response to community and resource agency input. If the proposed Project is approved and funded, CPRA states that it would implement the mitigation and stewardship measures as set forth in Appendix R1. CPRA's coordination with the affected communities and industries is described in Chapter 7 Public Involvement and Appendix R1, both of which have been revised for the Final EIS, in response to public comments.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Save Louisiana Coalition

George Ricks

This is Captain George Ricks. I'm President of the Save Louisiana Coalition. Firstly, I'd like to say, the least environmentally damaging alternative to this project, pipeline sediment delivery, or dredging, was not used in this EIS.

Under Section EIS-2, proposed need of this project, the EIS states, "This proposed project is needed to help restore habitat and ecosystems services injured in the northern Gulf of Mexico as a result of the Deepwater Horizon oil spill." This project, given the permanent adverse impacts to fisheries, marine mammals and water quality, is in total contradiction of this purpose and need. Under mitigation, the total of \$305 million for mitigation to seafood industries and dolphins is ridiculously low. I would like to point out, the 120-day Spillway opening in 2019, which caused the declared fisheries disaster of \$58 million was a one-time event. This disaster was caused by the same river water that this project is designed to put into the estuary. Given the permanent adverse impacts and collateral injuries of this project, the few long-term benefits do not justify the costs of construction, nor the economic loss to the fisheries, low-income families, and flooding of coastal communities affected. The Save Louisiana Coalition recommends this permit application be rejected. Thank you.

---

**Concern ID: 61873**

**The proposed Project's impacts are in contradiction with the Project's stated purpose and need to restore habitat and ecosystems damaged by the DWH oil spill given the permanent adverse impacts on fisheries, marine mammals, and water quality. The proposed Project is incompatible with both a healthy environment and healthy economy.**

**Response ID: 15829**

USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities), and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. If implemented, the proposed Project would deliver sediment, fresh water, and nutrients into the Barataria Basin. While there would be short- and long-term, adverse and beneficial impacts to physical, biological, and socioeconomic resources in the Project area due to the proposed Project, the sediment, fresh water, and nutrients are expected to restore habitat and ecosystems services injured in the northern Gulf of Mexico as a result of the DWH oil spill.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62666**

**It would be inappropriate, and contrary to the stated purpose of restoring injured resources, to use DWH settlement funds to implement a project that would harm the same wildlife (for example, shrimp, oysters, bottlenose dolphins, *Spartina alterniflora*) and ecological services that were negatively affected by the oil spill.**

**Response ID: 16625**

USACE is not evaluating the proposed Project for compliance with the OPA and is not involved in the process to restore the damage caused by the DWH oil spill. USACE's involvement with the proposed Project is limited to its permitting decisions and associated NEPA and other evaluations of the proposed Project under the CWA Section 404 and RHA Sections 10 and 14 (33 USC Section 408). USACE is not executing any DWH restoration actions under the OPA. As explained in the Restoration Plan, the LA TIG is responsible for deciding the appropriate use of NRDA funds to restore natural resources injured by the DWH spill in the Louisiana Restoration Area. As explained in the Final EIS, Appendix B2 DEIS Public Review and Public Meetings, Section 2.0 Agency Roles in the Responses to Public Comments, response content pertaining to the LA TIG's Draft Restoration Plan, the OPA and/or NRDA processes or other Trustee Planning was developed by the LA TIG and states only the LA TIG's views.

In the Restoration Plan, the LA TIG explained that the DWH oil spill resulted in the oiling of more than 1,100 kilometers of wetlands, nearly all of which were located in coastal Louisiana (DWH NRDA Trustees, 2016). The heaviest oiling occurred in the Barataria Basin, resulting in substantial injuries to natural resources in the basin (DWH NRDA Trustees, 2016). Recognizing that the resulting loss of marsh productivity affected resources throughout the northern Gulf of Mexico ecosystem, the State of Louisiana and the federal Trustees that negotiated the DWH Natural Resource Damages settlement allocated \$4 billion, almost half of the total settlement amount, to restoring Louisiana's wetland, coastal, and nearshore habitats. The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree of collateral injuries, to natural resources injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the LA TIG's Restoration Plan). The intended restoration of freshwater flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, as noted in the LA TIG's Restoration Plan, without the proposed Project, sea-level rise, subsidence, and other existing stressors would result in additional marsh loss over time reducing the suitability of habitat for many of the same species.

The LA TIG must weigh the potential and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed

Project against its potential benefits). The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that more closely resembles historic conditions. As described in Section 3.2.1.6 (Benefits Multiple Resources) of the Restoration Plan, this sustained ecosystem is expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing a deltaic process, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Final Restoration Plan because the LA TIG believes it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the NRDA Trustee's Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

In its Strategic Restoration Plan for Barataria Basin (2018), the LA TIG evaluated the potential and extent of collateral injury for a range of restoration techniques. Unfortunately, almost all large-scale restoration comes with some potential for collateral injury. The LA TIG evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54. In the Restoration Plan, the LA TIG strives to identify an alternative that would provide what it considers the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. Again, see Section 3.2.4 of the Restoration Plan for a discussion of how the LA TIG came to its decision.

In recognition of the potential for collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, the LA TIG has designed and CPRA will implement a suite of stewardship measures (see Section 3.2.1.1.5 [Associated Stewardship Measures] of the Restoration Plan and Appendix R1 to the EIS). The LA TIG is also committed through these measures to continuing efforts to restore the resources that would be adversely affected by the diversion, many of which were also injured by the DWH oil spill.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures

contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62709**

**The 2019 opening of the Bonnet Carré Spillway caused significant impacts to aquatic fauna from the release of river water, and resulted in a declared fisheries disaster of at least \$58 million.**

**Response ID: 16087**

A summary of select natural and man-made diversions in southeastern Louisiana, including the Bonnet Carré Spillway, has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment, including area fisheries. This summary is available in Appendix U of the Final EIS. However, it is important to note that the Bonnet Carré Spillway is an emergency flood control structure that is not operated for ecological purposes. The anticipated impacts of the proposed Project on aquatic fauna from the release of river water is discussed in detail in Chapter 4, Section 4.10 Aquatic Resources.

---

**Concern ID: 62780**

**Although the proposed MBSD Project would provide some benefits, the adverse impacts described in the EIS outweigh those benefits.**

**Response ID: 16362**

The commenter's opposition to the proposed Project, even considering the projected beneficial impacts, is noted. The beneficial and adverse effects of the proposed Project were discussed throughout Chapter 4 Environmental Consequences. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

To address adverse Project impacts, CPRA would implement a series of mitigation and adaptive management measures if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review,

---

Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63726**

**Some commenters felt that the amounts allocated for mitigation were insufficient, while others felt that no amount of mitigation would suffice, for example for the more senior fishers who won't be in a good position to adapt to the changing environment.**

**Response ID: 16702**

The Draft EIS considered how changes in the commercial fisheries, both with and without implementation of the proposed Project, would impact more senior fishers in Chapter 4, Section 4.14.4 in Commercial Fisheries. In response to public comments and resource agency input about the proposed mitigation efforts, CPRA has expanded and refined its fisheries mitigation and stewardship measures. CPRA's mitigation and stewardship strategies and associated expenditures would focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for fisheries in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to fisheries in the early years of the Project's operational life. The provisions of the fishery mitigation and stewardship plan, valued at approximately \$54 million, would help to achieve that goal and to mitigate the impacts of the proposed Project on oyster fishers. While not mitigation for the Project impacts, examples of other restoration/fishery improvement actions include: the LA TIG's funding of \$10 million in public and private oyster reef enhancement through the Living Coastal and Marine Resources funding allocation, the LA TIG's funding of \$9.7 million in oyster broodstock reef enhancement through the Living Coastal and Marine Resources funding allocation, CPRA's allocation of \$2 million in adaptive

management funding to support off-bottom oyster culture, the LA TIG's allocation of \$5.8 million in Living Coastal and Marine Resources funds to support the operations of the Voisin Hatchery and the LA TIG's allocation of \$38 million in recreational use funds to support subsistence and recreational fisheries. The Final Mitigation and Stewardship Plan is included in Appendix R1 to the Final EIS.

The comments of more senior fishers who expressed concern about their ability to adapt to changing fishery conditions are acknowledged. If permitted by USACE and funded by the LA TIG, it would take CPRA approximately 5 years to complete construction of the proposed Project and to begin operations. This relatively long period provides those affected with the time and opportunity to decide how they want to go forward, ranging from taking advantage of the adaptation opportunities offered through the Mitigation and Stewardship Plan (Appendix R1 to the EIS) to transitioning out of the fishing industry or retiring.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Shannon Loup

Hi. I am on the Wilkinson Canal in Myrtle Grove, and I guess my concern is what's going to happen with the water in Myrtle Grove Estates when this or if this happens and what are the plans for that. I'm under the impression that they are talking about possibly raising bulkheads or buying out the people in the community and that actually frightens me. Am I going to get an answer?

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

---

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Correspondence ID:39844**

Dina Eppley

I am a homeowner in one of the communities that are going to be impacted by this, and I mostly had some questions, and hopefully this is an appropriate forum to ask the questions. I put a couple of them in the chat box. But the first one was I just wanted to understand what we meant by "Sustain 20 percent of the land." That's unclear to me. Does that mean we're going - - this diversion project is going to allow us to keep 20 percent of the land we have now? Are we adding 20 percent of the land? And if we're adding, what is that based on? Today's levels or future levels? What does that mean?

---

**Concern ID: 62161**

**The commenter asked what is meant by “sustain 20 percent of the land” and further questioned whether this means the diversion would retain 20 percent of the land that exists now in 2021 or 20 percent of the projected future amount of land in the basin.**

**Response ID: 16182**

The commenter’s question regarding the meaning of the word “sustain” in describing the land building projected to take place during operation of the diversion has been considered. To help clarify, a discussion has been added to further explain currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to Executive Summary, Section ES.4.1 Geology and Soils and to Chapter 4, Section 4.2.3.2.2.1 Geology of the Final EIS.

In the LA TIG’s Restoration Plan in Section 3.2.1.1 OPA Evaluation of the Alternatives - Alternative 1 Description, the LA TIG highlights that by 2070 (the end of the analysis period), the Project is projected to be responsible for creating or maintaining approximately 20 percent of the land that remains in the Barataria Basin at that time. To be clear, this represents the amount of land that would be created or maintained by the Project in 2070 divided by the total amount of land that would remain in the Barataria Basin without the Project in 2070.

---

NWF and Restore the MS River Delta Campaign

Amanda Moore

My name is Amanda Moore. I'm with the National Wildlife Federation and also with Restore the Mississippi River Delta Campaign. We appreciate all of the work that has gone into this draft EIS and restoration plan, and we want to acknowledge that the Barataria Basin is losing land at one of the most rapid rates in the world, and was also Ground Zero for the BP oil spill. So losing this marsh means that we're losing fish and wildlife that depend on that habitat, and in addition, we'll be losing the storm surge protection that the marsh provides. The power of the river allows us to harness more land-building potential than we could get with dredge at a fraction of the cost, and the benefits are long-lasting, even in the face of sea level rise and hurricanes. This project is innovative and widely studied, and this project concept is our best shot at a vibrant and resilient future for fish, wildlife and communities in the Mississippi River delta. The Mid-Barataria Sediment Diversion is going to have major beneficial impacts. The land building that the project will provide compared to a future without action, and we also want to acknowledge that the sediment introduced by the diversion will not only build wetlands, but it will also increase the elevation across a hundred square miles in the Barataria Basin, and this will create more complex habitat that's favored by some fish and wildlife, and it will also help reduce the storm surge threats to nearby communities. We feel that's a really important benefit of the project.

In short, we feel the project is essential to a sustainable and more resilient future in the delta, and we want to thank you, again, and we're going to be submitting more detailed comments before the comment period closes.

---

**Concern ID: 61977**

**While other restoration project types, such as marsh creation, have been suggested in lieu of large-scale diversions, these project types would fail to build and sustain significant amounts of land in the Barataria Basin over the 50-year Project lifespan due to subsidence, sea-level rise, and erosion. Dredging alone cannot save the wetlands, the processes that originally built them must be reestablished. The power of the river allows more land-building potential to be harnessed than could be had with dredges at a fraction of the cost, and the benefits are long-lasting, even in the face of sea-level rise and hurricanes.**

**Response ID: 15977**

The commenter's support of the proposed Project is acknowledged. The EIS concludes that a large-scale sediment diversion meets the purpose and need of the proposed Project while large-scale marsh creation does not meet the purpose and need. Details on marsh creation alternatives including sustainability and the reasons for elimination from further detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. Additional information related to the marsh creation alternative have been added to Section 2.3.5 Large-Scale Marsh Creation for the Final EIS.

---

**Concern ID: 62210**

**An important benefit of the Project is that it would introduce sediment that would not only build wetlands but also increase elevations across a hundred square miles in the**

---

**basin, which would benefit some fish and wildlife. This would also reduce storm surge threats to nearby communities.**

**Response ID: 16422**

The beneficial impacts of sediment deposited below the Barataria Basin water surface were considered and incorporated in the Draft EIS in Chapter 4, Section 4.2.3 Geology, Topography, and Geomorphology; Section 4.4.4 Hydrology and Hydrodynamics; and in Section 4.6 Wetland Resources and Waters of the U.S. These processes are part of the model computations described in Appendix E Delft3D Modeling and are fully incorporated in the results and conclusions of the Draft EIS. Deposition of sediment by the proposed Project below the water surface would be beneficial to wetlands, fish, and wildlife by being resuspended and transported elsewhere for deposition, as the commenter suggests, and by forming a base layer upon which future pulses of sediment can form marsh or land.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:39848**

Mary Tucker

My name is Mary Tucker and I am a resident in Myrtle Grove. I am not representing the subdivision or the board. I am simply representing myself and my family. And while I appreciate the comments from the previous lady, with the Wildlife and Fisheries, I respectfully disagree. It's a great idea to build the marsh until it's not, and yes, there are some benefits for some. However, to the people of Myrtle Grove, we have identified and I think everybody knows there is a problem that, more days than not, we will probably have water on the road. In some of the previous meetings I've been at, it was state that, you know, it should not be that detrimental because these houses are raised and most of them are camps. However, these really aren't camps. These are people's homes. Most of them are half-a-million-dollar homes that people have invested their life savings and work into. We bought in this community because we were - - I wanted my kids to be able to ride their bikes on the streets, to play kickball in the lots. We wanted to fish off of our docks, and if the water continuously comes up when the diversion is operating, it's going to ruin the streets. Yes, if you raise infrastructure, i.e., the streets, I can access my property. However, my house was totally built to code; when I would get out of my car, I'd probably have water around my ankles. I do know that there is money to mitigate certain subdivisions. We still want clarity on how much money is available. I think the last meeting I listened to, it said 300 million. That's not just for Myrtle Grove. That's Myrtle Grove, that's Suzie Bayou, Happy Jack, Woodpark, and I think a few others. They talked about buy-outs, which would not be my first choice. A question is, how do they determine fair market value? So there are a lot of unknowns, and I guess I could say I'm against the diversion, and I would like some answers, please.

Thanks for letting me ask another question. I have read over, of course, not all 6,000 documents, and it might not be 6,000 pages, but I have looked in the sections that were just referenced, I think, by Mr. Brad, but I could not find - - and maybe these are one-off questions - - specific answers. They were broad strokes, and maybe we're not to that point yet, but how things are determined, fair market value, how that is determined, house raising. Who determines how high they would raise, you know, structures if they choose to go that route? And I'm not trying to belabor the issue.

---

**Concern ID: 62013**

**The Myrtle Grove subdivision is a residential neighborhood composed of homes, not camps, many of which may not have access to flood insurance. The proposed MBSD Project would increase flooding of the properties which would severely impact access to property and property values in Myrtle Grove and other affected areas such as Lake Hermitage.**

**Response ID: 16210**

The impacts raised by the commenters were considered in the Draft EIS in Chapter 4, Section 4.13 Socioeconomics, which discusses impacts of the proposed Project on property values, and Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction which discusses flood and storm related impacts due to the Project. The EIS (Section 4.13.5.3 in Socioeconomics) finds that the proposed Project would result in minor to moderate, permanent, adverse impacts on housing and property values in communities near the immediate outfall areas (within 10 miles north and 20 miles south) and outside of flood

---

protection. These affected areas include the communities of Myrtle Grove, Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, Happy Jack, and Grand Bayou, and to a lesser extent portions of Lafitte. In addition, negligible to minor increases in levee overtopping south of the immediate outfall area may occur in future years following delta formation (after approximately 20 years of Project operations) in the outfall area in communities inside levees, with the greatest increases in communities adjacent to the NOV-NFL Levee system.

The Final EIS discusses modeled impacts of the Project on water surface elevations and corresponding tidal inundation in Lafitte, Myrtle Grove, and Grand Bayou. These three communities are generally representative of other communities in the basin, including Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, and Happy Jack (see Figure 4.13-1 in Section 4.13.1 Area of Potential Impacts in Socioeconomics). Lafitte, Myrtle Grove, and Grand Bayou also represent varying levels of exposure to tidal flooding. As explained in Section 4.20.3 Public Health and Safety – Overview of Model for Impact Analysis, Grand Bayou has no structural protection and would experience similar tidal flooding as the unprotected communities of Hermitage, Suzie Bayou North, Suzie Bayou South, and Happy Jack. Myrtle Grove impacts would be similar to the neighborhood of Woodpark. Without implementation of the measures outlined in the Mitigation and Stewardship Plan (Appendix R1), the largest impact on tidal inundation frequency due to the diversion is projected to occur in Myrtle Grove, as this is the community that is closest to the immediate outfall area of the proposed diversion structure outside flood protection and thus is projected to see the greatest increase in water levels.

Section 4.13.5.3 Housing and Property Values has been revised in the Final EIS to provide additional discussion of potential effects of the proposed Project on the availability of flood insurance. The Final EIS concludes that the proposed Project would not impact the availability flood insurance, but may cause an increase in flood insurance premium for some properties in communities projected to experience increases in tidal flooding and storm hazards. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict how flood insurance premiums may change. Since issuance of the Draft EIS, CPRA has expanded and refined the mitigation measures intended to address the inundation projected in the communities south of the proposed Project's immediate outfall area including Myrtle Grove, Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack. CPRA plans to provide a combination of structural improvements (for example, improving bulkheads and raising roads and homes) and non-structural measures.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or

---

will possess the requisite property interest to undertake the activity proposed in the application.

In Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack, CPRA plans to purchase Project servitudes from landowners. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. See Section 6.3.2 of the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

---

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Steve Pollock

So my name is Dr. Steve Pollock of Triple N Oysters. I've been in the oyster industry in the state of Louisiana for six years now. I'm originally from Montreal, Canada, so I'm a bit of an oddball down here. But in looking over the EIS, I'm extremely worried about the short and long-term consequences of the planned Mid-Barataria Diversion. On the one hand, the EIS seems to support the idea that environmental damage will be immediate, long-lasting and severe for the state of Louisiana.

Yet, turns the other side of the card over and says that it looks like it's probably going to be beneficial in the next 50 years.

The EIS does not clearly show that the benefits will outweigh the costs of going through with this project, and in my opinion, other alternatives should be seriously considered to minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems by opening up the diversion in the Mid-Barataria region. That's my comment.

Thank you, sir.

---

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable alternatives, which is a requirement that the Draft EIS does not meet. Consider analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to

define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of "marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats" (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG's Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

---

**Concern ID: 62635**

**The proposed Project would cause harm to some species and fisheries, and would increase flooding in some communities, and the EIS does not show that the proposed Project's benefits outweigh these harms. Other less harmful alternatives to the proposed Project should be considered to minimize impacts.**

**Response ID: 16651**

The range of alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. USACE generally focused on the Applicant's purpose and need and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities), and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project purpose and need.

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were

---

considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. Based on a review of the various alternatives against these criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2 Alternatives, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Under relevant NEPA regulations, a cost-benefit analysis is not required for the EIS unless such a cost-benefit analysis is relevant to the agency's permit decision. USACE generally assumes that a permit applicant has made its own economic evaluation regarding the costs of a proposed project and therefore a cost-benefit analysis is not relevant to its decision. However, as part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits.

The LA TIG is the group responsible for restoring natural resources and services within Louisiana that were injured by the DWH oil spill. In the LA TIG's Restoration Plan, the LA TIG also evaluates a range of alternatives and identifies its Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs) as providing the right balance in terms of likely benefits the Project would achieve and risks related to collateral injury for its NRDA decision. Title 15 CFR §990.54 of the NRDA regulations outlines the criteria that are used to evaluate a reasonable range of alternatives and select the preferred alternative. Recognizing that almost all restoration comes with some potential for collateral injury, one factor for evaluation is the extent to which each alternative will prevent future injury and avoid collateral injury. The potential for collateral injury does not preclude an alternative from selection, rather the Trustees must evaluate each alternative under multiple factors and select a preferred alternative to meet the outlined restoration objectives.

The LA TIG, in selecting the Preferred Alternative in the Restoration Plan, evaluates a reasonable range of alternatives under the factors outlined in 15 CFR §990.54. The LA TIG strove to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, avoiding collateral injury, benefiting multiple resources, and protecting public health and safety. See Sections 3.2.4.7 (Identification of a Preferred Alternative), 3.2.1.5 (Avoids Collateral Injury – Alternative 1), and 3.2.2.5 (Avoids Collateral Injury – Alternatives 2-6) of the Restoration Plan. A project can harm species also harmed by the spill and still be an appropriate project. This is especially true for projects like sediment diversions that seek to reestablish deltaic processes that shaped the historic delta ecosystems, and necessarily entails reverting the current

ecosystem to a more natural state that was altered when Mississippi River flows were cut off by construction of levees. However, without the proposed Project, there would also be adverse impacts to some of the same species due to large-scale wetland loss over time, as is anticipated from ongoing sea-level rise, subsidence, and other existing stressors, which is anticipated to reduce the suitability of habitat for many of the species that currently occur in Barataria Basin.

The LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. Given these tradeoffs, the LA TIG selected Alternative 1 as its Preferred Alternative in the Restoration Plan.

The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that more closely resembles historic conditions. As described in Section 3.2.1.6 (Benefits Multiple Resources – Alternative 1) of the Restoration Plan, this sustained ecosystem is expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing a deltaic process, the proposed Project is expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Restoration Plan because it believes it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net benefits of the proposed Project would meet OPA's requirement of restoration, rehabilitation, replacement, or acquisition of the equivalent, of the natural resources injured by the spill.

John Tesvich

This is John Tesvich, and I'm on the Louisiana Oyster Task Force, and I'd just like to just add a couple of things to the conversation, listening to the presentation. One thing is on alternatives that were considered. I was disappointed that some real alternatives weren't part of that instead of just looking at no action and various levels of flow. There are things that have been suggested across many public hearings. One is colmates. It's colmata. It's actually levying the outflow of the diversion to take a part of Barataria Bay at a time and rebuild that part without affecting the larger area of the basin, instead of allowing the water just to go throughout the basin, depending on the wind and currents. Colmates will take one section and will build one section at a time. That is an alternative that would severely reduce the flooding, the indirect impacts to the seafood industry, so, you know, it has not been given, I feel, a serious consideration. The other thing is that the mitigations, the numbers that I saw you put up there about the oysters and shrimp, brown shrimp and dolphin, they are way, way off. You're off by an order of magnitude. 30 million and \$50 million, those are what's going to be the annual losses, and plus. So, you know, by downplaying the impacts, the negative impacts, you're justifying the diversion. When you take it from a level 10 times higher than that, then you'll see alternatives, and that's where colmates - - are you all familiar with colmates? Colmates are levying the size and providing a channel straight to the Gulf. So that is something I'd like to see a little more work and research into. It's an ancient form that was used in Egypt, it was used in Italy, and it can work here to make this actually a lot better project, because otherwise, this is going to be problematic. You know, the seafood industry, they've been talking about this, you know, from the beginning of this discussion, 10, 15 years ago, and I just think, you know, it's time that we sit down and get more serious about these negative impacts. Thank you for the opportunity to comment.

---

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable alternatives, which is a requirement that the Draft EIS does not meet. Consider analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency

with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of "marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats" (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG's Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

---

**Concern ID: 61895**

**Commenters suggest using a sediment diversion to selectively build land by directing sediment to a contained area, such as a colmates system or large-scale marsh creation containment area. A controlled system of dredging to create dry land coupled with a system to contain sediment-infused river water in specific areas outside of the levee protection system would be most beneficial to create more land exactly where it's needed.**

**Response ID: 15988**

This method of sediment transport and/or sediment containment and land building would not meet the proposed Project's purpose and need of reconnecting and reestablishing sustainable deltaic process between the Mississippi River and the Barataria Basin. A colmate or other means of large-scale marsh creation using dewatered sediment would allow for sediment to be transported from the Mississippi River to the Barataria Basin and deposited into a location confined by containment berms, which would create an impoundment where the suspended sediment would settle out of the water column over time to create a marsh platform. Once the area dewateres and the platform stabilizes at an appropriate marsh elevation, the berms would be degraded or gapped to allow fish passage and hydrologic exchange. While this type of system would create marsh, it would not be a passive system and would require active management and maintenance, including potentially pumps to ensure sediment transport, mechanical gapping/degrading of the retention berms and periodic lifts to combat the effects of subsidence. It would not reestablish natural deltaic processes. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

---

**Concern ID: 62071**

**The proposed MBSD Project would negatively impact the seafood industry, including shrimp, crab, and oyster fisheries. Commercial fisheries are directly linked to the favorable conditions of the estuary and its resources being healthy, abundant, and consistently available but that would be forever changed by the introduction of polluted Mississippi River water.**

**Response ID: 16241**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated under the Applicant's Preferred Alternative.

The LA TIG's Final Restoration Plan also acknowledges these impacts, and notes that such impacts are also anticipated under the No Action Alternative, but on a longer timeline. The Restoration Plan also notes that some benefits to the blue crab fishery and some finfish are anticipated.

CPRA has developed a plan to mitigate the potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to public comments, CPRA has expanded and refined the Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)

- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63726**

---

**Some commenters felt that the amounts allocated for mitigation were insufficient, while others felt that no amount of mitigation would suffice, for example for the more senior fishers who won't be in a good position to adapt to the changing environment.**

**Response ID: 16702**

The Draft EIS considered how changes in the commercial fisheries, both with and without implementation of the proposed Project, would impact more senior fishers in Chapter 4, Section 4.14.4 in Commercial Fisheries. In response to public comments and resource agency input about the proposed mitigation efforts, CPRA has expanded and refined its fisheries mitigation and stewardship measures. CPRA's mitigation and stewardship strategies and associated expenditures would focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for fisheries in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to fisheries in the early years of the Project's operational life. The provisions of the fishery mitigation and stewardship plan, valued at approximately \$54 million, would help to achieve that goal and to mitigate the impacts of the proposed Project on oyster fishers. While not mitigation for the Project impacts, examples of other restoration/fishery improvement actions include: the LA TIG's funding of \$10 million in public and private oyster reef enhancement through the Living Coastal and Marine Resources funding allocation, the LA TIG's funding of \$9.7 million in oyster broodstock reef enhancement through the Living Coastal and Marine Resources funding allocation, CPRA's allocation of \$2 million in adaptive management funding to support off-bottom oyster culture, the LA TIG's allocation of \$5.8 million in Living Coastal and Marine Resources funds to support the operations of the Voisin Hatchery and the LA TIG's allocation of \$38 million in recreational use funds to support subsistence and recreational fisheries. The Final Mitigation and Stewardship Plan is included in Appendix R1 to the Final EIS.

The comments of more senior fishers who expressed concern about their ability to adapt to changing fishery conditions are acknowledged. If permitted by USACE and funded by the LA TIG, it would take CPRA approximately 5 years to complete construction of the proposed Project and to begin operations. This relatively long period provides those affected with the time and opportunity to decide how they want to go forward, ranging from taking advantage of the adaptation opportunities offered through the Mitigation and Stewardship Plan (Appendix R1 to the EIS) to transitioning out of the fishing industry or retiring.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated

---

Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Marine Mammal Commission

Victoria Cornish

Hello, this is Victoria Cornish, representing the Marine Mammal Commission. We plan to submit written comments so have no comments at this time. However, given the length of the DEIS and the complexity of models presented, is it possible to request an extension of the comment period for at least an additional 30 days?

---

**Concern ID: 62487****Several commenters requested additional time to submit comments on the LA TIG's Draft Restoration Plan and Draft EIS.****Response ID: 15768**

The public comment period for the LA TIG's Draft Restoration Plan and Draft EIS was originally 60 days (March 5, 2021 through May 4, 2021). On April 23, 2021, USACE and the LA TIG issued a special public notice, announcing a 30-day extension of the public comment periods. With this addition, the public comment period for both documents was 90 days (March 5, 2021 through June 3, 2021).

---

**Correspondence ID:39855**

Doug Daigle

In reviewing the Draft EIS, I have seen sections on nitrogen and phosphorus under Water Quality, including mentions of Gulf of Mexico hypoxia. I have not so far seen a mention of the Gulf Hypoxia Action Plan, which the State of Louisiana as well as most of the federal TIG agencies are signatories to, and which calls for a 20% reduction in nitrogen and phosphorus loading to the Gulf by 2025, with subsequent reductions to the year 2035. An inclusion of this Plan and the reductions in Mississippi-Atchafalaya River nutrient loads would seem pertinent to the EIS.

I neglected to include my contact information in my earlier comment in the Chat on Gulf Hypoxia, and specifically the apparent lack of reference in the EIS to the Gulf Hypoxia Action Plan. Louisiana Hypoxia Working Group.

---

**Concern ID: 61817**

**Commenters stated that information about the Gulf Hypoxia Action Plan (Louisiana Hypoxia Working Group), which calls for a 20 percent reduction in nitrogen and phosphorus loading to the Gulf by 2025, is pertinent to the Draft EIS but is not mentioned. Commenters requested that the plan should be included in the Final EIS.**

**Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. 2008. Gulf Hypoxia Action Plan 2008 for Reducing, Mitigating, and Controlling Hypoxia in the Northern Gulf of Mexico and Improving Water Quality in the Mississippi River Basin. Washington, DC.**

**Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. 2013. Looking Forward, The Strategy of the Federal Members of the Hypoxia Task Force. Washington, DC.**

**Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. 2016. December 2016 Update, Looking Forward, The Strategy of the Federal Members of the Hypoxia Task Force. Washington, DC.**

**Response ID: 16428**

The USACE and the LA TIG agree that the Gulf Hypoxia Action Plan is relevant to the proposed Project area. Therefore, in response to these comments, a discussion about the Gulf Hypoxia Action Plan has been added to Section 4.25.5.4.4 Nitrogen and 4.25.5.4.5 Phosphorus in Cumulative Impacts of the Final EIS. The Hypoxia Action Plan has highlighted the important role that river diversions could play in reducing nutrient loads. In addition, substantial nutrient load reduction could be achieved through the measures being implemented by the other states and entities involved with the Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. These combined efforts could lessen the potential impacts of excess nutrient loads to Barataria Basin and the northern Gulf of Mexico.

**Correspondence ID:39856**

Dina Eppley

What does sustain 20% of the marsh mean? Does that mean this will keep 20% of the land we have today? Does it mean we'll add 20% to the land - is that based on the land we have today or the land we would've had in 2050?

Will the diversion flow constantly or only be opened at certain times?

---

**Concern ID: 61912**

**CPRA should consider alternative flow triggers, designs, and features in the operations plan and design of the proposed MBSD Project in order to minimize impacts. CPRA should also consider adjusting diversion design elements such as triggers, peak flows, volumes, and nutrient loads over the first years of operation to minimize impacts. These adjustments could minimize impacts to dolphins, oysters, brown shrimp, and other aquatic organisms. Some commenters suggested limits be imposed by USACE, others suggested an operating plan that is tied to specifics, while others emphasized flexibility tied to real-world experiences. CPRA should also consider alternative methods of operating the proposed MBSD Project, such as operating the diversion during winter when water levels in the basin are lower and can accept high volumes of water from the diversion.**

**Response ID: 15999**

The proposed MBSD Operations Plan can be found in Appendix F2 Preliminary Operations Plan of the Final EIS. As stated in the Chapter 4, Section 4.4.4.2.4 Sediment Transport in Chapter 4 Surface Water and Coastal Processes, sediment transported by the Mississippi River is primarily comprised of fine sediments, with higher river flows (typically occurring in the spring) suspending more coarse-grained sediment that are important in delta building (see Chapter 3, Section 3.4 Surface Water and Coastal Processes). Fine-sediment transport through the diversion would be generally proportional to water flow in the river. The intake channel was modeled and designed to divert a high sediment-to-water ratio while minimizing energy loss (to maintain flow and sediment transport through the diversion complex) and impacts on the river. The amount of sediment carried through the diversion would vary by year, depending on flow rates in the river and the corresponding variation of diversion operations. As explained in Chapter 2, Section 2.8.1.3 Project Operations in Action Alternatives Carried Forward for Detailed Analysis, the Mississippi River discharge of 450,000 cfs would be the standard operations "trigger to open the diversion for flow (above the base flow)". Operations (with the exception of a base flow up to 5,000 cfs) would cease when the river discharge falls below 450,000 cfs or when certain emergency triggers are met (such as in advance of hurricanes or when a spill of hazardous substances occur in the river). When the Mississippi River flows exceed 450,000 cfs, the gates would be fully opened (above base flow). At river flows of 450,000 cfs, the diversion flow would be approximately 25,000 cfs, and flows would increase proportionally as the river flow increases. This ramp would continue up to maximum diversion capacity flow of 75,000 cfs when the river reaches a flow of 1,000,000 cfs.

An alternative related to operational triggers specific to sediment concentration was considered but determined not to be technically feasible or reasonable because data and technology do not currently exist to support this operational regime (refer to the Eliminated

---

Alternatives Matrix in Appendix D2 of the EIS). According to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 of the Final EIS, as part of the adaptive management and monitoring process, CPRA would consider potential ways to optimize diversion operations based on Project performance and success and would assess potential operational changes that may minimize impacts to basin resources where practicable after sufficient operational data become available for analysis.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63054**

**Clarify whether “sustaining 20 percent of the marsh” means that the proposed Project would sustain 20 percent of the land that is present today or that the proposed Project would add 20 percent to the land’s total. Further clarify if those numbers are based on the land that is present today or what would be present in 2050.**

**Response ID: 16060**

The wetland acreages presented in Chapter 4, Section 4.6 Wetland Resources and Waters of the U.S., Table 4.6-3 of the EIS represent the total acreage projected to be present in the Barataria Basin under each action alternative assessed. The percentage of wetland gains and losses presented in Section 4.6, Table 4.6-4 therefore represents the total change in wetland area (including newly created wetlands as well as wetlands that would be lost to subsidence and sea-level rise but for the proposed Project). No edits to the Final EIS are warranted. The comparisons use projected wetland area by decade for all alternatives

---

assessed (that is, the numbers are based on the projected future conditions, and not current wetland area).

The LA TIG's Restoration Plan highlights that, by the end of the analysis period, the proposed Project is projected to be responsible for creating or maintaining approximately 20 percent of the land that would remain in Barataria Basin at that time (that is, 2070). Specifically, this represents the amount of created or maintained land that remains in 2070 divided by the total amount of land that remains in the Barataria Basin in 2070. See the EIS for more information about projected Project-driven changes in land area over time (Chapter 4, Section 4.2.3.2 Geology and Soils and Section 4.6.5.1 in Wetland Resources and Waters of the U.S.).

---

**Correspondence ID:39857**

John Gasquet

Will CPRA offer buy outs to homes that will no long be accessible after the diversion is completed?

Or raise our access road and boats docks and under our homes?

Why in other areas of our coast they are dumping sand and build land now and not waiting 30 years to build a small amount land at such a great coast?

Will Lake Hermitage road be raised?

How many bottlenose dolphins and sea turtles will be killed by this project?

Also how many acres of land could be build with \$2 billion dollars?

How much will this project increase the dead zone in the Gulf?

---

**Concern ID: 61816**

**Commenters expressed concern that the proposed Project operations would increase the hypoxic “dead” zone in the Gulf.**

**Response ID: 16427**

The Gulf of Mexico hypoxic zone was discussed in the Draft EIS in Chapter 3, Section 3.5.2.6 in Surface Water and Sediment Quality. The proposed Project would not have more than negligible impacts on the Gulf of Mexico hypoxic zone because it is located outside of the Project’s area of potential impacts (defined in Chapter 3, Section 3.1.1 [Project Area] of the Draft EIS). Vegetative growth expected to occur in the Barataria Basin due to Project operations is expected to utilize the nutrients diverted from the Mississippi River, resulting in lower concentrations of nutrients occurring in the Barataria Basin and reaching the Gulf through Barataria Basin than would reach the Gulf through the Mississippi River. Although the Gulf hypoxic zone is not expected to be impacted by proposed diversion operations, because it is near the proposed Project area, the USACE did include a description and map of the Gulf hypoxic zone in Section 3.5.2.6 in Surface Water and Sediment Quality (see Figure 3.5-6). In response to public comments, the USACE has revised the title of Section 3.5.2.6 (Dissolved Oxygen) to 3.5.2.6 (Dissolved Oxygen and Hypoxia) in the Final EIS so that information about hypoxia in and near the proposed Project area can be more readily found by EIS readers. As explained in the EIS, Chapter 4, Section 4.25.5.2 in Cumulative Impacts, the combined impact of several Mississippi River diversions operating simultaneously may reduce nutrient flow from the river to the Gulf, having a beneficial impact on the Gulf of Mexico hypoxic zone.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh

Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62951**

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates, and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

---

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again, community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the

LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude

---

would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal

Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Concern ID: 63108**

**Commenters questioned how many sea turtles would be killed by the proposed Project.**

**Response ID: 16409**

In compliance with the Endangered Species Act of 1973, as amended (16 U.S.C. §§ 1531 et. seq.), the NMFS' Biological Opinion on the proposed Project (included in the Final EIS as Appendix O4) concludes the proposed Project is not likely to jeopardize the continued existence of sea turtles and authorizes a "take" for the Project, which is defined as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect, or attempt to engage in any such conduct. In its Biological Opinion, the NMFS authorizes the incidental take of 783 sea turtles per year, including 370 Kemp's ridley sea turtles (including up to 38 mortalities), 319 loggerhead sea turtles (including up to 10 mortalities), and 94 green sea turtles (including up to 9 mortalities). Over the 50-year Project life, this could equate to a take of 39,150 sea turtles (including up to 2,850 sea turtles mortalities).

As a resident of Myrtle Grove, I have serious concerns regarding the future of our neighborhood. We chose to live "on" the water not "in" the water. We have invested substantially in our way of life and don't want to see it ruined. Referencing some sections in the documents is not going to give us a realistic and comprehensive answer to our financial losses if it comes to that.

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

---

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Alexandra Jiles

Can someone from the USACE, CPRA or the other organizations here please reiterate why alternatives that do not involve the diversion are not being considered? Is the reason cost alone? Is dredging not determined to be effective?

Where did the total of 33mil for stewardship to fisheries come from?

---

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable alternatives, which is a requirement that the Draft EIS does not meet. Consider analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated

---

Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of "marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats" (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG's Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

Cynthia Kuehne

I am also a resident in Myrtle Grove. I have worked my entire life and finally decided it was time to build my retirement home down here on the water. When I built down here I accepted the fact that we were outside of the levee system and would be affected by "Natural Disasters". I cannot accept the fact that my investment and way of life will be totally altered for a "Man-made Project". Not sure what the answer is at this time to remedy the problem but the data in the DEIS is very vague about this issue. We need answers.

The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:39863**

Theodore Mackenroth

Are you planning to narrow the bay long pass and 4 bayou pass during this project? Also are there restrictions on receiving monies to raise our homes? Like homestead exemption most of us have 2 homes and can only claim one exemption.

Are you planning to build islands in Barataria bay to slow tidal water down?

If this diversion does build land and closes off our main bayous, will you come in and dredge our bayous open?

People on Martin Lane (Happy Jack) have the same concerns as Myrtle Grove!!!! On Happy Jack we were flooded 51 times in 2018, 77 times in 2019, and 70 times in 2020. We need our road and homes raised because of the amount of rise in water.

If you know tidal water erodes, then narrowing 4 bayou should be a high priority. This should be added to this project.

Happy Jack - Our road is too low, they just raise our flood elevation, sewer lines are too low they get flooded enough that they shut them off, and we are going to need help if this goes through. Worried about what rules or restriction they will have on who get help.

The MRGO was a shipping channel but it was also a diversion. How much land did it build? If it did build land why would you close it?

Wouldn't it be better to dredge land and fill in before you put the diversion in. Would this not help to slow water down for the sediment to work and stop tidal surge?

Mentioned earlier about relocating brown shrimp, how would you do that and what happen to the smaller shrimper that can not travel as far to catch them?

What are the chances of stopping this project?

If you used the money from the diversion, how much more land could you build by dredging as compared to the land that the diversion will build?

How much will it cost to operate this diversion every year?

---

**Concern ID: 61857**

**Commenter asked what the chances of stopping this proposed Project are.**

**Response ID: 15883**

As stated in Chapter 1 Introduction and Purpose and Need of the EIS, CPRA submitted a Joint Permit Application on June 23, 2016 (revised March 16, 2018) and a Section 408 Permission Request Letter on January 13, 2017 to the USACE, New Orleans District (CEMVN) for a Section 10/404 permit and Section 408 permission for the proposed MBSD Project. The joint permit application and permission request can be found in Appendix A Permit Application (Section 10/404) and Permissions Request (Section 408) of the EIS. Approval of a Section 10/404 permit and a Section 408 permission to construct, operate, and maintain the proposed MBSD Project would be a major federal action and consequently, USACE has prepared this EIS to understand the potential impacts, both beneficial and adverse, associated with the proposed Project and reasonable alternatives to it. The information in the EIS will help USACE to make an informed decision on the Section 10/404

---

permit and Section 408 permission request. In addition, USACE will take all public comments under consideration in its decision making.

By regulation, the USACE is neither for nor against the proposed Project. USACE has not made any decision regarding the proposed Project and will not make a decision until it issues a Record of Decision after publication and public review of the Final EIS.

In its Strategic Restoration Plan #3 and Environmental Assessment, the LA TIG selected for further evaluation a large-scale sediment diversion to address ecosystem injuries in the Barataria Basin as a result of the DWH oil spill. Following NRDA regulations for restoration planning under OPA (15 CFR, Part 990.30), the LA TIG prepared the Draft Restoration Plan (LA TIG RP 3.2) for the proposed MBSD Project. Based on that LA TIG RP 3.2 and informed by the MBSD EIS (to which the federal agencies of the LA TIG are cooperating agencies) and the public comments received on both documents, the LA TIG will make a decision regarding the implementation of the proposed Project. Following publication of the LA TIG's Final Restoration Plan and the MBSD EIS, conclusion of the NEPA 30-day wait period, and issuance of the LA TIG's NEPA Record of Decision, the LA TIG would finalize its decision (15 CFR § 990.23(c)(2)(ii)(G)) and document such by LA TIG Resolution. Until that time, the LA TIG would not have made a final decision on the proposed Project.

---

**Concern ID: 61885**

**Consider the alternative of reducing the size of Bay Long Pass and 4 Bayou Pass to slow the tide water and save land instead of implementing the proposed MBSD Project.**

**Response ID: 15981**

This alternative as presented, specifically reducing or narrowing the passes, would not meet the goals and objectives as stated in the purpose and need as described in Chapter 1, Section 1.4 Purpose and Need and Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

Other similar restoration strategies are being considered for implementation by CPRA in its Coastal Master Plan, which will be updated in 2023, and by the LA TIG through Natural Resource Damage restoration planning.

---

**Concern ID: 61918**

**Prior to and during the implementation of the proposed MBSD Project, consider ways to slow down the flow of the water in the basin for the sediment to work and to stop tidal surge, including dredging and filling, building islands, and planting vegetation to prevent erosion.**

**Response ID: 16005**

CPRA considered ways to slow down the flow in the basin during design and alternatives development of the proposed MBSD Project. Chapter 2 Alternatives of the EIS describes the various alternatives that were considered including several diversion outfall features (see Section 2.5, Step 3: Evaluation of Sediment Diversion Outfall Features). Marsh terracing is an outfall feature that was included in the reasonable range of alternatives evaluated in the EIS because these features are often used to reduce wave energy, protect eroding or recently restored shorelines, or to promote sediment deposition. However, results of the impact

---

analysis showed mainly negligible to minor differences in impacts when terrace alternatives were compared to alternatives without terraces. If the proposed Project is implemented, CPRA would consider potential ways to optimize diversion operations including outfall management based on Project performance and success as part of the adaptive management and monitoring process.

Refer to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 of the Final EIS.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

In addition, other restoration strategies in coastal Louisiana similar to what is being proposed are being currently implemented or considered by CPRA in their Coastal Master Plan and the LA TIG through separate NRDA restoration planning.

---

**Concern ID: 61919**

**Commenter requested information on the proposed annual operation and maintenance budgets for the proposed MBSD Project and how would they be funded.**

**Response ID: 16006**

If the proposed Project is permitted and funded, CPRA states that information on the proposed annual operation and maintenance budgets for MBSD Project will be provided to the public through CPRA's Annual Plan. Details on the state funding cycle, CPRA's request for operations funding, and inclusion in CPRA's Annual Plan can be found in the CPRA's Monitoring and Adaptive Management (MAM) Plan in Appendix R2 of the Final EIS.

---

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information

---

related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 61978**

**Commenter inquired how much more land could be built by dredging as compared to the land that the diversion would build.**

**Response ID: 15978**

Details on marsh creation alternatives including sustainability and the reasons for elimination from further detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. Additional information related to the marsh creation alternative has been added to Section 2.3.5 Large-Scale Marsh Creation for the Final EIS. Because the marsh creation alternative was screened out, the EIS does not contain such a comparison.

Further, the LA TIG does not believe that comparing a sediment diversion to marsh creation projects using dredged material captures the benefits of the proposed Project. Most importantly, as explained in the LA TIG's Restoration Plan, the goal of the proposed Project is to create a long-term sustainable ecosystem through the reestablishment of deltaic process. Marsh creation through the use of dredged material would not bring fresh water or nutrients to the basin on an ongoing basis, and therefore would not nourish existing and created wetlands on an ongoing basis. Furthermore, assuming an initial dredge placement event with no further maintenance, the benefits of marsh created with dredged material would diminish relatively quickly compared to marsh created by the proposed Project due to subsidence, erosion, and sea-level rise; thus, the temporal nature of proposed Project benefits would also be markedly different. For these reasons, the LA TIG believes that simply comparing land-building capabilities of dredging and against a sediment diversion does not capture the full picture of the diversion's ecological benefits. The costs and benefits of the proposed Project were already considered and discussed in the LA TIG's Draft Restoration Plan.

Finally, while the proposed Project involves implementing a large-scale sediment diversion in the Barataria Basin, the Applicant also proposes to place suitable dredged and excavated material in three beneficial use areas, resulting in localized elevation increases that are expected to result in the establishment of wetland vegetation. Therefore, the Project is projected to provide marsh creation benefits using both the diversion of fresh water and sediment, as well as through dredged material placement.

**Concern ID: 62370**

---

**The commenter asserted that the MRGO was a shipping channel and a diversion, and asked how much land it built and why it was closed if it built land.**

**Response ID: 15878**

The MRGO was not a diversion; it was a navigation channel for shipping. The MRGO did not directly connect to the Mississippi River; instead it connected to the Gulf Intracoastal Waterway, which goes through the Inner Harbor Navigation Canal and the IHNC Lock before reaching the river. The lock is not designed to carry water or sediment from the Mississippi River into the MRGO. The MRGO is not a useful comparison to the proposed Project for the purpose of impact analysis in this EIS.

---

**Concern ID: 62951**

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates, and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again, community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of

potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62968**

**If operation of the diversion causes infill of various canals used to access surrounding communities, who will be responsible for dredging to maintain access? For example, if Wilkinson Canal is filled with silt then the canal cannot be used and waterfront property owners with boat lifts in Myrtle Grove will not be able to get out using their boats; the EIS does not require a remedy or provide a funded maintenance plan for this issue (including who would pay for dredging).**

**Response ID: 16642**

The impacts raised by the commenters were considered in the Draft EIS. As stated in Chapter 4, Section 4.21 Navigation, the USACE would continue to maintain federal navigation channels in the Project area during Project operations.

In acknowledgement of commenters' concerns regarding maintenance of non-federal navigation channels and canals impacted by sedimentation of the proposed diversion, the Mitigation and Stewardship Plan includes measures to mitigate impacts on navigation resulting from operation of the Project, including monitoring and dredging or other measures for certain non-federal navigation channels including Wilkinson Canal (see Appendix R1 [Mitigation and Stewardship Plan] to the Final EIS for additional details).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures

---

(collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the Final Mitigation and Stewardship Plan and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63100**

**Commenters request additional information on how homestead exemption will be considered in compensation for acquisition.**

**Response ID: 16638**

The reference to homestead exemption in the Draft EIS was for informational purposes, and not intended to determine how compensation or mitigation would be provided. As part of any property acquisition to implement the Project, CPRA intends to compensate landowners for the value of any property interest acquired in accordance with applicable law..

---

**Concern ID: 63142**

**Commenter requests information on how brown shrimp would shift in distribution in the basin and raised concern about the impact it would have on smaller shrimping boats that could not travel the added distance to catch them.**

**Response ID: 16525**

Chapter 4, Section 4.10 Aquatic Resources of the Draft EIS analyzed Project impacts on brown shrimp, including the decrease in habitat suitability of portions of Barataria Basin for brown shrimp and the potential of a shift in location for future brown shrimp fishing. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discusses impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.2, under the Applicant's Preferred Alternative, brown shrimp are expected to experience major, permanent, adverse impacts earlier, while white shrimp are expected to experience negligible to minor, permanent, beneficial impacts, relative to the No Action Alternative. However,

because a number of the same commercial fishers catch both brown and white shrimp during different seasons, overall impacts on the shrimp industry as a whole (including brown and white shrimp) would be expected to be moderate to major, permanent, and adverse, with the potential for a substantial loss of income in some months due to the decreased abundance of brown shrimp. Section 4.14.4.2 Applicant's Preferred Alternative discusses the potential adaptive responses of fishermen to changes in species abundance, including the potential for substitution of species and need for gear upgrades, as well as increasing the length of fishing trips. CPRA's Mitigation and Stewardship Plan includes measures to mitigate some Project impacts on the brown shrimp fishery, including funding to assist shrimpers with gear improvements necessary to travel farther distances (see Section 6.3 [Other Mitigation and Stewardship Measures] of Appendix R1 to the EIS). In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1), including allocating \$15 million] for vessel and facility improvements. There is no plan to relocate brown shrimp.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Sierra Club

Grace Morris

Grace Morris, Sierra Club, New Orleans, brief comment at this time: request to extend the public comment period by 60 days from May 4th, request that CPRA, USACE and NOAA/TIG work with Plaquemines Parish Councilmember of District 7, Councilmember LaFrance, Sr to hold community meetings with District 7 communities - - such as Ironton, Myrtle Grove and Wood Park - - and engage in a question and answer session from community

---

**Concern ID: 61961**

**Request that CPRA, USACE, and NOAA/TIG work with Plaquemines Parish Councilmember of District 7, Councilmember LaFrance, Sr. to hold community meetings with District 7 communities, such as Ironton, Myrtle Grove and Wood Park, and engage in a question-and-answer session from community.**

**Response ID: 15906**

Concurrent with issuance of the Draft EIS, CPRA has held several public meetings with the communities projected to be impacted by the proposed MBSD Project, including communities south of the diversion from Myrtle Grove south to Grand Bayou and Happy Jack, to solicit input on mitigation and stewardship strategies. Although the EIS indicates that the proposed MBSD Project would not have more than moderate impacts on Ironton, CPRA also held a public meeting in the community of Ironton.. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. CPRA will continue to coordinate regarding these meetings with the Plaquemines Parish government. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62487**

**Several commenters requested additional time to submit comments on the LA TIG's Draft Restoration Plan and Draft EIS.**

**Response ID: 15768**

The public comment period for the LA TIG's Draft Restoration Plan and Draft EIS was originally 60 days (March 5, 2021 through May 4, 2021). On April 23, 2021, USACE and the LA TIG issued a special public notice, announcing a 30-day extension of the public comment periods. With this addition, the public comment period for both documents was 90 days (March 5, 2021 through June 3, 2021).

---

**Correspondence ID:39866**

Steve Pollock

Dr Steve Pollock PhD. Triple N Oysters:

I am extremely worried about the short and long-term consequences of the mid Barataria planned diversion. The EIS seems to support the idea that environmental damage will be immediate, long lasting, and severe. The EIS does not clearly show that the benefits will outweigh the costs of going through with this project.

Other alternatives should be considered to minimize severe impacts to the LA fisheries, communities, and gulf coast ecosystems.

---

**Concern ID: 61852**

**The cost per acre of marsh creation by the diversion is far higher than a corresponding alternative of marsh creation through the use of dredged material. Marsh creation through a diversion takes 50 years unlike marsh creation through dredging. In addition, brackish/salt marshes (which would be created by dredging) are more resilient than freshwater marshes, and thus marsh created through dredging would be a more sound investment of restoration funding than a sediment diversion.**

**Response ID: 16617**

The timing of marsh benefits created by the proposed diversion was considered in the Draft EIS in Chapter 4, Section 4.6.5 Wetland Resources, Operational Impacts. In response to these comments, additional detail has been added regarding the resiliency of fresh marsh compared to brackish marsh in the Final EIS, Sections 4.6.5.1.2.3 Soil Shear Strength and 4.6.5.1.2.4 Land Accretion. Under relevant NEPA regulations, a cost-benefit analysis is not required for the EIS unless such an analysis is relevant to the agency's decision. USACE generally assumes that a permit applicant has undertaken its own economic evaluation of a proposed project and therefore, does not require a financial cost-benefit accounting for its decision. As part of its permitting decision, USACE conducts a public interest review, which weighs the probable harms of a project against its prospective benefits.

While the commenters suggest that marsh creation through dredging would cost less than the proposed Project, the LA TIG does not believe that comparing the costs of a sediment diversion to marsh creation projects using dredged material is relevant for several reasons. Most importantly, as explained in the LA TIG's Restoration Plan, the goal of the Project is to create a long-term sustainable ecosystem through the reestablishment of deltaic process. Marsh creation through the use of dredged material would not bring fresh water or nutrients to the basin on an ongoing basis. The benefits of marsh created with dredged material would diminish over time without maintenance in the form of additional pumping events due to subsidence and sea-level rise; thus, the temporal nature of Project benefits in the absence of periodic maintenance would also be very different. The costs and benefits of the Project were fully considered by the LA TIG and are discussed in the Draft Restoration Plan in Section 3.2.1.2 Cost to Carry Out the Alternative.

---

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable**

---

**alternatives, which is a requirement that the Draft EIS does not meet. Consider analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of "marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured

---

resources that depend in their life cycle on productive and sustainable wetland habitats” (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG’s Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

Katharine Poole

Did y'all have any dedicated climate scientists look at this proposal?

---

**Concern ID: 62667**

**One commenter inquired about whether climate scientists had been involved in assessing the potential impacts of the proposed Project.**

**Response ID: 16626**

Multi-disciplinary teams of scientists and professionals contributed to the preparation of the EIS and the LA TIG's Restoration Plan. See Chapter 6 List of Preparers in the Final EIS for the qualifications of the contributors to the EIS. In addition, climate modeling was incorporated into the EIS analysis. The Delft3D Basinwide Model incorporates two different Gulf of Mexico regional sea-level rise scenarios: 2.6 and 4.9 feet (0.79 and 1.5 meters) by year 2100 in addition to local subsidence rates. For additional information on Delft3D Basinwide Modeling, refer to Appendix E of the EIS.

**Correspondence ID:39868**

Michael Tritico

Would it not be a better use of words to say "restore elements injured" than to say "restore injuries" ?

How much consideration has been given to the timing of diversions compared with the timing of aquatic organism migrations and/or passive entrainment of eggs, larvae, and juveniles into the Basin?

---

**Concern ID: 61912**

**CPRA should consider alternative flow triggers, designs, and features in the operations plan and design of the proposed MBSD Project in order to minimize impacts. CPRA should also consider adjusting diversion design elements such as triggers, peak flows, volumes, and nutrient loads over the first years of operation to minimize impacts. These adjustments could minimize impacts to dolphins, oysters, brown shrimp, and other aquatic organisms. Some commenters suggested limits be imposed by USACE, others suggested an operating plan that is tied to specifics, while others emphasized flexibility tied to real-world experiences. CPRA should also consider alternative methods of operating the proposed MBSD Project, such as operating the diversion during winter when water levels in the basin are lower and can accept high volumes of water from the diversion.**

**Response ID: 15999**

The proposed MBSD Operations Plan can be found in Appendix F2 Preliminary Operations Plan of the Final EIS. As stated in the Chapter 4, Section 4.4.4.2.4 Sediment Transport in Chapter 4 Surface Water and Coastal Processes, sediment transported by the Mississippi River is primarily comprised of fine sediments, with higher river flows (typically occurring in the spring) suspending more coarse-grained sediment that are important in delta building (see Chapter 3, Section 3.4 Surface Water and Coastal Processes). Fine-sediment transport through the diversion would be generally proportional to water flow in the river. The intake channel was modeled and designed to divert a high sediment-to-water ratio while minimizing energy loss (to maintain flow and sediment transport through the diversion complex) and impacts on the river. The amount of sediment carried through the diversion would vary by year, depending on flow rates in the river and the corresponding variation of diversion operations. As explained in Chapter 2, Section 2.8.1.3 Project Operations in Action Alternatives Carried Forward for Detailed Analysis, the Mississippi River discharge of 450,000 cfs would be the standard operations "trigger to open the diversion for flow (above the base flow)". Operations (with the exception of a base flow up to 5,000 cfs) would cease when the river discharge falls below 450,000 cfs or when certain emergency triggers are met (such as in advance of hurricanes or when a spill of hazardous substances occur in the river). When the Mississippi River flows exceed 450,000 cfs, the gates would be fully opened (above base flow). At river flows of 450,000 cfs, the diversion flow would be approximately 25,000 cfs, and flows would increase proportionally as the river flow increases. This ramp would continue up to maximum diversion capacity flow of 75,000 cfs when the river reaches a flow of 1,000,000 cfs.

An alternative related to operational triggers specific to sediment concentration was considered but determined not to be technically feasible or reasonable because data and

---

technology do not currently exist to support this operational regime (refer to the Eliminated Alternatives Matrix in Appendix D2 of the EIS). According to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 of the Final EIS, as part of the adaptive management and monitoring process, CPRA would consider potential ways to optimize diversion operations based on Project performance and success and would assess potential operational changes that may minimize impacts to basin resources where practicable after sufficient operational data become available for analysis.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62687**

**A commenter suggested that the restoration goal should be clarified, noting the purpose should be to “restore elements injured” rather than “restore injuries” resulting from the DWH oil spill.**

**Response ID: 16503**

The LA TIG acknowledges the commenter's close reading of the LA TIG's Draft Restoration Plan and agrees that the phrase “restore injuries” could be confusing to the reader. In the LA TIG's Final Restoration Plan, the phrase “restore injuries” has been replaced with the more common phrase “restore for injuries,” as the goal is to restore what was injured.

