The Draft EIS recognized the uncertainty inherent in the model projections used to assess impacts of the Project on various elements of the environment, including dolphins (see Chapter 4, Section 4.11 [Marine Mammals] of the Draft EIS). The LA TIG agrees that the monitoring commitments included in the MAM Plan, which include extensive pre- and post-Project operation monitoring, would help address these uncertainties and would provide information critical to potential operational modifications that could reduce negative impacts to dolphins.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one

is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project

Re: Mid-Barataria Sediment Diversion Draft Environmental Impact Statement

To Whom It May Concern:

As noted in the attached St. Bernard Parish Council Resolution SBPC #2124-04-21 (pages 6 & 7) and April 21, 2021 letter from Parish President Guy McInnis (page 8), St. Bernard Parish Government is opposed to the referenced project. The parish's specific concerns regarding the findings outlined in the draft environmental impact statement (EIS) are provided below.

***The stated project purpose and need are inconsistent with the actual project scope of work and likely outcomes.***

The applicant describes the project's purpose and need as follows:

...to restore for injuries caused by the DWH oil spill by implementing a large-scale sediment diversion in the Barataria Basin through the delivery of sediment, fresh water, and nutrients to support the long-term viability of existing and planned coastal restoration efforts. The proposed Project is needed to restore habitat and ecosystem services injured in the northern Gulf of Mexico as a result of the DWH oil spill. (ES-2)

The DWH oil spill did not deprive the Barataria Basin of sediment, freshwater, or nutrients. Consequently, the diversion of these materials from the Mississippi River into the Barataria Basin will not restore habitat or ecosystem services to pre-DWH oil spill conditions or mitigate the risk associated with future industrial accidents. According to the EIS, the proposed project would instead introduce new and permanent risks to habitat, ecosystem services, and coastal communities in the affected area.

***The environmental and economic risks associated with the largescale diversion of freshwater into Louisiana’s estuaries are well documented.***

The proposed discharge of freshwater into the Barataria Basin will result in adverse impacts to aquatic resources, commercial and recreational fisheries, wildlife resources, essential fish habitat, and water quality. The discharge of freshwater at the Bonnet Carre’ Spillway during the *Gulf of Mexico Freshwater Flooding in Louisiana, Mississippi, and Alabama* (2019) federal fishery disaster recently caused over \$500 million in economic damage in less than six months. Additionally, the event triggered a NOAA-declared unusual mortality event (UME) for the *bottlenose dolphin* in the northern Gulf of Mexico. A total of 328 deceased dolphins were found throughout the region during the event. NOAA concluded its UME investigation as follows:

Based on necropsy, histopathology, and diagnostic findings and the extreme environmental conditions documented in the NGOM during this time period, the cause of the mortality event was determined to be environmentally driven by exposure to low salinity waters resulting from extreme freshwater discharge from watersheds that drain into the NGOM, including rivers in Florida, Alabama, Mississippi and Louisiana. (NOAA, 2020)

The EIS identifies project impacts that are very similar to those experienced during the 2019 fishery disaster. Many of the expected impacts on commercial and subsistence fisheries are described in the EIS as “major, permanent, and adverse” (ES-15). The EIS describes the impacts on bottlenose dolphins in the Barataria Basin as “immediate and permanent, major, adverse impacts on survival” (ES-12). The primary difference between the 2019 fishery disaster and the proposed project is the EIS describes many of the project’s adverse impacts as *permanent*.

***The EIS describes the project’s likely severe adverse impacts on the natural environment, including many that may be permanent.***

The proposed Project would result in impacts on the general character of the Barataria Basin, including but not limited to salinity, temperature, land accretion, and water quality [...] and subsequently to the people that rely on the area plants and animals for economic, recreational, and other purposes. (ES-6)

The EIS specifically references major, permanent, and adverse impacts on the shrimp fishery. The study also predicts that impacts on commercial shrimping “may also