Mayor, City of New Orleans

LaToya Cantrell

In New Orleans, living with water is the foundation of our existence. With climate change impacting our daily lives, we are experiencing record-breaking Mississippi River flooding, increasingly intense and frequent rainfall events, and unprecedented hurricane seasons. We are also facing some of the highest rates of sea level rise in the world. Now is the time to innovate and adapt. We can continue to see water as our biggest threat, or we can use it as a major asset. Here in New Orleans, we are leading the way, finding innovative ways to live with water. We are proud of the progress made since Hurricane Katrina.

Our delta city was built by the sand and mud of the Mississippi River. Though we've walled it off, the river is intricately linked to our geography, culture, and economy. The river will continue to be critical, especially to the sustainability of the coast that protects our city. In part, because we've walled off the river and its natural land-building process, we are losing our coast at a rate of one football field of wetlands every 100 minutes. This is not just an issue for our neighboring parishes; this is a dire issue for every parish in the region - from fishing camps on Grand Isle to bedroom communities of Baton Rouge.

The good news is that our state has recognized the seriousness of our coastal land loss and prioritized restoration and protection. We've empowered the Coastal Protection and Restoration Authority to advance coastal solutions at a rate that other coastal states can only dream of.

We should also all be thankful for the Mississippi River. We've leveed it off, but it's still there. It's still the Mighty Mississippi. Our best shot at maintaining and even rebuilding a coastal buffer to help sustain the future of New Orleans and our neighbors is to utilize the very tool that built the delta in the first place.

New Orleans and Louisiana are truly leading the way in coastal climate adaptation. CPRA has put forward a world-class Coastal Master Plan to provide a science-based blueprint for coastal restoration.

One of the most innovative projects in the Coastal Master Plan is the Mid-Barataria Sediment Diversion, located south of New Orleans in Plaquemines Parish. Mid-Barataria Sediment Diversion is the single largest ecosystem restoration project in U.S. history. It will build more land than any other restoration project in the world. This is the type of innovation and ingenuity we need to address the challenges that we face. Mid-Barataria will reconnect the river to its delta in a tightly controlled way restoring the natural wetland-building process and sustaining existing wetlands that are otherwise going to wash away.

This project will help protect our communities by restoring our coastal buffer and could bring thousands of jobs and billions of dollars in economic impact to our region.

Right now, we are in the midst of one of the most important public comment periods in the history of our coast. Comments are being accepted on the \$2 billion Mid-Barataria Sediment Diversion project. This is the time to support innovation, ingenuity, and climate adaptation. This is the time to embrace living with water and to make it our great asset. It's time to get involved and protect our coast and the future of our delta city.

---

**Concern ID: 63340**

---

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Correspondence ID:39873**

Russell Caffery

As a concerned citizen of Louisiana, I fully support the Mid-Barataria Sediment Diversion project. This project is desperately needed to aid in saving the Barataria Basin. Without this project, the immediate area will continue to collapse and disappear making the surrounding areas more and more vulnerable and susceptible to increased impacts from natural disasters as well as saltwater intrusion and sea level rise. Even if other alternatives are considered, their planning timeline and implementation schedule would put whatever that alternative project is, so far out in time that saving what precious resources we have today will be too far gone to even restore. Restoration of the Barataria Basin will be nearly impossible if this project is not permitted, and Louisiana is at an extremely crucial decision point. Our coastal wetlands are starving for sediment input. Dredging alone cannot save our wetlands, we must reestablish the processes that originally built them. The Mid-Barataria Sediment Diversion is the project that will restore that original, natural, process.

Not permitting the project will do such a disservice to the people that call this state home that we might as well start the clock on how long we have to watch Barataria Basin wash away. Doing nothing is not an acceptable alternative, and if this project is not granted a permit by the Corps, essentially the state is locked in to doing nothing and we'll watch the negative impacts to our coast and our people increase.

Please do not let the news that's populated the pages of the popular press recently about a few town councils passing a poorly written resolution against the Draft Environmental Impact Statement fray the importance and necessity of this permit and this project. I think it would be massive black mark on the state and the Corps if this project was not permitted because a few fishermen did not want to fish new areas. If this project is not permitted and built, generations to come will suffer the consequences because of our inability to act when we had opportunity.

I implore the Corps to permit the Mid-Barataria Sediment Diversion project to allow the State of Louisiana to protect itself and its citizens.

---

**Concern ID: 61977**

**While other restoration project types, such as marsh creation, have been suggested in lieu of large-scale diversions, these project types would fail to build and sustain significant amounts of land in the Barataria Basin over the 50-year Project lifespan due to subsidence, sea-level rise, and erosion. Dredging alone cannot save the wetlands, the processes that originally built them must be reestablished. The power of the river allows more land-building potential to be harnessed than could be had with dredges at a fraction of the cost, and the benefits are long-lasting, even in the face of sea-level rise and hurricanes.**

**Response ID: 15977**

The commenter's support of the proposed Project is acknowledged. The EIS concludes that a large-scale sediment diversion meets the purpose and need of the proposed Project while large-scale marsh creation does not meet the purpose and need. Details on marsh creation alternatives including sustainability and the reasons for elimination from further detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional

---

Alternatives. Additional information related to the marsh creation alternative have been added to Section 2.3.5 Large-Scale Marsh Creation for the Final EIS.

---

**Concern ID: 61995**

**Commenters suggested that restoration of the Barataria Basin would be nearly impossible if the proposed MBSD Project is not permitted, and Louisiana is at an extremely crucial decision point. The coastal wetlands are starving for sediment input. Dredging alone cannot save the wetlands, the processes that originally built them must be reestablished.**

**Response ID: 16018**

The commenter's support of the proposed Project is acknowledged. Coalition to Restore Coastal Louisiana

Sarah Giles

I am a wetland biologist, tournament kayak angler, duck hunter, and board member of the Coalition to Restore Coastal Louisiana. I completed the wetland delineation for the Mid Breton sediment diversion and an Environmental Site Assessment for the land adjacent to the Mid Barataria Sediment Diversion.

This is our only and best chance at preserving life in Louisiana as we know it. There is a pervading sense that we are on the cusp of something great, and I believe that we are. We can fight climate change and coastal land loss. But this project is the linchpin of it all. I live in a vulnerable city that depends upon our wetlands as a component of our hurricane protection. I see that something beautiful is slipping away from us before our eyes, but I know we have the means to fix it - if only we have the gumption.

We can either move oysters, or we can move people. It's time to move the oysters.

Sincerely,

Sarah Giles

---

**Concern ID: 62961**

**Project mitigation must adequately compensate impacts on the oyster industry, including financial compensation for economic losses. Commenters provided suggestions for mitigation such as compensating for increased costs of travel, providing direct financial payments to lease holders whose areas become unproductive, supporting new oyster leases or lease swaps, investing in research and development, using devices to move oysters to higher-salinity water, providing loans to oystermen to develop alternative income streams, providing support for elderly fisherfolk and buying out boats and businesses.**

**Response ID: 16532**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers as compared to No Action conditions in Chapter 4, Sections 4.10 (Aquatic Resources), 4.14 (Commercial Fisheries), 4.15 (Environmental Justice) and 4.16 (Recreation and Tourism).

In response to public comments and resource agency input about the proposed mitigation efforts, CPRA has expanded and refined the oyster mitigation and stewardship measures. CPRA's mitigation and stewardship strategies and associated expenditures would focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to oyster fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for oysters in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to oyster fisheries in the early years of the Project's operational life. The revised mitigation and stewardship measures include allocating \$4 million to establish new public seed grounds, \$15 million to enhance

---

public and private oyster grounds, \$4 million to enhance broodstock reefs and \$8 million for alternative oyster culture.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. New Orleans, LA 70118

Louisiana Trustee Implementation Group (LaTIG) c/o of NOAA

Re: Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

Mr. Laborde and Mr. Landry,

I support the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion, which has been comprehensively studied in the DEIS. Louisiana's land loss crisis is dire, and while the Mid-Barataria Sediment Diversion is only one piece of the solution that is needed, it is the most important and impactful one. Without re-connecting the river to the Mississippi River delta that it built, there is no future for Louisiana's coast.

I have lived in New Orleans for over a decade - first moving here for college at Loyola University, and then returning after obtaining a Masters degree that focused on environmental policy, and Louisiana's coastal land loss more specifically. Like many others who have lived in New Orleans and left, I was called back to this city and this unique slice of coastal paradise because I missed it, but also because I feared, deeply, for its future after I became aware of the scale of Louisiana's coastal crisis. I've now begun my career here and planted roots that I hope will one day become a family, including children that I can raise in this special place I love so much and now call home. Because of the rapid erosion of wetlands – decimating storm protection for communities and destroying one of the most important ecosystems in the country - I am uncertain that future will ever materialize, at least in Louisiana. I know for certain that it will not materialize, at least not with any degree of certainty, without the Mid-Barataria Sediment Diversion.

This project has been decades in the making and now is the time to act. I urge the Army Corps of Engineers to continue advancing this vital project with as much focus on time efficiency and productive coordination with statewide and local agencies and governments. That said, it is crucial for this project to be as comprehensive, inclusive, accessible and equitable as possible so that it can move forward with robust support and with the interests of the most marginalized communities in mind. I encourage further development of mitigation plans, and continued efforts to engage those living in the most impacted communities so that they're involved as the project moves towards implementation.

Please continue the forward momentum on this project and issue the final EIS as soon as possible, followed by the necessary permits and then construction. I look forward to watching the Mid Barataria Sediment Diversion come to life, along with many others of similar scale and size, and operating at its maximum potential. More than that, I look forward to showing my children a restored and thriving Barataria Bay in the years and decades to come.

Sincerely,  
Katie Gruzd  
New Orleans, Louisiana

**Concern ID: 61959**

**State government, elected officials, CPRA and other state agencies, and local jurisdictions must pivot to centering community expertise as they carry out the proposed MBSD Project. This would open the door to creating a truly equitable restoration landscape; one where those impacted by the proposed MBSD Project and future coastal restoration projects are proactively engaged and consulted as restoration projects are planned, designed, and implemented.**

**Response ID: 15905**

Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area, in an effort to reach out to community groups to gather information related to their concerns regarding proposed MBSD Project. More recently, CPRA has engaged the public through meetings with the communities impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities including fishers. This included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. A summary of these public engagement meetings and additional outreach can be found in Chapter 7 Public Involvement of the Final EIS. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that CPRA states it would implement as a result of the public involvement and engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63185**

**Additional development of mitigation plans and accountability for mitigation commitments is needed.**

**Response ID: 16562**

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, have been provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Scott Mouledous, Jr.

As a concerned citizen of Louisiana and resident of New Orleans, I believe diversion projects are crucial to a prosperous future in our region. I fully support the mid-Barataria Sediment Diversion project, the Corps' Draft Environmental Impact Statement, and the LA-TIG's Draft Restoration Plan.

Sincerely,

Scott Mouledous Jr.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

**Correspondence ID:39897**

Isabella Donnell

I'm writing to voice my support for the preferred alternative: Alternative 1, variable flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion. I support the adoption of the preferred alternative in the Corps' Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's (TIG) Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2.

While I support the diversion's construction, I am concerned about the quality of water that would be released from the river into the wetlands. It is also important to me that efforts are made to reduce, as much as possible, the potential negative impacts that the construction of this project would have on surrounding communities.

I would also suggest, if it has not been done already, that an assessment be made on how this construction of this project might impact the property value of homes in the surrounding area and that those landowners/home owners be made aware of the impact.

---

**Concern ID: 61819**

**Commenters expressed concern that the proposed Project would have adverse impacts on Barataria Basin's water quality, wetlands, fisheries, recreational uses, and eroding coastlines due to chemicals, oil and hazardous waste, and/or pollutants in the Mississippi River that would be routed to the Barataria Basin via the proposed diversion.**

**Response ID: 16429**

The impacts raised by the commenters were considered in the Draft EIS. As discussed in Chapter 3, Section 3.5.1.1 in Surface Water and Sediment Quality of the Draft EIS, the segment of the Mississippi River where the proposed diversion river intake structure would be located (subsegment LA070301\_00) fully supports its designated uses. Designated uses for this subsegment include swimming, boating, fishing, and drinking water supply. LDEQ's water quality assessment indicates that regulated substances are not present in concentrations that would cause a water quality impairment at the location of the intake structure. In response to this concern expressed by commenters, a new subsection has been added to Chapter 4, Section 4.5 Surface Water and Sediment Quality clarifying the potential impacts of nearby industrial facilities on river water routed to the basin during proposed Project operations. The new section is called 4.5.5.11 Hazardous Spills from Industrial Sites.

As described in the EIS, Chapter 2, Section 2.8.1.4 in Action Alternatives Carried Forward for Detailed Analysis and in Appendix F MBSD Design Information, in the event of oil spills and other hazardous discharges into the Mississippi River upstream of the proposed MBSD intake structure, the diversion structure would be closed.

**potential negative impacts that the construction of this proposed Project would have on surrounding communities including Ironton, Myrtle Grove, and Wood Park.****Response ID: 16216**

The impacts raised by the commenters were considered in the Draft EIS. The EIS includes analysis of socioeconomic impacts on affected communities. Section 4.13 Socioeconomics, 4.14 Commercial Fisheries, and 4.15 Environmental Justice provide detailed analyses of impacts from the proposed Project. In addition, the Socioeconomics Technical Report in Appendix H of the EIS provides additional details. In Chapter 4, Section 4.15.5 Environmental Justice of the Final EIS, a section has been added that provides a summary of impacts on the community of Ironton to assist understanding impacts of the proposed Project on that community.

CPRA has engaged in public outreach meetings with the communities and groups impacted by the proposed MBSD Project to solicit input on mitigation strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities and groups. A summary of these public outreach meetings can be found in Chapter 7 Public Involvement of the Final EIS. The Mitigation and Stewardship Plan in Appendix R1 of the EIS provides additional details about mitigation proposed by CPRA for the proposed Project, including mitigation measures for the communities projected to be impacted.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63332****A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. Tina Freeman

I urge you to go ahead with the Mid-Barataria Sediment Diversion.

As a New Orleans native I have seen our wetlands shrink over my lifetime. We need to rebuild our precious wetlands to protect our city. The wetlands decrease storm surge and if the lost wetlands had been there in 2005 it is very likely the levees would not have failed after Katrina.

---

**Concern ID: 63341**

**The coastal wetland system creates multiple lines of natural defense from hurricanes and storm surge, and the ongoing wetland loss resulting from the lack of riverine input into the basin has resulted in increased storm risks to local communities (including decreases in property values and impacts to the electrical grid).**

**Response ID: 16300**

The commenter's support for the proposed Project is noted. The commenter correctly notes that coastal wetlands are natural defense against hurricanes and storm surge, and the damage they cause to local communities and infrastructure, as discussed in Chapter 3, Section 3.6 Wetland Resources and Waters of the U.S. of the Draft EIS. The causes of wetland loss in the proposed Project area were discussed in Section 3.6.2 of the Draft EIS, and included subsidence, levees, storms, canals/spoil banks, herbivory, and the DWH oil spill. Chapter 4, Sections 4.6 Wetland Waters and Resources of the U.S. and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS explained how the proposed Project would create and maintain wetlands in the Barataria Basin, and discuss the corresponding impacts on storm surge and flooding.

Anne Giles

I am in favor of the diversion as a step towards helping Louisiana mitigate coastal land loss, which is happening with alarming speed. Now is a crucial time to act to save Louisiana's coastal lands, and we must do more, and faster. Having grown up in southern Louisiana, it pains me to see marshes I used to fish in as a child that are now reduced entirely to open water. This of course has devastating effects in many ways - to local livelihoods, the unique culture of these lands, and such a wide array of wildlife. Louisiana has already seen climate refugees and, unfortunately, they are unlikely to be the last, but potentially the first of many more to come. We still have time to work together to turn around the fate of Louisiana's coastal lands. Organizations like the Coalition to Restore Coastal Louisiana are working hard to make a brighter future for Louisiana possible. I urge you to please approve this diversion. Thank you.

---

Re: Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

My name is Chris Macaluso. I am a lifelong Louisiana resident, an avid recreational hunter and angler who has committed his life and career to advocating for the restoration and protection of my state's coastal fisheries and wildlife habitats.

I would like to respectfully submit the following comments of support on the U.S. Army Corps of Engineers' Draft Environmental Impact Statement for the Proposed Mid-Barataria Sediment Diversion Project, as well as the Louisiana Trustee Implementation Group's (LA TIG) Draft Phase II Restoration Plan #3.2: Mid-Barataria Sediment Diversion.

I strongly support the adoption of the Preferred Alternative in the U.S. Army Corps of Engineers' Draft EIS and Alternative 1 in the Louisiana TIG's Draft Phase II Restoration Plan #3.2.

I've had the incredible opportunity to fish and hunt across our state's coast over the last forty years.

Unfortunately, many places I have fished across this coast that had seemingly infinite bounties of marsh filled with fish, crabs, shrimp and ducks no longer exist.

Towns like Leeville and Empire, once separated from open water by miles of marsh, are now at the Gulf's door. Without changing how our coast is managed, Lafitte, Golden Meadow and surrounding marshes seem destined for the same.

The Mississippi River built this coast, established and fed the land our coastal communities are built on and the marshes that supported unparalleled commercial and recreational fishing.

Over the last century, as the river has been cut off from delivering sediment and nutrients to its wetlands, life has been squeezed out. As the Draft Environmental Impact Statement for the Mid-Barataria Diversion illustrates, nearly one-third of the Barataria Basin's marshes have been lost, costing commercial and recreational fishing opportunities and threatening communities.

The basin will continue to die unless it is resuscitated by the river. Building islands and marshes with dredges is important and can fill gaps. Without sediment depositions and nutrients from the river, however, life will continue to drain from the basin. That is why I write to insist the Mid-Barataria Diversion move forward to construction and operation.

I've seen sediment deposits from the Mississippi and Atchafalaya Rivers build wetlands.

Fishing those marshes has demonstrated fish and wildlife can respond to spring inundations,

utilize the new habitat created and thrive. In the spring of 2021, I caught more than 100 speckled trout over the span of three separate trips in three weeks in an area less than 9 miles from Mardi Gras Pass near Point a la Hache. It is a wetland thriving with freshwater grasses, alligators and freshwater catfish as well as crabs, brown shrimp, redfish and other fish and shellfish considered saltwater species all while more than 20,000 cubic feet per second of sediment-laden water flowed through the pass and building new marshes.

The notion water from the Mississippi River is irreparably detrimental to our state's fisheries is simply not true and not factually based in any way. And it is demonstrably false based on the fisheries like white shrimp, mullet, blue crabs, red drum, speckled trout and a litany of other species that thrive in areas affected annually by high river events. I remember well an August 2019 trip to Buras, seeing fishermen remove crawfish traps from marshes influenced by the Mississippi River while seeing another deploy crab traps in that same area. I have fished this spring less than 10 miles from the mouth of the Atchafalaya River with it flowing at more than 240,000 cubic feet per second and caught redfish and black drum and dodged crab traps throughout the freshwater and brackish marshes of western Terrebonne Parish that are influenced by that river.

I implore the agencies working to implement and build this project to rely on the best scientific data and the empirical evidence of how Louisiana's fisheries respond in areas where sediment deposition and freshwater inundation occur annually and facilitate the adaptation of commercial and recreational fishing in the Barataria Basin once this project is operational. I implore you to avoid the highly-emotional and politically charged rhetoric surrounding this project and to trust the science and the facts.

Undoubtedly, the Mid-Barataria Diversion will change fisheries. Louisiana's Coastal Protection and Restoration Authority is required to work with fishermen to help mitigate those changes. Louisianans should hold our state's agencies and our legislature accountable to finding the path forward for commercial and recreational fishing to adjust and capitalize on the opportunities that will come from diversion operation while embracing the land-building and wetland restoration and sustenance that will certainly result from this project. There is no sustainable future for most fisheries and wetlands in this Basin without the utilization of the sediment and freshwater resources of the Mississippi River.

There are thousands of acres of water bottom in the southern and western portions of the Barataria Basin that at one time supported oyster production but are no longer producing oysters on a large scale. Those areas should become productive oyster grounds again after operation of the Mid-Barataria Diversion begins. It is imperative the CPRA and Department of Wildlife and Fisheries continue to work to overcome the political barriers in the oyster industry and rely on the biological resources available to rebuild oyster productivity in the lower parts of the Barataria system. This will not only benefit the oyster industry in the long run, but also improve water quality, improve fisheries habitat for other species like blue crabs, redfish and speckled trout and provide some natural protection for Grand Isle and other areas in the lower Basin.

It is an undeniable reality that sediment deposition from the Mississippi River builds land. It is also undeniable and factual that the animals, fish and plants that utilize our coastal habitats have the ability to adapt to seasonal changes in salinities and many of them thrive because of

those changes, not in spite of them. Louisiana is one of the most productive fisheries in the world because of the Mississippi River's influence, not in spite of it.

While the benefits to the system in the short and long term of diversion operation are undeniable, there will be some adverse impacts as identified in the draft EIS, especially the inundation of area camps and communities outside of levee systems. To the fullest extent, the CPRA should adaptively manage diversion outflow to minimize these impacts. Personal experience and scientific data have shown water levels in Louisiana coastal marshes are at their lowest in the late winter and early spring when cold fronts combined with tides push water out of the marsh, exposing mudflats and draining bayous, ponds and lakes. This annual occurrence has been exacerbated by the extraordinary land loss over the last century in the Barataria and other basins.

During these low water periods, diversion operation can occur with lessened impacts to homes, camps and other physical structures because the basin can accept more water. It will also be able to retain more sediment during these periods because of the additional exposed water bottom and shallower water areas that will be able to slow and trap sediment.

Conversely, when water levels increase in the late spring and summer because of stronger southeast winds and higher tides, the basin will not be able to accept high volumes of water from the diversion. Sediment load in the river cannot be the only determining factor in diversion operation. Water levels in the basin and the basin's ability to accept additional volume must be accounted for. It is crucial that diversion operation be truly adaptive and responsive to a host of environmental conditions in the Barataria Basin. Reducing water flows from the diversion during the late spring and summer should also lead to fewer impacts to spawning activity for speckled trout.

I urge the federal and state agencies responsible for the construction and operation of the Mid-Barataria Diversion to continue to move this project forward. The future of our coastal wetlands, fisheries and wildlife productivity and coastal communities are dependent upon the use of all available resources to restore and sustain our coast, especially the suspended sediments of the Mississippi River.

Sincerely,

Chris Macaluso

---

**Concern ID: 61912**

**CPRA should consider alternative flow triggers, designs, and features in the operations plan and design of the proposed MBSD Project in order to minimize impacts. CPRA should also consider adjusting diversion design elements such as triggers, peak flows, volumes, and nutrient loads over the first years of operation to minimize impacts. These adjustments could minimize impacts to dolphins, oysters, brown shrimp, and other aquatic organisms. Some commenters suggested limits be imposed by USACE, others suggested an operating plan that is tied to specifics, while others emphasized flexibility tied to real-world experiences. CPRA should also consider alternative methods of operating the proposed MBSD Project, such as operating the diversion during winter when water levels in the basin are lower and can accept high volumes of water from the diversion.**

**Response ID: 15999**

---

The proposed MBSD Operations Plan can be found in Appendix F2 Preliminary Operations Plan of the Final EIS. As stated in the Chapter 4, Section 4.4.4.2.4 Sediment Transport in Chapter 4 Surface Water and Coastal Processes, sediment transported by the Mississippi River is primarily comprised of fine sediments, with higher river flows (typically occurring in the spring) suspending more coarse-grained sediment that are important in delta building (see Chapter 3, Section 3.4 Surface Water and Coastal Processes). Fine-sediment transport through the diversion would be generally proportional to water flow in the river. The intake channel was modeled and designed to divert a high sediment-to-water ratio while minimizing energy loss (to maintain flow and sediment transport through the diversion complex) and impacts on the river. The amount of sediment carried through the diversion would vary by year, depending on flow rates in the river and the corresponding variation of diversion operations. As explained in Chapter 2, Section 2.8.1.3 Project Operations in Action Alternatives Carried Forward for Detailed Analysis, the Mississippi River discharge of 450,000 cfs would be the standard operations “trigger to open the diversion for flow (above the base flow)”. Operations (with the exception of a base flow up to 5,000 cfs) would cease when the river discharge falls below 450,000 cfs or when certain emergency triggers are met (such as in advance of hurricanes or when a spill of hazardous substances occur in the river). When the Mississippi River flows exceed 450,000 cfs, the gates would be fully opened (above base flow). At river flows of 450,000 cfs, the diversion flow would be approximately 25,000 cfs, and flows would increase proportionally as the river flow increases. This ramp would continue up to maximum diversion capacity flow of 75,000 cfs when the river reaches a flow of 1,000,000 cfs.

An alternative related to operational triggers specific to sediment concentration was considered but determined not to be technically feasible or reasonable because data and technology do not currently exist to support this operational regime (refer to the Eliminated Alternatives Matrix in Appendix D2 of the EIS). According to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 of the Final EIS, as part of the adaptive management and monitoring process, CPRA would consider potential ways to optimize diversion operations based on Project performance and success and would assess potential operational changes that may minimize impacts to basin resources where practicable after sufficient operational data become available for analysis.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not

know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62734**

**Wetlands built by the Mississippi and Atchafalaya Rivers, as well as by wetlands downstream of Mardi Gras Pass, have shown resiliency and a diverse assemblage of freshwater and estuarine species during spring flows and active water diversions.**

**Response ID: 16112**

The commenter's observations are consistent with Chapter 4, Section 4.10.4.5 in Aquatic Resources of the EIS, which notes that, while some species would be negatively impacted by the freshwater flows from the diversion (including oysters, brown shrimp, spotted seatrout, and southern flounder), a higher number of key fishery species would either be unaffected or be benefitted by the proposed Project (including white shrimp, blue crab, bay anchovy, Gulf menhaden, red drum, Atlantic croaker, and largemouth bass). Because these issues were addressed in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 62735**

**Operation of the proposed Project would allow for the return of productive oyster grounds in the lower basin, which would in turn improve water quality, fisheries habitat, and natural protection for Grand Isle.**

**Response ID: 16113**

As discussed in Chapter 4, Section 4.10.4.5 in Aquatic Resources of the EIS, operation of the proposed Project could allow for increased production of oyster grounds in the lower basin; however, this would likely be contingent on the enhancement of existing substrates to make them more suitable. The Final Mitigation and Stewardship Plan (Appendix R1), which has been revised for the Final EIS, describes CPRA's mitigation and stewardship measures, including those measures intended to offset adverse impacts on oysters; these mitigation and stewardship measures have been revised in response to public comment since the release of the Draft EIS.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without

implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62736**

**The flora and fauna of Louisiana can adapt to seasonal changes in salinity and many of them thrive because of those changes, not in spite of them.**

**Response ID: 16114**

Comment noted. The proposed Project is anticipated to have both beneficial and adverse impacts on the flora and fauna of the Barataria Basin, as discussed throughout Chapter 4, Section 4.10 Aquatic Resources of the EIS. Because these issues were addressed in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 62956**

**It is imperative that oyster productivity be rebuilt because it would provide natural flood protection.**

**Response ID: 16613**

The oyster mitigation concern raised by the commenters was considered in the Draft EIS as part of the Draft Mitigation and Stewardship Plan (Appendix R1). Additional details on oyster mitigation have been added to this appendix in the Final EIS. CPRA agrees that maintaining a sustainable oyster population is imperative and has designated \$32 million in mitigation strategies associated with the Project toward that objective. Most of these funds would go towards new public seed grounds, enhanced public/private grounds, Alternative Oyster Culture, and broodstock reefs. Additional funding would go towards assisting the oyster industry in marketing and outreach. Details regarding the oyster mitigation measures are set forth in the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and

---

Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62978**

**Collaboration is needed to minimize impacts on oyster industry, including developing innovative uses for bottom oysters and supporting collaboration between CPRA and LDWF.**

**Response ID: 16539**

CPRA and other state agencies, such as LDWF, recognize the importance of collaboration to support the fishing industry in adapting the ongoing changes in the environment. As explained in Section 4.14.4.1 Commercial Fisheries of the Draft EIS, without the Project, adverse impacts to oyster fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for oysters in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to oyster fisheries in the early years of the Project's operational life. CPRA and LDWF worked together with numerous oyster fishers as part of Louisiana Sea Grant's Seafood Futures Initiative to develop mitigation and stewardship measures aimed at maintaining a sustainable oyster fishery. CPRA anticipates working with other agencies, such as Louisiana Economic Development, on the workforce development, education and training programs included in the Mitigation and Stewardship Plan (see Appendix R1 to the Final EIS). In addition, CPRA engaged the fishing community potentially impacted by the Project through public meetings to solicit input on mitigation and stewardship strategies and engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures from affected fishers. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

---

Refer to the Mitigation and Stewardship Plan for mitigation and stewardship measures to be implemented as a result of these engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of

specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

**Correspondence ID:39966**

Form Letter 21

Louisiana's coastal loss is of great concern to many. While Mardi Gras Pass is naturally building back some land it is not enough to off set the loss. Clearly Mother Nature needs our help. The Barataria Sediment Diversion will support land growth. I am a proponent of the diversion for a multitude of reasons. Among them are:

- The Mid-Barataria Sediment Diversion will work in concert with nearby marsh creation projects and will

extend the lifespan of the millions of dollars that have been invested in nearby marsh creation projects.

- Constructing the Mid-Barataria Sediment Diversion will have a massive positive economic impact, bringing thousands of jobs and billions of dollars in regional economic sales.

- The Mid-Barataria Sediment Diversion is the single largest ecosystem restoration project in the history of the U.S. This project will build more wetlands than any other individual restoration project in the world, and it is exactly the scale of project we need to address the very serious challenges we face.

As a result it will protect our area from severe hurricane damage, protect our way of life, stop the disappearance of many villages and towns, and maintain our rich culture.

I encourage you to do the right thing and support the Barataria Sediment Diversion.

Thank you in advance for your support.

Sincerely

Patricia Meadowcroft

Board of Directors Chair Pontchartrain Conservancy

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Concern ID: 63342**

**Other natural or man-made diversions have successfully built land, such that the proposed MBSD Project would also be expected to build land.**

**Response ID: 16302**

---

The commenter's support for the proposed Project is noted. Consistent with the comment, Chapter 4, Section 4.2.3.2 in Geology and Soils indicates that the proposed Project is anticipated to build land in the Barataria Basin (with smaller amounts of land loss projected in the birdfoot delta). To facilitate comparisons between the proposed Project and other natural or man-made diversions, a summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary is available in Appendix U of the Final EIS.

---

**Concern ID: 63374**

**Construction of the Mid-Barataria Sediment Diversion Project would have a massive positive economic impact, bringing thousands of jobs and billions of dollars in regional economic sales.**

**Response ID: 16337**

The commenter's support for the proposed Project is noted. Chapter 4, Section 4.13.4.2 in Socioeconomics of the Draft EIS discussed major economic benefits projected to occur within the Project area during construction of the proposed Project from increased jobs and regional sales.

---

Louisiana Trustee Implementation Group (LaTIG) c/o of NOAA

Re: Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

Mr. Laborde and Mr. Landry:

I am writing to offer public comment in response to the Draft Environmental Impact Statement (DEIS) for the Mid-Barataria Sediment Diversion.

I was born and raised in Braithwaite, Louisiana, on the East Bank of Plaquemines Parish. I consider myself incredibly fortunate to have grown up in this uniquely beautiful part of Louisiana. Although my home was only a 20-minute drive from New Orleans, Braithwaite and the East Bank of Plaquemines Parish were an entirely different world. I spent my childhood fishing and exploring the marshes behind our neighborhood and riding my bike and four-wheelers on the Mississippi River and back levees that protected my community from flooding.

Growing up, I had no awareness of the role that the Mississippi River levees played in cutting off sediment and freshwater to the wetlands and marshes behind our neighborhood. I really didn't even know that Louisiana was facing a land loss crisis and that these marshes and the wetlands that protected my community were disappearing. Nor was I fully aware of the Caernarvon Freshwater Diversion upriver from my neighborhood or its purpose and need and the value it provided to the basin. I didn't even really consider my community to be "coastal." To me, it was just home.

It was also a place my family had lived for many generations. My father and grandparents and their ancestors before them all grew up in Pointe-à-la-Hache, Louisiana, as far downriver as one can go on the East Bank. I grew up hearing stories of life there, but I knew it was Hurricane Betsy's destruction and flooding that forced my family to move further upriver to the safer, higher ground of Braithwaite. That plan worked for 50 years until Katrina destroyed everything I knew of my community, forcing my family and elderly grandparents to move outside of Baton Rouge, where they lived for the rest of their lives, always longing to get back to the place that was truly "home" for them. Today, all that my family has left in Plaquemines Parish is our tomb at the St. Thomas Catholic Church in Pointe-à-la-Hache, Louisiana.

In the years since Katrina, I would often drive back down to Braithwaite and all the way down to Pointe-à-la-Hache and imagine what things were like before the storm; however, imagining a return to a more normal time was difficult given what I would see on these drives. My next-door neighbor's house was demolished. In its place stands a home elevated 25 feet in the air. This is a common sight on the East Bank of Plaquemines Parish as storm surge from Hurricane Isaac in 2012 further decimated mostly what was left of the area and many people

have been forced to live in these homes in the sky if they want to remain there and if they can secure the resources to elevate.

I mention this because this alone is a clear sign that things are not normal and in my short lifetime, conditions have changed dramatically for Plaquemines Parish and the people who have or do call it home. Wetland loss and hurricanes have decimated communities and have forced so many families, like my own, to migrate away from the places they once called home.

How many more communities and families will be displaced before we finally act in a meaningful, substantive way to address this crisis? These are people, like me growing up, that didn't have knowledge of Louisiana's coastal environment or the ways it protected us. We were just living our lives - going to school or work or church, connecting with neighbors and family, feeling a deep connection and sense of pride in the place we lived. And then nature's destructive force – compounded by the actions of man, whether it was Mississippi River levees or navigation channels like the Mississippi River Gulf Outlet – disrupted our lives and communities in ways that were indelible.

We need to act today stop this destructive cycle before it's too late, before more intense hurricanes and sea level rise force what's left of communities in Plaquemines, St. Bernard, Jefferson and Orleans Parishes to follow in the footsteps of my family and so many others across coastal Louisiana.

That is why I am urging you to select the Preferred Alternative from the DEIS for the Mid-Barataria Sediment Diversion and to fund it using settlement dollars from the Deepwater Horizon Oil Spill settlement.

Louisiana literally is running out of time, land, and resources. Sediment diversions have been studied and pointed to by a large consensus of coastal scientists as absolutely critical to our future since as far back as 1984 – the year before I was born. It is vital that these projects are built and that Louisiana be allowed to leverage its greatest natural asset – the Mississippi River and its tons of sediment to push back against the forces of coastal land loss, sea level rise and stronger hurricanes.

The 2020 Atlantic Hurricane Season – the most active ever recorded – was a wake-up call for what's at stake if we do not act. We went to sleep expecting a tropical storm to make landfall, only to wake up and be faced with a Category 3 storm without time to evacuate. How will our region be able to survive into the future and face these rapidly intensifying hurricanes without the natural buffer provided by surrounding wetlands? As sea level rise increases, what sustainable, efficient options do we have to hold onto our wetlands and support other coastal restoration and protection investments?

Louisiana has been working tirelessly to advance projects from its Coastal Master Plan, but the State does not have the funding it needs to implement this plan in full. As other coastal areas, such as Miami, New York and California, begin to compete for funding to protect their communities and assets from sea level rise and flooding, how can Louisiana expect to compete for federal dollars if it is not putting its best natural asset – the Mississippi River – to work to protect its communities, infrastructure and natural resources? Given increased competition and need for these resources among other vulnerable coastal areas, what other options does Louisiana have to sustainably build, maintain and manage its wetlands into the future without using sediment diversions and harnessing the power and sediment of the river?

My sincere hope is that this project and others like it can move forward with urgency. I also hope the State and other involved parties do what they can to support communities living and working in Plaquemines Parish who need assistance in navigating the difficulties brought by a changing coast and climate. My next-door neighbor growing up was an oyster fisherman. He would often bring over gallons of freshly shucked oysters for us to enjoy. This is part of our culture and the livelihoods of many people in this region. However, the fact that people have been able to harvest species like shrimp and oysters adjacent to the largest freshwater river on the continent is a sign of human-induced change on our coast. We cannot pretend that conditions for species like oysters and shrimp haven't already changed and won't continue to change into the future with or without this project. Help people better understand and navigate these changes.

This brings me back to my earlier point about my knowledge and awareness of coastal and environmental issues growing up. My family was not steeped in these issues. We enjoyed the coast for what it was to us. We fished in the marshes across Plaquemines Parish. We enjoyed the parish's shrimp, oysters and citrus. For the most part, we just lived our lives year after year, until a hurricane whose damage was exacerbated by the loss of surrounding wetlands changed all of that.

There are many families like mine living and working across southeastern Louisiana who are also not tuned into the latest development or debate about coastal restoration and protection. They may not be familiar with the Coastal Master Plan or sediment diversions. They don't attend public meetings or offer public comment for projects and restoration plans. They are simply living their lives and want to continue to do so, hopefully where they are, without fear of having to relocate because of massive storm surge or increased flooding from rising seas. There are many people that many not have the knowledge, time, or resources to be deeply involved in these issues, but who also have a stake in what is happening. I hope that you consider the needs of these people in making a decision about moving this project forward. I also hope as this and similar projects move forward that you consider opportunities to better engage people across Louisiana's coast in the value of projects like these and why they are crucial to the future of our region.

There is truly no place else in the world like Plaquemines Parish. I often go back to the stories of my family members and neighbors, many of whom are now deceased or scattered across the state and country, of what their lives were like growing up there. I also remember and reflect on my own childhood. It's deeply saddening to have seen a place I was taught to love and appreciate so deeply change so drastically in my short lifetime. I hope we can hang onto what is left of this place and create a better future for the people who still live there and for all people across southeastern Louisiana who want to continue to call the region home.

With sincere regards,

Jacques P. Hebert

Former Plaquemines Parish Resident

---

**Concern ID: 61955**

**Commenters are concerned that all those that are impacted may not be aware of the proposed Project, its impacts, or potential mitigation. There are many people that may not have the knowledge, time, or resources to be deeply involved in these issues, but**

---

**who also have a stake in what is happening. Consider the needs of these people in making a decision about moving this proposed Project forward. If this proposed MBSD Project and similar projects move forward consider opportunities to better engage people across Louisiana’s coast in the value of projects like these and why they are crucial to the future of our region.**

**Response ID: 15900**

Public input is an integral part of the NEPA process, the OPA process, and the DWH oil spill restoration planning effort. USACE and the LA TIG undertook a coordinated and concurrent public review process for the EIS and the LA TIG’s Restoration Plan. Allowing submission of comments on either document to the same locations provided commenters a “one-stop shop” and was done to reduce confusion by commenters about where to direct their comments regarding the MBSD Project. Additionally, this ensured the LA TIG reviewed and considered all relevant comments to both the Restoration Plan and the Draft EIS in its decision-making process. All public comments received have been reviewed by both USACE and the LA TIG and will be considered as appropriate under relevant regulations by USACE and by the LA TIG, respectively, as each makes its decision on the proposed MBSD Project.

USACE and the LA TIG conducted public outreach and provided public comment opportunities throughout the development of the Draft EIS and the LA TIG Draft Restoration Plan. Details on USACE’s and the LA TIG’s outreach activities and the opportunities provided for public participation can be found in Chapter 7 Public Involvement in the Final EIS.

Examples of public outreach provided by USACE for the EIS include providing special public notices for the permit application, the scoping process, and for the Draft EIS through Federal Register notices, press releases, newspapers, mail outs to distribution lists, and provision of hard copies of the Executive Summary and other materials to local libraries. USACE and the LA TIG also coordinated with the SELA Voice organizations to understand the needs of the local communities regarding the best ways to reach out to these communities prior to the release of the Draft EIS and the LA TIG’s Draft Restoration Plan and during the public comment period.

Language interpretation and translation in Spanish, Vietnamese, and Khmer were provided at each of the virtual public meetings on the Draft EIS and the LA TIG’s Draft Restoration Plan. Also, the Public Notice to announce the Draft EIS Notice of Availability, the Executive Summary for the Draft EIS, and the Executive Summary for the LA TIG’s Draft Restoration Plan, were translated into Spanish and Vietnamese. The consolidated pre-recorded public meeting presentation was also translated into Spanish, Vietnamese, and Khmer and available on the Project webpage.

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area, in an effort to reach out to community groups to gather information related to the proposed MBSD Project. Throughout the public comment period and concurrent with the preparation of the Final EIS and LA TIG’s Final Restoration Plan, CPRA has engaged the public through meetings with the communities and groups projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including

---

reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups.

This included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented.

Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts. In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61996**

**A commenter inquired about what sustainable, efficient options are available to hold onto wetlands and support other coastal restoration and protection investments as sea-level rise increases.**

**Response ID: 16014**

The Draft EIS considered sea-level rise in the assessment of impacts of the proposed Project alternatives. Refer to Chapter 4, Section 4.1.3.2 in Approach to Evaluation of Environmental Consequences for a description of how the Delft3D Basinwide Model factors in sea-level rise projections. Chapter 4, Section 4.6 Wetland Resources and Waters of the U.S. of the Draft EIS found that the proposed MBSD Project would have beneficial impacts on wetlands in the Barataria Basin where wetlands would be sustained and created by the diversion of sediment and fresh water from the Mississippi River.

CPRA's Louisiana Coastal Master Plan evaluates other options for coastal restoration taking into account future sea-level rise. The implications of sea-level rise are also a component in the design and development of all LA TIG restoration projects.

---

**Concern ID: 62233**

**Restoration of coastal habitat and the delta would provide protection from storm damage.**

**Response ID: 15752**

While the intent of the proposed Project is to reestablish deltaic processes to restore resources injured by the DWH oil spill, the Draft EIS Chapter 4, Section 4.20.4.2 Public Health and Safety described the ancillary benefit of storm damage risk reduction on communities north of the proposed diversion due to the creation and maintenance of wetland habitat and increases in topography and land acreage within the delta formation area. At the same time, operation of the Project would have permanent, minor to moderate, adverse impacts on storm hazards in communities south of the diversion, with anticipated increases in storm surge of up to 1.7 feet near Myrtle Grove (as compared to the No Action Alternative). Section 4.20.4.2.2.2 in Public Health and Safety of the Final EIS has been revised to include additional information and figures further explaining the impacts of the Project on storm surge and wave height

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as

---

determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63362**

**This is a necessary step toward correcting environmental damage done to Louisiana by artificially directing water down the Mississippi River. Information about the necessity of healthy coastal marsh systems wasn't available when those decisions were made. It is especially necessary that the coastline is restored in preparation for climate change, which would hit Louisiana harder than most states.**

**Response ID: 16324**

The commenter's support for the proposed Project is noted. The impacts of climate change and sea-level rise in Louisiana were discussed in Chapter 3, Sections 3.1.3 in Introduction and 3.4.1.1 in Surface Water and Coastal Processes of the Draft EIS and were factored into the Delft3D Basinwide model results discussed throughout Chapter 4 Environmental Consequences. Impacts to marsh and to flood risk for various communities are discussed for both the No Action Alternative and the Applicant's Preferred Alternative.

---

**Concern ID: 63376**

**The State of Louisiana does not have the funding to implement its Coastal Master Plan in full. The State must utilize its best natural asset (the Mississippi River) to protect its communities, infrastructure, and natural resources, to compete for federal restoration funds in the future.**

**Response ID: 16339**

The commenter's input is noted. Implementation of Louisiana's Coastal Master Plan in full is outside of the scope of this EIS and the LA TIG's Restoration Plan.

---

**Correspondence ID:39971**

Southern Services & Equipment, Inc.

Mindy Nunez Airhart

My name is Mindy Nunez Airhart, and I am the President and CEO of Southern Services & Equipment, Inc. My company is a steel contractor located in lower St. Bernard, Louisiana. I am aware of the potential negative impacts of the Mid-Barataria and Mid-Breton Diversions. I know that fishing industries will change and potentially decline. But I do believe that people are resilient, and those industries will find new ways to survive. As for the diversion itself and its potential success, scientists and engineers agree the Mid-Barataria project is the best long-term solution to fight the threats we face from climate change, land loss, and a rise in the sea level. Change is hard, but this is something we must do.

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:39985**

Paulette Beninate

NO TO DIVERSION. DOES NOT MAKE SENSE.

1. Concrete: when my concrete guys pull up my driveway soon, where will it go?

have partners in place!!!!

2. Sink obsolete ships, barges. and build on that... And CAN YOU PLEASE REFRAIN from millions spent on new studies? How many ships are at the bottom of the ocean? Am sure there are plenty of environmental studies that have been done ALREADY!!!! Use that info. and if the govt doesn't like it, then let me know and concerned citizens can lambast our congressmen and women.

3. DREDGE

4. Alternate products. i have seen documentaries with alternate products to control erosion. GOOGLE IT.

Sheesh.....what are y'all doing?

NO TO BARATARIA DIVERSION !!!!!!!!!!!!!

Plenty of alternatives out there that will not kill an entire ecosystem. If you haven't figured them out yet, then shame on you!!!!!!!!!!!!

---

**Concern ID: 61890**

**Consider suggestions such as barging in wood chips and placing in shallow waters, and using old sunken ships and barges to build land.**

**Response ID: 15984**

Suggestions such as barging in wood chips and other organic material to the sediment deposited by the diversion or building upon old sunken ships and barges would not meet the scope and the scale of the proposed Project or its purpose and need, and therefore, would not be practicable. While alternative materials such as these may fill in small-scale areas, fill material such as these would not address the proposed Project's purpose of restoring deltaic processes to the Barataria Basin. Therefore, they were eliminated from further consideration. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

---

**Concern ID: 61892**

**Consider including in the design of the diversion the planting of black, red, and white mangroves to create and sustain land in the Barataria Basin, as well as planting bald or related species cypress trees to aid in the retention of land. Even dead trees would stabilize the soils.**

**Response ID: 15986**

The Draft EIS acknowledged impacts on wetland vegetation and terrestrial vegetation due to the proposed MBSD Project in Chapter 4, Section 4.6 Wetland Resources and Waters of the U.S. and Section 4.9 Terrestrial Wildlife and Habitat, respectively. While mangroves can provide areas of soil retention, their relative lack of cold tolerance does not currently allow growth throughout the entire coast of Louisiana. Red or white mangroves are not currently

---

found in Louisiana because they are not as cold tolerant as black mangrove, although as the climate changes, CPRA recognizes that dedicated plantings of black mangrove and exploratory plantings of other mangrove species are a potential option in areas that are not currently suitable. Cypress trees are a viable option today and have been used (along with willows) to stabilize newly deposited sediments at the outfalls of existing diversions. CPRA would consider these options in the outfall area as part of future adaptive management efforts, especially to the extent base flows would provide suitable freshwater habitat, as well as to increase sediment stabilization and retention.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62781**

**Although some form of coastal restoration is warranted and necessary for the long-term health of the Barataria Basin, the proposed Project is not the solution.**

**Response ID: 16363**

The commenter's opposition to the proposed Project is noted. As discussed in Chapter 2 Alternatives of the Draft EIS, an alternatives analysis was conducted to identify viable alternatives for the proposed action that would meet the proposed Project's stated purpose and need, as identified in Chapter 1, Section 1.4 Purpose and Need. Alternatives considered, but eliminated from consideration were summarized in Table 2.6-1. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63102**

**Commenters expressed concern that they will not be able to use their property if the Project proceeds. Commenters believe that the amount of funds proposed for mitigation is insufficient.**

**Response ID: 16640**

The commenters' concern regarding the adequacy of the funding for mitigation measures was considered by CPRA and the LA TIG in developing CPRA's Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included proposals to address and partially offset some of the projected impacts

---

of the Project on surrounding communities outside levee protection, including potential mitigation measures to address increased water levels due to the Project. In response to comments, CPRA further expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

The mitigation and stewardship measures would vary by community. In Myrtle Grove, CPRA would improve the bulkhead around the Myrtle Grove Marina Estates Subdivision to reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the Project. In other communities from Woodpark to Happy Jack south of the Project site outside levee protection, CPRA would elevate the roadways and make other infrastructure improvements to maintain access and the utilities of those communities. Also in these communities, CPRA plans to acquire Project servitudes from landowners. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

Details regarding the funding that will be available for aquatic/fisheries mitigation and stewardship measures is set forth in the Final Mitigation and Stewardship Plan, Appendix R1. Details regarding other mitigation and stewardship measures (e.g., mitigation for tidal flooding impacts) is also set forth in the Final Mitigation and Stewardship Plan, Appendix R1; however, final estimated costs for those measures continues under development. CPRA has stated that the total estimated cost of all mitigation and stewardship measures set forth in the Final Mitigation and Stewardship Plan exceeds \$300 million dollars. Details regarding the cost for the monitoring and adaptive management are set forth in Section 9 of the Final MAM Plan, Appendix R2. Section 3.2.1.2 of the Draft Restoration Plan includes estimates of project costs, including the cost for project design and construction and project monitoring. Updated cost estimates will be provided as part of the Final Restoration Plan, including project monitoring and stewardship measures.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Louisiana Sportsman Coalition

Steven Rockweiler

I was raised in the Barataria Basin, fishing, hunting, and trapping

. I go back over 60 years inside this basin. The amount of marsh lost in this basin is staggering. I cry each time I traversr it in my boat. I live on the edge of the upper basin with zero hurricane protection. We once had plenty of marsh to absorb any storm surge. The loss of all this marsh was also a huge loss in edge cover for important recreational and commercial fish species. Species such as Spotted Sea Trout are already below sustainable future brood stock levels. Many salwater fishermen that do not want this divetsion, are proposing a saltwater only dream. It is the immense saltwater intrusion which is killing all plant life in these marshes. We need this diversion, and the land which it will deposit. It is truly short sighted to just worry about today and next week, rather than the next decade, and the decades after. If this diversion is not built, and built soon, I will sell this house and move to another , safer location. We are a ticking time bomb in so many ways. Thank you for allowing my comments. Steven Rockweiler.

Bonnie Giles

This project is critical to help restore a least a small portion of the wetlands that have been lost in Louisiana, or more accurately, the state of Louisiana is being lost. Nature will restore itself if allowed and this is a cost effective way to restore the coastline in the most efficient way, having nature do it rather than man.

The sooner this project begins, the more land that will be restored and the more protection the state will have from hurricanes and high tides.

We cannot let the way of life of Southern Louisiana be jeopardized by inaction.

Bonnie Giles

Raleigh, NC

---

**Concern ID: 63334****The proposed MBSD Project would maintain and restore coastal lands and should move forward.****Response ID: 16291**

The commenter's statement of support is acknowledged. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Ted Falgout

As a fourth generation Louisianaian living in the Barataria basin for my entire life (70 yrs), some of my fondest memories involve activities in the basin with my grandfather, father, siblings, and now my children and grandchildren. My experiences are somewhat unique in that I have an educational background in fisheries biology and actually wrote my masters thesis on Commercial Fishermen's Perceptions of Coastal Zone Management. I have been heavily involved in coastal issues since 1973 (before it was cool)! Additionally, I had the opportunity to serve as the Port Director of Port Fourchon for over 30 years and participated in many restoration projects. I also served as the Chairman of the Lafourche Parish Coastal Zone Management Program, the first local program in the state, for over 30 years. I am also owner of over a thousand acres of wetlands in the basin.

Since the early 1970's just about every credible study conducted about the coastal crisis we face has stated reintroduction of sediment from the Mississippi River is key to address the magnitude of the problem we face. I have long been a proponent of diversions and have served as Chairman of the Davis Pond Advisory Committee.

We have before us what perhaps is a one time opportunity to effect change at the same level as the scale of the problem. Unfortunately, no affordable project that can adequately address the scale of the problem can be constructed without impacts. I believe these impacts are manageable and pale in significance to what is at stake if we squander this opportunity to construct the Mid Barataria Sediment Diversion.

Simply put, the Mid Barataria Sediment Diversion is the best long term solution to match the challenges we face from land loss, sea level rise and other impacts from climate change. A "future without action" would mean a future without much of South Louisiana, and that is something we owe to future generations!

---

**Concern ID: 63333****Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.****Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Marcus and Denise Ray

My family & I own (6) waterfront lots & 7 1/2 acres. We have a family camp on 1 of the water front lots and lease out the remaining properties to long term lessors whom are basically extended family. We also have a family cemetery there which is an historic landmark. We have owned and enjoyed this property for many generations and planned to have future generations enjoy this as well.

My girlfriend & I sold our homes in 2019 and decided to move and retire here. We purchased a home from one of our long term lessors and now live on (2) lots [REDACTED]. I also maintain our family camp which is located [REDACTED]. We also got married Oct 3rd , 2020 at our new home.

We have attended meetings but have left with more questions then answers.

How will this affect us now and in the future including future generations?

When this project starts they have discussed raising roads and properties.

Where will we live during this process and who will will pay for our relocation expenses?

We moved to this location to enjoy the bayou living and the fishing.

What will happen to our future bayou living and fishing which we love?

If we can't live & retire in "God's Country" due to this project.

How will be able to afford purchasing a new home and other associated cost?

How will we be able to afford to purchase another family camp for our family to enjoy for many generations?

What will happen to the family cemetery which is a historic landmark?

What will happen to all of the people who lease from us?

Who will buy our land, homes and also lessors homes and at what value will be used to determine purchase price?

Our lease money maintains our family camp, What happens to all of our lost revenue?

Hard to put a dollar figure on property that has been owned and enjoyed by many generations both past & future.

Once again more questions then answers.

How & when do we receive answers to all of this questions?

Our lives or basically on hold now due to as stated, this is our home and the place we planned on living out our retirement years.

What do we now when our lives or on hold?

What happens the fishing industry and the people who make a living here?

---

**Concern ID: 61757**

**Commenters recommended educating the public about the proposed Project as well as the impacts of the No Action Alternative. There would be a benefit of continued education with the affected communities.**

**Response ID: 15893**

---

As part of the Draft EIS process, USACE prepared various materials to educate the public regarding the analysis and impacts included in the Draft EIS. This included an Executive Summary summarizing the details of the Draft EIS into a concise, easy to read, document. Additionally, at the beginning of the public comment period, CEMVN posted to the CEMVN's Project website several pre-recorded presentation videos consisting of an explanation of how to comment on the Draft EIS and/or LA TIG's Draft Restoration Plan, an update on the proposed MBSD Project design, information concerning the ongoing restoration planning efforts and the LA TIG's Draft Restoration Plan, and details about how to navigate and review the contents of the Draft EIS. These pre-recorded presentation videos were then consolidated into one presentation and played at the beginning of each of the three public meetings. This consolidated pre-recorded presentation was also translated into Spanish, Vietnamese, and Khmer and available on CEMVN's Project webpage. In addition, dedicated toll-free numbers were provided during the public comment period on the Draft EIS and LA TIG's Draft Restoration Plan through which Spanish, Vietnamese, and Khmer-speaking individuals could listen to the translated pre-recorded presentation.

Examples of public outreach provided by USACE for the EIS include providing special public notices for the permit application, the scoping process, and for the Draft EIS through newspapers, mail outs, and local libraries. USACE and the LA TIG also coordinated with the SELA Voice organizations to understand the needs of the local communities regarding the best ways to reach out to these communities prior to the release of the Draft EIS and the LA TIG's Draft Restoration Plan and during the public comment period. Language interpretation and translation in Spanish, Vietnamese, and Khmer were provided at each of the virtual public meetings on the Draft EIS and the LA TIG's Draft Restoration Plan. The Public Notice to announce the Draft EIS Notice of Availability, the Executive Summary for the Draft EIS, the Executive Summary for the LA TIG's Draft Restoration Plan, and the public meeting presentations were translated into Spanish and Vietnamese. As noted above, the consolidated pre-recorded public meeting presentation was also translated into Spanish, Vietnamese, and Khmer and available on the Project webpage. As stated in Chapter 7 Public Involvement of the EIS, public engagement has been a vital element of developing and evaluating the proposed MBSD Project. Since 2016, CPRA has participated in nearly 200 outreach and engagement activities focused on the proposed MBSD Project, reaching more than 7,000 people. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities. These outreach and engagement efforts provided the public with an opportunity to ask questions and obtain information about the proposed MBSD Project. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. A summary of these public engagement meetings and public outreach conducted by CPRA can be found in Chapter 7 Public Involvement of the Final EIS.

For more information about proposed Project's operational and adaptive management governance, see Final EIS Appendix R2: Monitoring and Adaptive Management (MAM) Plan. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but

not be limited to, continuation of and changes to Project operations, riverside management, monitoring, maintenance, and adaptive management actions.

In addition, EIS Chapter 4, Section 4.24.3 Operations Impacts in Cultural Resources and Section 4.9 of the Final Mitigation and Stewardship Plan (in Appendix R1 to the Final EIS) discuss the NHPA process and mitigation for the proposed Project. The NHPA Programmatic Agreement developed for the proposed Project through the NHPA Section 106 consultation sets forth the alternative historic and cultural resources mitigation to be implemented by CPRA as part of implementing the Project. An Alternative Mitigation Plan is appended to the Programmatic Agreement and describes in detail the mitigation proposed to resolve adverse effects within the Operational Impacts APE. A website and public education materials are included in the Alternative Mitigation Plan as products to be developed through the alternative historic and cultural resources mitigation. The Programmatic Agreement is provided in Appendix K Cultural Resources Information of the Final EIS and attached as Appendix A to the Final Mitigation and Stewardship Plan located in Appendix R1 of the Final EIS.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The**

---

**diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.****Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures

---

(collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62380**

**Commenter asks how the proposed Project will affect current and future generations.**

**Response ID: 15916**

The Draft EIS discussed impacts of the proposed Project on human and natural resources projected over 50 years of Project operation.

---

**Concern ID: 62498**

**The commenter owns waterfront property near Port Sulphur and has a family cemetery that is an historic landmark. The commenter has owned and enjoyed this property for many generations and planned to have future generations enjoy this as well. The commenter wants to know what impacts the Project would have on the family cemetery that is an historic landmark.**

**Response ID: 16456**

The potential impacts raised by the commenter were considered in the Draft EIS. According to the LA SHPO database of historic sites, the Lake Hermitage cemetery located near the address provided by the commenter is identified as the Bieber Cemetery. As compared to the No Action Alternative, operation of the proposed Project would increase tidal flooding and storm surge in communities outside of federal levees within 20 miles of the outfall area, including the town of Lake Hermitage in which this cemetery is located. Such events may result in impacts from sediment deposition (burial) and/or erosion. Chapter 4, Section 4.4.4 in Surface Water and Coastal Processes and Section 4.13.3.1 in Socioeconomics detail these impacts.

---

**Concern ID: 62739**

---

**The commenter questioned what would happen to bayou living and fishing in the future.**

**Response ID: 16117**

Impacts of the proposed Project on Recreation and Tourism are discussed in Chapter 4, Section 4.16.5.2, impacts on local communities are discussed in Section 4.13 Socioeconomics, and impacts on Aquatic Resources are discussed throughout Section 4.10 of the EIS. Because these issues were addressed in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40026**

Ben Taylor

If you know anything at all about how this river delta came to be in such a short period of time (700 years for most of Plaquemines Parish) and what it demands for its sustenance and good health, this diversion only makes sense, especially as an important coastal line of defense for the large human population that resides on the delta a short distance away.

The people who are adamantly against this project either do not yet understand these things or seek profits from an artificial status quo which is unsustainable. Perhaps these people must be bought off, but it is of paramount importance to return the river to its delta.

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

United Methodist Church

Ellen Blue

I am an ordained member of the clergy in the United Methodist Church who believes we have a duty to care for the Creation. The decisions you make about how we should treat the land and water the Creator gave us for nourishment and nurture are vital for us and for generations to come.

I urge you to SELECT THE PREFERRED ALTERNATIVE from the draft EIS on the Mid-Barataria Sediment Diversion and to fund the project from the Deepwater Horizon settlement.

In the late 1970s, I learned of Woody Gagliano's idea that diverting sediment from the river could shore up the dwindling coast. If steps had been taken then - 40 years ago – so much land loss could have been prevented. Now is the time to act to avoid the loss of over 400 square miles in the next 50 years.

Through human actions, we have altered the shape of the coast, destroying habitats of people, animals, and plants. The Isle de Jean Charles band of the Biloxi-Chitimacha-Choctaw people have already been displaced. The United Houma Nation is in peril. All Louisianians are at huge RISK OF DEATH AND DESTRUCTION FROM HURRICANES due to land loss.

I appreciate the efforts of all the people who have worked on this complex issue. The land that is built will be a gift to all Louisianians.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63341**

**The coastal wetland system creates multiple lines of natural defense from hurricanes and storm surge, and the ongoing wetland loss resulting from the lack of riverine input into the basin has resulted in increased storm risks to local communities (including decreases in property values and impacts to the electrical grid).**

**Response ID: 16300**

---

The commenter's support for the proposed Project is noted. The commenter correctly notes that coastal wetlands are natural defense against hurricanes and storm surge, and the damage they cause to local communities and infrastructure, as discussed in Chapter 3, Section 3.6 Wetland Resources and Waters of the U.S. of the Draft EIS. The causes of wetland loss in the proposed Project area were discussed in Section 3.6.2 of the Draft EIS, and included subsidence, levees, storms, canals/spoil banks, herbivory, and the DWH oil spill. Chapter 4, Sections 4.6 Wetland Waters and Resources of the U.S. and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS explained how the proposed Project would create and maintain wetlands in the Barataria Basin, and discuss the corresponding impacts on storm surge and flooding.

**Correspondence ID:40062**

William Monie, Jr.

I own both a residence and property in Myrtle Grove Marina Estates 1 in Plaquemines Parish Louisiana and stand in complete opposition to the Mid Barataria Sediment Diversion. My reasons for this opposition are as follows:

1) The diversions that have been built previously have achieved only marginal success and the cost have all exceeded projections. For example Davis Pond and Marti Gras Pass. What makes the USACE believe this one will be different?

2) CPRA when considering alternatives to this diversion examples 5 alternatives...4 were diversions and the last was to do nothing.

Yet last week the governor announced 3 more projects that were not diversions that will build coastline. Why were these not considered for Mid Barataria?

3) The draft EIS clearly states that the majority of the bottle nosed dolphin population of this area will be destroyed... not just killed but sentenced to a horrific death at the hands of USACE. Who I might add has already killed hundreds of dolphins along the coast of Mississippi and Alabama with fresh water from the Bonnet Carre spillway. Not to mention the threatening of the Kemp- Ridleys sea turtle. Which by the way is a Endangered species....that alone should stop this diversion in its tracks. Not to mention the clandestine way that lobbyist for this project snuck into a budget Bill and got a one time exemption to the Marine Mammal Act ...in order to allow CPRA/USACE to kill these helpless creatures. Keep good records folks as that will be at the very top of the list for the lawsuit that will follow in Federal Court..not to mention the upcoming articles in the New York Times.

4) Chief among all these issues is the destruction of the seafood industry in Louisiana, as well as the elimination of a culture that has existed for over 200 years....shrimping and oyster fishing. Fresh water has destroyed these industries on the East bank of the Mississippi and now this ill planned diversion will destroy what's left of Louisiana's greatest industry. How can you reasonably justify that destruction

5) Camps that have been in families for years and many single family residences that are the only homes some people possess., will be flooded and destroyed by this fatally flawed attempt to build land along our coast. There is a very good reason that both the Plaquemines and St. Barnard Councils voted along with both Parish Presidents to oppose the diversion...unanimously to oppose I might add as did the Lt. Governor Billy Nungasser, a life long resident. You see they know the diversion will be a failure and destroy their parishes.

I have little doubt USACE will approve the Final EIS since they have a solid reputation of doing all the wrong things at the right time. But one can only hope this time it will be different. No one can argue that we need to build land along our coast. But there are many good ways to build land..hopefully other methods will be considered by the USACE...one can only hope. Thank you for allowing me to comment.

---

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable alternatives, which is a requirement that the Draft EIS does not meet. Consider**

---

**analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of "marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats" (LA

---

TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG's Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

---

**Concern ID: 62071**

**The proposed MBSD Project would negatively impact the seafood industry, including shrimp, crab, and oyster fisheries. Commercial fisheries are directly linked to the favorable conditions of the estuary and its resources being healthy, abundant, and consistently available but that would be forever changed by the introduction of polluted Mississippi River water.**

**Response ID: 16241**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated under the Applicant's Preferred Alternative.

The LA TIG's Final Restoration Plan also acknowledges these impacts, and notes that such impacts are also anticipated under the No Action Alternative, but on a longer timeline. The Restoration Plan also notes that some benefits to the blue crab fishery and some finfish are anticipated.

CPRa has developed a plan to mitigate the potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to public comments, CPRa has expanded and refined the Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62227**

**The diversion would flood access roads, damage vehicles, cause siltation/sludge, cause cancellation of flood insurance, inundate cemeteries, stress levees, impact provision of emergency services, and increase the cost to raise homes, slabs and wharves.**

**Response ID: 15820**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discusses the increased flooding impacts outside of federal levee systems, including road inundation and infrastructure damage, anticipated to be caused by the operation of the diversion. Sections 4.13.5.1.2.1 and 4.13.5.3.2.1 in Socioeconomics of the Final EIS has been updated to include potential impacts such as vehicle damage, accumulation of siltation and sludge, cemetery inundation and interruption of emergency services. Recognizing the potential for these impacts, CPRA has developed a comprehensive inventory of potentially

---

affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties.

In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes. A Project servitude would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Final EIS concludes that the proposed Project would not have impact on the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent

anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62639**

**The proposed Project is unlikely to succeed because similar types of projects have failed to build land, and have caused a range of other issues, like destroying habitat, exacerbating flooding, and reducing water quality. Specific examples of similar, problematic projects include the Mississippi River Gulf Outlet, Bonnet Carré Spillway, Caernarvon Freshwater Diversion, Davis Pond, West Bay, Baptiste Collette, Fort St. Philip, and Cubits Gap. In fact, data show that the Caernarvon Diversion in particular was unable to show sustained land gains in the face of Hurricane Katrina-driven losses in wetland habitat (Underwood 1994, Kearney et al. 2011). Davis Pond has seen increased land loss inside the diversion compared to a reference area (Couvillion et al. 2017). Fort St. Philip has lost large areas of wetlands (Suir et al. 2014). While the Atchafalaya River is building land in the Atchafalaya and Wax Lake Deltas, the Atchafalaya River carries more sediment than the Mississippi River does currently (Blum and Roberts 2009), and more of the Atchafalaya River is diverted to each of these deltas and marshes farther south. Additionally, one study identified poor performance of diversions due to many periods of inoperation due to socioeconomic uncertainties (Caffey et al. 2014).**

**Response ID: 16631**

The issues raised by the commenters were considered in the Draft EIS. The EIS states in Chapter 2, Section 2.1.1 Overview of Sediment Diversions, that CPRA considered information from other diversions in its assessment of the Project alternatives, but because the projects mentioned by the commenters had been designed to discharge primarily water, not sediment, they are not fully comparable to the proposed Project. As explained in the EIS Chapter 4, Section 4.1.3 (Environmental Consequences, Overview of Delft3D Basinwide Model for Impact Analysis), Delft3D Basinwide Modeling software was used to assess impacts of the Project on hydrology, land gains and losses, water quality, and vegetation in the Barataria Basin and birdfoot delta. Using standard professional practice, this physics-based model was validated to the West Bay Sediment Diversion. The West Bay Sediment Diversion is useful for validating the physical processes of erosion and deposition of sediment because it, like the proposed MBSD Project, is a sediment diversion that extracts relatively more sediment in the river. The other diversions cited were designed to primarily deliver water, not sediment, and are less useful comparisons.

The West Bay Sediment Diversion has successfully deposited large amounts of sediment in the system and, in concert with beneficial uses of dredged material, built land. Kolker et al. (2012) reported, "A majority of the sediment transported through the West Bay Diversion apparently was deposited in the bay, and contributed to sub-aerial land formation, which contrasts with the view presented by Kearney et al. (2011) and Turner et al. (2007) that diversions do not lead to appreciable sediment accumulation" (Kolker, A. S., Miner, M. D. and Weathers, H. D. 2012. Depositional dynamics in a river diversion receiving basin: The case of the West Bay Mississippi River Diversion, *Estuarine, Coastal and Shelf Science*, 2012, <http://dx.doi.org/10.1016/j.ecss.2012.04.005> ).

Comparing diversions outside of physics-based numerical modeling has limited value because diversions and receiving environments often exhibit unique behaviors that correlations do not account for. For that reason, the physics-based Delft modeling, even with its limitations and uncertainties, is a better predictor than anecdotal comparisons to Fort St. Phillip or other sites. Uncertainties associated with the validation and application of the Delft3D Basinwide Modeling conducted for the proposed Project were assessed by the West Bay application, sensitivity tests, and by the use of a Base-to-Plan (No Action Alternative compared to Action Alternatives) comparison method as described in EIS Appendix E Delft3D Modeling and incorporated into the EIS conclusions throughout Chapter 4 Environmental Consequences. While most citations mentioned by commenters were already included in the

---

Draft EIS, the Final EIS has been edited to include Caffey and Petrola (2014) to Chapter 4, Section 4.6.5.1.2.4 Land Accretion.

The likelihood of success of the Project and information from other freshwater diversions was also considered in the LA TIG's Draft Restoration Plan, Sections 3.2.1.4 Likelihood of Success - Alternative 1 and 3.2.2.4 Likelihood of Success - Alternatives 2-6 of the Restoration Plan address the likelihood of success of the Project and other Action Alternatives. The proposed MBSD Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the geomorphological features of the Lower Mississippi River as of 2012, including data from the referenced projects. All citations referenced by the commenters were included in the Final EIS and were considered by the LA TIG in the Final Restoration Plan.

---

**Concern ID: 62782**

**A large number of commenters expressed general opposition to the proposed Project.**

**Response ID: 16364**

The commenter's opposition to the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63067**

**The majority of the bottlenose dolphin population of this area will be destroyed... not just killed but sentenced to a horrific death. Freshwater releases at Bonnet Carré Spillway in 2019 resulted in an unusual mortality event (UME), demonstrating the harm that freshwater releases can cause to dolphins. A study by the Galveston Bay Dolphin Research Program also found that dolphins in upper Galveston Bay developed skin lesions after flooding from Hurricane Harvey. Additional studies further support the harm that the diversion could cause by demonstrating negative impacts to dolphins from exposure to low-salinity conditions (Deming and Garrison, 2021; Duignan et al., 2020; McClain et al., 2020).**

Deming, A., and L. Garrison. 2021. 2019 Northern Gulf of Mexico bottlenose dolphin unusual mortality event. Marine Mammal Commission meeting/webinar on "Effects of Low Salinity Exposure on Bottlenose Dolphins," 23 March 2021. Oral presentation. <https://www.mmc.gov/events-meetings-and-workshops/other-events/effects-of-low-salinity-exposure-on-bottlenose-dolphins-webinar/>

Duignan, P.J., N.S. Stephens, and K. Robb. 2020. Fresh water skin disease in dolphins: a case definition based on pathology and environmental factors in Australia. *Scientific Reports* 10:21979.

McClain, A.M., R. Daniels, F.M. Gomez, S.H. Ridgway, R. Takeshita, E.D. Jensen, and C.R. Smith. 2020. Physiological effects of low-salinity exposure on bottlenose dolphins (*Tursiops truncatus*). *Journal of Zoological and Botanical Gardens* 1:61-75.

**Response ID: 16590**

The Draft EIS included an analysis based on extensive literature and soon-to-be published data (now published) demonstrating the impacts of low-salinity conditions on dolphins. These data were considered as part of an Expert Elicitation (a garnering of expert opinions to determine or quantify an unknown) that resulted in dose-response curves (Booth et al. 2020) and summarized in Chapter 4, Section 4.11.3 (Marine Mammals - Overview of Impact Analysis Approach) of the EIS. While Deming and Garrison (2021) was presented after the release of the Draft EIS, the presentation was based on data that were fully considered in the Draft EIS, including as part of the Expert Elicitation. Along with other relevant data (for example, BBES tagging studies), the analysis contained in the Draft EIS determined that there would be a significant, adverse, permanent impact on the BBES Stock. Further, the analysis in the Draft EIS concluded that if the 75,000 cfs Alternative were implemented, impacts would be immediate and only a remnant population would be likely to exist near the barrier islands after 50 years of operation.

After release of the Draft EIS, at the request of the Marine Mammal Commission, the National Marine Mammal Foundation and University of St. Andrews released a population impact projection based on the information presented in the Draft EIS (including annual survival rates from Garrison et al. 2020) coupled with an updated population model for BBES dolphins (Schwacke et al. 2022, Thomas et al. 2021). This new, additional analysis has been incorporated into the Final EIS in Chapter 4, Sections 4.11.5.2 Barataria Bay Estuarine Stock and supports the original determination in the Draft EIS of major, permanent, adverse impacts on the BBES dolphin population. The research presented in the McClain et al. (2020) study cited by commenters was considered in the Draft EIS [cited at the time as McClain et al. (in prep)]; the research presented by Duignan et al. (2020) is consistent with the established literature and does not change the conclusions of the Draft EIS, but this study has been incorporated in Chapter 4, Section 4.11.5.2.2.1 General Effects on Dolphin Health of the Final EIS. Similarly, the information included in the Deming and Garrison presentation was considered in the Draft EIS, is consistent with the conclusions of the Draft EIS, and the presentation has now been cited in Section 4.11.5.2.2.

Since release of the Draft EIS and the LA TIG's Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible, the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized. In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include specific marine mammal response triggers that may affect Project operation mitigation efforts;

see Appendix R2 (Monitoring and Adaptive Management [MAM] Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in these Plans, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63080**

**The Corps and the TIG have circumvented a legal process intended to conserve marine mammals and protect ecosystems by obtaining a Congressionally-mandated MMPA waiver for the proposed Project. The waiver does not establish a quota for how many dolphins can be taken by the proposed Project, and it is clear that the level of take for this stock will be grossly unsustainable, in clear violation of the MMPA (absent BBA-18). The legislative waiver, quite simply, provided Congressional permission to break the law. It is critical for the protection of marine mammals that such a legislative waiver be a one-off occurrence.**

**Response ID: 16599**

The U.S. Army Corps had no role in seeking a Marine Mammal Protection Act waiver for this Project from Congress, nor did any federal agencies on the LA TIG. CPRA sought the waiver. Title II, section 20201 of the Bipartisan Budget Act of 2018 provides: "(a) In recognition of the consistency of the Mid-Barataria Sediment Diversion, Mid-Breton Sound Sediment Diversion, and Calcasieu Ship Channel Salinity Control Measures projects, as selected by the 2017 Louisiana Comprehensive Master Plan for a Sustainable Coast, with the findings and policy declarations in section 2(6) of the Marine Mammal Protection Act (16 U.S. C. 1361 et seq., as amended) regarding maintaining the health and stability of the marine ecosystem, within 120

days of the enactment of this section, the Secretary of Commerce shall issue a waiver pursuant to section 101(a)(3)(A) and this section to Section 101(a) and Section 102( a) of the Act, for such projects that will remain in effect for the duration of the construction, operations and maintenance of the projects. No rulemaking, permit, determination, or other condition or limitation shall be required when issuing a waiver pursuant to this section. (b) Upon issuance of a waiver pursuant to this section, the State of Louisiana shall, in consultation with the Secretary of Commerce: (1) To the extent practicable and consistent with the purposes of the projects, minimize impacts on marine mammal species and population stocks; and (2) Monitor and evaluate the impacts of the projects on such species and population stocks.”

The National Marine Fisheries Service issued the waiver in March 2018. Since that waiver in 2018, CPRA has not requested any additional waivers for coastal restoration projects. More information on the waiver can be found at <https://www.fisheries.noaa.gov/action/marine-mammal-protection-act-waiver-select-louisiana-coastal-master-plan-projects>.

---

**Concern ID: 63107**

**The proposed Project would kill sea turtles, which commenters indicated should stop the proposed Project.**

**Response ID: 16205**

Chapter 4, Section 4.12.2.2 Sea Turtles of the EIS, determined that the proposed Project would have negligible to minor adverse impacts on hawksbill and leatherback sea turtles, but minor to moderate adverse impacts on Kemp’s ridley, green, and loggerhead sea turtles due to the potential for increased interactions between sea turtles and commercial shrimp fishing efforts.

In compliance with the Endangered Species Act of 1973, as amended (16 U.S.C. §§ 1531 et. seq.), the NMFS’ Biological Opinion on the proposed Project (included in the Final EIS as Appendix O4) concludes the proposed Project is not likely to jeopardize the continued existence of sea turtles and authorizes a “take” for the Project, which is defined as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect, or attempt to engage in any such conduct. In its Biological Opinion, the NMFS authorizes the incidental take of 783 sea turtles per year, including 370 Kemp’s ridley sea turtles (including up to 38 mortalities), 319 loggerhead sea turtles (including up to 10 mortalities), and 94 green sea turtles (including up to 9 mortalities). Over the 50-year Project life, this could equate to a take of 39,150 sea turtles (including up to 2,850 sea turtles mortalities). This can be compared to the lower-end estimate of 4,900 large juvenile/adult, 56,000 juvenile, and 35,000 hatchling sea turtles killed by the DWH oil spill (NMFS 2020). Under the Endangered Species Act, NMFS can authorize the incidental take of sea turtles, but it cannot authorize a project that jeopardizes the continued existence of sea turtles in the proposed Project area.

The Mid-Barataria Sediment Diversion is a cornerstone project in Louisiana's plan for a resilient coast, and it will have a fundamental impact on Lafourche (my home) and Jefferson Parishes. It is projected to build and maintain thousands of acres of wetlands, create diverse habitat, and reduce storm surge threats to many communities. Please support this diversion project for the future of Louisiana.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Correspondence ID:40084**

John Morello

Hello-

I'm writing to express my support for the Mid-Barataria Sediment Diversion. The diversion is critical to the future of Louisiana, our culture, our environment, and the economy of the whole country. I strongly urge you to support it and it build it as rapidly as possible.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Correspondence ID:40131**

Thomas Gordon

I am writing this letter in opposition to the mid Barataria and mid Breton sound diversion projects. The potential for possible wetlands growth is far of a stretch where the diluted sound of the Mississippi coast and mid Britain sound in estuary harm would be a 100% factor. The solution would be to dredge the passes south pass and south east pass to relieve a pressure on rising rivers and let the natural process of building the river there also rock jetties to support growth and protect from oncoming storms would be a far more affordable solution than the potential for artificial growth in the diversion projects

---

**Concern ID: 61973**

**Consider dredging the passes (south pass and south east pass) to relieve pressure on rising rivers and let the natural process of building the river there, along with rock jetties along the Louisiana coastline, support growth and protect from oncoming storms. Then use dredging to build up specific areas inland.**

**Response ID: 15974**

This alternative as presented, specifically dredging the passes and building rock jetties to create marsh, would not meet the goals and objectives as stated in the purpose and need and described in Chapter 1, Section 1.4 Purpose and Need and Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives in the EIS. Similar to marsh creation alternatives (as described in Chapter 2, Section 2.3.5 Large-Scale Marsh Creation), it would not deliver enough fresh water, nutrients, and fine sediments to sustain existing and created wetlands beyond the marsh creation area and over the long-term would require repeated lifts and maintenance through placement of additional dredged material. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

Other similar restoration strategies are being considered for implementation by CPRA in its Coastal Master Plan, which will be updated in 2023, and by the LA TIG through Natural Resource Damage restoration planning.

---

**Concern ID: 62780**

**Although the proposed MBSD Project would provide some benefits, the adverse impacts described in the EIS outweigh those benefits.**

**Response ID: 16362**

The commenter's opposition to the proposed Project, even considering the projected beneficial impacts, is noted. The beneficial and adverse effects of the proposed Project were discussed throughout Chapter 4 Environmental Consequences. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

To address adverse Project impacts, CPRA would implement a series of mitigation and adaptive management measures if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

William Herke

I am wholeheartedly in favor of the Mid-Barataria Sediment Diversion project. However, I fault the Corps for not citing any of my publications. There are dozens of them that would be pertinent to the Draft EIS, especially those regarding salinity tolerance of fishes and crustaceans. Most of my over 30 years of studying the coastal marsh nursery was deep in the marsh where the water was so shallow that a shallow draft outboard, or better an airboat, was required. Most other researchers (including those of LDWF) ignore this habitat. Consequently, I discovered things such as salinity tolerances that are much lower than most of those found in the scientific literature.

I give a brown shrimp example from my dissertation, (Use of natural, and semi-impounded, Louisiana tidal marshes as nurseries for fishes and crustacean). I used a 16-ft setback otter trawl (knotted nylon 5/8-inch-bar mesh throughout except for 1/2-inch-bar-mesh in the tail). Also used was a 14-foot-wide surface trawl with 1/4-inch- -bar mesh. The otter trawl was pulled behind the boat and the surface trawl was pushed in front of the boat; it was set to fish from the surface to about 6 inches from the bottom. A measured 400-meter pass was made twice with each trawl. For each monthly sample I combined the catch from 2 passes with each trawl. On the May 2,1967 trip a total of 2381 shrimp were caught. Salinity per sample ranged from 0.68 to 1.85.ppt.; 45 were taken at salinities between 0.68 and 0.78.ppt.; 58 more were taken below 0.86 ppt. salinity.

My dissertation gives similar information (and much more) for Atlantic Croaker, Spot, Menhaden, Striped Mullet, Bay Anchovy, and White Shrimp. For further information on how interacting environmental factors affect Atlantic Croaker distribution see the monograph in my website "www.herke-estuarine-fisheries-com." I think anyone who reads the monograph will gain new perspectives. The website also contains the citations to dozens of my peer reviewed publications that should be of interest to your fishery biologists.

In conclusion, I fully support the sediment diversion project. In my opinion it will have fewer detrimental effects than those opposed to it understandably believe it will.

William H. Herke, PhD

American Fisheries Society, Certified Fishery Scientist, and

Fellow, American Institute of Fishery Research Biologists

---

**Concern ID: 62740**

**Specific field research indicates that fishes and crustaceans tolerate much lower salinity than those found in scientific literature; this research is available at [www.herke-estuarine-fisheries-com](http://www.herke-estuarine-fisheries-com) and should be cited in the EIS.**

**Response ID: 16118**

Although the noted website does not appear to exist as identified, select references by the comment author have been reviewed. Herke et al. 1987 (Abundance of Young Brown Shrimp in Natural and Semi-Impounded Marsh Nursery Areas: Relation to Temperature and Salinity) was incorporated into Chapter 4, Section 4.10.4.5.2.1 Brown Shrimp of the Final EIS.

---

**Concern ID: 63381**

---

**The proposed Project would have fewer detrimental effects than those opposed to it understandably believe it would.**

**Response ID: 16343**

The commenter's input is noted. The beneficial and adverse impacts of the proposed Project were explained throughout Chapter 4 Environmental Consequences of the Draft EIS. The LA TIG's Restoration Plan evaluated the proposed Project against a variety of factors, including those outlined in 15 CFR §990.54, and strove to identify an alternative that would provide what the LA TIG believes is the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. See Section 3.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan for a discussion of how the LA TIG came to its decision on the proposed Project.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

**Correspondence ID:40142**

Christopher Trapani

Dear commission, I am a 55 year old married man with 4 grown children, our whole family loves the Bay and the Ms Sound!,

I'm a life long resident of the Mississippi Coast, and thank you for the opportunity to voice additional comments regarding this project. My comments come from the experience of 2019 where volumes of Riverwalk was diverted through the Bonnie Carrie spillway through Lake Pontchartrain and drained into the Ms Sound, destroying trained into the Mississippi Sound. In the beginning we thought the fish kill would be short lived, it was not! We lost our beaches are tourism or fishing or recreation in the water everything and that was a three or four month diversion you are talking about a 36524 seven diversion of Mississippi river water into the Mississippi sound please record my comment in opposition to this plan and I would strongly suggest the dredging of the current passes of the Mississippi river to allow the volumes of water into the Gulf versus the Ms Sound.

Please be reasonable and stop this project.

Sincerely,

Chris Trapani

---

**Concern ID: 61905**

**Commenters expressed that residents' way of life including living off of and recreating in the water would be impacted by an influx of fresh water due to the MBSD Project.**

**Response ID: 16235**

The issues raised by the commenters were considered in the Draft EIS. As described in the Existing Conditions in Chapter 3, Section 3.16 Recreation and Tourism, as well as Appendix H1 Socioeconomics Technical Report, the Draft EIS acknowledges the importance of recreational use in the region, describing many types of outdoor recreational activities, including fishing, hunting, boating, wildlife viewing, and general shoreline use, among others. The EIS further acknowledges that extensive estuarine and freshwater wetlands provide habitat for many kinds of fish, birds, reptiles, and mammals that are an integral component of recreation in the region. The evaluation of environmental changes in the basin under the No Action Alternative shows that the abundance of target recreational species, including spotted seatrout and red drum, would decline over time. Access to recreational boating sites would also increase from negligible impacts in the early decades to major, adverse impacts in the later decades, leading to decreases in recreational use in the southern portions of the basin even without the Project. Chapter 4, Sections 4.16.4.2 and 4.16.5.2 in Recreation and Tourism describe how changes in the amount of fresh water due to the MBSD Project would impact recreation and tourism. As noted, there would be adverse impacts on-site accessibility, recreational boating, and boat-based recreational fishing due to tidal flooding, sedimentation, and invasive plants. There would be adverse impacts on recreational fishing for spotted seatrout and beneficial impacts on recreational fishing for red drum.

CPRA has developed a suite of mitigation and stewardship measures to help address and offset Project impacts (see the Draft Mitigation and Stewardship Plan in Appendix R1 to the Draft EIS). In response to comments, CPRA has expanded and refined this Mitigation and

Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61973**

**Consider dredging the passes (south pass and south east pass) to relieve pressure on rising rivers and let the natural process of building the river there, along with rock jetties along the Louisiana coastline, support growth and protect from oncoming storms. Then use dredging to build up specific areas inland.**

**Response ID: 15974**

This alternative as presented, specifically dredging the passes and building rock jetties to create marsh, would not meet the goals and objectives as stated in the purpose and need and described in Chapter 1, Section 1.4 Purpose and Need and Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives in the EIS. Similar to marsh creation alternatives (as described in Chapter 2, Section 2.3.5 Large-Scale Marsh Creation), it would not deliver enough fresh water, nutrients, and fine sediments to sustain existing and created wetlands beyond the marsh creation area and over the long-term would require repeated lifts and maintenance through placement of additional dredged material. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

Other similar restoration strategies are being considered for implementation by CPRA in its Coastal Master Plan, which will be updated in 2023, and by the LA TIG through Natural Resource Damage restoration planning.

---

**Concern ID: 62709**

**The 2019 opening of the Bonnet Carré Spillway caused significant impacts to aquatic fauna from the release of river water, and resulted in a declared fisheries disaster of at least \$58 million.**

**Response ID: 16087**

A summary of select natural and man-made diversions in southeastern Louisiana, including the Bonnet Carré Spillway, has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment, including area fisheries. This summary is available in Appendix U of the Final EIS. However, it is important to note that the Bonnet Carré Spillway is an emergency flood control structure that is not operated for ecological purposes. The anticipated impacts of the proposed Project on aquatic fauna from the release of river water is discussed in detail in Chapter 4, Section 4.10 Aquatic Resources.

---

**Concern ID: 62782**

**A large number of commenters expressed general opposition to the proposed Project.**

**Response ID: 16364**

The commenter's opposition to the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40145**

Pontchartrain Conservancy

John Kinabrew

Louisiana's coastal loss is of great concern to many. After all, this is our home and a place we all love.

I am a proponent of the Mid-Barataria Sediment Diversion for many reasons. Among them:

1) Louisiana leads the way in climate adaptation planning with the Coastal Master Plan. The Mid-Barataria Sediment Diversion is a linchpin project from the plan that is critical to building a more climate resilient future for Louisiana.

2) For decades, scientists and engineers have considered all the tools available and overwhelmingly agree that this project and projects like it are the best long term solution and necessary to match the challenges we face from land loss due to sea level rise and other climate change impacts. This is our best shot.

3) The Mid-Barataria Sediment Diversion is a game-changing coastal restoration project that uses the power of the river to build and maintain land. The project will build and maintain thousands of acres of vital wetlands to protect people from flooding from more intense hurricanes and sea level rise. Without action, some communities will see increased vulnerability floods, continued loss of wetlands, and a collapse of key fisheries.

4) The Mid-Barataria Sediment Diversion will work in concert with nearby marsh creation projects and will extend the lifespan of the millions of dollars that have been invested in nearby marsh creation projects.

I encourage you to take the broad view and do the right thing by supporting the Mid-Barataria Sediment Diversion.

Thanking you in advance for your support

Sincerely

John Kinabrew

Board Member - Pontchartrain Conservancy

---

**Concern ID: 63382**

**The Mid-Barataria Sediment Diversion is a linchpin project from the plan that is critical to building a more climate resilient future for Louisiana. For decades, scientists and engineers have considered all the tools available and overwhelmingly agree that this proposed Project, and projects like it, are the best long-term solution and necessary to match the challenges faced from land loss due to sea-level rise and other climate change impacts. The proposed Project would build and maintain thousands of acres of vital wetlands to protect people from flooding from more intense hurricanes and sea-level rise. Without action, some communities would see increased vulnerability to floods, continued loss of wetlands, and a collapse of key fisheries. Finally, the proposed Project would work in concert with nearby marsh creation projects and would extend the lifespan of the millions of dollars that have been invested in nearby marsh creation projects.**

**Response ID: 16344**

---

The commenter's support for the proposed Project is noted. The No Action and proposed Project alternatives' impacts on flooding potentials, wetland extent, and key fisheries were discussed in Chapter 4, Sections 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk, 4.6 Wetland Resources and Waters of the U.S., and 4.10 Aquatic Resources of the Draft EIS, respectively. Similarly, the cumulative impacts of the proposed Project and other restoration projects were discussed in Section 4.25 Cumulative Impacts of the Draft EIS, as applicable.

Conyers Family BBQ LLC

Howard Conyers

The oysterman and community need a BIPOC media and education consulting company like Conyers Family BBQ LLC to help document and tell the stories of the community. In addition, it will be extremely helpful if the consultant has an engineering background to be able to explain and translate the implications of the diversion plan and often the communities being impacted don't have the educational understanding. The people generally a white led organization does not always know how to communicate within these communities.

The State need to give Terry's Oysters funding to build tanks to get salinity back into the oysters when the diversion put more fresh water in the oyster beds. The other option the state need to investigate is to allow the oysterman to move the oysters in the water using some mobile device to allow the oysters to get more salinity.

Finally, the new Orleans chefs community needs to be consulted on how the gulf have off bottom oysters that can be used instead of going to Murder Point Alabama. Some of these Off Bottom oysters can be used in other dishes like oyster soups, stews, fried oysters, etc. In order for oystermen and fishermen impacted by the diversion, the restaurant community need to be well aware of the food that come from the area. It is particularly important that both black and white chefs in the city are consulted on this product. Conyers Family BBQ LLC media and education consulting company have an unbiased relationship with chef and restaurant owner in the city.

---

**Concern ID: 62961**

**Project mitigation must adequately compensate impacts on the oyster industry, including financial compensation for economic losses. Commenters provided suggestions for mitigation such as compensating for increased costs of travel, providing direct financial payments to lease holders whose areas become unproductive, supporting new oyster leases or lease swaps, investing in research and development, using devices to move oysters to higher-salinity water, providing loans to oystermen to develop alternative income streams, providing support for elderly fisherfolk and buying out boats and businesses.**

**Response ID: 16532**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers as compared to No Action conditions in Chapter 4, Sections 4.10 (Aquatic Resources), 4.14 (Commercial Fisheries), 4.15 (Environmental Justice) and 4.16 (Recreation and Tourism).

In response to public comments and resource agency input about the proposed mitigation efforts, CPRA has expanded and refined the oyster mitigation and stewardship measures. CPRA's mitigation and stewardship strategies and associated expenditures would focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to oyster fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for oysters in a large portion of the currently suitable habitat. With implementation

of the diversion, the Project would cause significant adverse impacts to oyster fisheries in the early years of the Project's operational life. The revised mitigation and stewardship measures include allocating \$4 million to establish new public seed grounds, \$15 million to enhance public and private oyster grounds, \$4 million to enhance broodstock reefs and \$8 million for alternative oyster culture.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62978**

**Collaboration is needed to minimize impacts on oyster industry, including developing innovative uses for bottom oysters and supporting collaboration between CPRA and LDWF.**

**Response ID: 16539**

CPRA and other state agencies, such as LDWF, recognize the importance of collaboration to support the fishing industry in adapting the ongoing changes in the environment. As explained in Section 4.14.4.1 Commercial Fisheries of the Draft EIS, without the Project, adverse impacts to oyster fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for oysters in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to oyster fisheries in the early years of the Project's operational

---

life. bCPRA and LDWF worked together with numerous oyster fishers as part of Louisiana Sea Grant's Seafood Futures Initiative to develop mitigation and stewardship measures aimed at maintaining a sustainable oyster fishery. CPRA anticipates working with other agencies, such as Louisiana Economic Development, on the workforce development, education and training programs included in the Mitigation and Stewardship Plan (see Appendix R1 to the Final EIS). In addition, CPRA engaged the fishing community potentially impacted by the Project through public meetings to solicit input on mitigation and stewardship strategies and engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures from affected fishers. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Refer to the Mitigation and Stewardship Plan for mitigation measures to be implemented as a result of these engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Little Lake Club

Stephen Saucier

I've been fishing and duck hunting in the Lafitte area for over 35 years and have watched the land erosion escalate annually. About ten years ago I took a flight over the Wax Lake Outlet and the Atchafalaya River sponsored by the Coalition to Restore Coastal Louisiana, it was an eye opening experience to see actual land being built naturally from free flowing river water laden with sediment. I've watched the dredge and fill projects constructed in the Lafitte area since Katrina and they are not really wetlands habitat, instead they are islands of land rising a foot or two above sea level that serve as storm surge protection more than marsh habitat. Releasing river sediment into this marsh is the only way to sustain it. I know some in the fishing community oppose the changes that will most likely occur but by doing nothing we lose the estuaries that sustain our seafood industry. We have a vibrant fishing industry downriver in Venice with the flow of river water. Barataria Bay needs the sediment and fresh water from this diversion. I am in favor of proceeding with permitting and construction.

---

**Concern ID: 62089**

**The Barataria Estuary would be more productive as a result of the increased input of carbon and the vital building blocks of life, which would mean opportunities for increased seafood harvest. The proposed MBSD Project is of critical importance for this transformation to one of our nation's most productive fisheries.**

**Response ID: 16250**

The commenter's support of the proposed Project is acknowledged. Chapter 4, Section 4.10 Aquatic Resources in the Draft EIS describes anticipated impacts from the proposed Project on aquatic species. As described, impacts would range from adverse to beneficial, depending on the species.

---

**Concern ID: 63342**

**Other natural or man-made diversions have successfully built land, such that the proposed MBSD Project would also be expected to build land.**

**Response ID: 16302**

The commenter's support for the proposed Project is noted. Consistent with the comment, Chapter 4, Section 4.2.3.2 in Geology and Soils indicates that the proposed Project is anticipated to build land in the Barataria Basin (with smaller amounts of land loss projected in the birdfoot delta). To facilitate comparisons between the proposed Project and other natural or man-made diversions, a summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary is available in Appendix U of the Final EIS.

---

**Correspondence ID:40171**

Calvin A Lopes

There is no doubt sediment deposits by natural means is the most efficient. Man has intervened and prohibited this from occurring by creating a hardened levee structure with fast flowing channels.

The goal of this Mid-Barataria Sediment Diversion project is to undo this situation to a very small degree.

The points needing addressing require a methodical approach which does not cause additional harm. Harm has been done to the environment already. To compound that would be unconsciousable.

My primary concerns:

- - Move sediment, not water
- - Prevent pollutants from being introduced into wetlands
- - Accommodate a reasonable salinity match
- - Utilize the flow rates as necessary to transport sediment over a given distance without erosion
- - Adjust the temperatures of the sediment and water to match

The common solution that addresses all of these concerns requires a 'processing plant' at the Mississippi River water's edge. Putting a hole in the levee solves nothing.

I would assume the greatest concentration of sediment in the River would be at substantial depth(s). The waters will be colder than near the surface. The 'diversions', as planned, would occur only during months with a high flow rate, aka northern regional snow melt. The waters will be colder than usual, most assuredly not matching the wetlands' temperature(s). The temperature shock will be harmful and likely will damage existing vegetation.

A processing plant that removes the sediment from the River needs to filter and neutralize it before transport. There will be a minimal salinity mismatch If the sediment is transported by barge. Water piped from the wetlands should be used if transported by pipeline (a closed-loop system). Using this water will solve other problems, specifically salinity, temperature, and, to a small degree a Ph balance.

Vegetation is fragile but is resilient. Seedlings could be introduced in the sediment flow as topsoil crusting occurs, or introduced years later at additional cost.

Presumably all of my concerns have already been considered; if not, they are worthy of consideration.

Calvin Lopes

New Orleans

---

**Concern ID: 61825**

---

**Diversion operations would occur during months with a high flow rate, which coincides with northern regional snow melt. The commenter expressed concern that the cold river water would have adverse impacts in the basin.**

**Response ID: 16430**

The impacts of water temperature from the river into the basin during proposed diversion operations were considered in the Draft EIS. As explained in Section 4.5.5.2 in Surface Water and Sediment Quality of the Draft EIS, the proposed Project would cause minor, intermittent decreases in water temperature during Project operations. As explained in Section 4.10.4.4 in Aquatic Resources, the proposed Project's overall direct and indirect impacts of decreased average temperatures and acute temperature changes on faunal populations at discrete locations and time periods in the Barataria Basin would likely be direct or indirect, minor to moderate, and adverse, and annually recurring and therefore permanent throughout the analysis period.

---

**Concern ID: 61897**

**Consider alternatives that transport more sediment and sand and less water, such as a conveyor belt or barge and utilizing a processing plant that removes the sediment from the Mississippi River to filter and neutralize the sediment before transport.**

**Response ID: 15991**

This suggested alternative would not meet the goals and objectives as stated in the purpose and need as described in Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives. CPRA's intent is to reestablish sustainable deltaic processes between the Mississippi River and Barataria Basin through the introduction of fresh water, sediment, and nutrients from the Mississippi River into the Basin. Additionally, in light of the volume and nature of the material that would need to be transported, a conveyor belt is not feasible. In addition, as described in Chapter 2, Section 2.4 Step 2: Evaluation of Operational Alternatives - Location, Operational Trigger, Capacity, and Base Flow the proposed Project is designed to maximize sediment bed load transport. Previous studies of the Mississippi River have documented the positive correlation between river discharge and sediment load, demonstrating that higher river discharge levels are generally correlated with higher sediment loads. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

---

**Concern ID: 63050**

**The temperature shock from the discharge of colder river waters would be harmful and likely would damage existing vegetation.**

**Response ID: 16056**

As described in Appendix E Delft 3D Modeling, Section 5.4.1 of the EIS, temperature coefficients for growth and for senescence mortality have been incorporated into the vegetation parameters for the Delf3D Basinwide Model. Water temperature is simulated within the model; based on the results of the modeling analysis, and as described in Chapter 4, Section 4.5.5.2 in Surface Water and Sediment Quality of the EIS, temperature trends projected for the proposed Project would follow the same seasonal patterns as the No Action Alternative, though there would be a minor temperature decrease (up to 5°F or 3°C) at

---

assessed locations following operation of the diversion structure above base flow. Because this issue was considered in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 64195**

**Vegetation is fragile but is resilient. Seedlings could be introduced in the sediment flow as topsoil crusting occurs, or could be introduced years later at additional cost.**

**Response ID: 16071**

Comment noted. The Project, as proposed, does not include planting of wetland vegetation; rather, the diversion of fresh water and sediments would alter the abiotic conditions in the Barataria Basin to allow for establishment of marsh species via natural recruitment and spread. No related edits to the Final EIS have been made.

---

**Correspondence ID:40174**

David Muth

Good morning, everyone. My name is David Muth. I live in New Orleans. I'm the Director of the Gulf Program for the National Wildlife Federation. The National Wildlife Federation will be Providing detailed written comments. On behalf of NWF and our over 6 million members and supporters, I want to say that NWF considers this project to be one of our highest national priorities for restoration. We consider the restoration of the Mississippi River Delta to be on a par with restoration efforts elsewhere in the country often better known, including those in the Everglades, the Great Lakes, and Chesapeake. No restoration effort now under way is more important for wildlife than this one, and no one single project will have greater positive impacts for wildlife, wildlife habitat, and ecosystems sustainability. NWF urges the Corps to issue permits for the Mid-Barataria Sediment Diversion and the preferred alternative, and we urge the Natural Resource Damage Trustees to fund the construction of the project, its operation and adaptive management, and the mitigation proposed in the trustees' Restoration Plan. We are fully cognizant of the fact that ecosystem change of the scale contemplated here will have impacts on people in communities and on some estuarine organisms. We commend the State and the Trustees for identifying those impacts and urge them to continue to work with affected individuals, families and communities to mitigate those impacts and to monitor and adaptively manage operations for effective wildlife and fisheries resources, guided by the ultimate critical purpose of the project.

And I want to take off my NWF hat and make the following personal comments. In my decades of reviewing NEPA documents and government plans, I have never seen a more comprehensive analysis, and I commend the team for their hard work. Of course, given the decades of in-depth scientific analyses that led to the discussion to build a diversion near this site, this is hardly surprising, but still commendable. About 40 years ago, like many citizens of Louisiana, I became aware of the dire straits and the dire rates of land loss that our coast was experiencing. Like many, I have watched the Barataria Basin dissolve before my eyes, and I have experienced the increasing ferocity of hurricanes hitting our coast. Like many, I lost a home in 2005. I had been waiting that 40 years for a project like this that is conceived and built at the scale necessary to begin to address the problem. The Mississippi River built the delta and only the river can rebuild it. Let's get started. Thank you very much.

---

**Concern ID: 62331**

**The EIS is comprehensive and well-prepared, and used the best available information and data.**

**Response ID: 15782**

Acknowledged.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of

---

wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Concern ID: 61756**

**The proposed MBSD Project sponsors should work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation and be as detailed and transparent as possible throughout the mitigation planning process. Use local non-profits to facilitate any mitigation measures that are decided upon. CPRA and the LA TIG should continue to encourage, accept, and solicit ideas and specific recommendation for mitigation after the June 4 deadline for these comments. The opportunity for continued input to inform the ultimate spending of those funds should also be made very clear publicly. The commenter also urges early action, as possible, before there is damage to mitigate.**

**Response ID: 15891**

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. These efforts have included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance if the Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive

---

management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61956**

**Commenters suggested [USACE and/or CPRA] carefully listen to those impacted by the diversion and have constructive dialogue between stakeholders and CPRA. They recommended to commit sufficient funding and resources necessary to those impacted to sustain their lives and livelihood throughout the diversion process.**

**Response ID: 15902**

Public input is an integral part of the NEPA process, the OPA process, and the DWH oil spill restoration planning effort. USACE and the LA TIG undertook a coordinated and concurrent public review process for the EIS and the LA TIG's Restoration Plan. Allowing submission of comments on either document to the same locations provided commenters a "one-stop shop" and was done to reduce confusion by commenters about where to direct their comments regarding the MBSD Project. Additionally, this ensured the LA TIG reviewed and considered all relevant comments to both the Restoration Plan and the Draft EIS in its decision-making process. USACE and LA TIG each provided public outreach and comment opportunities

---

throughout the development of the EIS and the LA TIG's Restoration Plan. Details on this outreach can be found in Chapter 7 Public Involvement in the Final EIS.

Since the release of the Draft EIS and the LA TIG's Draft Restoration Plan, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. This included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40175**

George Howard

Yes, sir. My name is George Howard and I am CEO of Restoration Systems, a mitigation banking firm headquartered in Raleigh, North Carolina, who was the sponsor of the Jesuit Bend Mitigation Bank, oh, about 10 miles north of you in a very similar landscape position as the planned project. I'd like to second Mr. Muth's comments, that it is an extraordinary document and an extraordinary undertaking you all have begun. Regardless of the diversion politics that surround it, you should be saluted for all the work that's gone into the permitting and planning thus far.

Obviously my concern, as a mitigation banker, is the opportunity to sell credits for the project, and we believe that the Jesuit Bend Mitigation Bank is actually an ideal offset for the particular project impacts. My curiosity - - and we can ask questions, correct? Is this purely comment or can you ask a question here or is that inappropriate?

MR. FRANKLIN: Just proceed as you feel free.

MR. GEORGE HOWARD: Yes. We feel comfortable - - the Corps of Engineers developed very, very similar levee plans to build the New Orleans to Venice levee, and in 2018, they determined that their impacts to wet pasture would need to be mitigated with credits, fresh to intermediate salinity credits, and made a fairly large purchase from the Jesuit Bend Mitigation Bank from exactly the same type soils. After that, a large LNG firm, Venture Global, developed in those same soils again and they were allowed to mitigate with bottomland hardwoods. We are curious whether the 404 process will be consistent with the Corps' own determination that wet pasture be mitigated with fresh to intermediate marsh, because that's what Jesuit Bend has.

It's an honor to follow Mr. Muth. He has been out to our project and counted many, many birds out there. We have been totally transparent about what we've done at Jesuit Bend. But if you're not aware of it, we moved 1.3 million yards of sand off of about a half-square-mile box in the river, at Mile 69, pumped it five miles, pumped it up and over the federal levee, dug a tunnel underneath Highway 23 and the New Orleans to Venice Railroad, up through a neighborhood, and then put it behind the Ollie pump station and created the newest 300 acres of land in Louisiana. We'd like that investment respected and hope that you all will seek pricing and availability from us as soon as possible, and we promise to be very fair in the pricing. But we're very curious, again, whether wet pasture will be mitigated as the Corps has mitigated in the past, with fresh to intermediate marsh.

Again, thank you very much, and I look forward to participating entirely through the process, and plan to have extensive and perhaps expensive comments by May 5th. Thank you very much.

---

**Concern ID: 62189**

**Jesuit Bend Mitigation Bank would provide an offset for Project impacts, particularly if wet pasture impacts are offset with fresh to intermediate marsh as it has been for previous USACE projects.**

**Response ID: 16402**

The direct wetland impacts associated with the proposed Project are discussed in the EIS at Chapter 4, Section 4.6.4.1 Wetland Resources and Waters of the U.S., Construction Impacts,

---

Wetland Types and Extent. USACE will evaluate impacts and consider any necessary compensatory mitigation consistent with 33 CFR §320.4(r), 33 CFR Part 332 and applicable USACE guidance in its permitting decision. If compensatory mitigation were required, options consistent with Part 332 would be considered, including banks within the appropriate watershed with available credits. Any potential compensatory mitigation requirements would be discussed in the ROD.

---

**Correspondence ID:40176**

Mark Rees

Thank you. So I appreciate the opportunity to comment on the Draft Environmental Impact Statement. I understand the purpose and the need for the Mid-Barataria Sediment Diversion, and I want to say I'm supportive of it, and specifically, I'm concerned with the potential for impacts to cultural resources.

I should pause and add that I'm speaking as an individual, as a resident of Louisiana, but I am also employed by the University of Louisiana, at Lafayette, and I am with the Louisiana Public Archeology Lab. I'm not speaking on behalf of the university, however. Again, I'm particularly concerned with the specific impacts to cultural resources and the mitigation of those adverse effects. So I've paid specific attention to those portions of the Draft Environmental Impact Statement, as someone had mentioned. I've gone through specifically those sections. To summarize, first, in case I don't get to everything, I'm specifically concerned that alternative mitigation and monitoring of the resources in the DEIS are not sufficient response, are not sufficient response to the ongoing impact and the potential adverse effects of the Mid-Barataria Sediment Diversion. Specifically, the information that might be provided by archeological sites, including National Register of Historic Places, eligible historic properties, but also a regional programmatic analysis of sites.

I'll just say a few words about the sections that deal with cultural resources. Chapter 3 specifically deals with or takes into account potential effects on historic properties, which are defined by the National Register of Historic Places. Typically, archeological sites are found to be eligible, based on the information they can provide. That's important. Also important is archeological integrity, that the sites are not entirely redeposited or that they have integrity of location to be able to provide that information. The DEIS recognizes the difficulty of distinguishing the potential effects of the proposed undertaking from all of the ongoing impacts that have been going on for well over a century.

I see my time's running out, so I'm going to drop down to some comments. I'm concerned that the undetermined National Register eligibility of some sites, that is, their undetermined eligibility, is being equated with ineligibility. For example, 21 of the 31 sites, or 2/3, are presumed to be inundated or destroyed and are consequently ineligible. I'm also concerned that the lack of archeological integrity makes individual sites ineligible, but overlooks the fact that sites regarded as ineligible together might contribute information from a regional programmatic approach.

I see my time is up. Can I have another 60 seconds?

---

**Concern ID: 62494**

**The commenter expressed concern that the undetermined National Register of Historic Places (NRHP) eligibility of some sites in the Project area is being equated with ineligibility. For example, 21 of the 31 sites, or 2/3, are presumed to be inundated or destroyed and are consequently ineligible.**

**Response ID: 16452**

As indicated in Chapter 4, Section 4.24 Cultural Resources of the Draft EIS, the National Register eligibility of all identified historic properties within the Operational Area of Potential Effects (APE) was considered by the USACE with comments from the LA SHPO. The USACE determined that the intensity and duration of potential Project-induced impacts on

---

submerged archaeological sites in the Operational Impacts APE cannot be separated from ongoing sea-level rise, subsidence, and other processes not caused by the proposed Project. The USACE, LA SHPO, ACHP, CPRA, and other consulting parties have developed a Programmatic Agreement (PA) for the long-term monitoring and management of cultural resources in the Operational Impacts APE. The PA is available in Appendix K Cultural Resources Information of the Draft EIS.

---

**Concern ID: 62495**

**The commenter expressed concern that the lack of archaeological integrity makes individual sites ineligible, but overlooks the fact that sites regarded as ineligible together might contribute information from a regional programmatic approach. The piecemeal approach used is not the right way to approach a regional-scale project.**

**Response ID: 16453**

As indicated in Section 4.24 Cultural Resources of the Draft EIS, all archival research regarding potential sites containing historic properties and completed field surveys were reviewed by the Section 106 Consulting Parties. To address the potential for adverse effects of the proposed Project on cultural resources, including archaeological sites, within the Operational Impacts APE, the USACE, LA SHPO, and other consulting parties developed an alternative mitigation plan for the proposed Project that includes an ethnohistoric overview regarding Tribal Nations in the Barataria Basin and larger Mississippi River Delta region.

In addition, unrelated to the proposed Project, the National Park Service's Mississippi River Delta Archaeological Mitigation Project (MRDAM) is collecting data from archaeological sites in the Mississippi River Delta region, including the Barataria Basin and birdfoot delta, to develop a database of sites under threat from sea-level rise and subsidence in Louisiana's coastal zone.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40177**

Mary Tucker

Hi. Good afternoon. My name is Mary Tucker and I am a resident in Myrtle Grove, and I am not speaking on behalf of the association. I am speaking for myself and my family. And while I agree with Mr. Muth, from the National Wildlife and Fisheries, the first man, we do need to rebuild our marsh; however, that being said, not at the expense of my little community. I spoke yesterday, so I am not in favor of the diversion. The reason being, we will have water on our property more days than not when the diversion is operating. When I bought and built in Myrtle Grove, everything was built to code. It was a way of life.

The man before me spoke about artifacts and culture. Well, what about the culture of the Louisiana way of life? I've raised my children. I'm now raising the next generation of my family. I chose to invest money outside of the levee protection, so I accepted that responsibility, for storms, but not man-made damage. Kids can ride bikes in the street. They can play on the land. We drive up to our camps. They fish off the dock, catch crabs off the dock, and shrimp.

When this diversion is operational, that will affect the fish. Again, my land will probably be inundated with water, so raising the road, hey, that will help me get there, but once I get there, it's covered in water.

Yesterday when I spoke, I was directed to go to, I think it was 4.27, Mitigation, and where I uncovered that Wilkinson Canal will probably be affected and they might have to redirect how watercraft will operate in the area. Again, that will take away my waterfront community. Also, I'm a little disappointed that there's 33 million for shrimp and oysters, approximately 20 million for dolphins, but nowhere is it mentioned the amount of money for mitigation to property owners who have invested blood, sweat, tears and money into property.

Thank you. I do think the marsh does need to be rebuilt, but we have to look at other ways. And that's all I have to say. I appreciate and I respect the time that I was given. Thank you very much.

---

**Concern ID: 62287****Individuals who chose to invest money outside of the levee protection did so accepting responsibility for impacts from storms, but not man-made damage.****Response ID: 15809**

The USACE acknowledges the commenter's concern regarding increased flooding from the proposed Project. Final EIS Appendix R1 Mitigation and Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties.

---

In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes. A Project servitude would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures such as raising roads or improving bulkheads in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA

TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62781**

**Although some form of coastal restoration is warranted and necessary for the long-term health of the Barataria Basin, the proposed Project is not the solution.**

**Response ID: 16363**

The commenter's opposition to the proposed Project is noted. As discussed in Chapter 2 Alternatives of the Draft EIS, an alternatives analysis was conducted to identify viable alternatives for the proposed action that would meet the proposed Project's stated purpose and need, as identified in Chapter 1, Section 1.4 Purpose and Need. Alternatives considered, but eliminated from consideration were summarized in Table 2.6-1. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63102**

**Commenters expressed concern that they will not be able to use their property if the Project proceeds. Commenters believe that the amount of funds proposed for mitigation is insufficient.**

**Response ID: 16640**

The commenters' concern regarding the adequacy of the funding for mitigation measures was considered by CPRA and the LA TIG in developing CPRA's Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included proposals to address and partially offset some of the projected impacts of the Project on surrounding communities outside levee protection, including potential mitigation measures to address increased water levels due to the Project. In response to comments, CPRA further expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

The mitigation and stewardship measures would vary by community. In Myrtle Grove, CPRA would improve the bulkhead around the Myrtle Grove Marina Estates Subdivision to reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the Project. In other communities from Woodpark to Happy Jack south of the Project site outside levee protection, CPRA would elevate the roadways and make other infrastructure improvements to maintain access and the utilities of those communities. Also in these communities, CPRA plans to acquire Project servitudes from landowners. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate

those landowners for the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

Details regarding the funding that will be available for aquatic/fisheries mitigation and stewardship measures is set forth in the Final Mitigation and Stewardship Plan, Appendix R1. Details regarding other mitigation and stewardship measures (e.g., mitigation for tidal flooding impacts) is also set forth in the Final Mitigation and Stewardship Plan, Appendix R1; however, final estimated costs for those measures continues under development. CPRA has stated that the total estimated cost of all mitigation and stewardship measures set forth in the Final Mitigation and Stewardship Plan exceeds \$300 million dollars. Details regarding the cost for the monitoring and adaptive management are set forth in Section 9 of the Final MAM Plan, Appendix R2. Section 3.2.1.2 of the Draft Restoration Plan includes estimates of project costs, including the cost for project design and construction and project monitoring. Updated cost estimates will be provided as part of the Final Restoration Plan, including project monitoring and stewardship measures.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section

10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Katharine Pool

Hi, I'm Katharine Poole. I'm a climate scientist, who works at Columbia, but I do not represent them; I represent myself.

If your EIS states that black and low-income communities will be highly and disproportionately impacted by a project, that is where exploration should end, full stop. If your EIS states that dolphins will be harmed via this project, more than were killed in the oil spill that it was designed to rectify, that is where it should end. If your EIS states that flooding will increase in areas that are already highly vulnerable and underserved as a result, that is where it should end. If your EIS states that wildlife will have their habitats destroyed on an expedited timeline, hurting not only the animals, but the ecosystems and people who depend on them for their livelihood, that is where it should end. If your EIS doesn't properly address the implications of diverting one of the most toxic and polluted rivers in the world into another ecosystem, that is where exploration should end. If your EIS doesn't properly address the fact that Louisiana is in the crosshairs of hurricanes multiple times of the year, potentially delaying the timeline of this project, that's where it should end. If you don't address that these jobs are temporary and dangerous, due to geographic vulnerability and heat concerns during the summer months, that's where it should end. If your EIS doesn't properly address that this project will be spending \$2 billion just to be fully under water by the end of the century, if not sooner, that is where it should end.

We need to stop pretending that we have any meaningful control over what is about to happen to our coast through gray and green infrastructure. We must stop working against climate change, which is a losing battle, and start working with it.

Use 2 billion to move people out of harm's way, not line the pockets of contractors; full stop. And please stop with the propaganda in media outlets, because it's very transparent.

This project is a direct threat to environmental justice. Why would we ever trust the Army Corps when they have shamelessly lied to the public for decades and are a large reason we are in the mess we're in because of their infrastructure failures. Why trust CPRA, when their board doesn't represent or look like the people it is supposed to serve? And I really hope you take those comments to heart, because it is terrible that you think that black and brown communities are expendable, because they are not; that you think wildlife is expendable, because it is not.

You know, you need to think more into this. It's really a matter of life and death, not only for animals, but for the livelihood of people.

---

**Concern ID: 61819**

**Commenters expressed concern that the proposed Project would have adverse impacts on Barataria Basin's water quality, wetlands, fisheries, recreational uses, and eroding coastlines due to chemicals, oil and hazardous waste, and/or pollutants in the Mississippi River that would be routed to the Barataria Basin via the proposed diversion.**

**Response ID: 16429**

The impacts raised by the commenters were considered in the Draft EIS. As discussed in Chapter 3, Section 3.5.1.1 in Surface Water and Sediment Quality of the Draft EIS, the

---

segment of the Mississippi River where the proposed diversion river intake structure would be located (subsegment LA070301\_00) fully supports its designated uses. Designated uses for this subsegment include swimming, boating, fishing, and drinking water supply. LDEQ's water quality assessment indicates that regulated substances are not present in concentrations that would cause a water quality impairment at the location of the intake structure. In response to this concern expressed by commenters, a new subsection has been added to Chapter 4, Section 4.5 Surface Water and Sediment Quality clarifying the potential impacts of nearby industrial facilities on river water routed to the basin during proposed Project operations. The new section is called 4.5.5.11 Hazardous Spills from Industrial Sites. As described in the EIS, Chapter 2, Section 2.8.1.4 in Action Alternatives Carried Forward for Detailed Analysis and in Appendix F MBSD Design Information, in the event of oil spills and other hazardous discharges into the Mississippi River upstream of the proposed MBSD intake structure, the diversion structure would be closed.

---

**Concern ID: 61898**

**Consider using the funds to move people out of the area instead of implementing the proposed MBSD Project.**

**Response ID: 15992**

This suggested alternative would not meet the goals and objectives as stated in the purpose and need as described in Chapter 1, Section 1.4 Purpose and Need and Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives. It would not reestablish sustainable deltaic processes and help restore habitat and ecosystem services injured by the DWH oil spill. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

---

**Concern ID: 61930**

**The proposed MBSD Project is an inequitable use of public funds because its negative impacts fall most directly on marginalized ethnic groups, including African American, Native American, Latin American, Asian American, Canary Islander American (Islenos), and Croatian American and unjustly places the burden on Louisiana's coastal fishers. Risks often fall disproportionately on low-income or minority communities due to ongoing institutional injustices. These low-income and minority communities, including homes, cultures, and livelihoods of Indigenous people and other people of color are often sacrificed for the benefit of the "greater good", particularly for the larger tax bases upstream of the proposed MBSD Project. For example, when the levee breached at Mardi Gras Pass, nothing was done to re-protect the mostly African American oyster farmers and fishers whose oyster farms in Breton Sound were destroyed by the fresh water from Mardi Gras Pass. But a levee breach anywhere else along the Mississippi River would be quickly rebuilt and the impacted people would be indemnified. Also, the most effective flood risk reduction solutions, like home buyouts, are not offered to low-income populations in areas south of New Orleans. Both the Draft EIS and the LA TIG's Draft Restoration Plan would benefit from additional reflections on the natural and human history of the Project geography that resulted in such fundamental changes to the landscape and set us on the course of the land-loss crisis that Louisiana faces today. The EIS should describe historic, systemic**

---

**inequities affecting communities with environmental justice concerns in the Project area to provide authentic and more complete context for the discussions.****Response ID: 16281**

The Draft EIS (including Section 4.15 Environmental Justice and Appendix H, Socioeconomics Technical Report at Chapter 2) included a discussion of communities with low-income and minority populations, including information about factors that have contributed to historic and systemic inequities in southeast Louisiana. As discussed in the EIS, the Project may have disproportionately high and adverse, long-term impacts on some low-income and minority populations in communities engaged in commercial and subsistence fishing and dependent on adversely impacted fisheries, as well as communities located near the immediate outfall area (within approximately 10 miles north and 20 miles south) and outside of federal levee protection. In addition, negligible to minor, adverse impacts related to increased risk of levee overtopping during certain 1 percent storm events south of the immediate outfall area may occur, which may impact the community of Ironton. Commenters also raised concerns about Mardi Gras Pass; however, the closure of Mardi Gras Pass is outside of the scope of the EIS.

CPRA has expanded and refined the Mitigation and Stewardship Plan, Appendix R1 to the Final EIS, since publication of the Draft EIS and LA TIG's Draft Restoration Plan based on community and resource agency input. The mitigation and stewardship measures now provide additional detail regarding specific efforts targeted at assisting low-income and minority populations in addressing the potential impacts of the Project.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

---

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and

---

stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62289****Hurricanes could potentially delay the timeline of the Project.****Response ID: 15799**

It is not clear whether the commenter is referring to a delay in the timeline for construction of the Project or in the rate of land building over 50 years, so this response addresses both. As for construction, there are contingencies built into the Project schedule to account for weather delays. In regard to the rate of land building over 50 years, the Delft3D Basinwide Model projections do not account for wetland erosion from hurricanes. However, it should be noted that if one or more hurricanes were to cause wetland loss during the 50-year analysis period, land building from the proposed Project would still result in a greater acreage of remaining wetlands than under the No Action Alternative. Additional analysis regarding the potential impact of hurricanes and saltwater inundation on the extent of wetlands in the Project area has been added to Chapter 4, Section 4.6.5.1 Wetland Types and Extent of the Final EIS.

---

**Concern ID: 62986**

---

**The Project would drive decreases in salinity that would reduce the overall health, survival, and reproduction of bottlenose dolphins that reside in the Barataria Basin, a species that was negatively affected by the Deepwater Horizon oil spill (NMFS, 2013). Some commenters felt that because of this, the Project should either not move forward or its operation should be altered.**

**National Marine Fisheries Service (NMFS). 2013. Roy Crabtree (NMFS) to Elizabeth Davoli (CPRA). <https://s3.documentcloud.org/documents/726710/national-marine-fisheries-service-comments-on.pdf>**

**Response ID: 16701**

The concerns raised by the commenters about the projected decreases in salinity and resulting effects on Barataria Bay dolphins were considered in the Draft EIS. More specifically, Chapter 4, Section 4.11.5.2 in Marine Mammals of the EIS acknowledges that the proposed Project would likely have significant, adverse impacts to Barataria Basin dolphins, a species that suffered significant impacts from the DWH oil spill. This section also discusses the physiological changes caused by exposure to low-salinity water, the duration of those changes that leads to mortality, and the anticipated mortality of a large portion of the dolphin population in the Barataria Basin within the first decade. These sections of the EIS provide a more in-depth analysis of potential impacts to dolphins than the letter cited by the commenter.

The concerns raised by the commenters were also considered in the LA TIG's Draft Restoration Plan (see Section 3.2.1.5 [Collateral Injury]); the Final Restoration Plan has been edited consistent with changes made to the Final EIS and see below regarding new, related content included in Appendix R.

The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree collateral injuries, to natural resources, like dolphins, that were injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the Restoration Plan). The intended restoration of freshwater flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, without the proposed Project, there would also be adverse impacts to some of the same species due to large-scale wetland loss over time, as is anticipated from ongoing sea-level rise, subsidence, and other existing stressors, which is anticipated to reduce the suitability of habitat for many of the species that currently occur in Barataria Basin.

The LA TIG must weigh the potential for and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed Project against its benefits). The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that creates and maintains wetlands. As described in Section 3.2.1.6 (Benefits Multiple Resources – Alternative 1) of the Restoration Plan, this sustained ecosystem would be expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational

---

users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing deltaic processes, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Restoration Plan because it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

Since release of the Draft EIS and the LA TIG's Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible (if it is possible), the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized.

In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures to benefit dolphins in Louisiana (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include more details regarding strategies and protocols that would be used at the onset of operations to minimize impacts on dolphins, as well as the process through which operational data would be used to evaluate potential modifications to those strategies and protocols; see Appendix R2 (Monitoring and Adaptive Management Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included

in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 64089**

**Commenters asked that the jobs that are created by construction of the proposed Project spur inclusive and equitable economic development. The Louisiana State and local economic development authorities should focus efforts through communication, recruitment, and training activities, into creating jobs for local residents, including minority residents. The same type of focused workforce development effort is likely necessary in order for these local jobs to translate into longer term economic benefits for affected communities. Work with the community to identify future needs of this workforce, including: providing adequate emergency and routine medical care for workers, facilitating the start and growth of small business to provide services to this workforce, and educating skilled workers who can later pivot to other jobs along our coast long after construction is complete.**

**Response ID: 16234**

With respect to the award of contracts, CPRA is required to follow the provisions of the Louisiana Public Bid Law, including those contained in Title 39, Chapter 17 (the Louisiana Procurement Code) and in Title 38, Chapter 10 (Public Contracts). CPRA has sought and regularly seeks engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS.

Mark Rees

So thank you for being given a chance to speak a little bit more, to talk about the cultural resources and the expected impacts. The Draft Environmental Impact Statement indicates there are no expected impacts on cultural resources within the APE for construction. That is because there are no historic properties that have been determined eligible for listing on the National Register. One of the key points I want to make is that information could also be obtained from sites in a regional approach rather than a piecemeal approach of site by site. Regarding the operational impact APE, the larger area, there are numerous sites, and I had mentioned 21 previously recorded sites could not be relocated and are presumed inundated or presumed destroyed. They automatically become ineligible and are not considered. The adverse effects within the operational APE are considered for only five historic properties, which are regarded as eligible for listing on the National Register. I'm concerned that their undetermined eligibility is being equated with ineligibility, and that inundated and inaccessible sites are presumed to be ineligible merely because they are submerged and then inaccessible. Lack of integrity makes individual sites ineligible for National Registry. This sort of piecemeal approach, I don't think, is the right way to approach a regional scale project. After all, the APE are defined as geographic regions.

To get to the Draft Programmatic Agreement regarding those five historic properties, the programmatic agreement indicates, on consultations and public involvement, that the public has an interest. Members of the public and stakeholders should be considered. Well, the public, at large, has an interest in and can benefit from public education. I think public education is largely left out, which is ironic, because it is the information potential of those sites that is deemed making them important, or eligible for the National Register. Yet, when it comes to public education, it's nearly absent, again, information from individual sites, as well as from a regional programmatic approach to cultural resources. Other consulting parties that could be added? Public university archeology programs that have an interest, a public interest in education; the Louisiana Archeological Society, as related to public interest in Louisiana's heritage; the Louisiana Archaeological Survey and Antiquities Commission, which advises the Secretary of the Department of Culture, Recreation and Tourism.

I will try to finish up here this last time. So I was talking specifically about the Draft Programmatic Agreement, in Appendix K of the Draft Environmental Impact Statement. And so I wanted to note that the public, at large, has an interest in public education, obviously, which I think is lacking from it. Other consulting parties I mentioned that should be added, I think that would be - - that would strengthen the public education component.

Also, on the assessment of effects, or the resolution, excuse me, of adverse effects, there are three sort of legs to the resolution of adverse effects, which make up an alternative mitigation plan, the peer-reviewed publication of ethnohistoric overview on tribes of the Barataria Basin. Well, ethnohistory involves archeology, as well as oral and archival sources, so it would make sense that an overview should draw on information from archeology, and that could include a regional analysis.

This does not appear to be included in the alternative mitigation plan; rather, it would be sort of a summary of existing literature. The lack of such information in such an overview might

---

raise questions from any peer-reviewed scholarship, which would cause problems for the mitigation plan.

Secondly, compilation of information for tribes, on their history, for future consultation. Again, it's unclear if such a database would include any new information on the sites, including the eligible sites that are going to be affected.

Public information is the third part of the alternative mitigation, and a website is suggested, or other accessible information or materials. Websites are great, but may have a limited effectiveness in public education. Again, I think support for public education, including Louisiana's universities that are teaching archeology, recommended - - I would recommend support for the Louisiana Archeology Month. This is the Louisiana Department of Culture, Recreation and Tourism's main means of educating the public on Louisiana's heritage. I recommend support for public archeology outreach initiatives that are absent. I would recommend support for public archeology in K12 and higher education.

Overall, I would recommend an alternative mitigation plan that includes site monitoring and involves both APE, construction and operations, in a programmatic approach to regional analysis, such as a systematic archeological sampling, including historic properties of undetermined eligibility, as well as those determined to be eligible for the National Register.

---

**Concern ID: 62494**

**The commenter expressed concern that the undetermined National Register of Historic Places (NRHP) eligibility of some sites in the Project area is being equated with ineligibility. For example, 21 of the 31 sites, or 2/3, are presumed to be inundated or destroyed and are consequently ineligible.**

**Response ID: 16452**

As indicated in Chapter 4, Section 4.24 Cultural Resources of the Draft EIS, the National Register eligibility of all identified historic properties within the Operational Area of Potential Effects (APE) was considered by the USACE with comments from the LA SHPO. The USACE determined that the intensity and duration of potential Project-induced impacts on submerged archaeological sites in the Operational Impacts APE cannot be separated from ongoing sea-level rise, subsidence, and other processes not caused by the proposed Project. The USACE, LA SHPO, ACHP, CPRA, and other consulting parties have developed a Programmatic Agreement (PA) for the long-term monitoring and management of cultural resources in the Operational Impacts APE. The PA is available in Appendix K Cultural Resources Information of the Draft EIS.

---

**Concern ID: 62495**

**The commenter expressed concern that the lack of archaeological integrity makes individual sites ineligible, but overlooks the fact that sites regarded as ineligible together might contribute information from a regional programmatic approach. The piecemeal approach used is not the right way to approach a regional-scale project.**

**Response ID: 16453**

As indicated in Section 4.24 Cultural Resources of the Draft EIS, all archival research regarding potential sites containing historic properties and completed field surveys were reviewed by the Section 106 Consulting Parties. To address the potential for adverse effects of the proposed Project on cultural resources, including archaeological sites, within the

---

Operational Impacts APE, the USACE, LA SHPO, and other consulting parties developed an alternative mitigation plan for the proposed Project that includes an ethnohistoric overview regarding Tribal Nations in the Barataria Basin and larger Mississippi River Delta region.

In addition, unrelated to the proposed Project, the National Park Service's Mississippi River Delta Archaeological Mitigation Project (MRDAM) is collecting data from archaeological sites in the Mississippi River Delta region, including the Barataria Basin and birdfoot delta, to develop a database of sites under threat from sea-level rise and subsidence in Louisiana's coastal zone.

---

**Concern ID: 62935**

**The cultural resources mitigation plan in the Draft Programmatic Agreement (Appendix K to the Draft EIS) includes a public education component (website or other materials). The commenter suggested that the public education component should include information about individual cultural resource sites as well as regional information. Also, the commenter suggested that the following entities should be consulted in developing the public education component: public university archeology programs that have an interest, the Louisiana Archeological Society, and the Louisiana Archaeological Survey and Antiquities Commission. Additionally, the public education component should include support for public archeology instruction in kindergarten through high school and for Louisiana's universities that teach archeology and support for the Louisiana Archeology Month, which is the Louisiana Department of Culture, Recreation and Tourism's means of educating the public about Louisiana's heritage.**

**Response ID: 16654**

The public education component of the Alternative Mitigation Plan appended to the Programmatic Agreement in Appendix K Cultural Resources Information of the EIS is intended to inform the public about the regional history of Native Americans between 1500 and 1900 AD in Southeastern Louisiana. As stated in the Alternative Mitigation Plan, to achieve this objective, the plan proposes to examine the archaeological record and cultural history of the region. While information gleaned from individual sites is invaluable, they often provide limited information at a local level and do not generally provide much information about the larger geographic region. In addition to incorporating ethnographic interviews, the parties participating in the National Historic Preservation Act (NHPA) Section 106 consultation have agreed on the minimum types of source materials that would be reviewed to develop the public education component of the plan, all of which may be derived from a variety of community programs and organizations, likely including those recommended by the commenter. A qualified professional consultant would complete the public education component. As stated in Part VI.B.2 of the Programmatic Agreement in the EIS Appendix K Cultural Resources Information, draft versions of all products would be provided to the NHPA Section 106 Consulting Parties for a 60-day review period to ensure that the final product is suitable for public education and includes a robust collection of the available materials from a diverse group of sources.

---

**Concern ID: 63899**

**The commenter expressed concern that the ethnohistoric overview component of the cultural resources alternative mitigation plan should draw on archeology, which could**

---

**include a regional analysis, as well as oral and archival sources. The commenter expressed concern that the alternative mitigation plan would merely be a summary of existing literature.**

**Response ID: 16656**

The issue raised by the commenter was addressed in the Programmatic Agreement developed concurrent with the Draft EIS, which sets forth the alternative mitigation to be implemented by CPRA as part of implementing the Project (see the Programmatic Agreement in Appendix K Cultural Resources Information of the EIS). The Alternative Mitigation Plan, developed by the Section 106 Consulting Parties, including federally recognized Tribes, includes a regional ethnohistory of Native American settlement in the southeastern coastal Louisiana region (Barataria Basin, Breton Sound Basin, and Pontchartrain Basin). The analysis conducted as part of the Alternative Mitigation Plan would include an examination of the archaeological record at the regional level as well as oral and archival sources. The Consulting Parties have agreed that the region is considered understudied and that the general public is currently without a synthesis of the extant archaeological and historical literature, particularly one augmented with regionally relevant Native American oral accounts. The products that the study proposes to provide are not merely a summary of the existing literature. Rather, the plan would: (1) mitigate for the lack of cohesion among the archaeological record, scholarly literature on Native American history, and the available vital/archival records; and (2) make the existing literature and Tribal knowledge available to the public online and in the classroom.

---

**Concern ID: 63900**

**The cultural resources Alternative Mitigation Plan should compile information about the history of Tribes and specific cultural sites for use in consultations.**

**Response ID: 16657**

The issue raised by the commenter was addressed in the Programmatic Agreement developed for the Draft EIS, which sets forth the Alternative Mitigation Plan to be implemented by CPRA as part of implementing the Project (see the Programmatic Agreement In Appendix K of the EIS). The Alternative Mitigation Plan, developed by the NHPA Section 106 Consulting Parties, including federally recognized Tribes, includes a regional ethnohistory of Native American settlement in the southeastern coastal Louisiana region (Barataria Basin, Breton Sound Basin, and Pontchartrain Basin). The Alternative Mitigation Plan does not include the investigation of archaeological sites. Instead, the objective of the Alternative Mitigation Plan is to develop a comprehensive ethnohistoric overview of Native American history in southeastern coastal Louisiana (Barataria Basin, Breton Sound Basin, and Pontchartrain Basin). One of the proposed products to be developed through the Alternative Mitigation Plan is information, documents, and/or maps to improve NHPA Section 106 consultation with federal agencies by clarifying for each participating Tribe which projects they wish to consult on.

---

**Correspondence ID:40180**

Cindy Kuehne

Hi. My name is Cindy Kuehne. I am a resident in Myrtle Grove, and I am against the diversion, but not against saving our wetlands. I don't understand why this location is the only location for the project, when there is several acres of vacant land very near by the project on Highway 23 that would have a lot less impact on the, you know, parish, you know, people that live there.

And, also, I see in the EIS about assisting property owners to elevate homes and other structures. So if they're going to run the diversion, what is it, approximately half the time of the year, what about the other half of the year? How are we going to access our boats when you all raise our homes and boathouses, so they're so high in the sky that we won't be able to access our boats because they're so far down? I mean, I'm not sure, you know, what the solution is to remedy the problem, but, I mean, you know, we're hoping to get answers, which we haven't gotten any so far.

And, I mean, when I built down here, I knew we were outside of the levee system and could accept that, if we had natural disasters. But I can't accept that my investment and my way of life will be totally altered for a man-made project.

I hope you all take all these comments into consideration, and we are looking forward to having a meeting next week with the CPRA that maybe they can give us some more information on it.

---

**Concern ID: 61865**

**Commenters asked why the location was chosen as the site for the proposed MBSD Project, since it so close to and impacts the Myrtle Grove Subdivision.**

**Response ID: 15936**

Chapter 2, Section 2.4.1 Evaluation of Location Alternatives under Step 2: Evaluation of Operational Alternatives - Location, Operational Trigger, Capacity, and Base Flow in the Draft EIS, detailed the evaluation of alternatives based on geographic location and the reasoning for selecting the proposed location for the MBSD Project. Consideration for the location of the proposed MBSD Project took into account the proximity of the diversion intake to a point bar in the Mississippi River that could serve as a continuous, long-term sediment source for the diversion in combination with the outfall location and receiving basin being well suited to gain benefits from a sediment diversion, the potential for accretion of sediment in the Barataria Basin, and the creation, maintenance, and sustainability of existing and future wetlands and marshes. In addition, previous studies have considered several general locations for a sediment diversion from the Mississippi River into the Barataria Basin, including the upper, middle and lower parts of the basin and were used in the evaluation in the EIS. The impacts of the proposed MBSD Project and its alternatives, particularly on Myrtle Grove, can be found in Chapter 4 Environmental Consequences under each of the Project's resources.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

1. To what degree will your project impact the entire Mississippi Sound and its aquatic life?
  2. With the more frequent openings of the Bonne Carre Spillway and their devastating affect on the Mississippi Sound aquatic life and the coastal Mississippi economy, to what degree will your project add to these problems caused by the Bonnet Carre Spillway openings?
- 

**Concern ID: 61849**

**The commenter questioned to what degree the proposed MBSD Project would adversely impact Mississippi Sound aquatic life and commercial fisheries. The commenter expressed concern that these resources are already adversely impacted by Bonnet Carré Spillway openings.**

**Response ID: 16463**

The commenter's concerns about freshwater impacts on Mississippi Sound aquatic life and fisheries are acknowledged. However, the proposed Project is not anticipated to have more than negligible impacts on aquatic life outside of the proposed Project area, particularly in the Barataria Basin and the Mississippi River birdfoot delta, as defined in Chapter 3, Section 3.1.1 (Project Area) of the EIS; therefore, negligible to no impacts on aquatic life in the Mississippi Sound are anticipated from the construction and operation of the proposed MBSD Project.

---

**Concern ID: 62729**

**The commenter questioned to what degree the proposed Project would impact the Mississippi Sound and its aquatic life.**

**Response ID: 16107**

The proposed Project is not anticipated to have discernable effects on aquatic life outside of the Project area, which includes the Barataria Basin and the Mississippi River birdfoot delta (particularly for biological resources), as defined in Chapter 3, Section 3.1.1 in Introduction of the EIS; therefore, negligible to no impacts on aquatic life in the Mississippi Sound are anticipated from the construction and operation of the proposed MBSD Project. Because this issue was addressed in the Draft EIS, no related edits have been made to the Final EIS.

Lucas Ragusa

I want to send this letter in support of all diversion projects now and in the future.

I am a New Orleans businessman raised on the waters of the Atchafalaya Basin. I am also a professional Bass Fisherman. Over the 35 years, I have fished in the Atchafalaya I have watched it filling in. That process has proven to me over the last 20 years that diversions are 100% worth wild investment into the future security of our state. The very product that I believe will fix our coastal zones is changing our landscape in the basin daily further illustrating why this process which was natural IS THE SOLUTION!

Please, for the love of the future generations of our precious state install these diversions and LET THE RIVER RUN! Even if the compromise is to ONLY flow the water at periods of high water as was the natural process for thousands of years it needs to be done.

Lucas J Ragusa

---

**Concern ID: 63334****The proposed MBSD Project would maintain and restore coastal lands and should move forward.****Response ID: 16291**

The commenter's statement of support is acknowledged. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Larry Helmer, Jr.

My name is Larry Helmer, Jr. and I have been a commercial fisherman since the age of 15. Once the Mid-Barataria Sediment Diversion project starts, it will affect my business. I want assistance in obtaining the vessel refrigeration that you have proposed to us fisherman. Thank you vey much.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A

summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Larry Helmer, Sr.

I have been a fisherman all my life. I will not do any other job because I love what I do. With my age, I cannot get another job. This will affect everybody. When you love your job, it's so much easier on your life. It's in my blood. That's why I never retired yet because I love to fish. I would love it that you do not run the freshwater because it would hurt us. It would flood our home because the water level will come up. You can buy me out. Buy my boat and my home for \$1,000,000 or \$500,000.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

National Audubon Society

Ryan Chauvin

Dear U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group,

I would like to provide comments to the U.S. Army Corps of Engineers and the Louisiana Trustee Implementation Group on the Draft Environmental Impact Statement (DEIS) and Phase 2 Restoration Plan #3.2 for the Mid-Barataria Sediment Diversion.

I fully support the identified preferred alternative in the DEIS for the Mid-Barataria Sediment Diversion, and funding the project using Deepwater Horizon settlement dollars as outlined in the restoration plan.

Six months ago, I purchased my first home in New Orleans. Knowing the risks and uncertain future in southern Louisiana, I wish to raise my children here. As the Digital Communications Manager for the National Audubon Society, I am intimately familiar with the state of our coastal crisis and the options we have available to address it. Big problems require bold solutions and I believe that sediment diversions provide our coast with the best chance at a sustainable future.

This diversion is a game-changing coastal restoration project that uses the power of the river to build and maintain land. This project will build thousands of acres that will help protect my home from dangerous storm surge and provide habitat for some of our state's most iconic wildlife. Now is not the time for inaction. If we do nothing, communities will see increased vulnerability to floods, continued loss of wetlands, and a collapse of key fisheries.

As the project advances, I urge federal and state decision-makers to keep engaging with impacted communities in planned mitigation and stewardship efforts. We must together develop and implement ideas and proposals for adaptation and mitigation over the life of the project. Finally, I ask for the development and implementation of a robust adaptive management program that incorporates knowledge gained from monitoring of the project over time and also considers input from key stakeholders.

Again, I am strongly in support of the implementation of the Mid-Barataria Sediment Diversion and urge the swift implementation of the project so that we may have the best chance to restore our coast.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter,

---

including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project

---

alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40192**

Brooke Gershman

It is important to me that we direct Deepwater Horizon funding to restore the Mississippi Delta. I support selecting the preferred alternative for the Draft Environmental Impact Statement for the Mid-

Barataria Sediment Diversion.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40193**

Mike Stewart

We are living in an time with unique opportunities to right many wrongs that we have done in the past. Our loss of critical wetlands in Louisiana not only affects our state but the entire country thru so many avenues that to not act now should be criminal. Mitigating losses to our amazing marshes as well as protecting the citizens and infrastructure of Louisiana are only parts of what an amazing project like this diversion could accomplish.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Louisiana Trustee Implementation Group (LATIG)

Subject: DEIS for the Mid-Barataria Sediment Diversion (MBSD)

Dear Mr. Brad Laborde (Corps) and Mr. Mel Landry (NOAA, on behalf of LATIG):

On behalf of the 1,052 members of Orleans Audubon Society (OAS) living in eleven parishes in southeast Louisiana, please accept these comments on the proposed MBSD.

We urge adoption of Alternative 5, Variable Flow up to 150,000 CFS, rather than the applicant's preferred alternative, Alternative 1, Variable Flow up to 75,000 CFS.

We urge adoption of Alternative 5 not only for the benefit of wildlife in southeast Louisiana, but also to promote the continued viability of the communities in which our members live. Without the wholesale re-ordering of the management of the Lower Mississippi River, of which this project is just one incremental step as laid out in the Coastal Master Plan, southeast Louisiana will cease to be inhabitable in the coming decades.

We reach our conclusion to support a larger diversion because the analysis for the DEIS finds substantially greater benefits for the higher flow, with concomitantly only marginally increased adverse effects, most of which will be mitigated by the measures being proposed for the 75,000 cfs Preferred Alternative.

We have also concluded that the DEIS both over-estimates adverse effects and underestimates positive effects.

Importantly, in our analysis, we believe the DEIS underestimates likely benefits, including:

- The total amount of land to be built. Conservative projections of land built are used, along with high projections of relative sea level rise. While this is an acceptable modelling strategy, it nevertheless very likely underestimates net land to be built.
- Total sediment added to the basin and availability for transport and marsh nourishment. There is little acknowledgment of the amount of sediment that will be contributed to the entire basin, exclusive of that which will build new land or be captured by existing vegetation. But a vast amount of sediment will end up deposited beneath the water's surface, changing bathymetry, and making these sediments available for resuspension and deposition on marsh surfaces far from the diversion. Because the MBSD is so far inland, little sediment is likely to escape to the open Gulf. And yet even in systems where high amounts of sediment escape to the Gulf, as in Atchafalaya Bay, area marshes and swamps benefit from resuspension during frontal passages and tropical storms, so much so that the area has seen

virtually no retreat over the last decades, in marked contrast to the Barataria, Terrebonne and Breton basins.

- Far field effects on marsh soil bulk density and marshes sustained against climate change and rising seas. Related to the total sediment phenomenon, existing models underestimate capture of fines carried in suspension by diverted waters far from the diversion, and modelling underestimates the effect of this capture on renewed marsh vigor and organic soil formation, largely because while the effect is obvious, the specifics are difficult to capture numerically.
- Effects on wildlife and habitat are underestimated in the extreme. Decades of field experience in Louisiana indicate that areas receiving annual inputs of Mississippi or Atchafalaya river water are vastly more productive and show greater wildlife diversity and abundance than comparable areas of fresh and brackish marsh with no riverine input. A few select instances where this is apparent include:
  - o waterfowl and wading bird abundance;
  - o foraging habitat for migratory shorebirds and neotropical migrants;
  - o nesting habitat for marsh birds;
  - o prey availability for predators, including, to name only a small sample, game fish, frogs, snakes, turtles, alligators, terns, gulls, cormorants, pelicans, ducks, falcons, eagles, ospreys, rails, marsh rice rats, muskrats, mink, otters and dolphins;
  - o net benthic and fisheries productivity;
  - o growth rates and density for submerged aquatic vegetation;
  - o the revival of woody vegetation, important for local songbirds, neotropical migrants and wintering birds-
    - pioneer species like black willow (which is exploding in the Davis Pond, Caernarvon and Mardi Gras Pass outfall areas);
    - baldcypress retention and recruitment in areas formerly too saline or submerged;
    - and survival and recruitment of live oaks and other maritime forest vegetation on natural levees and cheniers where saline soils have inhibited their growth, recruitment and survival for decades.

All of these benefits are ignored or downplayed in the DEIS. Obviously, all of these complex benefits are difficult to quantify and model, but they are apparent at each outlet of the Mississippi and Atchafalaya rivers.

Operation of such a transformative project will require a robust program of monitoring, which will also allow for a more detailed analysis to be incorporated in evaluations of future diversions, diversions that are anticipated in the Coastal Master Plan and plan process, and that will be absolutely necessary for the continued viability of coastal southeast Louisiana and adjacent Mississippi.

Doubling the land to be built will only marginally affect salinity changes. The analysis indicates that the 150,000 cfs alternative roughly doubles the net amount of land which could be built over fifty years. At the same time, the adverse effects-most conjectural-would increase only marginally, especially compared to the Future Without Action. In other words, the 150,000 cfs

alternative roughly doubles the benefits in terms of wetlands created, but nowhere near doubles adverse impacts like near-term salinity decreases and induced flooding.

Given this reality, the diversion structure should be designed and constructed to maximize the ability to capture sediment at the highest possible flow rates. Mitigation measures will be roughly the same whether the diversion is run at 75,000 cfs or 150,000 cfs. If Barataria Bay is fresh for a few weeks, then it can't be freshened more, and, in any case, no amount of water through the diversion can increase what is already entering the Gulf. A change in the outlet can only freshen a few localities around the edges, while increasing the salinity elsewhere (by, for instance, reduced discharge on the east bank and in the Birdsfoot); the net effect is the same, though the system will be more naturally balanced.

Simply having the capacity to flow at 150,000 cfs during peak river floods does not require that such flows be utilized in every case, but it gives operational flexibility and a greater capacity for adaptive management, especially as conditions change in the basin in response to climate change.

Similarly, mitigation measures adopted for communities that might experience increased localized flooding for a few weeks will work whether the flooding is for a few inches or for twice that much, and whether an event lasts for a week or two weeks. Once you are raised and armored against one flood, you are raised and armored against any comparable food. Because of subsidence and sea level rise, such increased flooding is coming in any case. Using mitigation dollars available for this project will prepare communities now for the inevitable, and obviate the need for such expenditures in the future, when funds cannot be guaranteed.

We are well aware of the concerns raised by commercial seafood harvesters, and we support measures to minimize and mitigate these effects, as long as the project purpose, which is to re-establish the deltaic cycle and build and sustain wetlands, is not compromised. As a matter of simple biophysics, we know that the Barataria Estuary will be more productive as a result of the increased input of carbon and the vital building blocks of life, which will mean opportunities for increased seafood harvest.

The DEIS and supporting studies make a potentially dire forecast about near-term effects on dolphin populations in parts of Barataria Bay. We note that these forecasts depend upon a number of unproven assumptions about dolphin adaptability and tolerance for living in the delta, assumptions which seem improbable given the nature of the delta landscape that now supports them. In any case, what is abundantly clear is that the continued collapse of the marsh platform in the Barataria Basin will eventually reach a tipping point and the prey base of dolphins in the bay, and indeed beyond into northern Gulf, will begin to shrink and could eventually collapse, to the detriment of dolphins and countless other estuarine dependent organisms. That would be an unacceptable outcome. For the long-term health of dolphins in the northern Gulf of Mexico, reconnecting the river to the delta and re-establishing the deltaic cycle at sufficient scale is absolutely essential.

The DEIS notes minor acceleration of land-loss in the Birdsfoot Delta, which will have impacts on public lands important to birds, wildlife and our members. Of course, all models suggest the Birdsfoot is unsustainable, given its high rate of subsidence, and accelerating sea level rise. Obviously, each upstream diversion will hasten its demise, though any losses will be more than offset by land building on more stable upstream platforms. However, the loss of

public lands will be an issue, and OAS recommends creating state and federal public lands in the diversion outfall area to fill the need for public lands in an active delta that will be lost at Delta NWR and Pass a Loutre WMA.

Given the massive investment of public funds and potential for misunderstanding and controversy, public access and provisioning for recreational and educational opportunities should be a priority. The diversion structure should be designed with ample opportunities for the public to witness and learn from the operation of the diversion. Just as importantly, the new delta lobe that forms as a result of public investment should not be closed to public access and enjoyment.

In conclusion, we urge the adoption of Alternative 5. In the event Alternative 5 is not adopted, our second choice would be Alternative 1, the Preferred Alternative.

Thank you for the opportunity to comment.

Sincerely,

Jennifer O. Coulson, Ph.D.

President

Orleans Audubon Society

---

**Concern ID: 61842**

**Commenter is concerned about the accuracy of the sea-level rise projections used in the Delft3D Basinwide Model to predict land changes. In particular, the commenter suggests that if updated sea-level rise rates (as provided in Sweet et al. 2017 and Church et al. 2014) were applied, the modeling would project no land-gain benefits from the diversion.**

**Response ID: 16480**

Large variability in projected relative sea-level rise does introduce corresponding uncertainty into land-loss and land-gain projections. The literature provided by the commenters has been reviewed. Measured and projected relative sea-level rise rates vary substantially by location, and using projections at a station in Florida, such as Cedar Key, are not useful for projections in the central Gulf Coast. Citing the USACE and NOAA sea-level projection tool (USACE 2019d), the MBSD Project Modeling Work Group chose a sea-level rise scenario based on the 2017 Coastal Master Plan “moderate” scenario, which is slightly higher than the USACE’s “Intermediate” rate for the Barataria Basin water level station at Grand Isle, LA, as shown in Chapter 4, Figure 4.1.3 of the Draft EIS. The USACE rate reflects sea-level rise data collected at Grand Isle over the period 1947 to 2007. The MBSD Project Modeling Work Group determined that the use of that 2017 Coastal Master Plan Intermediate Sea-Level Rise curve was an appropriate choice at the time the modeling was conducted in 2019.

The sea-level rise value used in the Delft3D Basinwide Model simulation for the Draft EIS considered “intermediate” at the time of the modeling, is close to the low projection (0.3 m Global Mean Sea Level) given by Sweet et al. (2017) for Grande Isle. The commenter’s suggestion of the Church et al. 2014 reference, which provides useful information, has been added as a reference in the Final EIS in Chapter 4, Section 4.1.3.2 Sea-Level Rise. Use of a different sea-level rise rate would affect the impact projections of all the alternatives considered in the EIS, including the No Action Alternative. If the relative sea-level rise rate used in the model is an underestimate, the effect on model results was mitigated, but not

eliminated, by the use of a “No Action Alternative compared to Action Alternatives” comparison method. (In other words, if sea-level rise was underestimated, it was underestimated for all alternatives, including No Action Alternative. The impacts of the proposed Project presented in the Draft EIS are the net difference in impact magnitude between the No Action Alternative and the proposed Action Alternatives). Chapter 4, Section 4.1.3.2 Sea-level Rise states that higher sea-level rise rates would reduce anticipated land creation. However, in light of the commenters’ concern, the USACE has amended the last sentence of the next to last paragraph of that section in the Final EIS to say, “If actual sea-level rise is higher (as is predicted by Sweet et al. 2017) than the value used in the Delft3D Basinwide Model, water levels would be higher and loss rates and land gains would be different than what the Delft3D Basinwide Model projects.”

---

**Concern ID: 61871**

**Alternative 5, Variable Flow up to 150,000 cfs, should be chosen for implementation because it provides substantially greater benefits at the higher flow, with only marginally increased adverse effects, most of which could be mitigated by the same measures being proposed for the 75,000 cfs Applicant’s Preferred Alternative.**

**Response ID: 15944**

CPRA submitted a joint Section 10/404 permit application and Section 408 permission request to USACE for the construction, operation, and maintenance of a 75,000 cfs sediment diversion (Applicant’s Preferred Alternative). The EIS evaluates the Applicant’s Preferred Alternative and five additional action alternatives as well as the No Action Alternative in order to inform USACE’s permit and permission decisions and the LA TIG’s NRDA decision in compliance with the statutes, orders, and policies outlined in EIS Chapter 5 Consultation and Coordination.

In the Restoration Plan, the LA TIG evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54, and made every effort to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. As noted in the LA TIG’s Restoration Plan, while the 150,000 cfs Alternative was projected to provide greater ecological benefits than the LA TIG’s Preferred Alternative, it was also expected to cause greater collateral injury and greater risks to public health and safety. See Chapter 3, Section 3.2.4 of the Final Restoration Plan for a discussion of how the LA TIG came to its decision. Additional detail can be found in the LA TIG’s Restoration Plan explaining the LA TIG’s evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

The Mitigation and Stewardship Plan (Appendix R1 to the EIS) has been designed by CPRA to mitigate the projected impacts of the 75,000 cfs sediment diversion (Applicant’s Preferred Alternative). Different or additional mitigation could be needed to address the projected impacts of the proposed Project if a large capacity diversion (150,000 cfs) were to be selected.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61909**

**The MBSD diversion structure and any newly built land should be open to the public for access and enjoyment.**

**Response ID: 16239**

According to CPRA, due to concerns about safety of the public and security for the Project facilities, there is not a plan to make the diversion structure or immediate outfall area accessible for public use. CPRA is, however, planning to provide signage and other public space near the Project to educate the public regarding the purpose and functioning of the Project. CPRA also states that ownership of any lands created by operation of the Project will be determined in accord with current state law, including mineral rights pursuant to La. R.S. 31:149 and La. R.S. 49:214.5.5(E) and that pursuant to La. R.S. 49:214.5.5(B), the Project will not create any rights to the public in or on private property.

Chapter 4, Section 4.16.5.2 in the EIS describes how an increase in wetland habitat from the MBSD relative to the No Action Alternative may result in increased opportunities for bird nesting and bird watching in some areas of the Barataria Basin. However, the MBSD Project would accelerate wetland loss in other areas such as the birdfoot delta.

---

**Concern ID: 62209**

**There is little discussion in the Draft EIS about the amount of sediment that would be deposited beneath the water's surface by the diversion, changing bathymetry and**

---

**making sediment available for resuspension and deposition on marsh surfaces far from the diversion.**

**Response ID: 16421**

The Draft EIS includes consideration and discussion of the benefits of the sediment that would be deposited below the Barataria Basin's water surface. Sediment deposited below the water surface can contribute in one of two ways - by being resuspended and transported elsewhere for deposition, as the commenter suggests, and by forming a base layer upon which future pulses of sediment can form marsh or land. These benefits are discussed in Chapter 4, Section 4.2.3.2 in Geology in Soils, Section 4.4.4 Hydrology and Hydrodynamics, and in Section 4.6 Wetland Resources and Waters of the U.S. They are part of the model computations described in Appendix E Delft3D Modeling and are fully incorporated in the results and conclusions of the Draft EIS. No related edits have been made to the Final EIS.

---

**Concern ID: 62707**

**The EIS does not acknowledge, or underestimates, the beneficial impacts of river water on the growth rates and density of SAV in coastal Louisiana.**

**Response ID: 16085**

Chapter 4, Section 4.10.4.1 in Aquatic Resources of the EIS discusses the impacts of the proposed Project on SAV, including the overall beneficial impact of freshwater input on SAV biomass. Because this issue was addressed in the Draft EIS, no related edits were made to the Final EIS.

---

**Concern ID: 62710**

**The Draft EIS may underestimate likely increases in net primary productivity for aquatic estuarine organisms, which would translate into more biomass in both the proposed Project area and into the northern Gulf of Mexico.**

**Response ID: 16088**

Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS identifies the overall effects of increased nutrients to the Barataria Basin as minor to moderate and beneficial based on benefits to the food web, and Section 4.10.4.5 accounts for these food web benefits in the individual determinations for each key species. Because this issue was addressed in the Draft EIS, no related edits have been made to the Final EIS. The potential for nearshore and offshore ecosystem benefits are also described in Chapter 3, Section 3.2.16 in OPA Evaluation of the Alternatives of the LA TIG's Restoration Plan.

---

**Concern ID: 62889**

**The Draft EIS ignores or underestimates likely positive impacts to upland wildlife (deer, hogs, furbearers, nutria), wetland wildlife (waterfowl, wading birds, colonial nesting birds), and wildlife with lower salinity tolerances (alligators), as well as foraging habitat (migratory shorebirds and neotropical migrants), nesting habitat (marsh birds) and prey availability for a variety of species.**

**Response ID: 16189**

The Draft EIS evaluated the effects of the proposed Project on terrestrial resources. The impacts of the proposed Project on upland species are discussed in Chapter 4, Section 4.9.4.2 in Terrestrial Wildlife and Habitat of the EIS, but are generally anticipated to be minor and adverse. Conversely, the effects of the proposed Project on wetland wildlife, wildlife with

lower salinity tolerances, foraging/nesting habitat, and prey availability in the Barataria Basin are generally anticipated to be beneficial, as discussed throughout Section 4.9 Terrestrial Wildlife and Habitat.

In addition, the potential benefits of the proposed Project to multiple resources in the Gulf are described in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Restoration Plan.

---

**Concern ID: 62957**

**Commenter expressed support for implementation and recognizes the cross benefit of mitigation measures to address increased localized flooding. The commenter noted that once in place those measures would result in protection to the communities from both localized flooding associated with the Project as well as from increased flooding associated with subsidence and sea-level rise.**

**Response ID: 16614**

The LA TIG acknowledges the commenter's support of the Project and agrees that the mitigation and stewardship measures would address some Project impacts, as well as flooding from sea-level rise and subsidence.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63019**

**The Draft EIS likely underestimated the benefits of far field effects on marsh soil bulk density and marshes sustained against climate change and rising seas. Related to the**

---

**total sediment phenomenon, existing models underestimate capture of fines carried in suspension by diverted waters far from the diversion, and modeling underestimates the effect of this capture on renewed marsh vigor and organic soil formation, largely because while the effect is obvious, the specifics are difficult to capture numerically.**

**Response ID: 16031**

As described in Appendix E Delft 3D Modeling of the EIS, to account for the complexity of fine-sediment transport patterns, a hysteresis curve has been developed and incorporated into the sediment transport module of the Delft3D Basinwide Model. Therefore, while the model results must be interpreted in light of the uncertainties involved, hysteresis sediment rating curves have been used to project fine-sediment transport in a way that simulates observed transport to the extent practicable in the modeling analysis. Where feasible, uncertainties have been examined through sensitivity tests and model-to-model comparisons and incorporated in the conclusions (see Chapter Section 4.1.3.3 in Approach to Evaluation of Environmental Consequences and Appendix E Delft 3D Modeling, Section 8). Because this issue was considered in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 63051**

**The Draft EIS underestimated the following beneficial impacts of the proposed Project:**

- **pioneer species like black willow (which is exploding in the Davis Pond, Caernarvon and Mardi Gras Pass outfall areas);**
- **bald cypress retention and recruitment in areas formerly too saline or submerged; and**
- **survival and recruitment of live oaks and other maritime forest vegetation on natural levees and cheniers where saline soils have inhibited their growth, recruitment, and survival for decades.**

**Response ID: 16057**

While forested wetlands (including cypress swamps) are present in the northern portions of the Barataria Basin, as depicted in Chapter 3, Section 3.6 Wetland Resources and Waters of the U.S., Figure 3.6-1 of the EIS, land gains associated with the proposed Project would primarily be in the outfall area where marsh vegetation predominates (see Chapter 4, Section 4.2 Geology and Soils, Figures 4.2-2 through 4.2-4 of the EIS). Therefore, the establishment or spread of forest species as a result of the proposed Project is not anticipated. However, a summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary, which includes observed changes in vegetation growth from other diversions, is available in Appendix U of the Final EIS.

**Concern ID: 63071**

**The dire forecasts about the near-term effects on dolphin populations in parts of Barataria Bay depend upon a number of unproven and improbable assumptions about dolphin adaptability and tolerance for living in the delta (Garrison et al., 2020). Conversely, the continued collapse of the marsh platform in the Barataria Basin will eventually reach a tipping point at which the prey base of dolphins in the bay would shrink and could eventually collapse. The long-term health of dolphins in the northern**

---

**Gulf of Mexico depends on reconnecting the river to the delta and reestablishing the deltaic cycle.**

**Garrison, L.P, Litz, J. and Sinclair, C. 2020. Predicting the effects of low salinity associated with the MBSD Project on resident common bottlenose dolphins (*Tursiops truncatus*) in Barataria Bay, LA. NOAA Technical Memorandum NOAA NMFS-SEFSC-748: 97 p.**

**Response ID: 16594**

The Draft EIS recognized that the loss of wetlands under the No Action Alternative would result in a gradually increasing, from negligible to moderate, adverse impact on dolphins (see Chapter 4, Section 4.11.5.1 [Operational Impacts]). The impacts on bottlenose dolphins from freshwater exposure have been well documented, including observations and data collected in association with the release of fresh water in Louisiana (see Chapter 4, Section 4.11 [Marine Mammals] of the EIS for more details). Most recently, a freshening event in 2019 resulted in the declaration of an unusual mortality event (UME) in the northern Gulf of Mexico. Existing data on low-salinity exposure were used to develop a dose-response model that formed the basis for the evaluation of impacts in the Draft EIS (see Chapter 4, Section 4.11.3 [Overview of Impact Analysis Approach]). The dose-response model was coupled with an updated population model to evaluate potential changes in survival rates within BBES. These potential decreases in survival rates caused by the diversion were compared to future conditions without the diversion (the No Action Alternative). The analysis contained in the Draft EIS determined that there would be a major, adverse, long-term impact on the BBES Stock. That conclusion is also supported by Thomas et al. (2021), which built on earlier studies and concludes that, after 1 year of operation of the Applicant's Preferred Alternative, there would be 61 percent fewer dolphins in the Central stratum than under the No Action Alternative, 35 percent fewer in the West stratum, 12 percent fewer in the Southeast stratum, and 2 percent fewer in the Island stratum, with 25 percent fewer overall. Thomas, et al. 2021 further concluded that after 10 the planned 50 years of operation, there would be 100 percent reduction in the populations of dolphins in the Central and West strata, an 82 percent reduction in the population of the Southeast stratum dolphins, and a 34 percent reduction in the population of the Island stratum dolphins as compared against the No Action Alternative, with an overall difference in population of 78 percent. (Note that Thomas, et al. 2022 slightly refined some of these projections.) After 50 years of operation, in three out of the four strata, dolphins are predicted to be functionally extinct under the Applicant's Preferred Alternative, with the remaining Island stratum being severely reduced relative to the No Action Alternative (that is, the median predicted population size of the Island stratum would be 85 percent lower [95 percent CI 28-99] under the Applicant's Preferred Alternative than under the No Action Alternative). Overall, by the year 2076, the median predicted stock size across all of Barataria Bay under the Applicant's Preferred Alternative is 143 dolphins (95 percent CI 11-706) compared to a predicted 3,363 (95 percent CI 2,831-4,289) predicted to inhabit the Barataria Bay under the No Action Alternative. In other words, the BBES dolphin stock would be 96 percent smaller (95 percent CI 80-100) under the Applicant's Preferred Alternative than then No Action Alternative. Chapter 4, Section 4.11 Marine Mammals of the Final EIS has been updated to reflect the results of Thomas et al (2021). The impacts of Project-induced wetland changes on dolphins is discussed in Chapter 4, Section 4.11.5 Operational Impacts of the EIS.

**Concern ID: 63133**

**Commenters support the proposed mitigation measures for the commercial fishing industry.**

**Response ID: 16517**

The comments received in support of the Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) are acknowledged. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA

---

TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63184**

**Commenter concerned about public land loss at birdfoot delta and recommends creating state and federal public lands in the diversion outfall area.**

**Response ID: 16561**

The Draft EIS considered impacts to public lands in Chapter 4, Section 4.17.4 (Public Lands - Operational Impacts). Ownership of newly created land from Project operations would be determined in accordance with state law. Pursuant to La. R.S. 49:214.5.5(B), the Project would not create any rights to the public in or on private property. It is expected that land loss in the birdfoot delta within the National Wildlife Refuge (NWR) and Wildlife Management Area WMAWMA would be offset by creation of land built in the area in water bottoms owned by the State of Louisiana. At the recommendation of USFWS, within 5 years of the commencement of Project operations, CPRA or the LA TIG will provide \$10,000,000 of additional funding for wetland preservation and restoration work in the Delta NWR and the Pass A Loutre (PAL) WMA to offset modeled acres of indirect wetland losses in those areas (See Appendix R1 Mitigation Plan, Section 4.6 Fish and Wildlife Coordination Act).

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40197**

Patrick Martinez

Living on the MS Gulf Coast and experiencing the effects of the Bonne Carrie Spillway opening in 2019 I must speak against this project. The Mid Barataria project and the Mid-Breton project will devastate and destroy the water quality for residents living in the affected areas. The fisheries will be affected and impacts on our investments in beaches, tourism, businesses and our personal property will be negatively affected. Dredge the River, barge and deposit the spoils into the desired areas to build the marsh.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated

---

Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62778**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on affected communities from flooding impacts, access issues, and cultural changes.**

**Response ID: 16360**

The commenter's opposition to the proposed Project is noted. The Draft EIS discussed impacts to the local communities from the proposed Project in Chapter 4, Section 4.13 Socioeconomics including Community Cohesion in Section 4.13.5.6. Consistent with the concern of the commenter, the Draft EIS did find potential minor to moderate, long-term adverse impacts on community cohesion from the proposed Project compared to the No Action Alternative. In addition, Sections 4.13 Socioeconomics and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction discuss the increased flooding impacts, including potential flooding of homes outside of federal levee systems potentially caused by the operation of the diversion.

In Myrtle Grove, CPRA would improve the bulkhead around the Myrtle Grove Marina Estates Subdivision to reduce the incidence of tidal flooding in that community. In other communities from Woodpark to Happy Jack south of the Project site outside levee protection, CPRA would elevate the roadways and make other infrastructure improvements to maintain access and utilities within those communities. In addition, CPRA plans to acquire Project servitudes from landowners in these communities (Woodpark, Deer Range, Suzie Bayou, Hermitage, Happy Jack and Grand Bayou) whose property is projected to be impacted by increased water levels due to Project operations. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in

the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would compensate those landowners for the Project servitude. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. These property owners would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40198**

Alex DeGiulio

The diversions are necessary. Without sediment diversions Louisiana will continue to lose its land and resources. The marsh will be rejuvenated by these projects and our state cannot be held hostage by a few vocal opponents. Anyone who speaks against this project does not have the interests of Louisiana in mind.

---

**Concern ID: 63334**

**The proposed MBSD Project would maintain and restore coastal lands and should move forward.**

**Response ID: 16291**

The commenter's statement of support is acknowledged. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Subject: The Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

Mr. Laborde and Mr. Landry:

I apologize for submitting 2 forms. I hit "submit" on my last entry before finishing my comments.

I write today in support of the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion in the Corps' Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's (TIG) Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2.

This project is vital to the health of our state by slowing down land loss and actually building up some areas of land that are essential for the prosperity and quality of life of our communities. The more land we lose, the more vulnerable we are to the strong storms and hurricanes that we experience every year- several times a year. The more vulnerable we are, the less likely businesses and citizens will want to move to or stay in Louisiana. Our state is beautiful with a rich diversity of wildlife and cultures. Let's do all that we can to maintain our precious state.

Thank you for the opportunity to comment.

Sincerely,

Rebecah W. Lloyd

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area,

---

community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Cynthia &amp; Gregory Kuehne

We are a full time resident in the Myrtle Grove Subdivision. My husband and I completed construction in 2019 on what we thought would be our retirement home. When we decided to invest in Myrtle Grove we were aware of the Diversion Project but had no idea what the affects would be until the DEIS was published. I cannot understand how this COSTLY project is the only option to restore the wetlands and take over 50 years to restore ONLY 24 sq. miles of sand while destroying our fishing, seafood industries and several communities along with depleting the dolphin population. Also the DEIS shows and increase of 119 days of more tidal flooding. That would result in about 1/3 of the year our property would experience flooding and have no access to. Who knows if this timeframe is accurate or will be EXTENDED based on the river water levels to continue running the diversion for a longer period of time. Also was noted in the DEIS that Wilkinson Canal will be filled with silt making it impossible for us to leave Myrtle Grove by Boat. We purchased water front property to access the waterways from our backyard not to trailer to a public launch. This is not acceptable. As far as mitigation options this was vaguely presented in the DEIS and at the CPRA meetings held. I believe elevating homes, structures, and infrastructure will take longer to complete than building the diversion and do not see this form of mitigation as an option. In conclusion, I truly believe the CPRA is condemning Myrtle Grove and other communities outside the levee protection for the benefit of the State of Louisiana. Our preferred method of mitigation if this project is permitted and moves forward would be a "Buy-out". We would expect to be fully compensated to replace the cost of our current home, other structures, other property, plus any other cost that will be incurred during this process. Our way of life should not be altered as a result of this man-made project. Nothing less will be accepted.

---

**Concern ID: 62227**

**The diversion would flood access roads, damage vehicles, cause siltation/sludge, cause cancellation of flood insurance, inundate cemeteries, stress levees, impact provision of emergency services, and increase the cost to raise homes, slabs and wharves.**

**Response ID: 15820**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discusses the increased flooding impacts outside of federal levee systems, including road inundation and infrastructure damage, anticipated to be caused by the operation of the diversion. Sections 4.13.5.1.2.1 and 4.13.5.3.2.1 in Socioeconomics of the Final EIS has been updated to include potential impacts such as vehicle damage, accumulation of siltation and sludge, cemetery inundation and interruption of emergency services. Recognizing the potential for these impacts, CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation),

---

(3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties.

In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes. A Project servitude would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Final EIS concludes that the proposed Project would not have impact on the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued.

Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62665**

**Commenters suggested that the proposed Project would achieve some benefits relative to the No Action Alternative, but that even if the modeling is correct (which it probably is not), the projected benefits provided by the Project would be very small compared to amount of habitat that is expected to be lost in the Barataria Basin over 50 years. If the models used for the EIS turn out to be accurate, more than 43 percent of the land in the Barataria Basin will have disappeared even with the Project in 30 years. During that time, 105,000 acres of land will be lost, with the Project sustaining only 17,300 more acres than the No Action Alternative (5 percent of the basin's current land area). Because of this background of large land loss, the proposed Project could only be considered a stop-gap measure. Further, commenters cited sources indicating ongoing debate about the effectiveness of large-scale sediment diversions as a land-building strategy and recommended those uncertainties be addressed in the Draft EIS (Blaskey, 2020; Blum and Roberts, 2009; Chamberlain et al., 2018; DeLaune et al., 2013; Suir et al., 2014; Turner et al., 2019).**

**Response ID: 16624**

The issues raised by the commenters were considered in the Draft EIS. For example, the proposed Project's long-term influence on land building and wetland creation has been modeled extensively through engineering and design and the impacts (beneficial and adverse) are described in Sections 4.2 (Geology and Soils), 4.4 (Surface Water and Coastal Processes) and 4.6 (Wetland Resources and Waters of the U.S.) of the EIS. With regard to modeling conducted to determine impacts of the proposed Project, the Delft3D Basinwide Model projections of Project impacts include uncertainties. Uncertainties are briefly summarized in the Draft EIS in Chapter 4, Section 4.1.3.3 (Model Limitations and Uncertainty), and in detail in Appendix E (Delft3D Modeling, Section 8.0 Model Limitations and Uncertainties). Uncertainty in model results is recognized in Table 4.2-4 found in Section 4.2.3.2.2.1 Geology, which indicates that land areas are considered accurate within +/- 200 acres and that the error in land gains is +/-300 acres.

As part of developing the EIS, the USACE, together with members of the LA TIG (including cooperating agencies and CPRA), reviewed the Delft3D Basinwide Model, including its parameters, methods of validation and calibration, inputs for the alternative production runs used in the EIS, and outputs, and concluded that the Delft3D Basinwide production runs and outputs were adequate and sufficient to inform the MBSD EIS impacts analysis of the alternatives. The cited studies were reviewed and included in relevant analyses in the Draft EIS.

The LA TIG acknowledges the commenters' concerns. As described in the LA TIG's Draft Restoration Plan, the Project would reestablish deltaic processes that deliver sediment, fresh water, and nutrients; improve the function of existing habitats; and develop deltaic habitats that connect nearshore and offshore ecosystems. The LA TIG expects that the Project would result in the creation of a maximum of 17,300 acres of land in the Barataria Basin by year 30 of operations; after 50 years of operation, the Project would result in the loss of 3,000 acres of land in the birdfoot delta but would create approximately 13,400 acres of land in the Barataria Basin, representing about 20 percent of the land remaining in the Barataria Basin at that time (see Section 3.2.1.1 [Alternative 1 Description] of the Restoration Plan). The LA TIG agrees that, with or without the Project, coastal Louisiana and the Barataria Basin would experience tremendous land loss. However, the LA TIG believes this background of large land loss makes the habitat created by the proposed Project even more important. Relative to other types of incremental approaches (for example, marsh creation through the application of dredged sediment), the Project would reconnect and reestablish sustainable deltaic processes and support the long-term viability of existing and planned coastal restoration efforts. All citations referenced by the commenters were included in the Final EIS and thus were considered by the LA TIG in the Final Restoration Plan.

---

**Concern ID: 62783**

**Commenters noted that the cost of designing and building the proposed MBSD Project is too high for the small amount of land anticipated to be built.**

**Response ID: 16365**

---

The commenter's opposition to the cost of the proposed Project is noted. Under NEPA, a cost-benefit analysis is not required for the EIS unless such an analysis is relevant to the agency's decision. USACE generally assumes that the permit applicant has conducted its own economic evaluation of a proposed project. Consequently, a cost-benefit analysis is not relevant to USACE's permitting decisions. As part of evaluating the proposed Project, the LA TIG considered the costs associated with developing, constructing, and managing the Applicant's Preferred Alternative consistent with the Restoration Plan alternatives evaluation criteria in 15 CFR §990.54. This discussion is in Chapter 3, Section 3.2.1.2 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan.

---

**Concern ID: 62968**

**If operation of the diversion causes infill of various canals used to access surrounding communities, who will be responsible for dredging to maintain access? For example, if Wilkinson Canal is filled with silt then the canal cannot be used and waterfront property owners with boat lifts in Myrtle Grove will not be able to get out using their boats; the EIS does not require a remedy or provide a funded maintenance plan for this issue (including who would pay for dredging).**

**Response ID: 16642**

The impacts raised by the commenters were considered in the Draft EIS. As stated in Chapter 4, Section 4.21 Navigation, the USACE would continue to maintain federal navigation channels in the Project area during Project operations.

In acknowledgement of commenters' concerns regarding maintenance of non-federal navigation channels and canals impacted by sedimentation of the proposed diversion, the Mitigation and Stewardship Plan includes measures to mitigate impacts on navigation resulting from operation of the Project, including monitoring and dredging or other measures for certain non-federal navigation channels including Wilkinson Canal (see Appendix R1 [Mitigation and Stewardship Plan] to the Final EIS for additional details).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the Final Mitigation and Stewardship Plan and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section

---

10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Ed Cambias

I AM IN FAVOR OF THE MID BARATARIA SEDIMENT DIVERSION. SINCE THE 1930'S LOUISIANA HAS LOST 1900 SQUARE MILES OF COASTAL LAND. THE RIVER CREATED THE DELTA THAT CAME TO BE KNOWN AS THE SPORTSMAN'S PARADISE BUT SINCE BEING CUT OFF FROM DEPOSTING SEDIMENT THE ESTUARY IS BEING LOST. THE RIVER BUILT THE DELTA AND THE RIVER CAN RESTORE THE DELTA. THIS IS A LONG TERM SOLUTION AND WILL BENEFIT FUTURE GENERATIONS.

---

**Concern ID: 63334**

**The proposed MBSD Project would maintain and restore coastal lands and should move forward.**

**Response ID: 16291**

The commenter's statement of support is acknowledged. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40206**

Mark M

Mr. Laborde and Mr. Landry:

I write today in support of the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion in the Corps' Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's (TIG) Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2. I'm both an avid fisherman and a conservationist. I realize that many sacrifices will have to be made in the coming years, but without action our future in South East Louisiana is certainly doomed. I support this for the future of our region and generations to come. I pray that we can right some of our wrongs and salvage what we can of our remaining coast.

Thank you for the opportunity to comment.

Sincerely, Mark

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

New Orleans A La Carde

Pamela Pipes

I own 4 tourism businesses in New Orleans. I also own property in Lafitte where I keep my boat and fish there weekly. The Mid-Barataria sediment diversion will destroy our area and impact the livelihood of every inhabitant in Lafitte, Barataria and surrounding areas. The entire seafood industry along with every restaurant in Louisiana will be destroyed. What are you thinking? Katrina was a man made disaster which the Corps of Engineering created due to your incompetence. Think long and hard before you destroy the lives of people for generations. Feel free to be in touch if you need more clarification. I know what I am talking about and have spent days and nights supporting this authentic fishing area and booking groups into restaurants, swamp tours, and fishing trips into this area.

Until,

Pamela Pipes

---

**Concern ID: 61908**

**Commenters suggested that there will be detrimental impacts on the tourism economy and on restaurants, which are partly dependent on fisheries in the Barataria Basin. Commenters express concerns about adverse effects on Louisiana's attractiveness as a fishing area and place for swamp tours and authentic seafood.**

**Response ID: 16238**

EIS Chapter 4, Section 4.16.5.2 in Recreation and Tourism describes how the MBSD Project would impact the tourism economy that is dependent on fisheries. Relative to the No Action Alternative, the proposed Project would cause minor, permanent, adverse impacts on recreational fishing for spotted seatrout and moderate, permanent, beneficial impacts on recreational fishing for red drum, which are the most targeted species by recreational anglers in the basin (targeted in 87 percent of angler trips between 2014 and 2018). Other species that are targeted include southern flounder, largemouth bass, sheepshead, black drum, sand seatrout, gafftopsail catfish, and blue crab. Both adverse and beneficial impacts on these species are anticipated over time relative to the No Action Alternative, but are anticipated to have negligible effects on angling effort in the basin, as these species are targeted in less than 2 percent of angling trips. As described in the EIS, these changes would not substantially impact the broad tourism economy, which includes more than fisheries.

While availability of shrimp and oysters from the basin would decrease with the Project, shrimp and oysters from Louisiana would continue to be available to restaurants, potentially at higher prices. Restaurants willing to pay a premium for local seafood would likely do so, and additional importing would likely also occur. Under both the Applicant's Preferred Alternative and the No Action Alternative, consumers in Louisiana would experience higher prices for locally caught seafood, or would consume additional imported shrimp over time. However, impacts would occur decades sooner under the Applicant's Preferred Alternative than under the No Action Alternative.

This discussion has been added to Section 4.14 Commercial Fisheries in the Final EIS.

---

**Correspondence ID:40212**

Brian Willis

As a property owner and recreational fisherman I am opposed to the proposed Barataria diversion project. This project will have devastating impacts on the fisheries as we know them today. This 2 billion dollar project is only projected to create 27 square miles of wetlands over 29 years while disrupting the seafood industry in our state and more importantly the lives of residents. There are many other options to building wetlands other than diverting polluted water from the Mississippi River. This diversion will increase water levels in the Myrtle Grove Estates subdivision by several feet restricting the ability to access our homes by automobile. Property owners have invested millions of dollars in their homes which will be severely depreciated if this project should move forward. My question to you is, is it really worth 2 billion dollars, a huge impact to our seafood industry, a huge impact to our state tourism and the disruption of lives to add 27 square miles of wetlands??

---

**Concern ID: 62013**

**The Myrtle Grove subdivision is a residential neighborhood composed of homes, not camps, many of which may not have access to flood insurance. The proposed MBSD Project would increase flooding of the properties which would severely impact access to property and property values in Myrtle Grove and other affected areas such as Lake Hermitage.**

**Response ID: 16210**

The impacts raised by the commenters were considered in the Draft EIS in Chapter 4, Section 4.13 Socioeconomics, which discusses impacts of the proposed Project on property values, and Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction which discusses flood and storm related impacts due to the Project. The EIS (Section 4.13.5.3 in Socioeconomics) finds that the proposed Project would result in minor to moderate, permanent, adverse impacts on housing and property values in communities near the immediate outfall areas (within 10 miles north and 20 miles south) and outside of flood protection. These affected areas include the communities of Myrtle Grove, Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, Happy Jack, and Grand Bayou, and to a lesser extent portions of Lafitte. In addition, negligible to minor increases in levee overtopping south of the immediate outfall area may occur in future years following delta formation (after approximately 20 years of Project operations) in the outfall area in communities inside levees, with the greatest increases in communities adjacent to the NOV-NFL Levee system.

The Final EIS discusses modeled impacts of the Project on water surface elevations and corresponding tidal inundation in Lafitte, Myrtle Grove, and Grand Bayou. These three communities are generally representative of other communities in the basin, including Hermitage, Suzie Bayou North, Suzie Bayou South, Woodpark, and Happy Jack (see Figure 4.13-1 in Section 4.13.1 Area of Potential Impacts in Socioeconomics). Lafitte, Myrtle Grove, and Grand Bayou also represent varying levels of exposure to tidal flooding. As explained in Section 4.20.3 Public Health and Safety – Overview of Model for Impact Analysis, Grand Bayou has no structural protection and would experience similar tidal flooding as the unprotected communities of Hermitage, Suzie Bayou North, Suzie Bayou South, and Happy Jack. Myrtle Grove impacts would be similar to the neighborhood of Woodpark. Without implementation of the measures outlined in the Mitigation and Stewardship Plan (Appendix

R1), the largest impact on tidal inundation frequency due to the diversion is projected to occur in Myrtle Grove, as this is the community that is closest to the immediate outfall area of the proposed diversion structure outside flood protection and thus is projected to see the greatest increase in water levels.

Section 4.13.5.3 Housing and Property Values has been revised in the Final EIS to provide additional discussion of potential effects of the proposed Project on the availability of flood insurance. The Final EIS concludes that the proposed Project would not impact the availability flood insurance, but may cause an increase in flood insurance premium for some properties in communities projected to experience increases in tidal flooding and storm hazards. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict how flood insurance premiums may change. Since issuance of the Draft EIS, CPRA has expanded and refined the mitigation measures intended to address the inundation projected in the communities south of the proposed Project's immediate outfall area including Myrtle Grove, Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack. CPRA plans to provide a combination of structural improvements (for example, improving bulkheads and raising roads and homes) and non-structural measures.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

In Woodpark, Suzie Bayou, Deer Range, Lake Hermitage, Grand Bayou, and Happy Jack, CPRA plans to purchase Project servitudes from landowners. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. See Section 6.3.2 of the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures

contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62780**

**Although the proposed MBSD Project would provide some benefits, the adverse impacts described in the EIS outweigh those benefits.**

**Response ID: 16362**

The commenter's opposition to the proposed Project, even considering the projected beneficial impacts, is noted. The beneficial and adverse effects of the proposed Project were discussed throughout Chapter 4 Environmental Consequences. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

To address adverse Project impacts, CPRA would implement a series of mitigation and adaptive management measures if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures

---

are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62796**

**Commenters questioned whether, based on limited scale of wetlands proposed to be constructed, the Project is worth the economic impacts on the communities, industry, and tourism.**

**Response ID: 16495**

The economic impacts that the commenter highlighted were considered in the Draft EIS in Chapter 4, Section 4.13 Socioeconomics, Section 4.14 Commercial Fisheries, Section 4.15 Environmental Justice, Section 4.16 Recreation and Tourism, and 4.20 Public Health and Safety. No related edits were made to these sections in response to the commenter's concern.

As part of its Section 10/404 permitting decision-making process, USACE conducts a public interest review, which weighs the probable harms of a project against its prospective benefits.

CPRA has updated its Mitigation and Stewardship Plan in response to public comments to expand support for job training and alternate business ventures, boat and facility improvements, marketing, and mitigation and stewardship measures (see Appendix R1 to the Final EIS).

These issues were also considered in the LA TIG's Draft Restoration Plan in Sections 3.2.1.5 (Avoids Collateral Injury) and 3.2.1.7 (Public Health and Safety). While these sections were not revised based on this comment, Section 3.2.1.1.5 (Alternative 1 Description - Associated Stewardship Measures) of the Final Restoration Plan has been revised to reflect the updates to the Mitigation and Stewardship Plan noted above.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in

the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Louisiana Trustee Implementation Group (LaTIG) c/o of NOAA

Re: Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

Mr. Laborde and Mr. Landry,

I come from a long line of oystermen and crabbers and I bring that heritage to this very issue: building a large river diversion. Truth be told, I am more comfortable with people who work the water than the scientists and other advanced degree folks I normally find myself around nowadays. I feel for the people who fear the inevitable change before them. The fishery is what they know. It's what they pride themselves on. It's how they afford to take care of their loved ones.

I also understand that change is coming, no matter what. You can either let the current system fade away, or intervene and innovate. Intervening means more radical change in the near-term, but it is also the best chance there is at sustaining the deltaic system in the long-term. The uncertainty ahead understandably provokes fear in many who depend on the estuary for their livelihoods. But we cannot operate based out of fear. If we do, we all lose.

If there were ever a restoration project that has been studied and modeled to reduce uncertainties, Mid-Barataria is the project. For decades, scientists and engineers have worked to get to this very project proposed today. CPRA has impressively committed to the best available science to plan and design the project. They've also committed to careful adaptive management once the project is constructed and funding for mitigation measures to aide in the transition for the most impacted stakeholders. The key to success right now is a constructive dialogue between stakeholders and CPRA. Responsibility for that dialogue lies on both parties.

Will the sediment diversion restore the coast? Will it build new wetlands and sustain existing marsh? That's the easy part. We know it will work. We see it all over the delta where the river is connected to its wetlands. One of the coolest places I've ever been on the planet is the Wax Lake Delta. The river builds land. That is unquestionable. It can sustain a healthy, flourishing, vibrant and protective landscape. From rural communities to the City of New Orleans, it is truly our best hope for the future.

Louisiana is on the frontlines of climate change and is leading the way in coastal adaptation and resilience. Mid-Barataria is a keystone project for the future delta and we must keep pushing to lead with innovation, have the hard conversations, and make the best choices for our future. I support the preferred alternative (Alternative 1). I also spent the aftermath of Deepwater Horizon on the ground, many times in Barataria Bay, helping the world understand

what was happening as oil washed into the marshes. Mid-Barataria Sediment Diversion is an ideal way to restore the ecosystem impacted by the oil spill.

Thank you for your work and your consideration,

Amanda Moore

---

**Concern ID: 61956**

**Commenters suggested [USACE and/or CPRA] carefully listen to those impacted by the diversion and have constructive dialogue between stakeholders and CPRA. They recommended to commit sufficient funding and resources necessary to those impacted to sustain their lives and livelihood throughout the diversion process.**

**Response ID: 15902**

Public input is an integral part of the NEPA process, the OPA process, and the DWH oil spill restoration planning effort. USACE and the LA TIG undertook a coordinated and concurrent public review process for the EIS and the LA TIG's Restoration Plan. Allowing submission of comments on either document to the same locations provided commenters a "one-stop shop" and was done to reduce confusion by commenters about where to direct their comments regarding the MBSD Project. Additionally, this ensured the LA TIG reviewed and considered all relevant comments to both the Restoration Plan and the Draft EIS in its decision-making process. USACE and LA TIG each provided public outreach and comment opportunities throughout the development of the EIS and the LA TIG's Restoration Plan. Details on this outreach can be found in Chapter 7 Public Involvement in the Final EIS.

Since the release of the Draft EIS and the LA TIG's Draft Restoration Plan, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. This included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would

---

be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62685**

**Commenters reflected on their own experience with the DWH oil spill and the aftermath in Barataria Bay and expressed support for the diversion as a way to restore the ecosystem impacted by the spill.**

**Response ID: 16502**

The LA TIG acknowledges the support for the Project from commenters who were active in the response to the DWH oil spill and continue to be concerned with the long-term health of the ecosystem. The LA TIG agrees that the Project would provide a critical element for comprehensive, integrated ecosystem restoration to address the injuries from the DWH spill.

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63368**

**CPRA has used the best available information and data to plan and design the proposed Project, and has committed to careful adaptive management and funding for mitigation to aide in the transition for the most impacted stakeholders.**

**Response ID: 16330**

The commenter's support for the proposed Project is noted, including support for the analysis that has been undertaken to understand the potential impacts of the Project. Appendix R1 (Mitigation and Stewardship Plan) of the EIS describes CPRA's mitigation and stewardship measures and Appendix R2 (Monitoring and Adaptive Management [MAM] Plan), describes

CPRA's proposed monitoring metrics to adaptively manage operations to meet Project objectives; both of these documents have been revised for the Final EIS in response to public comments.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40215****CAPT PETESOYSTERS**

Peter Vujnovich

To: U.S. Corps of Engineers

In regards to the EIS for Mid Barataria Sediment Diversion (MBSD)

I believe the EIS description of the negative impacts to commercial industries to be very vague, lacking necessary information and or any acceptable plan to mitigate, relocate or adequately compensate the user groups in the effected area.

Most of CPRAs proposed projects to enhance oyster production are pretty much a cosmetic fix and appear to be mostly for public perception. Although well intended they lack sufficient industry enhancement.

The CPRA seems to encourage and highlight its effort to provide incentives to Alternative Oyster Culture (AOC) neglecting the fact that the operation of the MBSD will have a severe negative impact on AOC farms within the Barataria estuary. In 2018 and 2019 most AOC farms lost 80-90% of their product to low salinity caused by natural high river. Moderate river levels combined with proposed MBSD operation guideline would not only threaten the continued existence of the promoted AOC farms but would also negate any legal claim to reimbursement from crop insurance do to man made causes of mortality.

It should be very obvious not to mention unacceptable as to what will happen to the existing oyster industry within the Barataria basin, based on whats currently happening on the east side of the river. The over freshening of the Breton Sound estuary has destroyed a once prolific oyster producing habitat. Hundreds of square miles have been rendered unproductive for not only oysters but other economically important species, which has directly caused the economic collapse of surrounding communities which were dependent upon these resources.

The MBSD operational plan based on river levels for the goal of delivering as much sediment as possible. Totally neglects the concerns, needs, cultural and economic significance of the communities which have successfully maintained a way of life for generations. The proposed plan recognizes but Blatantly Disregards the significance of this fact as a necessary consequence.

A successful restoration plan should not jeopardize the existence of established economic and cultural communities, its goals and objectives should be to protect and enhance such activities.

The EIS states that significant negative impacts will occur to the brown shrimp and oyster industry within the Barataria estuary. Surely there will be many more negative impacts which are currently not recognized within the EIS, nor does it contain any Avenue or resources to address the unexpected negative impacts.

I believe the bigger question is not if the present or future EIS is adequate ,

But does this proposed project and proposed operation meet the criteria establish for use of monies dedicated to restore and or rehabilitate environmental damages caused by the Deep Water Horizon oil spill.

The project and its operational plan will inflict severe continuous damages to industries which were heavily damaged by the influx of oil, the use of dispersants and also by the operation of Existing Freshwater Diversions.

It seems counter productive to use restoration monies to continually re-enact one of the major contributors to the environmental and economic disruptions caused by the use of existing diversions in an attempt to minimize the effects of the oil spill.

In other terms are the people and industries within the basin expected to Re-Live the same negative consequences of the spill year after year.

Sincerely

Capt Pete

Vujnovich

---

**Concern ID: 62103**

**The Draft EIS does not fully address the anticipated destruction of multiple components of the commercial oyster fishery, including oyster habitat, off-bottom oyster farms, and the oyster hatchery at Grand Isle resulting from impacts to water quality and changes in salinity.**

**Response ID: 16258**

Impacts of the proposed Project on eastern oysters are discussed in the Aquatic Resources section of the EIS in Chapter 4, Section 4.10.4.5, Key Species. The section identifies that most adverse impacts on oysters are anticipated at mid-basin locations, while some beneficial impacts may occur in the lower basin, including the Grand Isle area. The off-bottom and hatchery components of the oyster fishery would not be affected by the Project, or may benefit from it. Specifically, the only significant off-bottom oyster fisheries in Barataria Basin occurs in the lower basin. As indicated in Chapter 3, Section 3.14.6, Aquaculture, the Mike Voisin Oyster Hatchery in Grand Isle is the only commercially available source of oyster larvae and seed. These areas could benefit from the Project. Final EIS Chapter 4, Section 4.14 Commercial Fishing has been revised to discuss these effects.

CPRA's Mitigation and Stewardship Plan includes measures to increase funding for the development of broodstock reefs, enhancing public and private oyster areas, creating a new public oyster seed ground and to further develop alternative oyster culture methods, including off-bottom oyster culture. See the Mitigation and Stewardship Plan, Appendix R1 to the Final EIS for more information.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required

by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62733**

**The impacts on oysters and the oyster industry from the over-freshening of Breton Sound should be considered in the development of the proposed MBSD Project.**

**Response ID: 16111**

The impacts on oysters and the oyster industry from fresh water delivered through the proposed MBSD Project are discussed in Chapter 4, Sections 4.10.4.5 in Aquatic Resources and 4.14.4.2 in Commercial Fisheries of the EIS, respectively. As noted in those discussions, the proposed Project is anticipated to have major, permanent adverse impacts on eastern oysters in the Barataria Basin. Because these issues were addressed in the Draft EIS, no related edits have been made to the Final EIS.

To address Project impacts, CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan in Appendix R1 of the Final EIS). Mitigation and stewardship measures aimed at oyster impacts include establishment of new oyster seed grounds in appropriate areas of the basin, enhancing existing public and private seed ground, enhancement of broodstock reefs, and funding to support off-bottom oyster culture. Although not being implemented to mitigate the effects of the MBSD, the LA TIG also continues to address oil spill related injuries to oysters through various non-Project-related restoration/fishery improvement actions, including: the LA TIG's funding of \$10 million in public and private oyster reef enhancement through the Living Coastal and Marine Resources funding allocation, the LA TIG's funding of \$9.7 million in oyster broodstock reef enhancement through the Living Coastal and Marine Resources funding allocation, and the LA TIG's allocation of \$5.8 million in Living Coastal and Marine Resources funds to support the operations of the Voisin Hatchery.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement.

---

Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62797**

**Commenters questioned the goals and objectives for this Project. They noted that, given the potential for environmental and economic impacts on other resources from this Project, whether the MBSD meets the NRDA criteria to restore for damages caused by the DWH oil spill. They also questioned whether the proposed Project would be appropriate, given that the main driver of wetland loss is historical coastal oil and gas development, not the oil spill. They noted that 80 percent of the acreage projected to be reclaimed or built through the MBSD is privately owned by oil and gas companies.**

**Response ID: 16606**

USACE is not evaluating the proposed Project for compliance with the OPA and is not involved in the process to restore the damage caused by the DWH oil spill. As explained in the Restoration Plan, the LA TIG is responsible for deciding the appropriate use of NRDA funds to restore natural resources injured by the DWH spill in the Louisiana Restoration Area. As explained in the Final EIS, Appendix B2 DEIS Public Review and Public Meetings, Section 2.0 Agency Roles in the Responses to Public Comments, response content pertaining to the LA TIG's Draft Restoration Plan, the OPA and/or NRDA processes, or other Trustee Planning was developed by the LA TIG and states only the LA TIG's views.

In the Restoration Plan, the LA TIG explained that the DWH oil spill resulted in the oiling of more than 1,100 kilometers of wetlands, nearly all of which were located in coastal Louisiana (DWH NRDA Trustees, 2016). The heaviest oiling occurred in the Barataria Basin, resulting in substantial injuries to natural resources in the basin (DWH NRDA Trustees, 2016).

Recognizing that the resulting loss of marsh productivity affected resources throughout the northern Gulf of Mexico ecosystem, the State of Louisiana and the federal Trustees that negotiated the DWH Natural Resource Damages settlement allocated \$4 billion, almost half of the total settlement amount, to restoring Louisiana's wetland, coastal, and nearshore habitats.

The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree of

---

collateral injuries, to natural resources injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the LA TIG's Restoration Plan). The intended restoration of fresh water flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, as noted in the LA TIG's Restoration Plan without the proposed Project, sea-level rise, subsidence, and other existing stressors would result in additional marsh loss over time reducing the suitability of habitat for many of the same species that occur in Barataria Basin.

The LA TIG must weigh the potential and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed Project against its potential benefits). The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that more closely resembles historic conditions. As described in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Restoration Plan, this sustained ecosystem is expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing deltaic processes, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative because the LA TIG believes it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

In its Strategic Restoration Plan for Barataria Basin (2018), the LA TIG evaluated the potential and extent of collateral injury for a range of restoration techniques. Unfortunately, almost all large-scale restoration comes with some potential for collateral injury. The LA TIG evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54. In the Restoration Plan, the LA TIG strives to identify an alternative that would provide what it considers the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. Again, see Section 3.2.4 of the Restoration Plan for a discussion of how the LA TIG came to its decision.

In recognition of the potential for collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, the LA TIG has designed and CPRA would implement a suite of mitigation and stewardship measures (see Section 3.2.1.1.5 [Associated Stewardship Measures] of the Restoration Plan and Appendix R1 to the EIS). The LA TIG is also committed through these measures to continuing efforts to restore the resources that would be adversely affected by the diversion, many of which were also injured by the DWH oil spill.

The LA TIG acknowledges the concern regarding wetland loss drivers related to oil and gas activity, as well as the concern over the private ownership of the lands upon which wetlands would be created by the proposed Project. Regardless of the historic drivers of wetland loss, as explained in the Strategic Restoration Plan for Barataria Basin, because the Barataria Basin received the heaviest oiling from the DWH oil spill, the LA TIG believes that restoration activities in that basin are imperative.

With regard to the land ownership issue, the LA TIG's Restoration Plan details the reasoning supporting the location of the proposed Project, which is based on optimizing land building within the basin, regardless of ownership of the underlying land (see Section 2.3.3 [Restoration Planning Process – Proposed MBSD Project Location Alternatives] in the Restoration Plan). Private lands in the outfall area would be subject to the regular permitting processes required to conduct activities in the coastal zone. Activities on private lands would need to be in conformity with the Louisiana Coastal Zone Management Program, La. R.S. 49:214.21 and would be required to comply with the permitting requirements under the program. All coastal use permitting under the program must be consistent with the CPRA Master Plan projects. Additionally, private landowners would be required to comply with any other permitting requirements applicable to the area, including Department of the Army (DA) CWA Section 404 permits.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the DA Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63726**

---

**Some commenters felt that the amounts allocated for mitigation were insufficient, while others felt that no amount of mitigation would suffice, for example for the more senior fishers who won't be in a good position to adapt to the changing environment.**

**Response ID: 16702**

The Draft EIS considered how changes in the commercial fisheries, both with and without implementation of the proposed Project, would impact more senior fishers in Chapter 4, Section 4.14.4 in Commercial Fisheries. In response to public comments and resource agency input about the proposed mitigation efforts, CPRA has expanded and refined its fisheries mitigation and stewardship measures. CPRA's mitigation and stewardship strategies and associated expenditures would focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for fisheries in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to fisheries in the early years of the Project's operational life. The provisions of the fishery mitigation and stewardship plan, valued at approximately \$54 million, would help to achieve that goal and to mitigate the impacts of the proposed Project on oyster fishers. While not mitigation for the Project impacts, examples of other restoration/fishery improvement actions include: the LA TIG's funding of \$10 million in public and private oyster reef enhancement through the Living Coastal and Marine Resources funding allocation, the LA TIG's funding of \$9.7 million in oyster broodstock reef enhancement through the Living Coastal and Marine Resources funding allocation, CPRA's allocation of \$2 million in adaptive management funding to support off-bottom oyster culture, the LA TIG's allocation of \$5.8 million in Living Coastal and Marine Resources funds to support the operations of the Voisin Hatchery and the LA TIG's allocation of \$38 million in recreational use funds to support subsistence and recreational fisheries. The Final Mitigation and Stewardship Plan is included in Appendix R1 to the Final EIS.

The comments of more senior fishers who expressed concern about their ability to adapt to changing fishery conditions are acknowledged. If permitted by USACE and funded by the LA TIG, it would take CPRA approximately 5 years to complete construction of the proposed Project and to begin operations. This relatively long period provides those affected with the time and opportunity to decide how they want to go forward, ranging from taking advantage of the adaptation opportunities offered through the Mitigation and Stewardship Plan (Appendix R1 to the EIS) to transitioning out of the fishing industry or retiring.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated

---

Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63961**

**The EIS' description of the negative impacts to commercial industries is very vague, lacking necessary information and any acceptable plan to mitigate, relocate, or adequately compensate affected individuals.**

**Response ID: 16540**

The Draft EIS contains a detailed analysis on Project impacts to commercial fishing resources in Chapter 4, Sections 4.10 (Aquatic Resources) and 4.14 (Commercial Fisheries). The commenter has not identified which commercial industries he believes were not sufficiently evaluated or otherwise indicated any specific information or analysis missing from the Draft EIS; accordingly, no changes to this analysis were made in the Final EIS.

CPRA's mitigation strategies focus on establishing sustainable fisheries, particularly oysters and shrimp, rather than on compensating individual fishers for their particularized economic losses. In response to comments, CPRA has expanded and refined the Mitigation and Stewardship Plan since publication of the Draft EIS and LA TIG's Draft Restoration Plan. These additions, including a \$54 million funding allocation, can be found in the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive

---

management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Subject: The Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

Mr. Laborde and Mr. Landry:

I write today in support of the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion in the Corps' Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's (TIG) Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2.

Thank you for the opportunity to comment.

Sincerely,

Joseph Muth

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

ISeeChange

Julia Drapkin

ISeeChange is climate dialogue and data platform. We have been tracking community climate impacts in Louisiana since 2016 - watching, listening, and measuring the impacts of climate change on our community and on our culture. The Mid-Barataria Sediment Diversion presents the best chance we have with the best possible science backing it - specifically the preferred alternative in the Draft Environmental Impact Statement. However, there is no such thing as a perfect model and even in the easiest to measure hydrological systems, models are the first point of failure and mistakes get made. We urge you to put the communities who have the deepest levels of experience - the people who live close to the diversion- at the center of the planning process and to involve them directly in the co-design, measuring, monitoring, evaluation, and stewardship of these projects. There is no such thing as solving climate change - it is a constantly evolving baseline moving faster than we can anticipate. Adaptive management is essential and communities on the coast need to be involved. Finally the project should be funded using Deepwater Horizon settlement dollars as originally planned.

Sincerely, Julia Kumari Drapkin

CEO and Founder, ISeeChange

**Concern ID: 61959**

**State government, elected officials, CPRA and other state agencies, and local jurisdictions must pivot to centering community expertise as they carry out the proposed MBSD Project. This would open the door to creating a truly equitable restoration landscape; one where those impacted by the proposed MBSD Project and future coastal restoration projects are proactively engaged and consulted as restoration projects are planned, designed, and implemented.**

**Response ID: 15905**

Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area, in an effort to reach out to community groups to gather information related to their concerns regarding proposed MBSD Project. More recently, CPRA has engaged the public through meetings with the communities impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities including fishers. This included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. A summary of these public engagement meetings and additional outreach can be found in Chapter 7 Public Involvement of the Final EIS. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that CPRA states it would implement as a result of the public involvement and engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures

(collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA

---

had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63369**

**The commenter indicates that the Mid-Barataria Sediment Diversion presents the best chance to combat the impacts of climate change on Louisiana's communities and culture, with the best possible information and data backing it. However, the commenter notes that there is no such thing as a perfect model and even in the easiest to measure hydrological systems, models are the first point of failure and mistakes get made. Therefore, the commenter urges that the planning process involve the communities who have the deepest levels of experience, including the people who live close to the diversion, directly in the design, measuring, monitoring, evaluation, and stewardship of the proposed Project.**

**Response ID: 16332**

The commenter's support for the proposed Project is noted, including the substantial analysis that has been undertaken regarding the Project. CPRA's coordination with the affected communities and industries is described in Chapter 7 Public Involvement and Appendix R1 (Mitigation and Stewardship Plan), which have been revised for the Final EIS in response to public comments.

The Delft3D Basinwide Model projections of future conditions include uncertainties, as detailed in Appendix E Delft3D Modeling, Section 8.0 Model Limitations and Uncertainties of the Draft EIS. As part of developing the EIS, the USACE, together with the members of the LA TIG, reviewed the Delft3D Basinwide Model, including its parameters, methods of validation and calibration, inputs for the alternative production runs used in the EIS, and outputs, and concluded that the Delft3D Basinwide Model production runs and outputs were adequate and sufficient to inform the MBSD EIS impacts analysis of the alternatives.

---

Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan of the Final EIS includes details regarding operational and adaptive management governance for the proposed Project. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Please build this diversion. I understand that there will be communities impacted negatively, but the issue is bigger than that. Our biodiversity is at stake. More communities will benefit. I absolutely support this project and think that the sooner the better for building.

Let me know what I can do to help.

Catherine McGrath

New Orleans

In spite of short sighted opposition, it is imperative that this project moves forward to completion. I sympathize with those that fear how this may impact the seafood industry, but the people of South Louisiana are resilient and will adapt to whatever changes this project brings. We need to not be selfish by only thinking of our own pockets. Instead, we need to look to the future and make sure that we have a home to come to. We must also not forget that Mother Nature is resilient as well, and she will adapt to whatever changes come too.

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. I support the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion

Fund the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan

Center community needs in planned mitigation and stewardship efforts

Commit to developing a robust adaptive management program

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be

---

implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Christopher Pulaski

Mother nature knows best and a sediment diversion is one of the best solutions for mimicking the natural processes and once complete, nature does the rest. For thousands of years, the Miss River would overflow and deposit sediment across SE Louisiana. While the levees protected farmland and homes and businesses, they also cut off the sediment which along with subsidence, oil and gas exploration, salt water intrusion and many other impacts (natural and man made) have resulted in huge losses. I realize that there will be some negative impacts to certain species that we have become accustomed to having in the region, but some are only here because of the impacts mentioned above so in the natural setting they wouldn't be here. However, some of the impacts (in particular to oysters) can be minimized with proper management of the diversion.

It is a sediment diversion and therefore should only be operated when sediment content is high in the River and in the water column which just happens to be in the springtime when the water temps are low and oysters can handle the increase in the freshwater.

I support the project. I only wish we were closer to it so that my area could also see its benefits.

---

**Concern ID: 61912**

**CPRA should consider alternative flow triggers, designs, and features in the operations plan and design of the proposed MBSD Project in order to minimize impacts. CPRA should also consider adjusting diversion design elements such as triggers, peak flows, volumes, and nutrient loads over the first years of operation to minimize impacts. These adjustments could minimize impacts to dolphins, oysters, brown shrimp, and other aquatic organisms. Some commenters suggested limits be imposed by USACE, others suggested an operating plan that is tied to specifics, while others emphasized flexibility tied to real-world experiences. CPRA should also consider alternative methods of operating the proposed MBSD Project, such as operating the diversion during winter when water levels in the basin are lower and can accept high volumes of water from the diversion.**

**Response ID: 15999**

The proposed MBSD Operations Plan can be found in Appendix F2 Preliminary Operations Plan of the Final EIS. As stated in the Chapter 4, Section 4.4.4.2.4 Sediment Transport in Chapter 4 Surface Water and Coastal Processes, sediment transported by the Mississippi River is primarily comprised of fine sediments, with higher river flows (typically occurring in the spring) suspending more coarse-grained sediment that are important in delta building (see Chapter 3, Section 3.4 Surface Water and Coastal Processes). Fine-sediment transport through the diversion would be generally proportional to water flow in the river. The intake channel was modeled and designed to divert a high sediment-to-water ratio while minimizing energy loss (to maintain flow and sediment transport through the diversion complex) and impacts on the river. The amount of sediment carried through the diversion would vary by year, depending on flow rates in the river and the corresponding variation of diversion operations. As explained in Chapter 2, Section 2.8.1.3 Project Operations in Action Alternatives Carried Forward for Detailed Analysis, the Mississippi River discharge of 450,000 cfs would be the standard operations "trigger to open the diversion for flow (above the base

flow)". Operations (with the exception of a base flow up to 5,000 cfs) would cease when the river discharge falls below 450,000 cfs or when certain emergency triggers are met (such as in advance of hurricanes or when a spill of hazardous substances occur in the river). When the Mississippi River flows exceed 450,000 cfs, the gates would be fully opened (above base flow). At river flows of 450,000 cfs, the diversion flow would be approximately 25,000 cfs, and flows would increase proportionally as the river flow increases. This ramp would continue up to maximum diversion capacity flow of 75,000 cfs when the river reaches a flow of 1,000,000 cfs.

An alternative related to operational triggers specific to sediment concentration was considered but determined not to be technically feasible or reasonable because data and technology do not currently exist to support this operational regime (refer to the Eliminated Alternatives Matrix in Appendix D2 of the EIS). According to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 of the Final EIS, as part of the adaptive management and monitoring process, CPRA would consider potential ways to optimize diversion operations based on Project performance and success and would assess potential operational changes that may minimize impacts to basin resources where practicable after sufficient operational data become available for analysis.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63343**

---

**The diversion would result in a return to a more natural state in which a delta existed in the Barataria Basin and the saltier waters required by many important fishery species were naturally further south.**

**Response ID: 16304**

The concerns raised by the commenter related to the proposed Project's role in connecting the Barataria Basin to the Mississippi River were considered in the Draft EIS. As discussed in Chapter 4, Section 4.10.4.5 in Aquatic Resources, the proposed Project would impact salinity in the Barataria Basin, with salinity impacts benefiting some fishery species, such as bass and Gulf menhaden, and adversely impacting others, such as oysters and brown shrimp. Section 4.2 in Geology and Soils of the Draft EIS discussed the proposed Project's impacts on creating a delta in the basin. As identified in Chapter 2, Section 2.9 Summary of Environmental Consequences Under Each Alternative and discussed throughout Chapter 4 Environmental Consequences of the EIS, the No Action Alternative is compared to existing conditions to understand the anticipated changes in the environment that would occur irrespective of the proposed Project. Thereafter, the anticipated environmental consequences of the proposed Project action alternatives are compared to the results of the No Action Alternative analysis. Section ES.1 Introduction and Authority of the Executive Summary has been revised to include this clarification. In addition, Chapter 3, Sections 3.1.4.2 and 3.2.1.1 Historical Content, have been supplemented in the Final EIS to further discuss historic conditions and the role that the diversion may play in the Mississippi River Delta cycle.

---

**Concern ID: 63371**

**Some of the proposed Project impacts (in particular to oysters) could be minimized with proper management of the diversion. It is a sediment diversion and therefore should only be operated when sediment content is high in the river and in the water column, which just happens to be in the springtime when the water temperatures are low and oysters can handle the increase in the fresh water.**

**Response ID: 16334**

As discussed in Chapter 2, Sections 2.2.1 Define Project Objectives and 2.4.3.2 Application of Additional Considerations to Capacity Alternatives of the EIS, the intake channel was modeled and designed to divert a relatively high sediment-to-water ratio (SWR) (greater than 1.0 on average) to be as efficient as possible in transporting sediment to reestablish deltaic processes; an SWR greater than 1.0 indicates that the proposed Project would divert more sediment per unit volume of diverted fresh water than concentrations in the Mississippi River. As identified in Chapter 4, Table 4.1-3, intermediate to maximum flows through the diversion structure are projected to occur predominantly in winter, spring, and early summer months. However, as discussed in Chapter 4, Section 4.10.4.5 in Aquatic Species of the EIS, operation of the proposed Project would result in a permanent, major adverse impact on oysters, due in large part to decreases in salinity.

CPRP plans to operate the proposed MBSD Project in accordance with the Operations Plan which can be found in Appendix F (MBSD Design and Operations Information) of the EIS. CPRP would adaptively manage the diversion for performance (see Monitoring and Adaptive Management [MAM] Plan in EIS, Appendix R2), if the Project is approved and funded. The MAM Plan does not currently include a requirement to adjust operations based on SWR; however, it does include the parameters that will be monitored to evaluate Project objectives,

---

including SWR, observations that will trigger consideration of adaptive management, and examples of potential adaptive management actions related to SWR (see Section 4.1.1 and Table 4.1-1). Because these issues were addressed in the Draft EIS, no related edits have been made to the Final EIS.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

Peter Yaukey

Hello:

I am writing to express my support for the Mid-Barataria Sediment Diversion.

I am an academic from New Orleans, where I have been both a Professor of Geography and a Professor of Biology at two local universities during my 30 years living in the area. I have spent extensive time in the coastal wetlands of our state, including while conducting academic research that has been published in scholarly journals. In 2018 I published the article "Bird distribution among marsh types on the northern Gulf of Mexico," in the academic outlet Journal of Coastal Research (vol. 34 (5):1060-1086). In this paper I presented the results of bird counts at 100 locations in the marsh, tracked for several years starting in 2010. I have a strong familiarity with the birds found in different types of wetland communities along the salinity gradient.

The loss of coastal wetland habitat in southeast Louisiana has been catastrophic. We cannot wait around and do nothing- the rate of land loss is too fast, it is disappearing before our eyes.

I fully expect that, in areas of the coastal zone of south Louisiana that turn into open water, most of our marsh birds will plummet in numbers or disappear entirely. Most wetland bird species need habitats with emergent vegetation, not just plain open water.

Please support the Diversion to return needed sediment to the marshes- we are in an urgent position.

Peter Yaukey, Ph.D.

Peter H. Yaukey, Ph.D.

Departmental Chair and Professor of Biology

Department of Biological and Physical Sciences

University of Holy Cross

**Concern ID: 62892**

**The proposed MBSD Project would create wetlands supportive of birds (bald eagles, spring and fall migrants, waterbirds, and marsh birds) and other wildlife that are experiencing a high rate of coastal land (habitat) loss.**

**Response ID: 16191**

Chapter 4, Section 4.9.4.2 in Terrestrial Wildlife and Habitat of the Draft EIS, discussed the maintenance and creation of marsh that is projected to occur as part of the proposed Project, and identified that the net addition of wetlands would generally be beneficial to area birds. As identified in Section 4.12.3.2 in Threatened and Endangered Species of the Draft EIS, the creation and maintenance of wetlands could affect bald eagle aquatic foraging habitat and prey species, but would likely result in negligible effects on the bald eagle itself.

---

The potential benefits of the proposed Project to resources in the Gulf, including birds, are also described in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Restoration Plan.

---

**Concern ID: 62898**

**The 2018 publication “Bird distribution among marsh types on the northern Gulf of Mexico” in the Journal of Coastal Research (vol. 34 (5):1060-1086) presents the results of bird counts at 100 locations in the marsh, tracked for several years starting in 2010.**

**Response ID: 16196**

The literature cited by the commenter (Yaukey 2018) has been reviewed and incorporated into Chapter 4, Section 4.9.4.2.2.3 Wetlands (Wet Pasture/Marsh/Bottomland Hardwoods) of the Final EIS.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Pat Fitzpatrick

\*\*\* referenced plot in email is attached to this comment in Word document

To whom it may concern regarding the proposed MBSD project,

Many comments have certainly expressed concern about the cost-benefits analysis of a \$2 billion diversion, the minimal possible land growth over a 30- to 50-year-period, and the environmental impact of high-nutrient water on the ecosystem and its wetland roots. However, I'd like to address an aspect that has been overlooked - - the lack of a comprehensive plan for triggering the opening and closing of the diversion.

Currently, the diversion opening is based on a single metric - a threshold value of 450,000 cfs. There are many problems with this trigger point. For starters, this guarantees the diversion will be open 6-9 months in most years - not short-term "concentrated sediment water" as the proponents have promised. Below is a ten-year plot of the Belle Chasse river gauge. Indeed, the true intention is to run the diversion as much as possible, and certainly without any concern for the environment. One has to question the validity of the trigger point based on this plot.

However, this is representative of a larger issue - the lack of a comprehensive plan for running the diversion. Certainly such a consequential structure's implementation should be based on multiple, layered metrics for openings and closings, and the fact this has not been done should - by itself - result in the USACE rejecting the permit. A comprehensive plan should include triggers for closing based on:

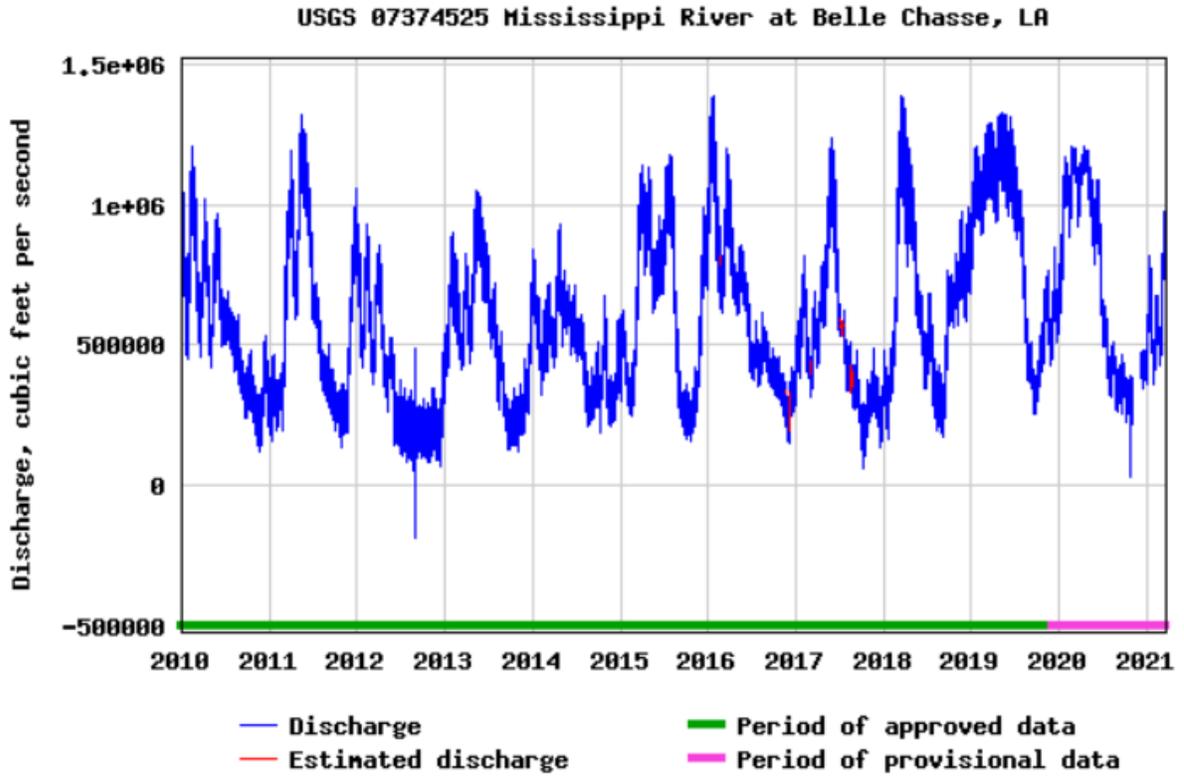

- 1) Barataria Bay water levels (i.e., storm surge events)
- 2) A monitoring system of animal impact and water pollution
- 3) Threshold closures for nitrates, ammoniums, and any hypoxia-related chemicals
- 4) Fish kills
- 5) Salinity thresholds
- 6) Hypoxia events
- 7) Marsh root impact (making wetlands susceptible to land loss by wave action, storm surge, or just inundation)

The fact that none of these are considered...except in a haphazard, general way with promises of monitoring in the future.... should raise alarm bells. The truth is they don't want such a monitoring system or to draw attention to these impacts. Nevertheless, should the diversion be approved, these facets must be considered in a detailed, tangible plan full of flow charts and a state-of-the-art monitoring system.

Best regards,

Dr. Pat Fitzpatrick

---

---

**Concern ID: 64020**

**A comprehensive plan for operating the diversion is lacking. Diversion operations should not be based solely on when flows in the Mississippi River exceed 450,000 cfs or only operate at maximum capacity when Mississippi River flows reach 1,000,000 cfs, but instead should rely on multiple factors for determining when to operate the diversion. The comprehensive plan should also include some flexibility in operations including triggers for water releases and for closing the diversion. The design should be modified to allow continued use after significant sea-level rise.**

**Response ID: 16012**

CPRA would operate the proposed MBSD Project in accordance with the Operations Plan which can be found in Appendix F2 Preliminary Operations Plan of the Final EIS. Chapter 2, Section 2.4.2 in Step 2: Evaluation of Operational Alternatives – Location, Operational Trigger, Capacity, and Base Flow of the Draft EIS described the evaluation of various operational triggers during the alternatives analysis. It was determined that the 450,000 cfs operational trigger would best meet the purpose and need and would be the standard operations trigger (see Chapter 2, Section 2.4.2.1 Application of Additional Considerations to On/Off Trigger Scenarios). Additionally as stated in Chapter 2, Section 2.4.3.2 Application of Additional Considerations to Capacity Alternatives, flow in a sediment diversion is variable. When the diversion is operating, the flow rate through a diversion is controlled by the difference in water surface elevation between the Mississippi River and the Barataria Basin (the head differential). When the Mississippi River flow and stage are high, this high head differential would push a higher volume of water and sediment through the diversion into the Barataria Basin. When the Mississippi River flow and stage are low, there would be less energy to push water and sediment through the diversion. Thus, depending upon the flow rate in the Mississippi River and the head differential, flow in the diversion would be variable, up to a defined maximum capacity.

The diversion is designed for passive operation rather than active operation. Once opened, the head differential determines the flow rather than pumps or another active feature.

Full operations (with the exception of a base flow up to 5,000 cfs) would cease when the river discharge falls below 450,000 cfs or when certain emergency triggers are met (such as in advance of hurricanes or when a spill of hazardous substances occurs in the river).

Triggers for closing the structure when river discharge is above 450,000 cfs include spills and other hazardous discharges, navigation impediments, climatic conditions such as tropical depressions or named storms, diversion structure damage or emergency, and public safety.

As stated in the Chapter 4, Section 4.4.4.2.4 Sediment Transport in Section 4.4 in Surface Water and Coastal Processes, sediment transported by the Mississippi River is primarily comprised of fine sediments, with higher river flows (typically occurring in the spring) suspending more coarse-grained sediment that are important in delta building (see Chapter 3, Section 3.4 Surface Water and Coastal Processes). Fine-sediment transport through the diversion would be generally proportional to water flow in the river. The intake channel was modeled and designed to divert a high sediment-to-water ratio while minimizing energy loss (to maintain flow and sediment transport through the diversion complex) and impacts on the river. The amount of sediment carried through the diversion would vary by year, depending

---

on flow rates in the river and the corresponding variation of diversion operations. The operation plan allows for diversion operations that capture the high sediment loads associated with rapidly rising river discharges and effectively addresses relative sea-level rise.

If the proposed Project is implemented and once operational, CPRA would consider potential ways to optimize diversion operations based on Project performance and success as part of the adaptive management and monitoring process. Refer to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 of the Final EIS.

The Project MAM Plan in the Final EIS Appendix R2 provides examples of possible outfall management actions, such as spoil bank gapping or construction of water-directing features, that CPRA may consider in the future as potential adaptive management actions aimed at improving Project effectiveness and limiting ecological and/or human impacts when possible. This will be based on assessment of Project performance and monitoring data and recommendations of the CPRA's Project Adaptive Management Team to CPRA's Project Operations Management Team.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

Jesse Shaw

Dear Army Corps of Engineers,

Louisiana's coastline is a vital place in our history, our culture, and our economy.

Now that there's an opportunity to protect this important part of our country using Deepwater Horizon settlement dollars, I request that you work to advance the Mid-Barataria Sediment Diversion by selecting the preferred alternative in the Draft Environmental Impact Statement for the project. The funding usage is outlined in the draft Restoration Plan.

The inevitability of climate change makes the need to find actual mitigation technologies essential, and the restoration of the Louisiana delta is one of our most promising projects to do so.

Sincerely,

Jesse Shaw

Washington, D.C.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Jaime

Dear Army Corps,

New Orleans is a city of with a vibrant history and culture, home to some of my loved ones, and at the very least, it is a US city deserving of preservation and protection.

Given that, I request that you work to advance the Mid-Barataria Sediment Diversion by selecting the preferred alternative in the Draft Environmental Impact Statement for the project and by funding the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

Without this project, the Greater New Orleans region does not stand a chance against sea level rise and stronger hurricanes.

New Orleans and Louisiana are high in the list of at-risk cities/states and indeed New Orleans has already seen too much devastation. We must act now and do everything we can to protect our country and citizens.

Sincerely,

Jaime

Minnesota

Sent from my iPhone

---

**Concern ID: 63372**

**New Orleans and Louisiana are high in the list of at-risk cities/states for sea-level rise and hurricanes, and New Orleans has already seen too much devastation. The commenter urged for quick action to protect the country and its citizens.**

**Response ID: 16335**

The commenter's support for the proposed Project is noted. The impacts of climate change and sea-level rise in Louisiana were discussed in Chapter 3, Sections 3.1.3 in Introduction and 3.4.1.1 in Surface Water and Coastal Processes of the Draft EIS.

**Correspondence ID:40231**

Charmaine Kathmann

To: U.S. Army Corps of Engineers

New Orleans District:

There is much concern and recent negative news coverage about the dolphins in the Mid Barataria Diversion project area. It is highly predicted that the dolphins will die after exposure to the sediment diversion materials that have a different concentration of fresh and salt water than the dolphins swim in now.

Grand Isle, Louisiana has abundant dolphin populations that survived the BP Oil Spill. These resilient marine animals will surely welcome the dolphins from the Mid Barataria region, despite being a different species. There are plethora types of fish to feed off of in the Gulf of Mexico and in the Caminada Bay area.

Could the Mid Barataria dolphins be transported to Grand Isle? Is the Army Corps of Engineers looking at this alternative to save the dolphins?

Thank you for your time and attention.

Sincerely,

Charmaine Kathmann

[REDACTED]

---

**Concern ID: 62918**

**A suggestion was submitted that Barataria Basin dolphins will thrive in the Grand Isle area and request for the Army Corps to consider transporting Mid-Barataria dolphins to Grand Isle.**

**Response ID: 16704**

The dolphins within the Barataria Basin, including those that inhabit the waters near Grand Isle, are all bottlenose dolphins (*Tursiops truncatus*) and are part of a single population stock, however studies indicate that many of these dolphins live and feed over much more localized areas within the bay. This population (including the dolphins around Grand Isle) was severely compromised by the DWH oil spill and, as described in Chapter 3, Section 3.11.3.2 in Marine Mammals of the EIS, continue to demonstrate health impacts (for example, reproductive failure, lung and heart disease, etc.) as a result of the spill and have not yet started a population trajectory to recovery. As noted in Chapter 4, Section 4.11 Marine Mammals of the Draft EIS, once diversion operations begin, the dolphin survival rate (that is, the number of dolphins that survives from year to year) will decline. After the planned 50 years of operation, dolphins in three of the four strata (as described in Thomas et al., 2021) are predicted to be functionally extinct under the Applicant's Preferred Alternative, with the dolphins in the remaining Island stratum (which includes the Grand Isle area) being severely reduced relative

to the No Action Alternative (the median predicted abundance in the Island stratum is 85 percent lower [95 percent CI: 28-99 percent] under the Applicant's Preferred Alternative than under the No Action Alternative). Section 4.11 of the Final EIS has been updated to reflect the results of Thomas et al. (2021).

In recognition of the potential collateral injury to bottlenose dolphins and in response to public comments on this issue, the LA TIG has developed a Marine Mammal Intervention Plan since the release of the Draft EIS (see Appendix R5 to the Final EIS). The Plan indicates that any animals impacted by the diversion that are captured and/or rehabilitated would be released in locations suitable for health and survival, which may include, but is not limited to, the areas near Grand Isle. However, it would be logistically impossible to translocate all dolphins compromised by the proposed Project to the waters around Grand Isle. In addition, given that BBES dolphins demonstrate high site fidelity within Barataria Basin and are not anticipated to leave unsuitable habitats resulting from Project operations, as described in Chapter 4, Section 4.11.5.1 in Marine Mammals of the EIS, it is unknown if dolphins that are relocated to waters near Grand Isle would stay near Grand Isle. Moreover, to compress the entire population (currently estimated at approximately 2,000 dolphins) to the waters of Grand Isle would likely result in increased competition and reduced prey resources, and the population would not be sustainable.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in these Plans, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Gus Flair

I am an avid outdoorsman who was raised hunting and fishing down in lower Lafitte, south east and west sides of Plaquemines Parish, as well as East bank side of the river. I am one of many who believe that letting the river run wild on the west side of Plaquemines Parish would be detrimental to thousands of residents, hundreds of businesses, and most importantly our wildlife and fisheries. My parents raised me to respect our outdoors as I did with my two children. It is only common sense that this will devastate our beautiful resource from wildlife habitat to fisheries habitat. We are truly blessed to have along our coastlines such a vibrant breeding area for all our wildlife and fisheries, and with this sentiment running wild, it will kill everything it covers. It will take many years for anything to come back. Many of us feel the best way to maintain what we have would be to rock the Louisiana coastline and keep our major passes open. Then we can use dredging to build up specific areas inland! It is only common sense and it has been proven to work!

I am totally against the Mid Barataria Sediment Diversion Program!!!

Sincerely, Gus Flair

---

**Concern ID: 61973**

**Consider dredging the passes (south pass and south east pass) to relieve pressure on rising rivers and let the natural process of building the river there, along with rock jetties along the Louisiana coastline, support growth and protect from oncoming storms. Then use dredging to build up specific areas inland.**

**Response ID: 15974**

This alternative as presented, specifically dredging the passes and building rock jetties to create marsh, would not meet the goals and objectives as stated in the purpose and need and described in Chapter 1, Section 1.4 Purpose and Need and Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives in the EIS. Similar to marsh creation alternatives (as described in Chapter 2, Section 2.3.5 Large-Scale Marsh Creation), it would not deliver enough fresh water, nutrients, and fine sediments to sustain existing and created wetlands beyond the marsh creation area and over the long-term would require repeated lifts and maintenance through placement of additional dredged material. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

Other similar restoration strategies are being considered for implementation by CPRA in its Coastal Master Plan, which will be updated in 2023, and by the LA TIG through Natural Resource Damage restoration planning.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result

---

in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62778**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on affected communities from flooding impacts, access issues, and cultural changes.**

**Response ID: 16360**

---

The commenter's opposition to the proposed Project is noted. The Draft EIS discussed impacts to the local communities from the proposed Project in Chapter 4, Section 4.13 Socioeconomics including Community Cohesion in Section 4.13.5.6. Consistent with the concern of the commenter, the Draft EIS did find potential minor to moderate, long-term adverse impacts on community cohesion from the proposed Project compared to the No Action Alternative. In addition, Sections 4.13 Socioeconomics and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction discuss the increased flooding impacts, including potential flooding of homes outside of federal levee systems potentially caused by the operation of the diversion.

In Myrtle Grove, CPRA would improve the bulkhead around the Myrtle Grove Marina Estates Subdivision to reduce the incidence of tidal flooding in that community. In other communities from Woodpark to Happy Jack south of the Project site outside levee protection, CPRA would elevate the roadways and make other infrastructure improvements to maintain access and utilities within those communities. In addition, CPRA plans to acquire Project servitudes from landowners in these communities (Woodpark, Deer Range, Suzie Bayou, Hermitage, Happy Jack and Grand Bayou) whose property is projected to be impacted by increased water levels due to Project operations. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would compensate those landowners for the Project servitude. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. These property owners would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions,

would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Correspondence ID:40234**

Andrea Chen

From Steve Cochrane:

"The project will also bring desperately needed jobs and economic growth. It would spur \$1.4 billion in regional investment through funds allocated by the Deepwater Horizon oil spill. With that investment, Plaquemines Parish, where the project would be constructed, and the surrounding region - including Orleans and Jefferson parishes - would expect to see a significant economic boost. Overall household earnings in our region could increase by as much as \$648 million annually, supporting 12,400 additional local jobs and boosting sales to regional businesses by nearly \$1.5 billion."

Let's make sure that the jobs that are created spur inclusive and equitable economic development.

---

**Concern ID: 62022**

**The Draft EIS lays out how many jobs would be created through construction and the proposed Project would also bring desperately needed jobs and economic growth. Plaquemines Parish, where the proposed Project would be constructed, and the surrounding region - including Orleans and Jefferson Parishes - would expect to see a significant economic boost.**

**Response ID: 16218**

The EIS describes the jobs impact from the construction of the diversion in Chapter 4, Section 4.13.4.2 in Socioeconomics. The EIS finds that moderate to major, temporary economic benefits are anticipated from proposed Project construction.

Episcopal Diocese of Louisiana

Morris Thompson

If there's anything we've learned as a society from scientific studies, to faith based response to life on this planet, and our own sense of presence as humanity has slowly evolved in the last 200,000 years it is this: "We are woven into the universe". From this earth, our island home which came into existence some four and one half billion years ago, out of a universe which we believe to have come into existence over seventeen billion years ago everything and everyone of us has been woven into this universe to live "one with" each other and with all of creation.

Our very life along coastal Louisiana is witness to the weaving process of the earth as the Mississippi River weaves its way down to the Gulf, bringing life to the region as the sediment it carries weaves threads of life which create and sustain our coastal marsh. This natural process carried on for millions of years until being interrupted by a series of interventions which have caused mass coastal erosion which now threaten the very life nature has woven for us.

The mid Barataria sediment diversion seems to be a thoughtful human response to restore the natural process which has sustained life in coastal Louisiana. The people within the Episcopal Diocese of Louisiana have a long history of coming along side and standing with the people, the wildlife and the land of coastal Louisiana. We have heard the concerns of the people who will be adversely effected when this diversion proceeds. This diversion will cause much suffering and hardship to many residents (human and wildlife) as this needed response of restoring the natural process to the region is implemented. Our diocese is committed to standing with those in need throughout the diversion process. We implore the CPRA to listen closely to the voices of those who will be impacted and to commit the funding and support necessary to sustain them throughout the entire diversion process.

In thanksgiving to God for the gift of life, for weaving us into the universe to be one with all of creation, and for our call and humanity's gift to be stewards of creation, I remain,

The Rt. Rev. Morris K Thompson, Jr.

Bishop of the Episcopal Diocese of Louisiana

---

**Concern ID: 61737**

**The construction of levees along the Mississippi River precluded land-building sediments from entering Louisiana estuaries, which has caused a loss of Louisiana's coastal wetlands and other problems, such as making properties more vulnerable to hurricane damage and decreasing property values.**

**Response ID: 16024**

The impacts raised by the commenters were considered in the Draft EIS. Information about historic causes of land loss can be found in Chapter 3, Section 3.1.4 Overview and History of the Project Area and Section 3.6.2 in Wetland Resources and Waters of the U.S. The importance of maintaining wetlands for the protection of coastlines, coastal communities, and wildlife resources is discussed in Sections 3.6 Wetland Resources and Waters of the U.S. and 3.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the EIS. As stated in Chapter 1, Section 1.4 Purpose and Need of the EIS, the purpose of the

---

Applicant's Preferred Alternative is to implement a large-scale sediment diversion in the Barataria Basin that would reconnect and reestablish sustainable deltaic processes between the Mississippi River and the Barataria Basin through the delivery of sediment, fresh water, and nutrients to support the long-term viability of existing and planned coastal restoration efforts.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. Helen Patterson

Re: Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)  
Mr. Laborde and Mr. Landry:

I support the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion- I write today to urge adoption of the Preferred Alternative in the Corps' Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's (TIG) Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2.

It is clear to me that the benefits of this project far outweigh any of the expected negative consequences. Louisianans have long lived in a degrading ecosystem, caused in large part by the leveeing of the Mississippi River, which has starved our estuary of the sediment and freshwater needed to maintain a healthy gradient that supports a robust array of fish and wildlife. While dredging sediment to build marsh, restoring ridges, and rebuilding barrier islands are essential tools in the restoration toolkit, only sediment diversions address the underlying cause of our land loss.

Additionally, I am hopeful about the ability of sediment diversions to build resilient marsh in the face of rising sea levels. Our basins will be healthier and more productive in the long term, and to me, that's what really matters.

I also want to commend the setting aside of funds for mitigation to support communities and industries that will be negatively impacted by this project. I encourage the decision makers to seek the assistance of mediators who can help to rebuild the trust that has been lost over the last several decades. I believe that this will be important to making sure that the most marginalized voices are well-represented in the process of deciding how to spend those dollars. To this end, I hope that environmental justice communities will be centered in mitigation and in job creation to support this project. It is essential that this unprecedented funding be spent in ways that address historic injustices.

Finally, I am a firm believer in the power of adaptive management and look forward to seeing the development and implementation of a robust and inclusive adaptive management plan. Done well, a plan of this nature will build trust, and allow us to learn as much as possible so that we can share this innovative technology with deltas all over the world.

Please issue the permits and fund this project. I hope that it will be the first of many successful sediment diversions.

Helen Rose Patterson

New Orleans, LA

**Response ID: 16345**

The commenter's input is noted. Appendix R2 (Monitoring and Adaptive Management [MAM] Plan) of the EIS reflects CPRA's proposed adaptive management strategies, which were refined for the Final EIS based on public input received during the Draft EIS comment period. The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be

implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Correspondence ID:40240**

LA 1 Coalition

Henri Boulet

The Louisiana Highway 1 Coalition, an organization whose mission is to complete the Louisiana Highway 1 Improvement Project in Lafourche, Louisiana, would like to respectfully submit the following comments of support on the U.S. Army Corps of Engineer's Draft Environmental Impact Statement for the Proposed Mid-Barataria Sediment Diversion Project, as well as the Louisiana Trustee Implementation Group's (LA TIG) Draft Phase II Restoration Plan #3.2: Mid-Barataria Sediment Diversion.

LA 1 Highway 1 (LA 1) in southern Lafourche Parish is America's access to the vast energy resources in the U.S. Gulf of Mexico. This critical, two-lane highway is the only roadway supporting Port Fourchon - America's busiest intermodal energy port, the Louisiana Offshore Oil Port (LOOP,) and Grand Isle. Combined, these locations service over 16 percent of America's domestic crude oil production and 4 percent of natural gas production. The highway also supports 20 percent of this nation's seafood production and eco-tourism destinations like Grand Isle, Louisiana's only inhabited barrier island. The highway also provides access to coastal marshes for restoration and protection projects and serves as the sole evacuation route for Port Fourchon and residents of Grand Isle and lower Lafourche Parish.

We believe the proposed alternative in draft environmental impacts statement for the Mid Barataria Sediment diversion will help deliver the sediment and freshwater to protect our basin, furthering the protection of remaining community access point such as "old" Louisiana Highway 1 in Leeville. We also believe the preferred alternative will provide additional storm surge protection and combat saltwater intrusion for the residents who live in the working coast communities which traverse LA 1 daily for work or for recreation. Finally, LA 1 was a critical response route for oil spill recovery and for existing and future coastal restoration projects, so we also believe this is a good use and wise investment of post-spill dollars allocated to the Louisiana Trustee Implementation Group.

It is for these reasons the LA 1 Coalition supports the adoption of the Preferred Alternative in the U.S. Army Corps of Engineers' Draft EIS and Alternative 1 in the Louisiana TIG's Draft Phase II Restoration Plan #3.2.

Henri Boulet

Executive Director

---

**Concern ID: 63386**

**LA Highway 1 (LA 1) is the only roadway supporting Port Fourchon and the significant industry that it supports, and is the sole evacuation route for area residents. The highway also provides access to seafood production areas, eco-tourism destinations, coastal marshes for restoration and protection projects, and a critical route for oil spill response. The proposed Project would help deliver the sediment and fresh water to protect our basin, furthering the protection of LA 1, and those who travel on it, from storms.**

**Response ID: 16348**

The commenter's support for the proposed Project is noted. The effects of the proposed Project on weather and storm surge events, including the areas in which the impacts of storm

---

events are projected to decrease, were discussed in Chapter 4, Section 4.20.4.2 in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS. As discussed, storm surge in the western and middle basin would increase up to 0.2 feet by 2040 under the Applicant's Preferred Alternative. Although the wetlands projected to be created or maintained by the proposed Project would not directly benefit LA 1, the cumulative impacts of the proposed Project and other restoration projects, as discussed in Chapter 4, Section 4.25.6.4 in Cumulative Impacts, would allow for substantial interim (before 2070) benefits of these other past, present, and reasonably foreseeable restoration projects in the Barataria Basin, including those related to storm surge risk.

**Correspondence ID:40241**

Tyler Antrup

I urge you to select the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion and fund the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40242**

Cory Sparks

I'm Reverend Cory Sparks and I'm representing the Commission on the Stewardship of the Environment of the Louisiana Interchurch Conference. We've worked since the 1980s to protect the coast, and have been involved in public hearings like this one because we feel there is a moral call to protect what's left of Louisiana wetlands. In Psalm 24, we hear, "The earth is the Lord's, and all that's in it." I want to say that we strongly support the Mid-Barataria Diversion. We've followed the progress closely since 2017, and see it as an opportunity to correct a mistake that we made back in 1927, when we levied the river and disrupted deltaic processes. We can correct that mistake now. We have the way forward and, of course, we understand that mitigation needs to be taken in order to support those who will be affected, including fishers and oystermen. I'll just yield the balance of my time. Thank you very much.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63334**

**The proposed MBSD Project would maintain and restore coastal lands and should move forward.**

**Response ID: 16291**

The commenter's statement of support is acknowledged. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40243**

Barbara Comeaux

Yeah, we're just going to comment, my husband and I. We have a home in Lake Hermitage and we're very concerned about the rising water due to the diversion project and, you know, there's just a lot down here as far as the water rising over our docks, the water coming in through the back yard, into the boat shed. It's just - - it's a constant, you know, and so we're really concerned about the additional water that's going to come in, and also whether we'll be able to get to our home, that's a concern. That's where we stand right now. We're very concerned about the rising water.

---

**Concern ID: 62224**

**Communities like Happy Jack, Lake Hermitage and Myrtle Grove, some of which have homes that are not above the new base flood elevation, already experience some degree of flooding which would be made worse by the diversion. This would affect the ability of residents to access and enjoy their homes and communities.**

**Response ID: 15757**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discuss the anticipated increased flooding impacts outside of federal levee systems to be caused by the operation of the diversion. Final EIS Appendix R1 Mitigation and Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties. In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes, which would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Correspondence ID:40244**

Kimberly Reyher

Hi, my name is Kimberly Reyher. I'm a resident of Louisiana. I'm raising three little girls here, and I want them to have the opportunity to live here safely into the future. I hope they will grow to enjoy the traditions and the bounty of Louisiana. I'm hoping they will all become skilled fishermen, but we'll see about that.

I'm also the Executive Director of a group called the Coalition to Restore Coastal Louisiana, or CRCL. CRCL is the first coastal advocacy organization in the state, and the organization came together in the eighties when we were all together realizing the challenges around coastal land loss. And some of our earliest reports concluded that sediment diversions were the best solution and perhaps the only long-term sustainable solution for reversing our land loss. Organizations have advocated for sediment diversions for decades, since the 1980s. We are pleased and actually relieved, in a lot of ways, to finally be at what we hope is the finish line for moving forward with these projects, for the first large-scale sediment diversion in the state. We recognize that there's still questions about how we do this, but we think it's time that we do it, and we very much appreciate the thought and diligence that's gone into the analysis of what we could do and what it means for all of us, in terms of the benefits and also the challenges.

We believe the sediment diversions will be the most impactful projects among those proposed in the Coastal Master Plan, that they are needed for rebuilding our coast. We support the general approach of using the power of the river to sustain the delta, and also the specific approach of the proposed diversion. In short, we support the preferred alternative, and we support the use of Deepwater Horizon funding to fund the project.

I want to take the opportunity to congratulate the Corps and all of those involved on creating the ambitious and extensive report. We recognize a lot of work has gone into it, and as the project proceeds, we want to urge the Corps and CPRA and all those involved to continue in efforts to center community members and community member concerns in developing the mitigation stewardship plans. Although these projects will have wide beneficial economic impacts, we recognize they will provide or result in negative impacts to some communities, as we've been hearing, and we think it's really important that we recognize this and grapple with it. We really appreciate just how clear and thorough the analysis has been in considering these challenges. We envision safe communities, thriving fisheries, as part of what we're all working to achieve, and we know all of you do, too.

We really appreciate the efforts and we appreciate the opportunity to talk tonight. We'll provide extensive detailed comments that are much more technical, but for now, I just want to thank everyone who has taken the time to comment on this, and those presenting and all the teams they represent, for working so hard to get us to this stage and advancing our understanding about the challenges we face and what we can do. So thank you for the option to comment.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-

---

making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40245**

Rosina Philippe

My name is Rosina Philippe and I'm an Elder with the Grand Bayou Village, Atakapa-Ishak/Chawasha people, and my question, every day Louisiana loses about an estimated 25 acres of wetlands, and I'm concerned about how does this number, within the same time frame, compare to the amount of land proposed to be built by the Mid-Barataria Diversion?

What is the projected amount of land estimated to be lost before balance is achieved, once the - - or if, and once the Mid-Barataria Diversion comes online?

And I know there has been some talk about mitigation efforts for communities during some of the negative impacts, and I would like to know, will there be proactive measures to this mitigation, ahead of the implementation of Mid-Barataria, and what does that time frame look like?

---

**Concern ID: 62162**

**The commenter stated that every day Louisiana loses an estimated 725 acres of wetlands, and the commenter is concerned about how this number, within the same time frame, compares to the amount of land proposed to be built by the Mid-Barataria Sediment Diversion Project. The commenter asked what the projected amount of land loss is estimated to be before balance is achieved once the Mid-Barataria Diversion operations begin.**

**Response ID: 16183**

The commenter's questions regarding the rates of land loss and land projected to be built during diversion operation were considered in the Draft EIS. The rate of land loss in Louisiana is discussed in the Draft EIS Chapter 3, Section 3.1.4. To clarify, a discussion has been added to further explain currently ongoing and future projected land loss without the proposed Project and the amount of land that would be created, sustained, or lost due to proposed Project diversion operations. This discussion has been added to the Executive Summary, Section ES.4.1 Geology and Soils and to Chapter 4, Section 4.2.3.2.2.1 Geology of the Final EIS.

---

**Concern ID: 63056**

**Louisiana loses an estimated 25 acres of wetlands each day; compare this daily loss to the daily wetland creation projected by the proposed Project.**

**Response ID: 16062**

Reference to the loss of 25 acres of wetlands per day is assumed to be based on the estimate by Couvillon et al. (2017) that, between 1985 and 2010, an estimated 16.6 square miles of wetlands was lost across the state of Louisiana annually. While wetland losses cannot be assessed on a daily basis, this estimate equates to about 29 acres of wetland loss per day.

By comparison, in 2060 (when wetland gains under the Applicant's Preferred Alternative are greatest when compared with the No Action Alternative), the proposed Project would result in a 17,100-acre wetland increase over the No Action Alternative in the Barataria Basin (see Chapter 4, Section 4.6 Wetland Resources and Waters of the U.S., Table 4.6-4). This area equates to about 428 acres (0.7 square mile) if it is averaged annually over the 40-year period between 2020 and 2060.

By 2070, the proposed Project is anticipated to create 12,700 acres in the Barataria Basin (approximately 19.8 square miles, see Chapter 4, Section 4.6 Wetland Resources and Waters of the U.S., Table 4.6-4). While wetland gains cannot be assessed on a daily basis, this projection would equate to about 254 acres per year or 0.7 acre per day.

Because the projected wetland increase over time was represented in the Draft EIS, no edits to the Final EIS have been made.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63933**

**Commenters asked if there will be mitigation efforts done prior to the implementation of the diversion and when will those measures occur?**

**Response ID: 16580**

CPRA's Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) contained information on mitigation, including mitigation that would be undertaken before the Project becomes operational. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS, including providing additional detail on several mitigation efforts that would be undertaken before the Project becomes operational, including funding for public and private oyster seed ground enhancement, marketing, shrimp vessel and facility improvements, workforce and business training, and subsistence fishing access (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS for additional details).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such

measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Correspondence ID:40246**

Ruth Falgout

I have been studying and learning about Louisiana's coastal land loss since my now 42 year old sons did their 4th grade social studies project "Louisiana's Coast, Can It Be Saved?" This is the biggest project that can truly answer their question. I urge you to go forward with the project to protect our way of life for generations to come.

---

**Concern ID: 63339**

**The Mid-Barataria Sediment Diversion is the largest individual ecosystem restoration project in our country's history, which is fitting since the Barataria Basin is experiencing one of the highest rates of land loss on the planet. Large-scale projects like the Mid-Barataria Sediment Diversion are just the kind of bold actions that are needed if there is to be any hope of a truly sustainable coast.**

**Response ID: 16297**

The commenters' support for the proposed Project is noted. Land and wetland loss along coastal Louisiana is described in EIS Chapter 3, Sections 3.1.4.1 and 3.1.4.2 in Introduction.

---

**Correspondence ID:40247**

Stephen Beaudet

I wish to express my concerns about this initiative. We have seen the very negative impact of this type of effort (intentionally and naturally) in the recent past. The MS sound and Biloxi marsh have been significantly altered recently and has had a very negative impact on our recreation, tourism, seafood (sport and economy) and our daily lives. Pls don't intentionally make things worse for us. Thank you

---

**Concern ID: 62786**

**Multiple commenters expressed concern with the impacts of diverted waters on the economy and natural environment of the State of Mississippi.**

**Response ID: 16368**

The proposed Project is not anticipated to have discernable effects on resources outside of the Project area, which is limited to Louisiana, and particularly the Barataria Basin and the Mississippi River birdfoot delta (as defined in Chapter 3, Section 3.1.1 in Introduction and the subsections entitled Area of Potential Effects for each resource heading in Chapter 4 Environmental Consequences). Because these resource-specific areas of potential effects were determined based on the anticipated limits of discernable impacts, negligible to no impacts on the natural or human environment are anticipated in the State of Mississippi from the construction and operation of the proposed MBSD Project.

---

**Correspondence ID:40248**

Valerie Ramirez

Hello, my name is Valerie Ramirez. I'm originally not a native to Louisiana. This is honestly the first time I've heard about what was going on with the situation. So my question is, what are the number - - what is the statistics of Louisiana citizens that are aware of this project, if there are any? And I've been reading a couple of articles and there isn't really one number that is consistent on the amount that is being spent on the project, along with the time frame.

---

**Concern ID: 61955**

**Commenters are concerned that all those that are impacted may not be aware of the proposed Project, its impacts, or potential mitigation. There are many people that may not have the knowledge, time, or resources to be deeply involved in these issues, but who also have a stake in what is happening. Consider the needs of these people in making a decision about moving this proposed Project forward. If this proposed MBSD Project and similar projects move forward consider opportunities to better engage people across Louisiana's coast in the value of projects like these and why they are crucial to the future of our region.**

**Response ID: 15900**

Public input is an integral part of the NEPA process, the OPA process, and the DWH oil spill restoration planning effort. USACE and the LA TIG undertook a coordinated and concurrent public review process for the EIS and the LA TIG's Restoration Plan. Allowing submission of comments on either document to the same locations provided commenters a "one-stop shop" and was done to reduce confusion by commenters about where to direct their comments regarding the MBSD Project. Additionally, this ensured the LA TIG reviewed and considered all relevant comments to both the Restoration Plan and the Draft EIS in its decision-making process. All public comments received have been reviewed by both USACE and the LA TIG and will be considered as appropriate under relevant regulations by USACE and by the LA TIG, respectively, as each makes its decision on the proposed MBSD Project.

USACE and the LA TIG conducted public outreach and provided public comment opportunities throughout the development of the Draft EIS and the LA TIG Draft Restoration Plan. Details on USACE's and the LA TIG's outreach activities and the opportunities provided for public participation can be found in Chapter 7 Public Involvement in the Final EIS.

Examples of public outreach provided by USACE for the EIS include providing special public notices for the permit application, the scoping process, and for the Draft EIS through Federal Register notices, press releases, newspapers, mail outs to distribution lists, and provision of hard copies of the Executive Summary and other materials to local libraries. USACE and the LA TIG also coordinated with the SELA Voice organizations to understand the needs of the local communities regarding the best ways to reach out to these communities prior to the release of the Draft EIS and the LA TIG's Draft Restoration Plan and during the public comment period.

Language interpretation and translation in Spanish, Vietnamese, and Khmer were provided at each of the virtual public meetings on the Draft EIS and the LA TIG's Draft Restoration Plan. Also, the Public Notice to announce the Draft EIS Notice of Availability, the Executive Summary for the Draft EIS, and the Executive Summary for the LA TIG's Draft Restoration Plan, were translated into Spanish and Vietnamese. The consolidated pre-recorded public

meeting presentation was also translated into Spanish, Vietnamese, and Khmer and available on the Project webpage.

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area, in an effort to reach out to community groups to gather information related to the proposed MBSD Project. Throughout the public comment period and concurrent with the preparation of the Final EIS and LA TIG's Final Restoration Plan, CPRA has engaged the public through meetings with the communities and groups projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups.

This included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented.

Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts. In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not

know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Brian Moore

Hi, good evening. Thanks for having me. Thanks for doing all you're doing. And really, thanks to everyone on the panel for all you've done to move the ball forward with the Mid-Barataria Sediment Diversion. It's important to me and it's important to the organization I represent, which is the National Audubon Society, and our over 2 million members nationally, and also important to us is 26,000 acres that we own and manage and operate in Louisiana that we've had for nearly a hundred years. So we feel like we have a pretty big stake in what's happening to the Louisiana coast, but for lots of reasons, and we would like to stand in support of the Mid-Barataria Sediment Diversion.

It's important for a whole lot of reasons. One reason for us, as the National Audubon Society, our focus is on wildlife and habitat, and particularly birds, and 40 percent of birds that migrate through the U.S., the United States, at some point in time in their migration or other habits, stop on the coast of Louisiana, so there could not be a more important place for habitat for birds and other wildlife, and this Mid-Barataria Sediment Diversion has a real chance to help bring back some of the wetlands that birds and other wildlife find important.

I think, also important is what the Mid-Barataria Sediment Diversion will do to help stabilize the whole ecosystem and also help provide some protection for people and communities, and, of course, for the economy in coastal Louisiana, which are all important to us.

And, finally, I'd like to say I'm glad to see that there is a significant amount of funding in the proposal to work with potentially impacted communities. We think that the trustees and everyone involved should really work as closely and collaboratively with the potentially affected communities as possible, and do that in a transparent way so that, you know, we can all be a part of the process.

And that is it for me. Thank you very much and have a great evening.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting**

---

**coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Dian Campbell

Hi, my name is Dian Campbell. I'm a resident of the Lake Hermitage area and I had a couple of questions and I also have a comment. I, too, living in the Lake Hermitage area, can see a need for us to take some type of action for the coastal erosion. Actually, you can tell within the last 10 years how massive it's become. But part of my question has to do with the type of diversion that we're speaking of. If it's - - if I'm understanding correctly, you're going to transport the sediment by moving water, and I'm just wondering why is that favorable to actually - - I know when we had now Lieutenant Governor Billy Nungesser as Parish President, he had proposed doing dredges and moving the fill in that manner, to be successful.

That was one of my questions.

And the other part that I'm questioning is, by pumping in all of this water from the river, we all know that the river is not free of any type of hazards or chemicals. We just recently had where millions or billions of tiny pellets were discharged and no one took claim to that being a hazardous material, and they're still sitting out there, so you're going to have that type of contamination introduced into the bayous. What are you doing for protecting fish from that?

---

**Concern ID: 61819**

**Commenters expressed concern that the proposed Project would have adverse impacts on Barataria Basin's water quality, wetlands, fisheries, recreational uses, and eroding coastlines due to chemicals, oil and hazardous waste, and/or pollutants in the Mississippi River that would be routed to the Barataria Basin via the proposed diversion.**

**Response ID: 16429**

The impacts raised by the commenters were considered in the Draft EIS. As discussed in Chapter 3, Section 3.5.1.1 in Surface Water and Sediment Quality of the Draft EIS, the segment of the Mississippi River where the proposed diversion river intake structure would be located (subsegment LA070301\_00) fully supports its designated uses. Designated uses for this subsegment include swimming, boating, fishing, and drinking water supply. LDEQ's water quality assessment indicates that regulated substances are not present in concentrations that would cause a water quality impairment at the location of the intake structure. In response to this concern expressed by commenters, a new subsection has been added to Chapter 4, Section 4.5 Surface Water and Sediment Quality clarifying the potential impacts of nearby industrial facilities on river water routed to the basin during proposed Project operations. The new section is called 4.5.5.11 Hazardous Spills from Industrial Sites.

As described in the EIS, Chapter 2, Section 2.8.1.4 in Action Alternatives Carried Forward for Detailed Analysis and in Appendix F MBSD Design Information, in the event of oil spills and other hazardous discharges into the Mississippi River upstream of the proposed MBSD intake structure, the diversion structure would be closed.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the**

---

**Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred

---

Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 63202**

**There needs to be a plan to protect the basin from pollution introduced from the Mississippi River into the Barataria Basin.**

**Response ID: 16570**

Chapter 3, Section 3.5.1.1 Water Quality Standards and Dedicated Uses - Mississippi River of the Draft EIS considered the commenter's concern regarding the potential for the Project to introduce pollution from the Mississippi River into the basin and explains that the Mississippi River fully supports designated uses for the river established by the Environmental Protection Agency and the Louisiana Department of Environmental Quality. However, the designated uses for the Mississippi River may be different from the designated uses for other waterbodies in the Barataria Basin. The Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the Final EIS) includes monitoring of a variety of water quality related parameters, which would start prior to construction and continue throughout the Project's implementation.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

---

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40253**

Steve Dillard

I thank you all for your patience. My IT neighbor just showed up and pressed the right button, so - - I thank you all. Thank you, James. All right, guys. Look, I appreciate it. Thank you for your patience. I know I only have three minutes and it took 45 to connect, so here we go.

My name is Steve Dillard. I live at [REDACTED] commonly known as Happy Jack, down in Port Sulphur. I've been a resident down there a long time, been in and out. It's a great place. I want to see it stay. I appreciate and love the coastal restoration that you all are doing. I'm all for it, for coastal restoration. I don't know if your approach is correct, but this is not the time or place to go into that. It's too detailed and I only have three minutes. My immediate concern is the flooding of the road on Happy Jack. If you all are going to raise this water to the levels you all are talking about, we already can't get in and out of the road, to begin with. You all are going to have to significantly raise and modify this road. This is nothing but a little bitty shell gravel road, that's all we got, and it floods out right now beaucoup times a year. So that's issue one.

Secondly, my dock, at present, goes under water, so if you're going to add more water to it, I'm not going to be able to use the underside of my house. If I can't use the underside of my house, you're going to say, okay, we'll mitigate and raise your dock. There you go, I like that, go ahead and raise my dock. But now you've got to turn around and you've got to raise my camp, because now I can't get underneath my house. So I've got some issues.

And the only other comment I got out there - - and I appreciate all the translators that's on there - - but how come we ain't got no cajun translator? And that's just a joke, but I love you all. So that's what I've got.

And the other thing in your presentation, Brad, that you had ongoing, I believe, you all talked about you don't have any present - - you all did a bunch of computer models, and this, that and the other, that you all created to speculate what may happen with this river diversion and so on. Well, you got a great model right across the street, Mardi Gras Pass. What has Mardi Gras pass done for us? Has it been positive? Has it been negative?

And I'll go ahead and leave all my comments there, and I hope someone circles back, and please don't cite chapters of books for me to read. I love you, Brad, thank you, but no. I want to know specifically, are you all going to take care of the road, the docks, the houses. What are you all going to do to mitigate the increased water? And I thank you all for your patience.

---

**Concern ID: 62639**

**The proposed Project is unlikely to succeed because similar types of projects have failed to build land, and have caused a range of other issues, like destroying habitat, exacerbating flooding, and reducing water quality. Specific examples of similar, problematic projects include the Mississippi River Gulf Outlet, Bonnet Carré Spillway, Caernarvon Freshwater Diversion, Davis Pond, West Bay, Baptiste Collette, Fort St. Philip, and Cubits Gap. In fact, data show that the Caernarvon Diversion in particular was unable to show sustained land gains in the face of Hurricane Katrina-driven losses in wetland habitat (Underwood 1994, Kearney et al. 2011). Davis Pond has seen increased land loss inside the diversion compared to a reference area (Couvillion et al. 2017). Fort St. Philip has lost large areas of wetlands (Suir et al. 2014). While the Atchafalaya River is building land in the Atchafalaya and Wax Lake Deltas, the**

---

**Atchafalaya River carries more sediment than the Mississippi River does currently (Blum and Roberts 2009), and more of the Atchafalaya River is diverted to each of these deltas and marshes farther south. Additionally, one study identified poor performance of diversions due to many periods of inoperation due to socioeconomic uncertainties (Caffey et al. 2014).**

**Response ID: 16631**

The issues raised by the commenters were considered in the Draft EIS. The EIS states in Chapter 2, Section 2.1.1 Overview of Sediment Diversions, that CPRA considered information from other diversions in its assessment of the Project alternatives, but because the projects mentioned by the commenters had been designed to discharge primarily water, not sediment, they are not fully comparable to the proposed Project. As explained in the EIS Chapter 4, Section 4.1.3 (Environmental Consequences, Overview of Delft3D Basinwide Model for Impact Analysis), Delft3D Basinwide Modeling software was used to assess impacts of the Project on hydrology, land gains and losses, water quality, and vegetation in the Barataria Basin and birdfoot delta. Using standard professional practice, this physics-based model was validated to the West Bay Sediment Diversion. The West Bay Sediment Diversion is useful for validating the physical processes of erosion and deposition of sediment because it, like the proposed MBSD Project, is a sediment diversion that extracts relatively more sediment in the river. The other diversions cited were designed to primarily deliver water, not sediment, and are less useful comparisons.

The West Bay Sediment Diversion has successfully deposited large amounts of sediment in the system and, in concert with beneficial uses of dredged material, built land. Kolker et al. (2012) reported, "A majority of the sediment transported through the West Bay Diversion apparently was deposited in the bay, and contributed to sub-aerial land formation, which contrasts with the view presented by Kearney et al. (2011) and Turner et al. (2007) that diversions do not lead to appreciable sediment accumulation" (Kolker, A. S., Miner, M. D. and Weathers, H. D. 2012. Depositional dynamics in a river diversion receiving basin: The case

of the West Bay Mississippi River Diversion, Estuarine, Coastal and Shelf Science, 2012, <http://dx.doi.org/10.1016/j.ecss.2012.04.005> ).

Comparing diversions outside of physics-based numerical modeling has limited value because diversions and receiving environments often exhibit unique behaviors that correlations do not account for. For that reason, the physics-based Delft modeling, even with its limitations and uncertainties, is a better predictor than anecdotal comparisons to Fort St. Phillip or other sites. Uncertainties associated with the validation and application of the Delft3D Basinwide Modeling conducted for the proposed Project were assessed by the West Bay application, sensitivity tests, and by the use of a Base-to-Plan (No Action Alternative compared to Action Alternatives) comparison method as described in EIS Appendix E Delft3D Modeling and incorporated into the EIS conclusions throughout Chapter 4 Environmental Consequences. While most citations mentioned by commenters were already included in the Draft EIS, the Final EIS has been edited to include Caffey and Petrola (2014) to Chapter 4, Section 4.6.5.1.2.4 Land Accretion.

The likelihood of success of the Project and information from other freshwater diversions was also considered in the LA TIG's Draft Restoration Plan, Sections 3.2.1.4 Likelihood of Success - Alternative 1 and 3.2.2.4 Likelihood of Success - Alternatives 2-6 of the Restoration Plan address the likelihood of success of the Project and other Action Alternatives. The proposed MBSD Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the geomorphological features of the Lower Mississippi River as of 2012, including data from the referenced projects. All citations referenced by the commenters were included in the Final EIS and were considered by the LA TIG in the Final Restoration Plan.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina

---

Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure

that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Natalie Snider

I am the Senior Director of Coastal Resilience at the Environmental Defense Fund, and a few things I would like to compliment the team on is, No. 1, as in my previous life, working on a lot of EIS's and tracking those, it's a very complete and amazing document that you've put together.

No. 2, having the translation here on the webinar, it's unfortunate it hasn't been used as much as we would have hoped, but for all the translators that are here, we appreciate you being here and spending your time here, because it's important to at least have that inclusion and that availability of inclusion in these, in this work. And we know, in coastal Louisiana, we are diverse and that's what makes us the gumbo, right? And I do look forward to the cajun translating on this project, so I'm looking forward to that coming.

You know, Brad, you mentioned the operations and adaptive management, and I think that's where I want to focus my comment is, you know, making sure that people understand, and being more clear about how this is not a project that is put in place and you walk away from. It is operated every day, every year, multiple years, and there's a lot of decisions that have to be made on a daily and annual basis about how operations occur, when it's open, when it's not. So I commend CPRA for putting in the monitoring, putting in substantial money for the monitoring to make sure that we understand what the response is of this ecosystem and these communities to this project, which is fundamentally important. I request that the adaptive management be expanded, the governance be more inclusive of not only the natural resource users, but the communities that are being impacted should be part of that conversation and that adaptive management program.

But all in all, great job to all you guys in doing a very robust scientific analysis, and we look forward to working with you, as the Adaptive Management Program evolves over time. Thank you.

---

**Concern ID: 62331**

**The EIS is comprehensive and well-prepared, and used the best available information and data.**

**Response ID: 15782**

Acknowledged.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to

---

them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Correspondence ID:40255**

Office of Louisiana Lt. Governor

William Nungesser

I'm writing today to express my concern over the expediting of the environmental permitting process for the planned river sediment diversion project in Plaquemines Parish at Mississippi River mile 60.7. I am strongly opposed to cutting any corners, changing any laws or rules for any project where we have not fully determined the environmental or economic impact. The thought that we would divert up to 75,000 cubic feet per second of polluted freshwater into the estuary without looking at every aspect of the potential environmental impact to the wildlife and to the seafood industry is deeply concerning.

In addition to the polluted river water that will be diverted into the Mid-Barataria Basin, I am also concerned with the known impacts of low salinity levels within the estuary that give life to benthic and marine mammal species. The size and effects of the dead zone in the Gulf of Mexico has been chronicled over the years and I cant help but think of the potential negative consequences of the toxic water from the proposed river diversions settling in the marsh. This will be nothing short of catastrophic to both our seafood industry and the hospitality industries in Louisiana.

The National Oceanic and Atmospheric Association has concluded that two proposed population stocks of dolphins might be negatively affected by the proposed sediment diversions. NOAA has also concluded that the existing dolphin population will face irreparable harm when exposed to prolonged periods of freshwater exposure and that comparing the Lake Pontchartrain dolphin stock with the dolphin stocks in Mid-Barataria and Mid-Breton is an inappropriate physical and ecological comparison. This analysis was followed by a commissioned study requested by the Marine Mammal Commission to further analyze the impacts this project would inflict upon our coastal communities. The University of St. Andrews in Scotland concluded that the negative impacts to the bottlenose dolphin population would be far higher than the NOAA study and further damage our fragile eco-system with an estimated mortality rate of 60% to 70%.

Furthermore, the timeline of this project shows that it will not have an immediate impact on flood protection or marsh creation in the basin and assumes that the long term benefits will outweigh the short term costs. Shortening the (EIS) process doesnt may any sense to me or the stakeholders that stand to lose their way of life. A fully implemented environmental study is critical to the future safety and viability of our most vulnerable communities. This process has been deeply concerning, and unfortunately, many leaders will not speak up on this matter for fear of losing funding for coastal restoration projects within their parishes, a well-known silencing tactic used even when I was Parish President.

The federal permitting process for the diversion projects has not given me the confidence to provide my support for their implementation at this time. I still have questions surrounding the issuance of the Marine Mammal Protection Act (MMPA) waiver approved by Congress under the 2018 Congressional Budget Act that has led to the fast tracking of the (EIS) timeline by three years in the name of coastal restoration.

I have said many times, we have enough money from the BP oil spill to substantially protect t our coast. God help us if we waste it, we wont get this chance again.

Sincerely,

Billy Nungesser  
Lieutenant Governor

---

**Concern ID: 62185**

**The commenter is concerned with the expedited permitting process and is opposed to cutting corners and changing rules or laws without fully determining the environmental or economic impact.**

**Response ID: 15738**

While the Mid-Barataria Sediment Diversion Project permitting process is being conducted utilizing the Fixing America's Transportation Act (FAST-41) process, the process was not expedited. The intent of FAST-41 is enhanced coordination, transparency, predictability, and accountability in federal environmental reviews and authorizations. It does not modify any underlying statutes, regulations, or mandatory reviews. The environmental review and permitting processes has not cut corners, and through the EIS, USACE has analyzed and disclosed the environmental and economic impacts of the proposed Project. CPRA filed its DA permit application for the proposed Project in 2016 (revised in 2018). USACE expects a decision on CPRA's application in December 2022.

---

**Concern ID: 62708**

**The release of polluted river water into the Barataria Basin would create harmful algal blooms and/or large areas of low dissolved oxygen that could negatively affect aquatic fauna including mortality of adults and juveniles that may not be able to escape impacted areas.**

**Response ID: 16086**

As discussed in Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS, the input of nutrients from the Mississippi River is generally anticipated to be beneficial to the food web, although there is an acknowledged potential for harmful algal blooms. As mentioned in Section 4.5.5.1 in Surface Water and Sediment Quality of the EIS, the majority of the Barataria Basin is shallow and well-mixed by wind and tidal action, such that it is not typically prone to stratification that promotes hypoxic (dissolved oxygen of less than 2 to 3 mg/L) conditions. Further, as discussed in Section 4.10.4.4 in Aquatic Resources, the Delft3D Basinwide Model's dissolved oxygen results do not suggest that Project implementation would result in oxygen concentrations below 5 mg/L on an average monthly basis; therefore, although sporadic and limited areas of low dissolved oxygen may occur, mainly in the summer months, no large or prolonged periods/layers of low dissolved oxygen are projected by the Delft3D Basinwide Model, nor anticipated based on the Barataria Basin's identification as a largely well-mixed estuary. To make this clearer in the Final EIS, language indicating that the Delft 3D Basinwide Model results do not suggest that a significant hypoxic zone will form in Barataria Basin due to Project implementation has been added to Section 4.5.5.5.2 in Dissolved Oxygen of the Final EIS.

The Monitoring and Adaptive Management (MAM) Plan (Appendix R2), which has been updated for the Final EIS in response to public comments, includes CPRA's plan to implement a monitoring program for phytoplankton species composition, including harmful cyanobacterial/algal bloom species (and associated toxins) (see Sections 3.7.3.10 and 3.7.3.11 of Appendix R2 of the Final EIS).

---

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54

---

and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider

---

public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62788**

**The proposed Project would result in quick or immediate adverse impacts on resources in order to produce potential benefits in the future.**

**Response ID: 16369**

As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would cause both beneficial and adverse impacts on the assessed resources upon commencement of operation, as well as both beneficial and adverse impacts on the assessed resources in the future. For example, the decrease in salinity that would occur upon initial operation of the proposed Project would result in major adverse impacts on various species (oysters, brown shrimp, bottlenose dolphins) over a relatively short period of time; however, the accumulating fresh water and sediments would create or maintain wetlands over long term or permanent basis, (that is, extending through the remainder of the 50-year period of analysis) which would benefit other commercially or recreationally important aquatic species, such as white shrimp, blue crab, and Gulf menhaden, and would increase storm protection for communities north of the immediate outfall area the Delft3D Basinwide Model projects these benefits to increase over time and to be greatest in the 2060s (see Chapter 4, Sections 4.6.5.1 in Wetland Resources and Waters of the U.S., 4.10.4.5 in Aquatic Resources, 4.11.5.2 in Marine Mammals, and 4.20.4.2 in Public Health and Safety, Including

---

Flood and Storm Hazard Risk Reduction). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 62880**

**A fully implemented environmental study is critical to the future safety and viability of our most vulnerable communities. The federal permitting process for the diversion projects has not given the commenter the confidence to provide support for their implementation at this time. The commenter has questions surrounding the issuance of the Marine Mammal Protection Act (MMPA) waiver approved by Congress under the 2018 Congressional Budget Act that has led to the fast tracking of the (EIS) timeline by 3 years in the name of coastal restoration.**

**Response ID: 15740**

While the Mid-Barataria Sediment Diversion Project permitting is being conducted utilizing the Fixing America's Transportation Act (FAST-41) process, the process was not expedited. The intent of FAST-41 is enhanced coordination, transparency, predictability, and accountability in federal environmental reviews and authorizations. It does not modify any underlying statutes, regulations, or mandatory reviews. Similarly, the MMPA waiver does not alter USACE's or the LA TIG's NEPA responsibility to evaluate anticipated impacts of the proposed Project on marine mammals. The EIS analyzes and discloses the environmental and economic impacts of the proposed Project, including anticipated effects on marine mammals (see Chapter 4, Section 4.11 Marine Mammals). The NEPA process was not abbreviated to expedite review. All steps in the NEPA process have been followed to allow for public participation and transparency, including scoping, public review and comment periods. In recognition of the potential for collateral injuries from the proposed Project, and acknowledging the inability to fully avoid or mitigate collateral injuries, the LA TIG has designed and CPRA would implement a suite of mitigation and stewardship measures. See Section 3.2.1.1.5 of the LA TIG's Final Restoration Plan and Appendix R to the Final EIS. The LA TIG is also committed to continuing efforts to restore the resources that would be adversely affected by the diversion, many of which were also injured by the DWH oil spill. Section 20201(b) of the Bipartisan Budget Act of 2018 also requires the State of Louisiana, in consultation with the Secretary of Commerce (delegated to NMFS), to the extent practicable and consistent with the purposes of the proposed Project, to minimize impacts on marine mammal species and population stocks, and monitor and evaluate the impacts of the proposed Project on such species and population stocks.

---

**Concern ID: 63070**

**A recent study suggests that the proposed Project would not only prevent the recovery of the BBES Stock, but it would result in the functional extinction of dolphins in the West, Central, and Southeast strata of the stock area (Thomas et al., 2021). The only dolphins remaining in the basin would live adjacent to the barrier islands, and even this group would become severely reduced over the 50-year planning horizon of the proposed Project. Additionally, an expert elicitation (Booth and Thomas, 2021)**

---

**building on previous studies (Garrison et al., 2020; Schwacke et al., 2017; Thomas et al., 2021) suggests that while dolphins can endure some periods of exposure to low salinity, the period of tolerable exposure shortens for dolphins exposed to acute changes in salinity, and the median time to death is 22 days with continuous exposure to water with salinity levels below 5 ppt.**

**Booth, C., and L. Thomas. 2021. An expert elicitation of the effects of low-salinity water exposure on bottlenose dolphins. *Oceans* 2(1):179-192.**

**Garrison, L.P, J. Litz, and C. Sinclair. 2020. Predicting the effects of low salinity associated with the Mid-Barataria Sediment Diversion Project on resident common bottlenose dolphins (*Tursiops truncatus*) in Barataria Bay, Louisiana. NOAA Technical Memorandum NOAA NMFS- SEFSC-748. 97 pages.**

**Schwacke, L.H., L. Thomas, R.S. Wells, W.E. McFee, A.A. Hohn, K.D. Mullin, E.S. Zolman, B.M. Quigley, T.K. Rowles, and J.H. Schwacke. 2017. Quantifying injury to common bottlenose dolphins from the Deepwater Horizon oil spill using an age-, sex- and class-structured population model. *Endangered Species Research* 33:265-279.**

**Thomas, L., Marques, T., Booth, C., Takeshita, R., and L. Schwacke. 2021. Predicted population consequences of low salinity associated with the proposed Mid-Barataria Sediment Diversion Project on bottlenose dolphins in the Barataria Bay Estuarine System Stock.**

**Response ID: 16593**

The Draft EIS included an analysis of the impacts to marine mammals, including BBES dolphins in Chapter 4, Section 4.11.5.2 Barataria Bay Estuarine Stock. This analysis incorporated the Booth and Thomas (2021), Garrison et al. (2020), and Schwacke et al. (2017) studies, and the Final EIS includes additional analyses that were completed by Thomas et al. (2021) after the Draft EIS was released for public comment. The impact conclusions in the Draft EIS were based in large part on Garrison et al. (2020), which predicts that only a remnant population of dolphins would continue to exist in Barataria Basin after diversion operations commenced. The conclusion of major, permanent, adverse impact to bottlenose dolphins is also supported by Thomas et al. (2021), which built on these earlier studies and concludes that, after 1 year of operation of the Applicant's Preferred Alternative, there would be 61 percent fewer dolphins in the Central stratum than under the No Action Alternative, 35 percent fewer in the West stratum, 12 percent fewer in the Southeast stratum, and 2 percent fewer in the Island stratum, with 25 percent fewer overall. Thomas, et al. further concluded that after 10 years of operation, there would be 100 percent reduction in the populations of dolphins in the Central and West strata, an 82 percent reduction in the population of the Southeast stratum dolphins, and a 34 percent reduction in the population of the Island stratum dolphins as compared against the No Action Alternative, with an overall difference in population of 78 percent. (Note that Thomas, et al. 2022 slightly refined some of these projections.) After 50 years of operation, in three out of the four strata, dolphins are predicted to be functionally extinct (defined as less than or equal to dolphin in Thomas, et al. 2022) under the Applicant's Preferred Alternative, with the remaining Island stratum being 85 percent lower [95 percent CI -28 -- -99] under the Applicant's Preferred Alternative than under the No Action Alternative. Overall, by the year 2076, the median predicted stock size across all of Barataria Bay under the Applicant's Preferred Alternative is projected to be 143 dolphins

---

(95 percent CI 11-706) compared to a predicted 3,363 dolphins (95 percent CI 2,831-4,289) predicted to inhabit the Barataria Bay under the No Action Alternative. In other words, the BBES dolphin stock is projected to be 96 percent smaller (95 percent CI -80 -- -100) under the Applicant's Preferred Alternative than the No Action Alternative. Chapter 4, Section 4.11 Marine Mammals of the Final EIS has been updated to reflect the results of Thomas et al. (2021).

Booth and Thomas (2021) evaluated multiple scenarios with different salinity changes, and in one of those scenarios' where bottlenose dolphins experience a change in salinity within 0 to 5 days from typical salinity environment (that is, mean 15 to 25 ppt) down to an atypical environment with salinity below 5 ppt for an extended period, the median time to death would be 22 days.

Attn: CEMVN-ODR-E; MVN-2012-2806-EOO

7400 Leake Avenue

New Orleans, LA 70118

Louisiana Trustee Implementation Group (LaTIG) c/o of NOAA Re: Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

Mr. Laborde and Mr. Landry,

As a resident of Louisiana and mother to three young children, I am writing to express my strong support for the Mid-Barataria Sediment Diversion, and specifically, the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid- Barataria Sediment Diversion.

I firmly believe that the Mid-Barataria Sediment Diversion is a crucial first step to ensuring the long-term health of Louisiana's coastal communities, ecosystems and wildlife in the face of rising sea levels, increasing storm intensity, and continued land loss.

This project allows us to harness the power of the "Muddy Mississippi" and use it to rebuild wetlands and habitat, provide a line of defense to storms and sea level rise, and ensure sustainability for communities including the bayou communities and New Orleans.

However, changing the ecosystem to a more natural state will mean unfortunate impacts to some resources that have benefited from the artificially created estuary over the past decades, such as oysters, brown shrimp and dolphins. But by not reconnecting the Mississippi River, these precious resources may suffer even greater impacts in the future, along with the ecology, economy, communities and culture. Restoring a more natural state to the Louisiana delta will not be easy but is fundamentally essential if future generations want to enjoy the bounty and culture of the region. So while I appreciate your efforts to address those impacts with important stewardship measures and substantial funding, I encourage you to continue to take a holistic approach to address citizen concerns.

We have no time to lose to reconnect the sediment, nutrients and freshwater of the Mississippi River to its wetlands and start to rebuild our coast. The future of New Orleans, the bayou communities, the fisheries and wildlife and Louisiana's amazing culture desperately depend on it.

I truly appreciate your tireless efforts on this important matter, both for our generation and for future generations.

Sincerely,

Cathleen Berthelot

New Orleans, LA

**Concern ID: 63179**

---

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

National Audubon Society

Brent Newman

June 2, 2021

U.S. Army Corps of Engineers

New Orleans District

Attn: CEMVN-ODR-E; MVN-2012-2806-EOO

7400 Leake Avenue

New Orleans, LA 70118

Re: Draft Restoration Plan and Environmental Impact Statement: Mid-Barataria Sediment Diversion

Dear U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group:

The National Audubon Society (Audubon) is a nonprofit conservation organization whose mission is to protect birds and the places they need, today and tomorrow, throughout the Americas. Audubon has had a presence on the Gulf Coast for nearly a century and is invested thoroughly in the region. Audubon staff are working to advance habitat restoration, conservation, and stewardship with the goal of having healthy and resilient coastal and marine ecosystems that support populations of birds, fish, wildlife, and people throughout the Gulf's five coastal states.

On behalf of our 1.8 million members, Audubon would like to provide comments to the U.S. Army Corps of Engineers, other cooperating agencies, and the Louisiana Trustee Implementation Group on the Draft Environmental Impact Statement (DEIS) and Phase 2 Restoration Plan #3.2 for the Mid-Barataria Sediment Diversion. Audubon would like to express our full support for the identified preferred alternative in the Draft EIS for the project, and the proposed use of funds from the Deepwater Horizon Oil Spill to implement the project.

The Mid-Barataria Sediment Diversion provides a path forward for a more sustainable Louisiana coast, grounded in the best available science, to provide economic opportunity, adapt to climate threats, and restore vital wetland habitat. By harnessing the Mississippi River's sediment, this diversion will restore the natural processes that created the Louisiana coast that we all know, enjoy, and rely on by building and maintaining thousands of acres of vital wetlands that provide bird habitat and protect communities from more intense hurricanes and sea-level rise. This project and other efforts intended to work cooperatively for long-term restoration and protection in the Barataria Basin are priority projects for the Restore the Mississippi River Delta coalition, of which Audubon is a member. Additionally, the Mid-Barataria Sediment Diversion is identified as a priority project in Audubon's Comprehensive Gulf Restoration Plan.

The impacts of the 2010 Deepwater Horizon oil disaster were devastating to birds, and Barataria Bay was among the most heavily and consistently oiled areas during the tragedy. This oiling accelerated long-term habitat loss and erosion, which threatens bird populations that depend on the wide variety of habitats this region provides. Shorebird populations have shown dramatic population declines with the loss of these coastal habitats. This project will provide critical nesting or foraging habitat for many of Audubon's conservation priority

species, such as Mottled Duck, Bald Eagle, Little Blue Heron, Western Sandpiper, and King Rail.

Audubon would like to commend the cooperating agencies on developing a science-based DEIS and Restoration Plan that provides a comprehensive outlook of the impacts anticipated from project construction and operation. The mitigation actions contemplated should ensure that the operation of the Mid-Barataria Sediment Diversion will achieve its purpose while minimizing impacts to communities, fish and wildlife, through in-depth analysis and robust adaptive management.

Below, Audubon has detailed a few specific recommendations for the project proponents and permitting agencies to consider, which we believe will foster greater public understanding of project impacts and ensure the sustainability of the basin's naturally diverse and crucial resources.

- **Operations and Monitoring Data Repository:** Audubon commends the Louisiana Coastal Protection and Restoration Authority (CPRA) for committing to the U.S. Fish and Wildlife Service's recommendation for a "basin-wide operations and basin monitoring data repository." To expand on this recommendation, CPRA should make this operations and monitoring data available in a user-friendly way to the public and stakeholders, to foster a greater understanding of the project operations and impacts to the basin. A "real-time information dashboard" model would be useful to the public and diversion operators by increasing transparency and general understanding of the on-the-ground impacts of the project operation. This resource would also be valuable for state agencies, researchers, stakeholders, and can serve as a model for the implementation of similar restoration projects along the Mississippi River, or in other locations worldwide.
- **Adaptive Management:** The importance of the Monitoring and Adaptive Management (MAM) Plan cannot be overstated. The Barataria Basin must be continually monitored due to the complexity of the natural ecosystem, so that the impacts from this project are fully understood. This provides an opportunity for CPRA to modify project operations, if needed, to maximize restoration benefits and minimize impacts to fish and wildlife. Although the USFWS recommendations suggest coordination among USFWS, NMFS, and other resource agencies, we would suggest expanding this coordination to other science, policy-based and community stakeholders, to ensure a broader discussion of management impacts and options. Many projects nationwide employ these broader workgroup perspectives, including dam operations and other water management strategies.
- **Adaptive and Transparent Mitigation for Communities:** The DEIS lays out impacts to several different communities that are integral to Louisiana's culture and lifestyle, including coastal fishing communities, historically disadvantaged communities including Black and indigenous groups, and members of the seafood industry. It is imperative that CPRA and the Corps ensure that all impacts to these communities are addressed and mitigated. As the diversion project begins operation, and the MAM plan is implemented, the impacts to these communities should also be monitored and the agencies must plan and budget for adaptive mitigation, depending on the evolving needs of these integral communities. It is difficult to wholly prepare for the impacts of an innovative project such as the Mid-Barataria Sediment Diversion, so the implementing agencies should anticipate evolving needs and mitigation strategies, which should be developed in partnership with the affected groups. This evolving nature of adaptive mitigation should include the modeled and anticipated effects of a warming

climate on project operations, and the effects to socially vulnerable populations and communities. CPRA has done a commendable job in outreach, and demonstrated a willingness to work with affected parties on appropriate mitigation strategies. That manner of outreach and engagement should continue through all aspects of construction and project operation.

- **Comprehensive Management of the Lower Mississippi River:** In recent federal legislation such as the Water Resources Development Act or the pending Mississippi River Restoration and Resilience Initiative, comprehensive and holistic management of the Lower Mississippi River is recognized as a useful and necessary collaborative effort. Other existing efforts such as the Gulf Hypoxia Task Force recognize the cumulative effects of water management throughout the entire Mississippi River Basin on the resources along the river and into the Gulf. Audubon encourages further discussion, study, and implementation of projects and processes that would maximize natural infrastructure and coordinated operations among existing projects and other water management efforts throughout the basin for the benefit of birds, wildlife, and people. The beneficial impacts of coordinated operations could include maximizing habitat protection and restoration, managing for high water events, and minimizing negative impacts to birds, wildlife, and people.
- **Coastal Mississippi Considerations:** The proposed project underscores the importance of CPRA, the Corps, and other coordinating natural resource agencies and stakeholders to continue working together with the regional scale in mind. In recognition that our natural resources do not follow political boundaries, southeast Louisiana's wetlands, waters, and living coastal and marine resources, play a vital role in the overall ecological health and community resiliency of the Gulf of Mexico, particularly for coastal Mississippi. A recent example of the significance of this vast interconnected ecosystem was demonstrated by the repeated openings of the Bonnet Carre' Spillway over the last several years, which resulted in dramatic impacts to the health and productivity of the Mississippi Sound estuary and its barrier islands.

Although the proposed diversion's receiving waters are mainly on the western side of the Mississippi River, we encourage CPRA and the Corps to prioritize meaningful opportunities to disseminate information and provide for public engagement throughout the decision-making process, including outreach to coastal Mississippi communities and other interested stakeholders, and establishing a regular dialogue with Mississippi natural resource agencies and coastal leaders.

- **Consistent and Comprehensive Outreach and Education:** Given the proposed diversion's unprecedented scale and intended contribution to supporting a vibrant, sustainable Gulf ecosystem, inter-state and regional cooperation are essential to complement and maximize restoration at the landscape scale while identifying opportunities to develop public-private partnerships and leverage technical and scientific expertise. As the State of Louisiana's most consequential sediment diversion proposal to-date, transparent, timely, and inclusive communications are essential to its success.

To that end, we recommend that CPRA and the Corps employ a comprehensive suite of communications tools and engagement approaches to share announcements, educate and engage all interested interstate and regional stakeholders, and solicit broad public input in a coordinated, timely, and transparent manner. These tools could include, but should not be

limited to, public meetings and workshops (virtual/in-person as appropriate), webinars, open houses, electronic newsletters, text messages, and social media platforms.

Audubon appreciates the opportunity to provide comments on the Draft Environmental Impact Statement (DEIS) and Phase 2 Restoration Plan #3.2 for the Mid-Barataria Sediment Diversion, and recommends the approval of the identified preferred alternative, as well as the proposed use of funds from the Deepwater Horizon Oil Spill to implement the project and restoration plan. Without this project, the future of the Louisiana coast, communities, economy, and wildlife is dire. The importance of this project is apparent to our membership, with over 25,000 Audubon members regionally and nationally signaling their support for implementation through the comments portal.

Audubon strongly encourages the implementation of this project and Restoration Plan, ensuring future generations of people and birds can thrive and prosper on the unique and singular landscape of Louisiana's coast.

Sincerely,

Kara Fox

Director, Gulf Coast Restoration

National Audubon Society

Brian Moore

Vice President, Gulf Policy

National Audubon Society

**Concern ID: 61953**

**The public participation process is flawed because the public participation for this proposed Project should extend beyond coastal Louisiana. Expanding certain public participation methods such as media events or environmental NGOs beyond coastal Louisiana would be productive for the proposed MBSD Project. This proposed Project is a great example of one option for restoration after an oil spill and there are likely people beyond Louisiana that have expertise in this field that could be helpful in the public participation process. Ensuring that the proposed Project is able to have the best possible commentary from experts in the field is essential to its success.**

**Response ID: 15897**

The public participation process has been and would continue to be open to all public, agency, and stakeholder input regardless of geographic residence. USACE has provided multiple means for the public to engage in the permit and environmental review processes including providing public notices for the permit application and the scoping process, and for the Draft EIS through Federal Register notices, press releases, newspapers, mail outs to distribution lists, and libraries. Materials and information related to the proposed Project are available on the USACE New Orleans District website, including the Draft EIS at <http://www.mvn.usace.army.mil/Missions/Regulatory/Permits/Mid-Barataria-Sediment-Diversion-EIS/>.

The virtual nature of the public meetings held for the Draft EIS and LA TIG's Draft Restoration Plan in April 2021 allowed participants from any geographic residence to participate in the meetings and provide

---

verbal comments through a internet/web-based conferencing application or by telephone. Approximately 39,303 (out of 40,699) comments on the Draft EIS were received from outside the State of Louisiana.

CPRA and the LA TIG would continue to seek input from the public, agencies, and groups interested in and affected by coastal restoration, including the proposed Project if implemented, and other restoration efforts.

---

**Concern ID: 61965**

**Commenter's recommend that CPRA and the USACE employ a comprehensive suite of communications tools and engagement approaches to share announcements, educate, and engage all interested interstate and regional stakeholders, and solicit broad public input in a coordinated, timely, and transparent manner. These tools could include, but should not be limited to, public meetings and workshops (virtual/in-person as appropriate), webinars, open houses, electronic newsletters, text messages, and social media platforms.**

**Response ID: 15910**

USACE and the LA TIG, including CPRA, acknowledge the suggestions to employ a comprehensive suite of communication tools and engagement approaches to engage all interested stakeholders and would take these suggestions into consideration for future engagement efforts for the proposed MBSD Project. USACE maintains Project materials, including the EIS, on its public website. USACE and LA TIG held virtual public meetings accessible by everyone with access to the internet or a telephone for the Draft EIS and the LA TIG's Draft Restoration Plan to comply with COVID-related restrictions in place at the time. These public meetings allowed verbal comments during the public comment portion in addition to providing multiple ways for a participant to comment. Spanish, Vietnamese, and Khmer translators interpreted the meeting and comments in real time. USACE has engaged with community groups to distribute information and materials about the proposed Project. CPRA has also engaged with communities that would be affected. See Final EIS Chapter 7 Public Involvement for a description of these efforts.

In addition, refer to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 for a description of the adaptive management, governance, and monitoring that CPRA has committed to along with stakeholder engagement during the adaptive management process if the proposed MBSD Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions.

CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

---

**Concern ID: 62801**

---

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62837**

---

**Encouraging the comprehensive and holistic restoration of the Lower Mississippi River would benefit all restoration projects in the region. Coordinating the operation of the proposed Project to work well with other restoration and water management efforts would benefit birds, wildlife, and people.**

**Response ID: 16664**

The Project is part of several comprehensive, coordinated strategies for restoration of Barataria Basin and the surrounding region. First, the Project is contemplated in the PDARP/PEIS, which establishes a comprehensive framework for restoring the northern Gulf of Mexico from impacts from the DWH oil spill. Second, the Project is part of the LA TIG's Strategic Restoration Plan for Barataria Basin, which articulates a comprehensive Restoration Plan for restoring the Barataria Basin. The Project is also a cornerstone project of Louisiana's Coastal Master Plan, the 50 year, \$50 billion scientifically based strategy for restoring coastal Louisiana. Louisiana's Coastal Master Plan projects are selected with an eye toward complementing other restoration efforts, such as the Gulf of Mexico Hypoxia Task Force and the Lowermost Mississippi River Management Program.

The Draft EIS considered coordinating the Project with other restoration and management efforts—specifically CPRA's agreement to implement Conservation Recommendation 3 from the Fish and Wildlife Coordination Report to establish a basin-wide operation and monitoring data repository to ensure operators of other projects can coordinate in an effort to maximize restoration efforts in the basin (see Chapter 5, Section 5.3 [Fish and Wildlife Coordination Act Report Recommendations] of the EIS and Section 6.3 [Data Storage and Accessibility] of the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 to the EIS). These collaboration methods are also included in the Final EIS.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

---

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63336**

**This proposed Project is absolutely crucial for the future of our coast and the safety and livelihoods of our coastal communities.**

**Response ID: 16292**

The commenter's support for the proposed Project is noted. The proposed Project, by reestablishing deltaic processes, is intended to build coastal resiliency and protection for the coastal communities behind Barataria Basin. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

See Sections 3.2.1.6 (Benefits Multiple Resources) and 3.2.1.7 (Public Health and Safety) of the LA TIG's Restoration Plan for a detailed discussion of the proposed Project's potential benefits and public health and safety impacts, respectively.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Concern ID: 63777**

**CPRA should coordinate with not only USFWS, NMFS, and other resource agencies, but also other science, policy-based and community stakeholders, to ensure a broader discussion of management impacts and options.**

**Response ID: 16687**

CPRA and the LA TIG considered the commenters concern in developing the Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the EIS). The MAM Plan includes input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]). The MAM Plan included in the Final EIS (Appendix R2) has been revised in response to public comments. In addition, in response to public comments, CPRA would develop a web-based informational dashboard that would make operational information available to the public through the

internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

With specific regard to the inclusion of scientific expertise, in addition to the expertise within CPRA, the governance provisions of the MAM Plan call for establishing a Technical Focus Group/Peer Review Group with subject matter expertise to provide technical support on long-term Project planning, assist in the evaluation and interpretation of monitoring data and evaluate the state of the science concerning adaptive management. See Section 2.2.2.3 (Technical Focus Group(s)/Peer Review) of the MAM Plan (Appendix R2 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63934**

**Implementing agencies should be adaptive and transparent in how they mitigate impacts to communities. CPRA has done a great job in outreach and the same level of outreach and engagement should continue through construction and Project operation.**

**Response ID: 16581**

CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. Further, CPRA engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA would continue outreach to help ensure that impacted communities become aware and take advantage of the mitigation measures that

---

CPRA would offer if the Project is approved and funded. The MAM Plan also includes particular measures including engagement with stakeholder groups. See Section 2.2.2.2 (Stakeholder Review Panel) of the MAM Plan (Appendix R2 to the Final EIS).

CRCL, NRDC, Earth Justice, Sierra Club

Jay Eickenhorst

"Katy Bar the Door" best expresses my concern that the MBSD will NOT be the preferred alternative for the DEIS.

It is quite clear that hurricane frequency and intensity will increase for the foreseeable future and this project will help reverse the land loss, reinforce storm mitigation systems, restore vital ecosystems and invigorate the regional economy.

Drawing on the funds in the Deepwater Horizon Restoration Plan has already been outlined.

By embarking on this project, the United States will demonstrate to the world that we are committed to addressing the already catastrophic effects of global warming as well as provide a real-world laboratory and an unparalleled opportunity in which every concerned citizen of our planet can watch and participate.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. Sustainable Energy Economy Solutions

Andy Kowalczyk

As someone who advocates for an efficient and reliable electricity system in the state of Louisiana. System resilience has become an increasingly important aspect of planning, which is recognized by the Regional Transmission Organization that Louisiana is situated in. Power outages and hurricanes go hand in hand - - for the first time in MISO history, the Hurricane Laura event triggered a capacity related load shed event. Increasing transmission capacity, and alternative flows of power throughout the state is critical, but the landscape this infrastructure is built on is equally important. A restored coast will help provide energy security through the protection it provides by creating a buffer for extreme weather events, and lowering storm surge. A more protected power grid also means reduced costs, which should translate to lower rates for consumers.

As NOAA cites in their "Billion-Dollar Weather and Climate Disasters" tracker, the state of Louisiana has spent over \$210 billion dollars in damages over 40 years, and the frequency of disasters have increased dramatically in recent years.

A crucial component to restoring the coast is reconnecting the Mississippi River to the surrounding marshes. I support the selection of the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion and support funding the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

Centering community needs in planned mitigation and stewardship efforts should also be a priority. Plans to help communities deal with impacts of the projects should be clearly stated and fully funded. It should be recognized that building support with local communities and recognizing their needs should be foundational to any mitigation efforts. in the region.

---

**Concern ID: 62024**

**Electricity system resilience has become an increasingly important aspect of planning, which is recognized by the Regional Transmission Organization that Louisiana is situated in. A restored coast would help provide energy security through the protection it provides by creating a buffer for extreme weather events, and lowering storm surge. A more protected power grid also means reduced costs, which should translate to lower rates for consumers.**

**Response ID: 16219**

The EIS considers impacts on Public Services and Utilities in Chapter 4, Section 4.13 Socioeconomics. As described, most public services and utilities infrastructure are located inside flood protection, though a few facilities are not. Beneficial impacts on public service infrastructure and utilities are expected in areas distant from the diversion and to the north associated with decreases in storm hazards with the proposed Project as compared to the No Action Alternative.

Additionally, the LA TIG finds that restoration of the coastal environment is intended to build resiliency, including security for infrastructure such as power providers.

---

**Concern ID: 63179**

---

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63341**

**The coastal wetland system creates multiple lines of natural defense from hurricanes and storm surge, and the ongoing wetland loss resulting from the lack of riverine input into the basin has resulted in increased storm risks to local communities (including decreases in property values and impacts to the electrical grid).**

**Response ID: 16300**

The commenter's support for the proposed Project is noted. The commenter correctly notes that coastal wetlands are natural defense against hurricanes and storm surge, and the damage they cause to local communities and infrastructure, as discussed in Chapter 3, Section 3.6 Wetland Resources and Waters of the U.S. of the Draft EIS. The causes of wetland loss in the proposed Project area were discussed in Section 3.6.2 of the Draft EIS, and included subsidence, levees, storms, canals/spoil banks, herbivory, and the DWH oil spill. Chapter 4, Sections 4.6 Wetland Waters and Resources of the U.S. and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS explained how the proposed Project would create and maintain wetlands in the Barataria Basin, and discuss the corresponding impacts on storm surge and flooding.

---

**Correspondence ID:40265**

Lisa Boswell

I have several concerns with this project. When the water rises, how will I be able to access, or depart from, my property. The road will need to be raised. This will cause the water to back up on my property. Will the state be paying to elevate my property. If the land is elevated, I will have less clearance under my house. Will the state be raising my house? If so, will they be paying for all related damages to sheetrock, etc.?

I have an 800 square foot dock with decking that runs under my house at the same level. I have spent thousands on this for my family's enjoyment and recreation. Will The state be raising this as well? What about the sewerage? Will our sinks and toilets back up? Will the state be raising the sewerage system?

I am concerned about the environmental impact from the polluted, "fresh", river water will have on the ecosystem. My wife's greatest joy is to interact with the Dolphins by splashing until they come close enough to pet. This too will be taken from us, as well as being able to catch crab, shrimp, Trout and Red fish from our dock. The main reason I bought the property was to be able to more fully enjoy our great Sportsman's Paradise. I spend a great deal of my annual salary to do so. I would hate to see the value of my investment deteriorate because of this destructive project. I would also hate to see this project destroy my dream. Will there be a buyout plan if my property no longer interests me when I can't do all the things I purchased it for? Will there be an appraisal done before the project starts for the sake of accuracy? I wholeheartedly believe that our coastline should be restored for the safety and enjoyment of our future generations, however, this is not the correct method of restoration. The \$2 billion price-tag is ludicrous! It seems to me that more studies need to be conducted. It seems that dredging/pumping sand in conjunction with rock jetties would be a cheaper, faster, and possible more lasting solution.

The whole design of this project seems to be flawed. There is no back gate to prevent the water from bottling up in the diversion and overtopping the levees when a hurricane comes from that direction. Since there has never been a diversion this size before, we do not even know if the sediment will settle or continue going right on out into the Gulf. The potential devastation to the environment is not worth the risk when there are other viable solutions.

Another monetary concern for myself it that this project jeopardises my 35 year career of seafood restaurant management in Plaquemines Parish. What am I to do if my job goes away due to this project? Will the state be paying my salary and bills? Please, I beg you, lets take a different approach!

---

**Concern ID: 61973**

**Consider dredging the passes (south pass and south east pass) to relieve pressure on rising rivers and let the natural process of building the river there, along with rock jetties along the Louisiana coastline, support growth and protect from oncoming storms. Then use dredging to build up specific areas inland.**

**Response ID: 15974**

This alternative as presented, specifically dredging the passes and building rock jetties to create marsh, would not meet the goals and objectives as stated in the purpose and need and described in Chapter 1, Section 1.4 Purpose and Need and Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives in the EIS. Similar to marsh creation

alternatives (as described in Chapter 2, Section 2.3.5 Large-Scale Marsh Creation), it would not deliver enough fresh water, nutrients, and fine sediments to sustain existing and created wetlands beyond the marsh creation area and over the long-term would require repeated lifts and maintenance through placement of additional dredged material. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

Other similar restoration strategies are being considered for implementation by CPRA in its Coastal Master Plan, which will be updated in 2023, and by the LA TIG through Natural Resource Damage restoration planning.

---

**Concern ID: 62781**

**Although some form of coastal restoration is warranted and necessary for the long-term health of the Barataria Basin, the proposed Project is not the solution.**

**Response ID: 16363**

The commenter's opposition to the proposed Project is noted. As discussed in Chapter 2 Alternatives of the Draft EIS, an alternatives analysis was conducted to identify viable alternatives for the proposed action that would meet the proposed Project's stated purpose and need, as identified in Chapter 1, Section 1.4 Purpose and Need. Alternatives considered, but eliminated from consideration were summarized in Table 2.6-1. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of

---

the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures

contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)

- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62225**

**Plaquemines Parish could experience flooding from the diversion similar to flooding due to the Mississippi River Gulf Outlet. Commenter asked if the diversion would be closed if it causes such flooding.**

**Response ID: 15758**

As described in Draft EIS Chapter 2, Section 2.8 Action Alternatives Carried Forward for Detailed Analysis, the proposed Project design includes earthen guide levees that would be constructed along both sides of the diversion conveyance channel. The portion of the guide levees on the protected side of the New Orleans to Venice Levee system (NOV-NF-W-05a.1) would be designed and built as hurricane and storm damage risk reduction levees against storm surges that may enter the diversion channel. A gated control structure would also be built on the Mississippi River side of the conveyance channel, and the gate would be closed prior to and during storm events. Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discusses the increased flooding impacts potentially caused by the operation of the diversion.

CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties. In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes. A Project servitude would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures

contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62785**

**This type of freshwater and sediment diversion project is unproven and there are uncertainties with respect to what the diversion would do (that is, if it would work and, if so, to what extent).**

**Response ID: 16367**

The Delft3D Basinwide Model projections of future conditions include uncertainties. Uncertainties have been incorporated into the EIS impact conclusions and were briefly summarized in the Draft EIS in Chapter 4, Section 4.1.3.3 in Approach to Evaluation of Environmental Consequences, and in detail in Appendix E Delft 3D Modeling, Section 8.0 Model Limitations and Uncertainties.

Section 4.1.3 Overview of Delft3D Basinwide Model for Impact Analysis of the Draft EIS acknowledged that the outputs of the model are projections generated using defined inputs, often based on historical conditions. Because it is not possible to precisely predict future conditions such as weather patterns and degree of sea-level rise, the model inputs are necessarily based on trends, averages, and best professional judgment as well as reasonable assumptions about future behaviors. Readers of the EIS should not consider the model outputs as absolute values or as predictions of actual future conditions. The outputs are instead used to compare the degree of difference between the impacts projected for each alternative as compared to the projected changes for the No Action Alternative.

In addition to the modeled data, Chapter 4 Environmental Consequences of the EIS includes additional analyses based on published literature and empirical data. USACE and the LA TIG considered the best information and data available to them in drafting the EIS. In response to public comments, a summary of select natural and man-made diversions in southeastern

---

Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary is available in Appendix U of the Final EIS.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The LA TIG recognizes and acknowledges that a controlled sediment diversion of this scale has not been constructed in Louisiana previously. However, a sediment diversion at this location has been extensively studied over several decades with the objective of designing and operating the proposed Project to provide a combination of land building and ecosystem benefits (see Chapter 3, Section 3.2.1.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan). The proposed Project would be monitored and adaptatively managed to meet its objectives (see the Monitoring and Adaptive Management [MAM] Plan, Appendix R2 of the EIS).

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Carroll Erlinger

Its a proven fact, diversion projects we have right now arent working like they were proposed. The little sediment that is built up, one tropical storm or hurricane destroys any progress that was made. Until the coast is built back it will continue to be a losing battle. The only way to build back any land loss is with rocking the coast and dredging to pump sand. Commercial trawlers have been fighting for decades to maintain their livelihoods for years. First with TURTLE EXCLUDER DEVICES (TEDS) in the 80s, diversions and all the other regulations the state and federal government can dream up to put them out of business, this would be the last nail in the coffin for commercial fishermen in the Barataria basin. This is probably a waste of time anyway, once again its all about the money, too many pockets are going to get packed with money from this project, thats the bottom line. The question I have for anyone who will reply, the report says a estimated 30% of the dolphin population will be killed, what about the turtles, I havent heard anything about the turtle population, federal government sure worried about the turtles when it comes to commercial fishermen! Too conclude, I believe I speak for all the commercial fishermen that the affects from this diversion will be detrimental to their livelihoods.

---

**Concern ID: 61973**

**Consider dredging the passes (south pass and south east pass) to relieve pressure on rising rivers and let the natural process of building the river there, along with rock jetties along the Louisiana coastline, support growth and protect from oncoming storms. Then use dredging to build up specific areas inland.**

**Response ID: 15974**

This alternative as presented, specifically dredging the passes and building rock jetties to create marsh, would not meet the goals and objectives as stated in the purpose and need and described in Chapter 1, Section 1.4 Purpose and Need and Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives in the EIS. Similar to marsh creation alternatives (as described in Chapter 2, Section 2.3.5 Large-Scale Marsh Creation), it would not deliver enough fresh water, nutrients, and fine sediments to sustain existing and created wetlands beyond the marsh creation area and over the long-term would require repeated lifts and maintenance through placement of additional dredged material. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

Other similar restoration strategies are being considered for implementation by CPRA in its Coastal Master Plan, which will be updated in 2023, and by the LA TIG through Natural Resource Damage restoration planning.

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on

---

commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62784**

**Prior or proposed diversions and diversion-like projects (including the Caernarvon Diversion, MRGO, Mardi Gras Pass, Maurepas Bonnet Carré Spillway openings) did not work or caused adverse impacts on area resources.**

**Response ID: 16366**

---

The commenter's concern regarding the effectiveness and adverse impacts of existing diversions and diversion-like structures is noted. A summary of select natural and man-made diversions (and diversion-like structures) in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary, which includes discussions on the Caernarvon Diversion, MRGO, Mardi Gras Pass, and Bonnet Carré Spillway, is available in Appendix U of the Final EIS. The Maurepas Diversion is subject to an ongoing NEPA analysis, which is anticipated to be finalized in 2022.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The referenced projects all had unique goals, and, where goals existed, each of those projects have achieved their goals. Those achievements increase confidence in the ability of the LA TIG to set goals and select approaches appropriate for achieving those goals. The proposed Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the current geomorphological features of the Lower Mississippi River, as well as data and knowledge gained from the referenced projects.

---

**Concern ID: 62794**

**This poorly planned and executed proposed Project is being pushed forward for the financial gain of politicians and contractors because taxpayer dollars are being used. Private investment dollars would entail more deliberation and a full impact study, including more natural options with less risk and more overall benefits.**

**Response ID: 16375**

The commenter's opposition to the proposed Project is noted. As discussed in Chapter 1, Section 1.6 Scope of the EIS, this EIS has been developed in accordance with applicable NEPA, CEQ, and USACE regulations and guidance and constitutes a full impact analysis. A variety of alternatives assessed in the EIS are identified in Chapter 2 Alternatives. Because this issue was addressed in the Draft EIS, no related edits have been made to the Final EIS.

If the proposed Project is permitted by USACE and approved by the LA TIG, construction would be funded from funds received from the DWH NRDA settlement, of which approximately \$4 billion was allocated for the restoration of wetlands, coastal, and nearshore habitat, as described in Section 1.1 Background and Summary of the Settlement of the LA TIG's Restoration Plan.

The LA TIG's Restoration Plan evaluated a reasonable range of alternatives under the factors outlined in 15 CFR §990.54. The LA TIG strove to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, avoiding collateral injury, benefiting multiple resources, and protecting public health and safety. See Chapter 3, Sections 3.2.4.7, 3.2.1.5 and 3.2.2.5 in OPA Evaluation of the Alternatives of the LA TIG's Restoration Plan. The LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. Given these tradeoffs, the LA TIG has selected Alternative 1 as the LA TIG's Preferred Alternative.

**Concern ID: 63108**

---

**Commenters questioned how many sea turtles would be killed by the proposed Project.****Response ID: 16409**

In compliance with the Endangered Species Act of 1973, as amended (16 U.S.C. §§ 1531 et. seq.), the NMFS' Biological Opinion on the proposed Project (included in the Final EIS as Appendix O4) c

oncludes the proposed Project is not likely to jeopardize the continued existence of sea turtles and authorizes a "take" for the Project, which is defined as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect, or attempt to engage in any such conduct. In its Biological Opinion, the NMFS authorizes the incidental take of 783 sea turtles per year, including 370 Kemp's ridley sea turtles (including up to 38 mortalities), 319 loggerhead sea turtles (including up to 10 mortalities), and 94 green sea turtles (including up to 9 mortalities). Over the 50-year Project life, this could equate to a take of 39,150 sea turtles (including up to 2,850 sea turtles mortalities).

---

**Correspondence ID:40268**

Josie Lopez

Dear U.S. Army Corps of Engineers, New Orleans District,

Eleven years ago, the Deepwater Horizon exploded, killing 11 people and eventually spilling millions of gallons of oil into the Gulf of Mexico. It became the largest environmental disaster in U.S. history that resulted in the deaths of as many as one million birds.

The oil spill exacerbated a dire land-loss crisis. Since the 1930s, the Barataria Basin, an estuary in southeastern Louisiana near New Orleans, has lost nearly 295,000 acres of land, displacing communities, threatening critical infrastructure and jobs, and devastating habitat for birds and other wildlife. Forty percent of North America's migratory bird species depend on this disappearing habitat.

Barataria Basin was also ground zero for the oil spill, causing wetlands to disappear three times faster than the rest of the state. We now have an opportunity to restore some of the damaged habitat.

I strongly support of the Mid-Barataria Sediment Diversion, the single-largest ecosystem restoration project in the history of the U.S.

Wildlife, fisheries, and beautiful natural places are at risk of complete collapse without large-scale natural infrastructure restoration projects like the Mid-Barataria Sediment Diversion. Natural infrastructure is engineering with nature-restoring and mimicking natural landscapes like wetlands to provide bird habitat, buffer coastal communities against flooding, and absorb carbon pollution—a win-win-win for birds and people.

This project will build more wetlands than any other individual restoration project in the world. By reconnecting the Mississippi River with its marshes, the sediment diversion will mimic the natural spring floods that once replenished the marshes, benefiting birds, wildlife, and fisheries.

This innovative project is a crucial first step in turning the tide on the state's land loss crisis and protecting vulnerable communities from hurricanes and sea-level rise, while also ensuring the long-term health of the ecosystem in the face of a changing climate and coast.

U.S. Army Corps of Engineers, I believe that there is overwhelming public support for restoration of Louisiana's Barataria Basin because Louisiana's coast is in crisis, putting birds and coastal communities at risk. More than 400 species of birds call coastal Louisiana home, and 40% of all migratory birds in North America spend a part of their life in coastal Louisiana. The Mid-Barataria Sediment Diversion is essential to rebuild vital habitats on which these birds depend.

I completely support the preferred alternative as outlined in the draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion. I also support the proposal in the draft Restoration Plan to use funds from the Deepwater Horizon Oil Spill settlement to implement this project, which will help to restore the overall health of the ecosystem that was injured as a result of the oil spill.

With that in mind, I ask the following of the U.S. Army Corps of Engineers and Louisiana Trustee Implementation Group:

\*Select the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion.

\*Fund the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

As the project advances, I urge federal and state decision-makers to consider the following:

\*Commit to developing a robust adaptive management program that incorporates knowledge gained from monitoring the project over time and also considers input from key stakeholders.

\*Work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation, and to be as detailed and transparent as possible throughout the mitigation planning process.

Thank you for considering my comments.

Sincerely,

josie Lopez

El Paso, TX 79912

---

**Concern ID: 61756**

**The proposed MBSD Project sponsors should work proactively and collaboratively with potentially impacted communities to develop ideas and proposals for adaptation and mitigation and be as detailed and transparent as possible throughout the mitigation planning process. Use local non-profits to facilitate any mitigation measures that are decided upon. CPRA and the LA TIG should continue to encourage, accept, and solicit ideas and specific recommendation for mitigation after the June 4 deadline for these comments. The opportunity for continued input to inform the ultimate spending of those funds should also be made very clear publicly. The commenter also urges early action, as possible, before there is damage to mitigate.**

**Response ID: 15891**

CPRA has sought and continues to seek engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-governmental/non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. These efforts have included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including Coastal Connections meetings and use of community non-profit organizations to help ensure that diverse populations are aware of and take advantage of the mitigation and stewardship measures adopted as part of the proposed Project, if implemented. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship

measures that would be implemented as a result of the public involvement and engagement efforts.

In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance if the Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62675**

**Commenters noted that the impacts of the DWH oil spill on wetlands, wildlife, birds, communities, and land loss are still felt by this region and in particular, Barataria Basin**

---

**where 95 percent of the oiling occurred. These impacts are exacerbated by decades of saltwater intrusion, sea-level rise, and subsidence.**

**Response ID: 16497**

The impacts of the DWH oil spill were considered in the Draft EIS. For example, Chapter 3, Section 3.6.2 Wetland Loss of the EIS notes the ongoing impact of the DWH oil spill on wetlands, as well as ongoing saltwater intrusion, sea-level rise, and subsidence. Section 3.10.5.2 Key Fish and Shellfish Species of the EIS provides an overview of the adverse impacts of the oil spill on key aquatic species within the Barataria Basin.

The LA TIG agrees with the commenters that the impacts of the DWH oil spill are significant in this region and thus the LA TIG is committed to continuing to plan and implement significant restoration projects like the LA TIG's Preferred Alternative in the Restoration Plan. The LA TIG's Restoration Plan focuses on restoring wetlands, coastal, and nearshore habitats in the Barataria Basin. These habitats are critical components of the broader northern Gulf of Mexico ecosystem and suffered the greatest degree of oiling in Louisiana due to the DWH oil spill.

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the

---

Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and

---

Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Valerie Palacios

Good evening,

I'm writing in support of the Mid-Barataria Sediment Diversion plan. Although I am not a resident of Louisiana, it is a state I have come to love over the past decade, and I often think about the potential of living here. In my many visits, I have come to especially love the bayou and coastal regions, and the knowledge of its disappearance is devastating. It is one of the most magical feeling places on earth, but how can I move there if its going to be gone in less than 20 years?

I know that this is an essential time to lead and show the world that a robust, adaptive management program is possible! And I hope that you will adopt measures that protect the land and the people I love who live there.

Thanks so much for taking the time to consider a healthy future!

Mississippi Aquarium

Holley Muraco

June 1, 2021

U.S. Army Corps of Engineers

New Orleans District

Attn: CEMVN-ODR-E; MVN-2012-2806-EOO

7400 Leake Avenue

New Orleans, LA 70118

Dear U.S. Army Corps of Engineers:

This letter has been prepared by the Mississippi Aquarium (MSAQ), a 501c3 organization with a dedicated interest in the conservation, research and management of marine mammals, sea turtles, fisheries, water quality, health and ecology of the Mississippi Sound and the Northern Gulf of Mexico. We have reviewed the Draft Environmental Impact Statement (EIS) that has been prepared to disclose and analyze all significant environmental impacts of the Proposed Action as required under the National Environmental Policy Act (NEPA) in accordance with the Council on Environmental Quality's (CEQ) regulations found in 40 CFR Parts 1500-1508. This EIS addresses the Public Interest Review requirements of 33 CFR Parts 320-332 including 33 CFR Part 325, Appendix B, 33 U.S.C. 408 and 40 CFR Part 230 (Section 404(b)(1) Guidelines), so that the EIS, when completed, will provide information required for an informed decision on the DA permit application and Section 408 permission request.

According to 40 CFR 1502.15: "The environmental impact statement shall succinctly describe the environment of the area(s) to be affected or created by the alternatives under consideration, including the reasonably foreseeable environmental trends and planned actions in the area(s). The environmental impact statement may combine the description with evaluation of the environmental consequences (§ 1502.16), and it shall be no longer than is necessary to understand the effects of the alternatives. Data and analyses in a statement shall be commensurate with the importance of the impact, with less important material summarized, consolidated, or simply referenced. Agencies shall avoid useless bulk in statements and shall concentrate effort and attention on important issues. Verbose descriptions of the affected environment are themselves no measure of the adequacy of an environmental impact statement ([www.govinfo.gov](http://www.govinfo.gov))."

In the Executive Summary (ES-5) of the Draft EIS, it was stated: "All areas of the human and natural environment that may be impacted by the proposed Project were considered, including geology and soils; groundwater resources; surface water and coastal processes; surface water and sediment quality; wetland resources and waters of the U.S.; air quality; noise; terrestrial wildlife and habitat; aquatic resources; marine mammals; threatened and endangered (T&E) species; socioeconomics; environmental justice; commercial fisheries; cultural resources; land use and land cover; recreation and tourism; public lands; aesthetic and visual resources; public health and safety, including flood risk reduction and shoreline protection; navigation; land-based transportation; and hazardous, toxic, and radioactive waste."

In the Executive Summary (ES-12) of the Draft EIS, Marine Mammals, it was stated that the only marine mammal stock likely to be impacted by the MBSD Project is the Barataria Bay Estuarine System (BBES) stock of bottlenose dolphins.

In Section 3.11, Marine Mammals, the EIS provided information about common bottlenose dolphin stocks that could be affected by the MBSD Project. This included science explaining why the stocks would or would not be affected. The stocks that were assessed in the EIS included: Barataria Bay Estuarine System (BBES), Terrebonne-Timbalier Estuarine System (TTES), Mississippi River Delta (MRD), and Northern and Western Coastal. The Atlantic spotted dolphin was also included as a potential impacted species.

According to Figure 3.11-1 Geographic Extent of the Northern Gulf of Mexico Stocks Considered in the Proposed Project EIS, page 3-142, a map is presented that shows the regional dolphin stocks. This map includes the Mississippi Sound dolphin stock. The Mississippi Sound BSE (MSS BSE) stock includes all of the Mississippi Sound, Lake Borgne and Bay Boudreau. However, despite showing the Mississippi Sound stock as part of the geographic extent of the EIS, this stock was not included in the EIS.

The latest Mississippi Sound stock assessment published by NOAA in 2017 states that there is insufficient data to determine population trends for the MSS BSE stock. Additionally, from January 11-13, 2021, MSAQ participated in a bottlenose dolphin workshop facilitated by the Marine Mammal Commission ([www.mmc.gov](http://www.mmc.gov)). The goals of the workshop was to enhance conservation of common bottlenose dolphins in Mississippi state waters by fostering collaborations and strengthening capacity for science, management, and marine mammal health. The workshop showed numerous data deficiencies for dolphins in Mississippi including but not limited to unknown trends in abundance, genetic connectivity to dolphins outside of the MS Sound region and biologically meaningful boundaries for demographically independent population of dolphins that utilize MS Sound waters. MSAQ believes that pursuant to 40 CFR 1502.15, the EIS should have included the MSS BSE stock to be potentially impacted and provide the associated necessary documentation as to why or why not this stock could be impacted by the MBSD project.

Although the EIS references studies that support high site fidelity in the Barataria Stock, no comprehensive or comparable studies on site fidelity have been conducted with adjacent stocks including MRD and MSS stocks. MSAQ believes that the MBSD Project should include routine, standardized, line transect, capture mark recapture surveys as well as genetic sampling and tagging efforts in Lake Borgne, Bay Boudreau and Bay Saint Louis regions as part of the stewardship measures. MSAQ also questions if the MSS BSE stocks could experience additional pressure due to displacement or change in prey or movement of dolphins from the MBSD project. Therefore, the MSS BSE stock need to be monitored before and after this project, particularly with a focus on Lake Borgne and Bay Boudreau Region dolphins.

MSAQ also supports the comments made by The Marine Mammal Commission (the Commission), in consultation with its Committee of Scientific Advisors on Marine Mammals, on the Regionwide Trustee Implementation Group's (Regionwide TIG) Draft Restoration Plan/Environmental Assessment #1: Birds, Marine Mammals, Oysters, and Sea Turtles (draft RP/EA), as well as the comments provided regarding the draft EIS.

Sincerely,

Kurt Allen  
President & Chief Executive Officer  
Mississippi Aquarium

---

**Concern ID: 62870**

**Although the EIS references studies that support high site fidelity in the Barataria Stock of bottlenose dolphins, no comprehensive or comparable studies on-site fidelity have been conducted with adjacent stocks including Mississippi River Delta and Mississippi Sound (MSS) stocks. The proposed Project should include routine, standardized, line transect, capture-mark-recapture surveys of bottlenose dolphins, as well as genetic sampling and tagging efforts, in Lake Borgne, Bay Boudreau and Bay Saint Louis regions. In addition, MSS stocks could experience additional pressure due to displacement or change in prey or movement of bottlenose dolphins from the proposed Project. Therefore, the MSS stock needs to be monitored before and after the Project, with a particular focus on Lake Borgne and Bay Boudreau Region dolphins.**

**Response ID: 16678**

The Draft EIS considered the issue raised by commenters in Chapter 4, Section 4.11.5.3 (Operational Impacts - Other Dolphin Stocks Considered), finding it is unlikely the Mississippi River Delta (MRD) stock would be impacted by the proposed Project, either directly from low salinity or other environmental effects (for example, temperature). Hence, the Project would not be expected to impact dolphins or their prey inhabiting those waters. It is not anticipated that dolphins in the Barataria Basin would relocate to the MRD stock area or beyond; therefore, no impact on other Louisiana stocks is anticipated. Therefore, no changes were made to the Final EIS on MRD stock monitoring.

Studies such as the ones suggested by the commenter, including aerial line transect surveys designed to better understand the population structure (for example, abundance, distribution, and density) of the Mississippi Sound, Lake Borgne, and Bay Boudreau dolphin stocks east of the Mississippi River, are being integrated into the permitting and environmental analysis efforts associated with CPRA's proposed Mid-Breton Sediment Diversion Project, currently under USACE permit review through a separate EIS process.

---

**Concern ID: 63072**

**The EIS should include an analysis of the potential impacts of the proposed Project on bottlenose dolphins in the Mississippi Sound.**

**Response ID: 16595**

While Figure 3.11-1 of the Draft EIS showed the distribution of bottlenose dolphin stocks in southeast Louisiana, including the Mississippi Sound Stock, it was not meant to imply that all depicted stocks would be affected by the Project. The figure has been updated to clarify this point in the Final EIS. The Project would divert fresh water, sediment, and nutrients into the Barataria Basin on the western side of the Mississippi River. The Barataria Basin has no hydrological connection to Mississippi Sound, and the Mississippi Sound Stock does not extend into the Barataria Basin, or any other area that would be affected by the Project. Therefore, the Mississippi Sound Stock is not included in the analysis of the impacts of the Project.

**Correspondence ID:40273**

Earl Boswell

This is a very expensive unproven project. The destruction of the oysters, shrimp, speckled trout and dauphins is unacceptable. More land can be built by dredging and pumping sand in conjunction with building rock jetties. This process is much cheaper and faster and longer lasting than a fresh water diversion.

Past experience with fresh water being diverted from the Mississippi river has proven to be bad on the east bank of the river and surely will have a bad impact on Barataria Basin.

Consideration must be given to the lost way of life that will happen to the families that depend on the seafood industry for their lively hood. New Orleans restaurants depend on fresh seafood which could no longer be available at a reasonable price.

In closing please don't kill the bay.

---

**Concern ID: 61973**

**Consider dredging the passes (south pass and south east pass) to relieve pressure on rising rivers and let the natural process of building the river there, along with rock jetties along the Louisiana coastline, support growth and protect from oncoming storms. Then use dredging to build up specific areas inland.**

**Response ID: 15974**

This alternative as presented, specifically dredging the passes and building rock jetties to create marsh, would not meet the goals and objectives as stated in the purpose and need and described in Chapter 1, Section 1.4 Purpose and Need and Chapter 2, Section 2.2.1 in Steps Taken to Identify and Evaluate Reasonable Alternatives in the EIS. Similar to marsh creation alternatives (as described in Chapter 2, Section 2.3.5 Large-Scale Marsh Creation), it would not deliver enough fresh water, nutrients, and fine sediments to sustain existing and created wetlands beyond the marsh creation area and over the long-term would require repeated lifts and maintenance through placement of additional dredged material. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

Other similar restoration strategies are being considered for implementation by CPRA in its Coastal Master Plan, which will be updated in 2023, and by the LA TIG through Natural Resource Damage restoration planning.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD

Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in

the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62078**

**The proposed MBSD Project would cause the loss of Louisiana shrimp, oyster, crab and finfish production which would impact the seafood based supply chain of southern Louisiana, including corresponding impacts on restaurants in New Orleans and southern Louisiana.**

**Response ID: 16243**

The impacts raised by the commenters were considered in the Draft EIS. The EIS acknowledges in Chapter 3, Section 3.14.7 in Commercial Fisheries that the seafood industry represents a major source of jobs and income in Louisiana, which includes commercial harvesters, seafood processors and dealers, seafood wholesalers and distributors, and retail sales. Chapter 4, Section 4.14 Commercial Fisheries discusses regional economic impacts and community impacts on the shrimp, oyster, crab, and finfish fisheries, noting that communities with a high reliance on these landings may be most heavily impacted, and that indirect effects may include impacts to fish license holders, crew, dealers, suppliers, and seafood processors. While availability of shrimp and oysters from the basin would decrease with the Project, shrimp and oysters from Louisiana would continue to be available to restaurants, potentially at higher prices. Restaurants willing to pay a premium for local seafood would likely do so, and additional importing would likely also occur. Under both the Applicant's Preferred Alternative and the No Action Alternative, consumers in Louisiana would experience higher prices for locally caught seafood, or would consume additional imported shrimp over time. However, impacts would occur decades sooner under the Applicant's Preferred Alternative than under the No Action Alternative. This discussion has been added to Section 4.14 Commercial Fisheries in the Final EIS.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS

---

(Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA

---

TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62784**

**Prior or proposed diversions and diversion-like projects (including the Caernarvon Diversion, MRGO, Mardi Gras Pass, Maurepas Bonnet Carré Spillway openings) did not work or caused adverse impacts on area resources.**

**Response ID: 16366**

The commenter's concern regarding the effectiveness and adverse impacts of existing diversions and diversion-like structures is noted. A summary of select natural and man-made diversions (and diversion-like structures) in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary, which includes discussions on the Caernarvon Diversion, MRGO, Mardi Gras Pass, and Bonnet Carré Spillway, is available in Appendix U of the Final EIS. The Maurepas Diversion is subject to an ongoing NEPA analysis, which is anticipated to be finalized in 2022.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The referenced projects all had unique goals, and, where goals existed, each of those projects have achieved their goals. Those achievements increase confidence in the ability of the LA TIG to set goals and select approaches appropriate for achieving those goals. The proposed Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the current geomorphological features of the Lower Mississippi River, as well as data and knowledge gained from the referenced projects.

---

**Concern ID: 62789**

**The cost of designing and building the proposed MBSD Project is too high for a project that has undependable results.**

**Response ID: 16370**

The commenter's opposition to the proposed Project is noted. With respect to the dependability of the future benefits of the proposed Project, the Draft EIS acknowledged that the Delft3D Basinwide Model projections of future conditions includes uncertainties, which are incorporated into the EIS impact conclusions. These uncertainties are briefly summarized in the EIS in Chapter 4, Section 4.1.3.3 in Approach to Evaluation of Environmental Consequences, and in detail in Appendix E Delft 3D Modeling, Section 8.0 Model Limitations and Uncertainties. However, in addition to the modeled data, Chapter 4 - Environmental Consequences -includes analyses based on published literature and empirical data. USACE and the LA TIG considered the best information and data available to them in preparing the EIS. As part of developing the EIS, the USACE, together with the LA TIG, reviewed the Delft3D Basinwide Model, including its parameters, methods of validation and calibration, inputs for the alternative production runs used in the EIS, and outputs, and concluded that the

---

Delft3D Basinwide Model production runs and outputs were adequate and sufficient to inform the EIS impacts analysis of the alternatives.

Consistent with OPA regulations (15 CFR §990.54), the LA TIG's Restoration Plan evaluated multiple alternatives based on a number of criteria, including the cost of the alternative. For more information see Section 3 of the LA TIG's Final Restoration Plan. The costs associated with developing, constructing, and managing the Applicant's Preferred Alternative are discussed in Chapter 3, Section 3.2.1.2 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan.

---

**Correspondence ID:40275**

Simone Maloz

I would like to express my personal support for the selection of the preferred alternative in the Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion. I also support the use of Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan to fund the project.

I grew up in the Barataria and Terrebonne Basins and now live in Jefferson Parish. My friends would hydraslide in the bayou after school, and we spent weekends at friends' fishing camps. Now, our young family has spent many weekends enjoying our Sportsman's Paradise from my son's first fishing trip to playing on the shores of Grand Isle. These wonderful opportunities and this way of life are at great risk if we do not take bold action now. I believe that bold action includes using the river to return our system to a more natural system which built our delta, but with the control afforded through an engineered diversion structure and operational regime as presented by Mid Barataria.

The Mid Barataria project will also provide critical storm surge protection to communities such as mine, but more importantly, to many more vulnerable communities such as Gretna, Harvey, Marrero, and Estelle. According to the CPRA Master Plan viewer social vulnerability map, which includes non-English speaking and natural resources dependent populations, there are a multitude of areas that are medium to high risk socially. We all need to work harder to protect those communities where retreat is not always an option, and by building the Mid Barataria Sediment Diversion, we can work towards those communities' long-term protection.

Working professionally in this space for 16 years, I am not blind to the fact that this project will have both positive and negative impacts for both the short and long term. I do not accept lightly the criticism that the state isn't trying hard enough-while I don't work for the state, I have worked along side them for all of those 16 years and they are taking the bold action needed to stem the devastating land loss this basin has been experiencing for decades. But the state cannot build a sustainable future for our coast alone -the coastal communities must step up to clearly express what their needs are and work towards solutions. Some, but not many, have been willing to have an open dialogue about their future, with or without the project. In the future, we need to find ways to build trust and have that critical dialogue about how we can work together to secure our future.

A critical factor and difference of this project is that mitigation and stewardship is to be funded through the project using post-oil spill dollars; it is not additional funding that needs to be authorized and appropriated. With funding for mitigation and stewardship built into the cost of the project, this is not like previous projects where folks were sold on the idea of something wonderful coming in the future, but the promises were never delivered. With the close of this DEIS comment period, our real-and hardest work- begins on identifying and implementing those mitigation solutions as early as we can. Even a series of pilot projects could go a long way to earn that trust back into the community.

Many people have found flaws in the mitigation proposed so far but the initial \$300 million commitment is TEN TIMES the annual overall budget of the entirety of Plaquemines Parish, not to mention how the DEIS lays out how many jobs will be created through construction. The payroll for those construction jobs, plus every trip to the gas station or sandwich bought

at a local restaurant, rolls over again and again in the community. Having worked on projects such as the \$400 million construction of elevating Louisiana Highway 1 in south Lafourche, I have seen where there can be an economic boom for the local community from everything to the post office to laundromats to housing and beyond. We should be working with the community to identify future needs of this workforce, including:

- providing adequate emergency and routine medical care for workers
- facilitating the start and growth of small business to provide services to this workforce
- educating skilled workers who can later pivot to other jobs along our coast long after construction is complete
- ensuring our transportation systems can handle a construction project of this magnitude (ie will the Belle Chasse bridge be constructed and how will this project impact traffic counts, tolling, etc.), and
- safeguarding our community resources like sewage, water, broadband etc. to make sure it can handle construction impacts in both the short and long term.

Finally, what is the future of our coastal communities without the project? The scenario laid out in the DEIS is dire, and in a future without action scenario, there is no guaranteed \$300 million to help the people of these communities. Dredging, while important in the short term, is terribly more expensive and does not provide sustainability. Even our most robust levee protection cannot take hit after hit from hurricanes or storms, like our previous record-setting hurricane season, and predictions are extreme weather will only increase in the future. How will our wildlife acclimate to these devastating storms, sea level rise and increased, intruding salinities? We simply do not have another decade to research suitable alternatives to replace the Mid Barataria, and even so, funding would in no way be guaranteed.

In summary, growing up in Louisiana and working professionally in this space for 16 years has also allowed me an extraordinary opportunity to understand how important-and vulnerable-the Barataria Basin is. I understand that for all the wonderful benefits this project provides, including a sustainable future, there will be negative impacts in both the short and long term to some. But I am willing to work the rest of my life to making sure that Louisiana remains a place where my children, and their children, can grow and thrive... and for me, that means, supporting the Mid Barataria Sediment Diversion and working towards its successful implementation.

---

**Concern ID: 61931**

**Commenters noted that the proposed MBSD Project will provide critical storm surge protection to vulnerable communities such as Gretna, Harvey, Marrero, and Estelle. According to the CPRA Master Plan viewer social vulnerability map, which includes non-English speaking and natural resources dependent populations, there are a multitude of areas that are medium to high risk socially. These communities need to be protected where retreat is not always an option, and by building the Mid-Barataria Sediment Diversion, it can work towards those communities' long-term protection.**

**Response ID: 16284**

The commenter's support of the Project is acknowledged. The EIS Chapter 4, Section 4.15 Environmental Justice acknowledges that low-income and minority populations in

---

communities north of the proposed diversion and inside of federal flood protection would experience some beneficial impacts related to additional protection from storm hazards as land building reduces storm surge and wave heights. Chapter 4, Section 4.20 Public Health and Safety provides additional information about storm hazard reduction afforded by creation and maintenance of wetland habitat within the diversion outfall area.

---

**Concern ID: 61956**

**Commenters suggested [USACE and/or CPRA] carefully listen to those impacted by the diversion and have constructive dialogue between stakeholders and CPRA. They recommended to commit sufficient funding and resources necessary to those impacted to sustain their lives and livelihood throughout the diversion process.**

**Response ID: 15902**

Public input is an integral part of the NEPA process, the OPA process, and the DWH oil spill restoration planning effort. USACE and the LA TIG undertook a coordinated and concurrent public review process for the EIS and the LA TIG's Restoration Plan. Allowing submission of comments on either document to the same locations provided commenters a "one-stop shop" and was done to reduce confusion by commenters about where to direct their comments regarding the MBSD Project. Additionally, this ensured the LA TIG reviewed and considered all relevant comments to both the Restoration Plan and the Draft EIS in its decision-making process. USACE and LA TIG each provided public outreach and comment opportunities throughout the development of the EIS and the LA TIG's Restoration Plan. Details on this outreach can be found in Chapter 7 Public Involvement in the Final EIS.

Since the release of the Draft EIS and the LA TIG's Draft Restoration Plan, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-profit organizations to assist with and facilitate meetings with the impacted communities and groups. This included deploying several tools and forms of outreach to solicit feedback on mitigation and stewardship measures. Meeting formats included small group briefings, one-on-one individual discussions, open-house style meetings, and virtual webinars. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. Refer to the Final Mitigation and Stewardship Plan in Appendix R1 for mitigation and stewardship measures that would be implemented as a result of the public involvement and engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures

---

are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62022**

**The Draft EIS lays out how many jobs would be created through construction and the proposed Project would also bring desperately needed jobs and economic growth. Plaquemines Parish, where the proposed Project would be constructed, and the surrounding region - including Orleans and Jefferson Parishes - would expect to see a significant economic boost.**

**Response ID: 16218**

The EIS describes the jobs impact from the construction of the diversion in Chapter 4, Section 4.13.4.2 in Socioeconomics. The EIS finds that moderate to major, temporary economic benefits are anticipated from proposed Project construction.

---

**Concern ID: 63188**

**One comment noted, in reference to the adequacy of the mitigation funds, that the initial amounts committed are 10 times the annual budget of Plaquemines Parish.**

**Response ID: 16563**

The Draft EIS contained a Mitigation and Stewardship Plan in Appendix R1. The Final Mitigation and Stewardship Plan is published as Appendix R1 to the Final EIS. CPRA expanded and refined the Final Mitigation and Stewardship Plan (Appendix R1) in response to community and resource agency input.

According to CPRA, its budget for mitigation and stewardship measures, to be potentially funded by the LA TIG, reflects the needs that were identified through the environmental review and many public meetings. See the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) for additional information on mitigation funding allocations. The Plaquemines Parish budget was not considered by CPRA in determining the budget for the stewardship and mitigation and stewardship measures.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in

---

those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63194**

**The Draft EIS and Draft Restoration Plan seem to indicate CPRA and other entities will only begin performing mitigation when they have proof of impact. Instead, they should help communities begin to adapt throughout construction so adaptations will be in process as the MBSD operation begins.**

**Response ID: 16566**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) contained information on steps that would be taken before Project construction to protect fisheries. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS, including specifying mitigation and stewardship measures that would be undertaken before Project construction (see Appendix R1 to the Final EIS for additional details). For example, the Final Mitigation and Stewardship Plan outlines the structural mitigation and stewardship measures that CPRA plans to implement in the communities south of the diversion outside of levee protection (Myrtle Grove to Happy Jack/Grand Bayou) prior to beginning Project operations.

Structural measures such as raising roads or improving bulkheads in the Mitigation and Stewardship Plan were not included in CPRA's MBSD DA permit application and are not part of the currently-proposed MBSD Project. Many of these structural measures would require USACE and other permits prior to installation. No applications have been filed with USACE. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of

---

potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 64089**

**Commenters asked that the jobs that are created by construction of the proposed Project spur inclusive and equitable economic development. The Louisiana State and local economic development authorities should focus efforts through communication, recruitment, and training activities, into creating jobs for local residents, including minority residents. The same type of focused workforce development effort is likely necessary in order for these local jobs to translate into longer term economic benefits for affected communities. Work with the community to identify future needs of this**

---

**workforce, including: providing adequate emergency and routine medical care for workers, facilitating the start and growth of small business to provide services to this workforce, and educating skilled workers who can later pivot to other jobs along our coast long after construction is complete.**

**Response ID: 16234**

With respect to the award of contracts, CPRA is required to follow the provisions of the Louisiana Public Bid Law, including those contained in Title 39, Chapter 17 (the Louisiana Procurement Code) and in Title 38, Chapter 10 (Public Contracts). CPRA has sought and regularly seeks engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS.

---

**Concern ID: 64090**

**Commenters request assurance that their community resources like sewage, water, broadband etc. can handle construction impacts in both the short and long term.**

**Response ID: 16232**

The EIS considers impacts to local public services and utilities within the 10-parish Project area in Chapter 4, Section 4.13.5.5 Public Services and Utilities in Socioeconomics. As described, construction of the proposed Project would not affect electric power plants or water supply or treatment facilities, as none are located in the Project construction footprint. Beneficial impacts on public service infrastructure and utilities are expected in areas distant from the diversion and to the north associated with decreases in storm hazards with the proposed Project as compared to the No Action Alternative. Additionally, the LA TIG finds in its Restoration Plan that restoration of the coastal environment is intended to build resiliency including security for infrastructure.

---

**Concern ID: 65169**

**The commenter expressed concern that construction of the proposed Project would impact the construction of the Belle Chasse Bridge. Commenter questioned whether and how the proposed MBSD Project would impact transportation systems, for example traffic counts, tolling, etc.**

**Response ID: 16493**

The impacts on area traffic from the proposed Project were considered in the Draft EIS. During the 5-year construction period of the Project, CPRA estimates that construction truck deliveries would generate up to 100,100 roundtrips to the diversion complex via LA 23 during the construction period, with the majority of truck deliveries (approximately 94,000) occurring during the first 42 months (3.5 years) of proposed Project construction. This equates to an estimated 515 truck deliveries per week over this duration, or about 103 roundtrips each day

based on a 5-day workweek. This would represent less than a 2 percent increase in the existing daily traffic of 9,300 vehicles. Much of the truck traffic may travel across the Belle Chasse Bridge en route to the proposed MBSD Project site on LA 23. Because proposed MBSD Project-induced increased traffic would only increase LA 23 traffic by 2 percent above existing traffic levels on LA 23, the proposed Project is not expected to cause more than a minor increase in traffic on the bridge, and therefore is not expected to impact the construction timeframe or future tolling system of the Belle Chasse Bridge. Chapter 4, Section 4.22 (Land-Based Transportation) and Section 4.25.22 Cumulative Impacts, Land-Based Transportation provide more details on traffic studies and traffic impact analyses conducted for the proposed MBSD Project.

---

**Correspondence ID:40278**

Rebecca Davison

Please Restore The Mississippi River Delta and support the Mid-Barataria Sediment Diversion. This is the cornerstone project for Louisiana's Coastal Master Plan! We need to restore the natural process of delta building in the Barataria Basin. If we do not invest in our future now we will lose 400 square miles of wetlands over the next 50 years as sea levels rise.

This project will provide incredible habitat and storm surge protection for communities, including the West Bank of New Orleans. It will give us natural green infrastructure to help buffer the states failing levee systems.

We must not give in to commercial fisheries who thrive off of the collapsing ecosystem of Louisiana as saltwater creeps towards New Orleans. We must not allow short term profit to blind us from long term economic growth, which will come from the improved health of our wetlands. What happens in Louisiana affects the rest of the world. Our actions do not take place in a bubble.

Be a beacon of hope, a leader in protecting the Mississippi River Delta. Our lives and our land depend on you.

Thank you,

Rebecca Davison

---

**Concern ID: 61870****If no action is taken, the resources may suffer even greater impacts in the future, along with the local ecology, economy, communities, and culture.****Response ID: 15941**

The concerns raised by the commenters were considered in the Draft EIS. The EIS evaluates anticipated conditions in the Barataria Basin if no action is taken. Within the EIS, the No Action Alternative enables a comparison of anticipated future conditions without the proposed Project to anticipated future conditions with the proposed Project and the alternatives. Refer to Chapter 4 Environmental Consequences of the EIS, for a description of anticipated conditions under the No Action Alternative for each of the resource areas evaluated. The Delft3D Basinwide Model was used to forecast conditions that would occur under the No Action Alternative which helped to inform the analysis in Chapter 4.

---

**Concern ID: 62233****Restoration of coastal habitat and the delta would provide protection from storm damage.****Response ID: 15752**

While the intent of the proposed Project is to reestablish deltaic processes to restore resources injured by the DWH oil spill, the Draft EIS Chapter 4, Section 4.20.4.2 Public Health and Safety described the ancillary benefit of storm damage risk reduction on communities north of the proposed diversion due to the creation and maintenance of wetland habitat and increases in topography and land acreage within the delta formation area. At the same time, operation of the Project would have permanent, minor to moderate, adverse impacts on storm hazards in communities south of the diversion, with anticipated increases in storm surge of up

to 1.7 feet near Myrtle Grove (as compared to the No Action Alternative). Section 4.20.4.2.2.2 in Public Health and Safety of the Final EIS has been revised to include additional information and figures further explaining the impacts of the Project on storm surge and wave height

---

**Concern ID: 62399**

**Commenter asserts that short-term profit in the form of commercial fisheries that thrive off the collapsing ecosystem as saltwater moves north should not detract from long-term economic growth which will come from the improved health of our wetlands.**

**Response ID: 15923**

As part of its decision-making process for the DA Section 10/404 permits, the USACE will conduct a public interest review in which the probable harms of the proposed Project will be weighed against its prospective benefits. Also as part of that process, USACE will consider public comments on the Draft EIS.

With respect to its Restoration Plan, the LA TIG acknowledges the commenter's concern that potential impacts to commercial fisheries not override the benefits that would be provided by the Project. In selecting their Preferred Alternative, the LA TIG evaluated a reasonable range of alternatives under the factors outlined in 15 CFR §990.54 of the NRDA regulations. The LA TIG strove to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, avoiding collateral injury, benefiting multiple resources, and protecting public health and safety. See Sections 3.2.4.7, 3.2.1.5, 3.2.2.5 of the LA TIG's Final Restoration Plan. As suggested by the commenter, the LA TIG has found that a project can harm species also harmed by the spill and still be an appropriate project. This is especially true for projects like sediment diversions that seek to reestablish deltaic processes that shaped the historic delta ecosystems and necessarily entails Mississippi River flows that were cut off by construction of levees. The LA TIG recognize that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. Given these tradeoffs, the LA TIG selected Alternative 1 as the Preferred Alternative in the Final Restoration Plan.

---

**Concern ID: 63334**

**The proposed MBSD Project would maintain and restore coastal lands and should move forward.**

**Response ID: 16291**

The commenter's statement of support is acknowledged. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

**Correspondence ID:40279**

Joshua Plourde

Please support support of the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion in the Corps' Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's (TIG) Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2.

As the foundational project for Louisiana's Coastal Master Plan and of the Natural Resource Damage Trustees from the Deepwater Horizon oil spill this project will provide habitat and storm surge protection for communities, including the West Bank of New Orleans. Restoring the Barataria Basin gives a natural green infrastructure to help buffer and support an aging levee system, which needs all the help it can get!

This is the project that will restore the natural process of delta building in the Barataria Basin. The Barataria Basin has lost 425 square miles of wetlands since 1935, and will lose over 400 more square miles over the next 50 years due to sea water rise if action is not taken now!

Do Not pander to the commercial fisheries who want to profit off of the collapse of Louisiana's ecosystem, which is allowing oysters and brown shrimp to thrive in our salt polluted waters. DO Not let short term profit destroy the state's natural resources and hurricane buffer!

Sincerely,

Joshua Plourde

---

**Concern ID: 63333**

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40280**

Commenter

My family and I disapprove of the proposed injection of Mississippi River water into the barataria basin. The annual floods that built the area as you know subsided and the river water maintained its boundaries. I do not think the wildlife, plant life should be subjected to a constant supply of polluted fresh water. The diversion will only make the water unfishable to Comercial and recreational fisheries as well. If we can limit the flow and obtain direct injection of River bottom material like queen bess and others. Let's rebuild our islands first.... this will help restrict the salt intrusion.... please please reconsider this.

---

**Concern ID: 61970**

**The only alternatives in the EIS are diversions at different flow rates. The EIS has not listed other possible methods on building land in the Barataria Basin. One alternative is to study the creation of barrier islands and compare the result with the diversion alternative. Also consider fortifying the barrier islands with sheet piles, boulders, and rocks, and dam all pipeline canals and washed-out marsh openings with concrete dams.**

**Response ID: 15972**

The Draft EIS considered barrier islands as a functional alternative to the proposed Project. This alternative was determined not to meet the purpose and need. Refer to Chapter 2, Section 2.3.4 in Step 1: Evaluation of Functional Alternatives of the EIS for details on why this alternative was eliminated from further analysis in the EIS. While barrier islands play a critical role in reducing land loss, they are not intended or designed to transport sediment, fresh water, or nutrients.

Past investments through a multitude of restoration programs have resulted in the restoration of every major barrier island in the Barataria Basin. CPRA's Coastal Master Plan includes programmatic barrier island restoration to support future maintenance of the restored islands. However, CPRA has stated that fortifying barrier islands with hard structures is not feasible.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process,

USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public

---

interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Midway Cattle Ranch, L.L.C.

Christopher Vance

On March 5, 2021, the United States Army Corps of Engineers published the draft Environmental Impact Statement for the Proposed Mid-Barataria Sediment Diversion Project, Plaquemines Parish, Louisiana ("Draft EIS"). Midway Cattle Ranch, L.L.C. ("Midway") submits the following comments on the Draft EIS.

**Background**

Midway owns an approximately 569 acre tract of property at [REDACTED] in Plaquemines Parish. Located on the property is the Myrtle Grove Borrow Site, which has been in operation since 2011. Midway supplies borrow material from the site for public and private projects. Midway's property is located within the construction footprint of the proposed Project. As proposed in the Draft EIS, the conveyance channel would run directly through Midway's property. According to materials received from CPRA, approximately 146 acres of Midway's property would be impacted by excavation of the conveyance channel. The entirety of Midway's property would be impacted by increased water levels and flooding which would result from construction of the Project.

**Comments:**

CPRA's plan to excavate Midway's borrow material and use it for the Project

The Draft EIS makes clear that CPRA plans to use the material excavated for the conveyance channel to construct the diversion complex structures and conveyance channel levees. Draft EIS, Section 2.8.1.3, p. 2-62 ("Channel excavation would provide the volume necessary for embankment construction, such that outside sources of material would not need to be imported to the site for the embankments."); Draft EIS, Section 4.2.3, p. 4-16 ("Most of the material excavated or dredged for the conveyance channel and outfall transition feature would be used for fill associated with construction of the diversion complex structures and conveyance channel levees."). This means that CPRA is not simply acquiring a right of way for purposes of constructing and operating the Project. Instead, CPRA also plans to use Midway's borrow material to construct the Project, which will impact Midway's operations on the property by preventing Midway from excavating and selling the same borrow material, in a manner consistent with its current operations. Thus, when compensating Midway for the acquisition of Midway's property rights, CPRA must take into account the value of the borrow material. To the extent Midway's compensation does not reflect the value of the borrow material that will be excavated and used by CPRA, the Draft EIS underestimates the direct impact that the Project will have on Land Use and Socioeconomics.

Appendix H of the Draft EIS titled "Socioeconomics Technical Report" provides information relevant to the analysis of potential impacts to socioeconomic resources resulting from the Project. Appendix D to Appendix H, titled "Economic Impact of the Design and Construction of the Mid-Barataria Sediment Diversion Project" includes a breakdown of the cost estimates for the design and construction of the Project. This appendix does not clearly set forth the cost/value of the borrow material that CPRA will excavate from Midway's property and use for the Project. Without this information, the Draft EIS does not accurately analyze the impacts of the Project on socioeconomics.

#### Incorrect characterization of Midway's property

Chapter 4, Section 4.18 of the Draft EIS classifies Midway's property as a mix of "barren" and "pasture/hay." Draft EIS, Figure 4.18-1. This classification is incorrect. Midway is currently operating a borrow site on approximately 250 acres of the property. For the remaining acreage, Midway has an application pending with the Louisiana Department of Natural Resources, Office of Coastal Management for a coastal use permit to operate this acreage as a borrow site. The inaccurate classification of Midway's property in Section 4.18 is highlighted by the fact that, elsewhere in the document, the Draft EIS actually refers to Midway's borrow site by name. Draft EIS, Section 4.2.4.1 (discussing impacts on the transport of materials from the "Myrtle Grove USACE-approved borrow site" due to LA 23 modifications). Thus, Midway's property should be classified as "Developed" in Section 4.18. As such, any impacts to Midway's property should be based on this classification.

Chapter 4, Section 4.13 of the Draft EIS addresses the impacts of the Project on Socioeconomics. Section 4.13.4.2 addresses the impacts on agricultural lands within the construction footprint of the Project. Draft EIS, Section 4.13.4.2, p. 4-535. However, this section fails to address the impacts to Midway's property and its borrow material business as a result of the construction of the Project.

#### Impacts to Midway's property from increased water levels and storm surge

Even for the areas of Midway's property that will not be excavated to construct the Project, the Draft EIS makes clear that these areas will be impacted by increased water levels. Midway's property is located in the "immediate outfall area" in which area the Draft EIS states "[o]perational impacts on water levels...would be permanent, adverse, and range from major to minor, depending on the location in the basin, with maximum increases of 1.1 foot in the immediate outfall area." Draft EIS, Executive Summary, p. ES-8. The Draft EIS also states that the Project will impact storm surge. In particular, the Draft EIS states that increases in storm surge of up to 1.7 feet are expected near Myrtle Grove, which is located 0.5 miles south of the Project. Draft EIS, Executive Summary, p. ES-19. Further, the days per year of tidal flooding in the Myrtle Grove area are expected to increase from 62 to 181. Draft EIS, Section 4.20.4.2. The Draft EIS acknowledges that "[t]he greatest impacts on surge elevation and wave heights are projected to occur within the vicinity of the MBSD Project immediate outfall area," which is the precise location of Midway's property. Draft EIS, Executive Summary, p. ES-19. The Draft EIS does not specifically quantify the storm surge increase in this area and therefore does not adequately address the impacts of storm surge on Midway's property. However, it is clear that such impacts will be significant.

The property must be drained and dry in order for Midway to process and load borrow material. The increased water levels and tidal flooding caused by the Project will severely impact Midway's ability to continue to operate its property to harvest and sell borrow material. CPRA must compensate Midway for such impacts taking into account the reduction in property value from the reduced ability to continue to operate its property to harvest and sell borrow material. To the extent Midway's compensation does not reflect the reduction in property value from the reduced ability to sell borrow material, the Draft EIS underestimates the direct impact that the Project will have on Land Use and Socioeconomics.

#### Impacts to Midway's property from increased traffic on LA 23 and modifications to LA 23

Section 4.2.4.1 discusses the impacts that may occur as a result of increased construction traffic on LA 23 and modifications to LA 23. This section provides:

Similarly, temporary, minor, adverse indirect impacts on the transport of materials from the ConocoPhillips and Myrtle Grove USACE-approved borrow site locations for HSDRRS projects may occur due to LA 23 modifications. Any future use of channel bars in the Lower Mississippi River as borrow areas for coastal restoration projects in the vicinity of the intake channel, cofferdam, or gated control structure would be precluded during construction and operation of the Applicant's Preferred Alternative. However, because users could potentially use other borrow sources in the area, this would represent a temporary, minor, adverse impact.

Draft EIS, Section 4.2.4.1, p. 4-45. Thus, while the Draft EIS evaluates the potential impacts to Midway's customers, the Draft EIS does not evaluate the impacts that will be caused to Midway's business. For example, traffic delays caused by road construction would impair Midway's ability to move trucks into and out of its site. The Draft EIS should fully address the impacts to Midway's business as a result of increased traffic on LA 23 and modifications to LA 23.

Comments on cumulative impacts analysis

As part of the cumulative impacts analysis, the Draft EIS analyzes impacts from the NOV-NF-W-05a.1 levee project. Draft EIS, Section 4.25.4.4. This section discussed the re-alignment of the levee in the vicinity of Midway's property that would occur under the proposed NOV-NF-W-05a.1 project. This section acknowledges: "The existing non-federal back levee...would be left in place, creating a new polder [Polder B] between it and the NOV-NF-W-05a.1 levee reach where water would be trapped during storm surge overtopping events." This section acknowledges further that hydraulic modeling indicates that "during storm surge events in the Barataria Basin that overtop the back levee, a scenario is possible where Polder B would be completely inundated, requiring dewatering." Draft EIS, Section 4.25.4.4, p. 4-848. Midway's property is located within the "Polder B" identified in the Draft EIS. Because the Draft EIS fails to accurately classify Midway's property as a "developed" borrow site, the Draft EIS does not accurately evaluate the cumulative impact to Midway's property resulting from the operation of the Project in conjunction with the levee alignment.

Also as part of the cumulative impacts analysis, the Draft EIS identifies 50 reasonably foreseeable future projects located in the vicinity of the Project. Draft EIS, Table 4.25.1-1. 10 of those projects are privately funded (listed as "Major Industrial"). It is reasonably foreseeable that certain of these private projects will require the use of borrow material for project features. In fact, Midway has been approached multiple times by representatives for certain of these private projects to provide price quotes for the sale of borrow material for the projects. Thus, USACE's cumulative impacts analysis supports the conclusion that a private market for borrow material exists. The private market should be considered in valuing Midway's property for purposes of compensating Midway for the acquisition of Midway's property rights. In addition, the public market for borrow material should also be considered when valuing Midway's property, particularly given that CPRA plans to use Midway's property for the same purpose as Midway uses the property for its own business (i.e., as a source of borrow material).

We appreciate the opportunity to comment on the Draft EIS.

---

**Concern ID: 62025**

Appendix H of the Draft EIS titled “Socioeconomics Technical Report” provides information relevant to the analysis of potential impacts to socioeconomic resources resulting from the proposed Project. Appendix D to Appendix H, titled “Economic Impact of the Design and Construction of the Mid-Barataria Sediment Diversion Project” includes a breakdown of the cost estimates for the design and construction of the proposed Project. This appendix does not clearly set forth the cost/value of the borrow material that CPRA will excavate from Midway’s property and use for the proposed Project. Without this information, the Draft EIS does not accurately analyze the impacts of the proposed Project on socioeconomics.

**Response ID: 16221**

The commenter’s concern regarding ensuring appropriate compensation for any property owner whose property is acquired or taken as part of the proposed Project is acknowledged. As part of any property acquisition to implement the proposed Project, CPRA would compensate landowners for property used for the Project in accord with Louisiana and Federal law, including the Louisiana Constitution and the Fifth Amendment of the U.S. Constitution.

---

**Concern ID: 62297**

The Draft EIS does not specifically quantify the storm surge increase in the Midway Cattle Ranch area and therefore does not adequately address the impacts of storm surge on Midway’s property. However, it is clear that such impacts would be significant.

**Response ID: 15804**

While the EIS does not describe storm surge impacts at the parcel level, it does provide an analysis of impacts to storm surge elevations and wave heights in comparison to the levee heights which provide storm risk reduction to such parcels. For example, Figure 4.20-24 in Chapter 4, Section 4.20.4.2 Public Health and Safety of the Draft EIS showed projected storm surge and wave height in comparison to levee heights in the vicinity of Midway’s property. As shown in the figure and described elsewhere in Section 4.20.4.2, the proposed Project would decrease storm surge elevation north of the diversion, decreasing the risk associated with overtopping of the levee in the vicinity of Midway’s property. However, it should be noted that, as described in Section 4.20.4.2, some storms are projected to overtop this reach of the NOV-NFL Levee, both with or without the proposed Project.

---

**Concern ID: 62449**

The commenter expressed concern that the Draft EIS Section 4.25.4.4 Cumulative Impacts - Surface Water and Coastal Processes, does not disclose the potential impacts of projected flooding in the “Polder B” area on Midway’s property, which is a developed borrow site.

**Response ID: 16468**

The potential impacts of flooding in “Polder B” were considered in the Draft EIS in Chapter 4, Section 4.25.4.4 Cumulative Impacts - Surface Water and Coastal Processes. In response to this comment, Section 4.25.13.4 Cumulative Impacts - Socioeconomics of the Final EIS has been revised to include a statement about the potential socioeconomic impact on the Polder

---

B area and the Midway property due to the flooding associated with the reasonably foreseeable NOV-NF-W-05a.1 Project.

---

**Concern ID: 63098**

**Commenter asserted that the compensation evaluation for Midway should consider public market and value of borrow material.**

**Response ID: 16637**

As part of any property rights acquisition from Midway to implement the Project, CPRA would compensate landowners for the value of any property interest acquired in accordance with applicable law. Determining the appropriate amount that CPRA would pay for property it acquires for the Project is outside of the scope of the USACE EIS process and the LA TIG's OPA Restoration Plan.

---

**Concern ID: 63130**

**Commenters noted that the Draft EIS classified Midway's property as a mix of "barren" and "pasture/hay" (see Figure 4.18-1). They believe that this classification is incorrect as Midway is currently operating a borrow site on approximately 250 acres of the property. For the remaining acreage, Midway has an application pending with the Louisiana Department of Natural Resources, Office of Coastal Management for a coastal use permit to operate this acreage as a borrow site. However, elsewhere in the Draft EIS (see Chapter 4, Section 4.2.4.1 in Geology and Soils), the Midway borrow site is referenced by name. Thus, Midway's property should be classified and assessed as "developed" in Section 4.18 Land Use and Land Cover.**

**Response ID: 16279**

As discussed in Chapter 3, Section 3.18.2 in Land Use and Land Cover and referenced in Chapter 4, Section 4.18 Land Use and Land Cover, Figure 4.18-1 of the EIS, the existing land use types within the construction footprint are based on the 2016 National Land Cover Dataset (NLCD) (Multi-Resolution Land Characteristics Consortium 2016). The construction footprint shown in Figure 4.18-1 includes the proposed site of the diversion structure. None of the permitted or developed borrow pits owned by Midway Cattle are located in the construction footprint of the diversion structure and therefore they are not included in the land use acreages shown in Table 4.18-1 or land use types shown in Figure 4.18-1. Note, the NLCD is based on land cover including water, vegetation, or tree canopy; therefore, it may not reflect current use of land. The Myrtle Grove USACE-approved borrow site referred to in Section 3.2.3.1 Non-Fuel Mineral Resources and in Section 4.2.3.4 in Mineral Resources of the Draft EIS is located near the proposed construction footprint. For clarity, its name has been revised to the Midway Cattle Ranch borrow pit in the Final EIS.

---

**Concern ID: 63719**

**The valuation of any properties acquired for the construction of the Project should account for the value of borrow materials that could be excavated and sold by the owners of these properties.**

**Response ID: 16512**

As part of any property rights acquisition to construct the Project, CPRA would compensate landowners for the property interest acquired in accordance with applicable law. Determining the appropriate amount that CPRA would pay for properties and rights it acquires for the

Project is outside of the scope of the USACE EIS process and the LA TIG's OPA Restoration Plan.

---

**Correspondence ID:40282**

Gary Smith

my question for the park service is the following: when the Morganza spillway was built, it diverted the natural flow of water from the Louisiana marsh. it also diverted the natural sediment that the marsh needs to maintain itself.

why is the morganza spill way not being opened to allow the natural flow of water so it can deposit sediment.

I do not oppose this project but I am tired of flood water being diverted to Mississippi ruining our fishery when the natural flow of water is suppose to flow through the Louisiana Marsh.

---

**Concern ID: 62394**

**When the Morganza Spillway was built, it diverted the natural flow of water from the Louisiana marsh and the sediment the marsh needs to maintain itself. The commenter asks why the Morganza Spillway is not being opened to allow the natural flow of water so it can deposit sediment.**

**Response ID: 15856**

Comment noted. The operation of the Morganza Spillway is outside the Project area and the scope of this EIS. The scope of this EIS is limited to areas in which the Project is expected to have more than negligible effects on the environment, particularly the Barataria Basin and the Mississippi River birdfoot delta in Louisiana.

Louisiana Trustee Implementation Group (LaTIG) c/o of NOAA

Re: Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

Mr. Laborde and Mr. Landry:

I support the preferred alternative: alternative 1, Flow variable 75,000 CFS under certain conditions. I think the preferred alternative should be implemented when the communities surrounding Barataria Bay can establish resilient, secure economies.

Many towns surrounding Barataria Bay are economically reliant on commercial fishing. These towns are Buras, Venice, and Lafitte among others. Over the past two decades the commercial fishing industry in Louisiana has experienced multiple economic shocks that it has not recovered from. This has left families and communities with little savings making them vulnerable to future hardship. The applicant's preferred alternative is expected to have major, permanent adverse impacts on oysters and brown shrimp which are some of the largest commercial fisheries in the Barataria Bay. Without a proper course of action the preferred alternative could be the tipping point that collapses the coastal economies. At a very general level the preferred alternative should be implemented when:

- 1.) Low income, vulnerable fishing communities see a rebound in their profitability to a point where they can financially prepare for the sediment diversion.
- 2.) There is a somewhat agreed upon strategy for coastal communities to be prosperous and resilient within the new ecosystem

Given my work with fisheries, my comments will be focused towards item one above.

#### Shrimp

A likely outcome of the applicant's preferred alternative is a significant decline of the brown shrimp population within the project area as stated multiple times throughout the draft environmental impact statement (DEIS). The applicant's proposed mitigation measures for commercial shrimpers does not address the adverse impact that will be experienced by inshore fishers who rely on brown shrimp as a significant source of income. Therefore, LA TIG should offer targeted mitigation for this specific group.

A large portion of the shrimping fleet fish in smaller boats that are restricted to the inshore waters of Barataria Bay. The Louisiana Shrimp Management Plan indicates that juvenile shrimp leave the shallow nursery grounds into deeper estuaries, and eventually into coastal waters as they grow larger (LDWF 2016). Additionally, the plan states that the majority of brown shrimp landings occur in the smaller, juvenile size, around 40 shrimp per pound (LDWF 2016). From this we can infer that a majority of brown shrimp is being caught in the upper estuaries in smaller sizes. On the other hand, landings of white shrimp of 16-20 count

per pound comprised the largest component of white shrimp landed between 2000 and 2013 (LDWF 2013). A significant portion of white shrimp is being caught further offshore at a more valuable size. The boats being used to catch brown shrimp are smaller and restricted to the inshore waters. Therefore, the diversion will greatly hurt shrimpers who fish in smaller boats and rely on brown shrimp because they will not be able to offset their losses by catching more white shrimp in offshore waters. Given the large amount of 40 count brown shrimp being landed, it seems fair to say that this is a significant portion of the fishers that will be hurt.

The mitigation measures for shrimpers set forth in Appendix R section 6.3.3 of the DEIS such as vessel refrigeration, and marketing will greatly benefit the shrimp industry. However, it may not provide enough for fishers who heavily rely on inshore brown shrimp. Vessel refrigeration may not be compatible with smaller boats, and marketing will likely not offset the losses from the large decrease in brown shrimp. Additional mitigation options for inshore shrimpers could be:

- 1.) offering assistance that will help inshore shrimpers catch different commercial species. This assistance should be anything from training to grants for gear.
- 2.) Opening up red drum for commercial fishing specifically for the most vulnerable shrimpers. As stated on pages 4-391 through 4-394, red drum is expected to see moderate, beneficial impacts with the applicant's preferred alternative. If commercial fishing will not deplete the red drum stock, then it would be an excellent way to provide fishers with an additional source of income.
- 3.) Offer the most vulnerable shrimpers funding for a larger boat that can fish offshore.

Although the above mitigation efforts will help shrimpers, the decrease in brown shrimp and potential transitioning to other species will disrupt the shrimp supply chain. Dealers and processors are already experiencing low and negative profit margins, so this could put many out of business. LA TIG needs to work with these businesses to help them adapt to the new ecosystem. An option could be to provide docks and processors with the resources necessary to take on other commercial species.

Trip ticket data can be used to identify the most vulnerable shrimpers. Ideally the data can identify fishers whose brown shrimp was caught in the upper estuaries and represents at least 20% of their total commercial seafood landings by value. The data may not be aggregated to this level, so targeting fishers with vessel lengths under 25 feet and brown shrimp landings over 20,000 pounds in Barataria Bay may be a better option.

#### Cold Storage

Many businesses in Louisiana's seafood supply chains are experiencing low to negative profit margins. This is particularly true for the shrimp industry. The anticipated adverse effects on brown shrimp from the sediment diversion may force businesses to exit the industry due to unprofitability which would leave many without jobs. A way to offset this could be to offer funding for fisheries to invest in cold/ freezer storage.

The Louisiana seafood industry is lacking freezer/ cold storage facilities. This is causing inefficiencies that are preventing businesses from being able to adapt to economic shocks.

Providing funding for the shrimp industry, in particular, to invest in cold storage facilities can potentially be a key driver in helping fisheries become more resilient.

Storage facilities will allow seafood businesses to have more flexibility with their products. In the shrimp supply chain, businesses have to take whatever price they can get from buyers because they have no way of selling to higher paying customers who need a consistent supply before the product spoils. If there was more storage, then processing facilities and other businesses along the supply chain would be able to market their larger sized white shrimp to these higher paying customers. Additionally it will allow facilities to hold shrimp while prices are low and sell when they go up.

Storage facilities will allow the industry to decrease costs associated with transportation and increase the quality of the seafood. There are businesses that are storing seafood in Baton Rouge and other cities, and then ship it back when they have a buyer. This is highly inefficient and cuts into profits. Additionally, seafood that is chilled or frozen for longer between the time it leaves the water to when its on a plate is going to have higher quality, and therefore, be worth more.

### Oysters

The mitigation efforts for the oyster industry laid out in appendix R section 6.3.3 of the DEIS along with the initiatives in the oyster management and strategic plan provide a significant amount of resources that will help the industry adapt to the changes brought on by the sediment diversion. Despite this, there are oyster fishers whos leases will become unproductive as a result of the changes in salinity and fecal coliform densities.

Specialized mitigation should be given to economically vulnerable oyster fishers with leases that have a high probability of becoming unproductive as a result of the sediment diversion. In this context, economically vulnerable oyster fishers have lower incomes and are at higher risk of becoming unprofitable. In chapter four page 4-407 it was indicated that oysters in the mid-basin areas, such as Station B. Bay North GI, will be most adversely affected. It seems rational to give oyster fishers who heavily rely on leases in this area additional leases in an area that will be productive with the diversion such as those in the Breton Bay public seed grounds. Another option could be to offer these individuals priority in startup assistance for Alternative Oyster Culture (AOC).

### Technical assistance/ Workforce Development

Many fishers in the Barataria Bay have historically been cut off from financial tools and other resources necessary to pursue economic opportunity. This is due to illiteracy, a lack of technological understanding, and more. Without access to knowledge and resources, it will be very difficult for fishers to adapt to the preferred alternative. Therefore, La TIG should provide technical assistance with grant programs and such, business consulting, and career advice to low income fishers who will have trouble adapting to the diversion.

### Conclusion

The mitigation measures in Appendix R offer great avenues to create a more resilient restored coastal economy. However, there are still some gaps in the plan that will potentially devastate the significant portion of low income fishers. Please consider filling these gaps and

allowing the fishing industry and coastal communities time to become more economically stable before implementing the sediment diversion.

Sincerely,

Max St. George

---

**Concern ID: 61929**

**Commenters expressed that southeast Louisiana’s fisheries-dependent residents have endured more overlapping disasters in one generation than anyone can reasonably expect of a community. They have suffered the levee breaches of Hurricane Katrina, the DWH oil spill’s ongoing impacts on fish stock, the historic flood events of 2019, and COVID-19. Many of these same fishers have also survived forced refugee flight from Southeast Asia. Fishing is not just their livelihoods-it’s their lives. One commenter suggested that at a very general level the Applicant’s Preferred Alternative should be implemented when low-income, vulnerable fishing communities see a rebound in their profitability to a point where they can financially prepare for the proposed MBSD Project.**

**Response ID: 16280**

As noted in the purpose and need, the proposed Project is intended to support coastal restoration projects. Such projects may reduce the impacts of tropical events such as hurricanes and associated flooding. Without the Project, adverse impacts on commercial shrimp, oyster, crab, and certain finfish fisheries are anticipated due to reduced marsh habitat and increased salinity over the long term (that is, 50 years), but more rapidly after 2050 for shrimp and oyster, as discussed in Chapter 4, Section 4.14 Commercial Fisheries. It is anticipated that as the coastal areas, including wetlands in the Barataria Basin, continue to erode, communities would be increasingly vulnerable to environmental disasters and the economic effects of declining fisheries. While the proposed Project would not stop subsidence and sea-level rise and associated impacts in the Barataria Basin, by 2070, the proposed Project is projected to create approximately 13,400 acres of land in the Barataria Basin and result in the loss of 3,000 acres of land in the birdfoot delta as compared to the No Action Alternative.

CPRA has expanded and refined its Mitigation and Stewardship Plan, Appendix R1 to the Final EIS, since publication of the Draft EIS and LA TIG’s Restoration Plan based on community and resource agency input. The mitigation and stewardship measures now provide additional detail regarding specific efforts targeted at assisting low-income and minority populations in addressing the potential impacts of the Project.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are

identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Concern ID: 62963**

**Mitigation compensation should prioritize those most affected, likely those who rely on oyster leases in the mid-basin areas or smaller operations, as well as economically vulnerable oyster fishers.**

**Response ID: 16533**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers as compared to No Action conditions in Chapter 4, Sections 4.10 Aquatic Resources, 4.14 Commercial Fisheries, 4.15 Environmental Justice and 4.16 Recreation and Tourism.

In response to public comments and resource agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined the oyster mitigation and stewardship measures. CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to oyster fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for oysters in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to oyster fisheries in the early years of the Project's operational life. The revised mitigation and stewardship measures include allocating \$4 million to establish new public seed ground, \$15 million to enhance public and private oyster grounds, \$4 million to create or enhance broodstock reefs and \$8 million for alternative oyster culture. While the focus of the proposed mitigation and stewardship measures are on establishing sustainable fisheries, oyster mitigation and stewardship measures have been crafted to focus on those impacted by the Project specifically. For example, a portion of each of the stewardship measures for impacts to oyster harvesters would be expressly designated for use by low-income and minority oyster harvesters. See the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

---

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSF Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

---

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as

special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Concern ID: 63144**

**A commenter recommended that additional cold storage in the seafood supply chain is needed.**

**Response ID: 16526**

CPRA's Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included vessel refrigeration as a proposed measure to address the anticipated impacts of the Project. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1), including allocating \$15 million for vessel and facility improvements. This funding could be used to provide additional cold storage, as suggested by the commenters.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

---

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Concern ID: 63148**

**Commenter prefers implementation of alternative 1 (75k diversion) only when the low-income fishing communities surrounding Barataria Bay have established resilient, secure economies given their reliance on the commercial fishing industry. The commenter recommended emphasis on support for low-income, vulnerable communities and the need for a strategy for resiliency in the future ecosystem.**

**Response ID: 16708**

The commenters' request that the implementation of the proposed Project occur only once the low-income fishing communities surrounding Barataria Bay have established secure and resilient economies is acknowledged.

While the Draft EIS acknowledged that oyster and brown shrimp fisheries would be adversely impacted by the proposed Project, it also concludes that the Project would create and maintain wetlands, and increase the abundance of SAV, that would provide refugia, foraging, and resting habitats, including essential fish habitats that support multiple managed species (see Chapter 4, Section 4.10 Aquatic Resources of the EIS). In addition, while the proposed Project would have minor to moderate increases in storm surge in areas south of the diversion, it would also help reduce the impacts of storm surge on communities north of the diversion by creating and nourishing coastal marshes that would provide natural storm protection; see Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Reduction of the EIS for more details. The proposed Project is projected to have some temporary, moderate to major, beneficial impacts on the regional economy expected as a result of construction related spending, as described in Section 4.13 Socioeconomics of the EIS. Fishing communities in the Barataria Basin may experience some of these benefits.

As explained in the analysis of the No Action Alternative in the EIS and Section 1.6 (No Action Alternative) of the LA TIG's Restoration Plan, conditions in Barataria Basin would continue to deteriorate and destabilize under the No Action Alternative. While the proposed Project would not stop subsidence and sea-level rise and their associated impacts in the Barataria Basin, the proposed Project is projected to create and/or maintain approximately 12,700 acres of wetland by the year 2070 when compared with the No Action Alternative. In its Restoration Plan, the LA TIG has determined that slowing land loss in the Barataria Basin is essential to the overall ecological and economic sustainability of the Basin. More specifically, the proposed Project would help nearshore marine ecosystems, water column resources (including fish and invertebrates), and birds and terrestrial wildlife.

In recognition of the potential impacts that would occur due to the proposed Project, CPRA included mitigation and stewardship measures to address vulnerable communities in the Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS). In response to public comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review,

---

Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40288**

Rosa deSayne

My name is Rosa deSayne and my comment is that, if this diversion goes through, it will destroy Plaquemines Parish fishing, shrimping, oysters, and it will destroy many people's lives. It will also flood the community that I'm in, Myrtle Grove, and by sending water over our little levee and into our streets. If they think that they can mitigate our homes with 300 million, I seriously doubt that, considering just my street alone, is over close to 4 million dollars' worth of homes so like I said I am totally against it. You will destroy the southern part of Plaquemine parish and in 50 years' no one knows what's going to go on. There is an alternative to it; we're going to show you this. We will have a documentary and also one of the other things is that you're going to kill our beautiful dolphins and you cannot mitigate dolphins after they're dead.

Thank you very much

---

**Concern ID: 62778****Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on affected communities from flooding impacts, access issues, and cultural changes.****Response ID: 16360**

The commenter's opposition to the proposed Project is noted. The Draft EIS discussed impacts to the local communities from the proposed Project in Chapter 4, Section 4.13 Socioeconomics including Community Cohesion in Section 4.13.5.6. Consistent with the concern of the commenter, the Draft EIS did find potential minor to moderate, long-term adverse impacts on community cohesion from the proposed Project compared to the No Action Alternative. In addition, Sections 4.13 Socioeconomics and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction discuss the increased flooding impacts, including potential flooding of homes outside of federal levee systems potentially caused by the operation of the diversion.

In Myrtle Grove, CPRA would improve the bulkhead around the Myrtle Grove Marina Estates Subdivision to reduce the incidence of tidal flooding in that community. In other communities from Woodpark to Happy Jack south of the Project site outside levee protection, CPRA would elevate the roadways and make other infrastructure improvements to maintain access and utilities within those communities. In addition, CPRA plans to acquire Project servitudes from landowners in these communities (Woodpark, Deer Range, Suzie Bayou, Hermitage, Happy Jack and Grand Bayou) whose property is projected to be impacted by increased water levels due to Project operations. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would compensate those landowners for the Project servitude. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. These property owners would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

---

The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also

---

anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62781**

**Although some form of coastal restoration is warranted and necessary for the long-term health of the Barataria Basin, the proposed Project is not the solution.**

**Response ID: 16363**

The commenter's opposition to the proposed Project is noted. As discussed in Chapter 2 Alternatives of the Draft EIS, an alternatives analysis was conducted to identify viable alternatives for the proposed action that would meet the proposed Project's stated purpose and need, as identified in Chapter 1, Section 1.4 Purpose and Need. Alternatives considered, but eliminated from consideration were summarized in Table 2.6-1. The USACE is evaluating

---

the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 62785**

**This type of freshwater and sediment diversion project is unproven and there are uncertainties with respect to what the diversion would do (that is, if it would work and, if so, to what extent).**

**Response ID: 16367**

The Delft3D Basinwide Model projections of future conditions include uncertainties. Uncertainties have been incorporated into the EIS impact conclusions and were briefly summarized in the Draft EIS in Chapter 4, Section 4.1.3.3 in Approach to Evaluation of Environmental Consequences, and in detail in Appendix E Delft 3D Modeling, Section 8.0 Model Limitations and Uncertainties.

Section 4.1.3 Overview of Delft3D Basinwide Model for Impact Analysis of the Draft EIS acknowledged that the outputs of the model are projections generated using defined inputs, often based on historical conditions. Because it is not possible to precisely predict future conditions such as weather patterns and degree of sea-level rise, the model inputs are necessarily based on trends, averages, and best professional judgment as well as reasonable assumptions about future behaviors. Readers of the EIS should not consider the model outputs as absolute values or as predictions of actual future conditions. The outputs are instead used to compare the degree of difference between the impacts projected for each alternative as compared to the projected changes for the No Action Alternative.

In addition to the modeled data, Chapter 4 Environmental Consequences of the EIS includes additional analyses based on published literature and empirical data. USACE and the LA TIG considered the best information and data available to them in drafting the EIS. In response to public comments, a summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary is available in Appendix U of the Final EIS.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The LA TIG recognizes and acknowledges that a controlled sediment diversion of this scale has not been constructed in Louisiana previously. However, a sediment diversion at this location has been extensively studied over several decades with the objective of designing and operating the proposed Project to provide a combination of land building and ecosystem benefits (see Chapter 3, Section 3.2.1.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan). The proposed Project would be monitored and adaptatively managed to meet its objectives (see the Monitoring and Adaptive Management [MAM] Plan, Appendix R2 of the EIS).

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship,

---

monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62951**

**CPRA must address how it will mitigate flooding in the EIS with specific plans and adequate funding. Commenters specifically asked whether there will be funding available to raise roads, homes, and properties; to compensate property owners for lost property value; to relocate people and businesses; to address increases in flood insurance costs; to provide a fair market buyout option; to pay for flood walls, gates, and maintenance; to compensate for loss of use and enjoyment of property; and to cover increased costs of providing emergency services.**

**Response ID: 16711**

Impacts associated with inundation raised by the commenters were considered in Chapter 4, Section 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS and in Appendix R1 Mitigation and Stewardship Plan. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Concurrent with publication of the Draft EIS, CPRA held several meetings with the communities potentially affected to receive their input on how best to mitigate the Project effects on water levels. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation and stewardship measures. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of

---

the mitigation and stewardship measures. CPRA also plans to prepare outreach materials in easy to read and understand formats for distribution to the public.

Based in part on the feedback received, CPRA expanded the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection. This includes a combination of structural measures (for example, raising roads, boat houses, docks, and utilities) and non-structural measures (for example, Project servitudes).

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plans to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision, which would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions if the proposed Project were not constructed.

In communities south of the diversion outside levee projection from Woodpark south to Grand Bayou and Happy Jack, CPRA plans to raise the road to improve access to the properties and purchase Project servitudes from property owners that would permit CPRA to add and/or increase the water flow on landowners' properties. CPRA would attempt to negotiate with the landowners to acquire this servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to acquire these servitudes and would compensate landowners for the value of any property interest acquired. Landowners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures.

CPRA also may consider purchasing an impacted property outright if requested by the owner. Decisions regarding buyouts would be made on a case-by-case basis depending on the particular circumstances. These potential measures are described in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

As part of developing the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), CPRA considered the possibility of installing a flood gate for the Myrtle Grove community. CPRA decided not to pursue this option for several reasons. While some property owners in the Myrtle Grove Marina Estates Subdivision have suggested a flood gate, others do not support a flood gate due to the impacts that such a structure would have on immediate accessibility to the Barataria Basin. CPRA also considered a flood wall, but again,

community members were not aligned regarding this potential solution, with some objecting to a flood wall on the grounds that it would block access to the basin. CPRA has developed instead other structural mitigation and stewardship measures to address the projected impacts of the proposed Project on water levels and boat accessibility in the Final Mitigation and Stewardship Plan.

The Final EIS concludes that the proposed Project would not impact the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3 in Socioeconomics and Section 4.15.4 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63826**

**Commenters suggested that no one will be able to mitigate dolphin impacts if Project activities kill them.**

**Response ID: 16551**

The stewardship measures described in the Mitigation and Stewardship Plan are intended for implementation prior to and during diversion operations. Although these measures may not minimize impacts from the proposed Project on BBES dolphins, they could enhance individual

---

dolphin survival threatened by other anthropogenic sources, such as by funding a state-wide stranding program (the current funding of which is set to expire in 2026; see Appendix R1 to the EIS).

Regarding the operation of the diversion, CPRA also developed a detailed MAM Plan to evaluate the proposed MBSD Project's effects on the Barataria Basin as they occur and consider how the management of the diversion may be adapted to better meet Project goals (see Appendix R2 [Monitoring and Adaptive Management Plan] to the EIS). In addition to performance monitoring to measure progress toward the proposed MBSD Project's restoration objectives, and to better understand the ecological functions and services provided by habitat created by the Project, the Monitoring and Adaptive Management (MAM) Plan also includes monitoring to document changes to the abundance, distribution, population demography, density, survival, health and reproduction of the BBES Stock of bottlenose dolphins, their prey, and their habitat that may result from the operation of the Project and resulting low salinity.

Adaptive management strategies in CPRA's MAM Plan to minimize impacts to BBES dolphins from Project operations include a framework for coordinating stranding response activities during operations, and a commitment to evaluate whether diversion operations could be modified to meet Project goals while reducing impacts to marine mammals. Marine mammal related MAM activities have been updated since the release of the Draft EIS to include more details regarding the process through which operational data would be used to evaluate potential modifications to those strategies and protocols.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40289**

Colleen Dufor

My name is Colleen Dufor. I'm totally against the Mid-Barataria Diversion. It will destroy Plaquemines Parish and our culture and seafood industries. There is another way to accomplish coastal restoration by dredging and building land. This will not take 50 years.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional

---

Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement.

---

Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. **Correspondence ID:40290**

Wayne Martin

My name is Wayne Martin. I believe that dredging and pumping the sediments where it is needed to rebuild wetlands and I believe that the sediment and freshwater diversions are used to maintain them. A diversion takes too long, changes the natural bays and channels, as well as disrupts the food chain and will destroy the seafood industry. We already dredge 90 million cubic yards of sediments from the Lower Mississippi for transportation purposes and just waste those sediments; half the cost is already being spent just building infrastructure that can move those sediments to where they're needed. For every 1 million cubic yards of sediment, you can build 1 square mile of the wetlands. It's + 3.0 elevation.

Theoretically, we could build 90 square miles of new wetlands each year with half the cost already being spent for dredging of the river that is already being paid for. Use a map from the 1950s, restore the shorelines, bays and bayous, and canals back to their former locations, as well as bring the marshes back to a +3.0 elevation. Primarily work from the intercostal canal going southwards. It is a shame that we're wasting 90 million cubic yards of sediment that are being dredged by the Corps of Engineers each year and not being used for beneficial purposes. When the current sediment content of the river is dropping each....(call dropped)

**Correspondence ID:40291**

Jessica Savoy

My name is Jessica Savoy. I am totally against the Mid-Barataria diversion. It will destroy Plaquemines Parish in which I live. It will also affect my camp which is another home for me. Our land will be underwater there. There are other ways to accomplish coastal restoration. Dubai was built on boulders and mud. You can put rock jetties; you can dredge existing canals and build up the land. Those do not take 50 years. Also what about the seafood industry? You will kill local businesses that rely on the inland water for their living. Only the big companies will survive. The Mississippi River has a natural dead zone where it meets the Gulf. You'll expand that tenfold.

What about our dolphins? I have have enjoyed them since I was a kid; I enjoyed bringing my children to see them. I love sharing that experience with my kids. It will be gone. Y'all are going to completely change our precious diversity of fish life. Y'all are going to destroy human lives, animal lives, because y'all have a hypothesis of what water will do, but you can't guarantee it; because it's not going to do just what you say, we're not an experiment. I absolutely do not want this diversion built. It's ridiculous, but y'all won't listen to us, the people...(call dropped)

---

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable alternatives, which is a requirement that the Draft EIS does not meet. Consider analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and

Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of "marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats" (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG's Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land

---

building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62778**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on affected communities from flooding impacts, access issues, and cultural changes.**

**Response ID: 16360**

The commenter's opposition to the proposed Project is noted. The Draft EIS discussed impacts to the local communities from the proposed Project in Chapter 4, Section 4.13 Socioeconomics including Community Cohesion in Section 4.13.5.6. Consistent with the concern of the commenter, the Draft EIS did find potential minor to moderate, long-term adverse impacts on community cohesion from the proposed Project compared to the No Action Alternative. In addition, Sections 4.13 Socioeconomics and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction discuss the increased flooding

---

impacts, including potential flooding of homes outside of federal levee systems potentially caused by the operation of the diversion.

In Myrtle Grove, CPRA would improve the bulkhead around the Myrtle Grove Marina Estates Subdivision to reduce the incidence of tidal flooding in that community. In other communities from Woodpark to Happy Jack south of the Project site outside levee protection, CPRA would elevate the roadways and make other infrastructure improvements to maintain access and utilities within those communities. In addition, CPRA plans to acquire Project servitudes from landowners in these communities (Woodpark, Deer Range, Suzie Bayou, Hermitage, Happy Jack and Grand Bayou) whose property is projected to be impacted by increased water levels due to Project operations. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would compensate those landowners for the Project servitude. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. These property owners would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or

will possess the requisite property interest to undertake the activity proposed in the application.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently

---

contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62781**

**Although some form of coastal restoration is warranted and necessary for the long-term health of the Barataria Basin, the proposed Project is not the solution.**

**Response ID: 16363**

The commenter's opposition to the proposed Project is noted. As discussed in Chapter 2 Alternatives of the Draft EIS, an alternatives analysis was conducted to identify viable alternatives for the proposed action that would meet the proposed Project's stated purpose and need, as identified in Chapter 1, Section 1.4 Purpose and Need. Alternatives considered, but eliminated from consideration were summarized in Table 2.6-1. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 62785**

**This type of freshwater and sediment diversion project is unproven and there are uncertainties with respect to what the diversion would do (that is, if it would work and, if so, to what extent).**

**Response ID: 16367**

The Delft3D Basinwide Model projections of future conditions include uncertainties. Uncertainties have been incorporated into the EIS impact conclusions and were briefly summarized in the Draft EIS in Chapter 4, Section 4.1.3.3 in Approach to Evaluation of Environmental Consequences, and in detail in Appendix E Delft 3D Modeling, Section 8.0 Model Limitations and Uncertainties.

Section 4.1.3 Overview of Delft3D Basinwide Model for Impact Analysis of the Draft EIS acknowledged that the outputs of the model are projections generated using defined inputs, often based on historical conditions. Because it is not possible to precisely predict future conditions such as weather patterns and degree of sea-level rise, the model inputs are necessarily based on trends, averages, and best professional judgment as well as reasonable assumptions about future behaviors. Readers of the EIS should not consider the model outputs as absolute values or as predictions of actual future conditions. The outputs are instead used to compare the degree of difference between the impacts projected for each alternative as compared to the projected changes for the No Action Alternative.

---

In addition to the modeled data, Chapter 4 Environmental Consequences of the EIS includes additional analyses based on published literature and empirical data. USACE and the LA TIG considered the best information and data available to them in drafting the EIS. In response to public comments, a summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary is available in Appendix U of the Final EIS.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The LA TIG recognizes and acknowledges that a controlled sediment diversion of this scale has not been constructed in Louisiana previously. However, a sediment diversion at this location has been extensively studied over several decades with the objective of designing and operating the proposed Project to provide a combination of land building and ecosystem benefits (see Chapter 3, Section 3.2.1.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan). The proposed Project would be monitored and adaptatively managed to meet its objectives (see the Monitoring and Adaptive Management [MAM] Plan, Appendix R2 of the EIS).

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62790**

**Diversion of polluted and nutrient-laden waters into the Barataria Basin would result in harmful algal blooms (HABs) and expansion of the dead zone.**

**Response ID: 16371**

The impacts raised by the commenters were considered in the Draft EIS. As discussed in the EIS, Chapter 4, Section 4.5 Surface Water and Sediment Quality, while increases in both nitrogen and phosphorus concentrations in the Barataria Basin are projected by the Delft3D Basinwide Model to occur as a result of proposed Project operations, monthly dissolved oxygen concentrations are not projected to fall below the water quality criterion of 5 mg/L at the six stations evaluated in the basin over the 50-year analysis period.

According to USEPA's Mississippi River/Gulf of Mexico Hypoxia Task Force "Hypoxia 101" webpage, hypoxic waters have dissolved oxygen concentrations of less than 2 to 3 mg/L. Hypoxia can be caused by a variety of factors, including excess nutrients and waterbody stratification (layering) due to saline or temperature gradients. The hypoxic zone in the Gulf of Mexico is a result of excess nutrients from the Mississippi/Atchafalaya River and seasonal stratification (layering) of waters in the Gulf. As nutrient-laden water from the Mississippi flows into the Gulf, this fresh water is less dense and remains above the denser saline seawater. In addition to the saline gradient caused where the fresh water and saline water meet, the fresh water is warmer than the deeper ocean water, further contributing to the stratification. This stratification prevents the mixing of oxygen-rich surface water with oxygen-poor water on the bottom of the Gulf. Without mixing, oxygen in the bottom water is limited and the hypoxic condition remains. In the Gulf hypoxic zone "water near the bottom of the Gulf contains less than two parts per million of dissolved oxygen" (<https://www.epa.gov/ms-htf/northern-gulf-mexico-hypoxic-zone#:~:text=The%20hypoxic%20zone%20in%20the,condition%20referred%20to%20as%20hypoxia.>)

Dissolved oxygen concentrations associated with the Applicant's Preferred Alternative are projected to generally increase in the Barataria Basin during the modeled period as compared to the No Action Alternative, which would decrease the potential for hypoxia to occur. Further, vegetative growth projected by the Delft3D Basinwide Model to occur due to Project operations is expected to utilize the nutrients diverted from the Mississippi River, resulting in lower concentrations of nutrients occurring in the Barataria Basin and reaching the Gulf through Barataria Bay than would reach the Gulf through the Mississippi River. As mentioned in Section 4.5.5.1 in Surface Water and Sediment Quality of the EIS, the majority of the Barataria Basin is shallow and not typically prone to stratification that promotes hypoxic conditions. The shallow nature of the Barataria Basin allows for full water column mixing by wind and tidal action, reducing the opportunity for algae to establish to the extent that would cause hypoxia. The Delft3D Basinwide Model's dissolved oxygen results do not suggest that Project implementation would result in oxygen concentrations below the 5 mg/L water quality criterion in Barataria Basin. To make this clearer in the Final EIS, language indicating that the Delft 3D Basinwide Model results do not suggest that a significant hypoxic zone will form in Barataria Basin due to project implementation has been added to Section 4.5.5.5.2 in Dissolved Oxygen of the Final EIS. Furthermore, as explained in Section 4.25.5.2 of the Cumulative Impacts section of the EIS, if the Mid-Breton Sediment Diversion is permitted, the combined impact of Mississippi River diversions operating simultaneously may reduce nutrient flow from the river to the Gulf, having a beneficial impact on the Gulf of Mexico hypoxic zone.

Aquatic resource impacts associated with algal blooms (caused by excess nutrients such as nitrate and phosphate) are addressed in Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS. A reference to this section has been added to Sections 4.5.5.3.2 and 4.5.5.4.2 of the Final EIS. Finally, the EIS acknowledges the potential for up to major adverse Project impacts from harmful algal blooms to occur, and that the formation of these blooms is not well understood by the scientific community (see Section 4.26.4 in Additional Considerations in Planning).

Appendix R2 Monitoring and Adaptive Management (MAM) Plan of the EIS includes monitoring of nutrients, as well as phytoplankton species composition (including harmful cyanobacterial/algal bloom species) in the Barataria Basin during Project operations to guide CPRA's management actions.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

James Adams

One word... Morganza!! Use the spillway that is already there! I fish regular in Lafitte and Cocodrie LA. That diversion would literally destroy the industry in Lafitte. Shrimpers and crab fisherman would be out of business, what tourist come there from out of town to fish are there for trout and redfish. Both would be pushed out of the area. On the other hand Cocodrie is in dire need of sediment from the river. They have even begged for it. Open the morganza an give them some help! That also means we are not destroying our own marine wildlife by constantly using the Bonnie Carre which also helps the marine wildlife in Pontchartrain.. It's win win blows my mind that this is even being debated. The only reason morganza isn't being used it's because high profile people have land/clubs in the area that would get flooded from time to time.

---

**Concern ID: 61902****Consider opening the Morganza Spillway instead of implementing the proposed MBSD Project.****Response ID: 15995**

The Morganza Spillway, operated by USACE for emergency flood control, discharges into the Atchafalaya Basin. The scope of this EIS is the Barataria Basin and the Mississippi River birdfoot delta, which is the defined proposed Project area. This suggested alternative would not meet the purpose and need to reestablish sustainable deltaic processes between the Mississippi River and the Barataria Basin. The LA TIG identified the Barataria Basin in the SRP/EA #3 as the location for the proposed Project because within Louisiana, the Barataria Basin suffered the most severe and persistent oiling from the DWH oil spill. This suggestion would not provide any land-building benefits in the Barataria Basin because it is located outside of the basin. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

---

**Correspondence ID:40293**

Plaquemines resident

This diversion is more of the same type of promises just like the Mississippi River Gulf Outlet (MRGO) that promised jobs & commerce & was permitted & dug by a width of 250 feet with bridge piers built on dry land through St. Bernard Parish by the USACE promising jobs & commerce but that destroyed St. Bernard & Orleans as well as flooding parts of St. Tammany & Jefferson Parishes, a hurricane highway at 2,500 feet wide due to environmental damages predicted by the U. S. Dept. of the Interior.

This diversion also is only funded by the deaths of 11 men from the BP Oil spill as well as all of the dead wildlife such as pelicans & dolphins. Let us be sure we teach in Louisiana classrooms that the State of LA collected \$\$\$\$ for every dead dolphin & pelican but now has a so called waiver from the laws of the land, NEPA as well as the Marine Mammals protection Act to kill 3 times as many Barataria Bay dolphins that will cause their functional extinction. If the State of LA was not so ethically challenged they would pay the monies collected from all of the dead dolphins killed by the oil spill back to BP Oil (also ethically challenged) as the State of LA will far surpass the rate of dead wildlife by another unproven type of project. If you want to mimic Mother NATURE, let the Mississippi River go towards the Atchafalya River to rebuild the deltas by natural processes.

---

**Concern ID: 61888**

**Consider the alternative of allowing the levees to sink, erode, and collapse down to a normal height with annual widespread overflow distribution of the sediments in the historic and gentle way that would not have the sudden, disruptive impacts as seen with existing and planned diversions. Restoration of natural processes is the best way to replenish and preserve our renewable natural resources.**

**Response ID: 15983**

This alternative of removing levees and restoring natural processes is not feasible and was not considered further because levees are necessary for flood risk reduction for the communities and industries that line the Mississippi River in Barataria Basin. This alternative has been added to the Eliminated Alternatives Matrix in Appendix D2 of the Final EIS as an alternative considered based on public comments, but eliminated/not carried forward for detailed review.

---

**Concern ID: 62784**

**Prior or proposed diversions and diversion-like projects (including the Caernarvon Diversion, MRGO, Mardi Gras Pass, Maurepas Bonnet Carré Spillway openings) did not work or caused adverse impacts on area resources.**

**Response ID: 16366**

The commenter's concern regarding the effectiveness and adverse impacts of existing diversions and diversion-like structures is noted. A summary of select natural and man-made diversions (and diversion-like structures) in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary, which includes discussions on the Caernarvon Diversion, MRGO, Mardi Gras Pass, and Bonnet

---

Carré Spillway, is available in Appendix U of the Final EIS. The Maurepas Diversion is subject to an ongoing NEPA analysis, which is anticipated to be finalized in 2022.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The referenced projects all had unique goals, and, where goals existed, each of those projects have achieved their goals. Those achievements increase confidence in the ability of the LA TIG to set goals and select approaches appropriate for achieving those goals. The proposed Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the current geomorphological features of the Lower Mississippi River, as well as data and knowledge gained from the referenced projects.

---

**Concern ID: 62819**

**A commenter expressed that the State of Louisiana collected money for every dead dolphin and pelican but now has a “so-called waiver from the laws of the land (NEPA and the MMPA) to kill three times as many Barataria Bay dolphins that would cause their functional extinction”. The State of Louisiana would far surpass the rate of dead wildlife by another unproven type of project.**

**Response ID: 16392**

Chapter 3, Section 3.11.1 Marine Mammals in the Northern Gulf of Mexico of the Final EIS has been revised to discuss the Marine Mammal Protection Act waiver.

The MMPA waiver does not alter USACE's or the LA TIG's NEPA responsibility to evaluate anticipated impacts of the proposed Project on marine mammals. The EIS analyzes and discloses the environmental and economic impacts of the proposed Project, including anticipated effects on marine mammals. (See Chapter 4, Section 4.11 Marine Mammals).

Section 2020(1)(b) of the Bipartisan Budget Act of 2018 also requires the State of Louisiana, in consultation with the Secretary of Commerce (delegated to NMFS), to the extent practicable and consistent with the purposes of the proposed Project, to minimize impacts on marine mammal species and population stocks, and monitor and evaluate the impacts of the proposed Project on such species and population stocks.

Grand River

Kim Koppman

Louisiana's decisions to protect Louisiana during massive flooding should not impact or destroy the habitat of another state legally. THIS SHOULD BE FEDERAL LAW! The damages financially to the state of Mississippi , especially the entire gulf coast in the past should never be allowed to occur again. I am against any project to divert water or sediment onto my state, in an effort to improve or protect the state of Louisiana or any other state.

---

**Concern ID: 62786**

**Multiple commenters expressed concern with the impacts of diverted waters on the economy and natural environment of the State of Mississippi.**

**Response ID: 16368**

The proposed Project is not anticipated to have discernable effects on resources outside of the Project area, which is limited to Louisiana, and particularly the Barataria Basin and the Mississippi River birdfoot delta (as defined in Chapter 3, Section 3.1.1 in Introduction and the subsections entitled Area of Potential Effects for each resource heading in Chapter 4 Environmental Consequences). Because these resource-specific areas of potential effects were determined based on the anticipated limits of discernable impacts, negligible to no impacts on the natural or human environment are anticipated in the State of Mississippi from the construction and operation of the proposed MBSD Project.

---

**Correspondence ID:40296**

Stacy Ortego

I support the preferred alternative: Alternative 1, Variable Flow up to 75,000 CFS for the Mid-Barataria Sediment Diversion- -I write today to urge adoption of the Preferred Alternative in the Corps' Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's (TIG) Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2.

This year's hurricane season is expected to (yet again) be an active one with 13-20 named storms. Six to ten of those are expected to become hurricanes with 3-5 reaching major hurricane strength of Category 3 or higher. For a record sixth year in a row, NOAA has predicted a more-active-than-normal hurricane season. Of course, regardless of the forecast, we know all too well that it only takes one storm to make it a bad season. What would it matter if any given year is predicted to have a below-normal season if the one that does come destroys communities? Just last year, the U.S. was hit with 7 hurricanes that were billion-dollar disasters - three of which made landfall in Louisiana. While we can't stop the storms from coming, we can be smart in how we make ourselves more resilient to them when they do inevitably come.

You'd have to be in plain denial to not see that things are changing. The way things have always been done isn't enough for this reality we're facing of ever-increasing threats. Louisiana has made great progress with the variety of coastal projects that have been implemented – but it needs the addition of projects that can match the scale of the loss we're facing.

Large-scale projects like the Mid-Barataria Sediment Diversion (MBSD) are just kind of bold actions that are needed if we are to have any hope of a truly sustainable coast. Even with such a project, we are faced with the reality that our coast is smaller than it once was and will be smaller still in the future. It may be too late to save all that's been previously lost but it's not too late to take action to preserve as much as we can as soon as possible. That action, however, needs to be big; it needs to be bold – that is what the MBSD is. It is our best shot. Period.

I didn't grow up on the coast. I grew up on a farm in St. Landry Parish. Even there, of course, we still had the occasional hurricane to prepare for. I now live in Baton Rouge. While still not in the coastal zone, it's easy to see how much more risk East Baton Rouge Parish will face in the future if we don't implement major projects like the MBSD.

I've had the opportunity to see our coast from above. It didn't take long before the small plane I was in was flying over open water. Our current state maps are no longer a true representation of our landscape. Communities are much closer to the coast than they think – levees provide much needed protection but also a distorted sense of proximity to the Gulf for cities like New Orleans. While those levees provide protection, even those structures need the buffer of healthy wetlands and barrier islands to reduce wave action. Without those buffers, those levees will take a much harder beating during storms and will increase the risk of catastrophic failures.

The MBSD will not only build new land; it will also help sustain land that is already there. This is key because that land that's already there has vegetation. That vegetation has established

root systems that are holding that soil together. The wetlands are literally hanging on by threads. It is critical that we maintain whatever we can that is already established.

This isn't about a single project. This isn't about a single stakeholder. This is about the future of this state and the ability of our coast to function in a viable way for the people and wildlife that depend on it. We are way past the point of working on a small scale to try to stitch a little hole here and there along the coast – we need large-scale projects like the Mid-Barataria Sediment Diversion.

The science has spoken for decades. It's past time we listen – and act.

---

**Concern ID: 63339**

**The Mid-Barataria Sediment Diversion is the largest individual ecosystem restoration project in our country's history, which is fitting since the Barataria Basin is experiencing one of the highest rates of land loss on the planet. Large-scale projects like the Mid-Barataria Sediment Diversion are just the kind of bold actions that are needed if there is to be any hope of a truly sustainable coast.**

**Response ID: 16297**

The commenters' support for the proposed Project is noted. Land and wetland loss along coastal Louisiana is described in EIS Chapter 3, Sections 3.1.4.1 and 3.1.4.2 in Introduction.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

**Concern ID: 63341**

**The coastal wetland system creates multiple lines of natural defense from hurricanes and storm surge, and the ongoing wetland loss resulting from the lack of riverine input into the basin has resulted in increased storm risks to local communities (including decreases in property values and impacts to the electrical grid).**

**Response ID: 16300**

The commenter's support for the proposed Project is noted. The commenter correctly notes that coastal wetlands are natural defense against hurricanes and storm surge, and the damage they cause to local communities and infrastructure, as discussed in Chapter 3, Section 3.6 Wetland Resources and Waters of the U.S. of the Draft EIS. The causes of wetland loss in the proposed Project area were discussed in Section 3.6.2 of the Draft EIS,

and included subsidence, levees, storms, canals/spoil banks, herbivory, and the DWH oil spill. Chapter 4, Sections 4.6 Wetland Waters and Resources of the U.S. and 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction of the Draft EIS explained how the proposed Project would create and maintain wetlands in the Barataria Basin, and discuss the corresponding impacts on storm surge and flooding.

THIS PROJECT WILL BE A DEATH BLOW TO THE BILOXI MARSH AND THE MISSISSIPPI SOUND FISHING INDUSTRY. MISSISSIPPI RIVER TOXINS AND FERTILIZERS, (THE FEDERAL GOVERNMENT REFUSES TO ADDRESS) WILL CAUSE ALGAE BLOOMS AND MARINELIFE KILLS OF MONUMENTAL PROPORTIONS.

SIMILAR RESULTS CAN BE STUDIED FROM PAST OPENINGS OF THE BONNET CARRE SPILLWAY.

THIS IS A NO WIN FOR THE RECREATIONAL AND COMMERCIAL FISHERMEN.

PLEASE RECONSIDER THIS PROJECT, OR DIVERT IT TO THE WEST TO THE ATCHAFALAYA BASIN.

**Concern ID: 62786**

**Multiple commenters expressed concern with the impacts of diverted waters on the economy and natural environment of the State of Mississippi.**

**Response ID: 16368**

The proposed Project is not anticipated to have discernable effects on resources outside of the Project area, which is limited to Louisiana, and particularly the Barataria Basin and the Mississippi River birdfoot delta (as defined in Chapter 3, Section 3.1.1 in Introduction and the subsections entitled Area of Potential Effects for each resource heading in Chapter 4 Environmental Consequences). Because these resource-specific areas of potential effects were determined based on the anticipated limits of discernable impacts, negligible to no impacts on the natural or human environment are anticipated in the State of Mississippi from the construction and operation of the proposed MBSD Project.

Commenter

As per the May 19th article in the Advocate the dolphins will become extinct if the diversion is passed. I'm against the diversion because we should get more studies on dolphins and other marine life.

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Concern ID: 63627**

**A commenter expressed opposition to the diversion because more studies are needed on dolphins and other marine life.**

**Response ID: 16601**

The Draft EIS included an analysis of the impacts to marine mammals, including bottlenose dolphins in Chapter 4, Section 4.11 Marine Mammals. That analysis included a review of the extensive studies of the BBES dolphin stock since the DWH oil spill as well as a comprehensive literature review of studies of the impact of low-salinity waters on dolphins that was incorporated into the Expert Elicitation described in Chapter 4, Section 4.11.3 Overview of Impact Analysis Approach. The Final EIS also incorporates additional analysis by Thomas et al. (2021), which was published after the Draft EIS was released for public comment. Based on these sources, the EIS projects that the proposed Project would have major, adverse, permanent impacts to BBES dolphins, resulting in their functional extinction except for a small number that may survive around Grand Isle.

The LA TIG notes, however, that the MAM Plan, included in Appendix R2 to the EIS, includes extensive monitoring before and during Project operations, which would help address key uncertainties, such as the optimal balance between sediment and freshwater input needed to achieve the Project purpose, and could provide information critical to informing potential operational modifications over time that could reduce negative impacts to dolphins.
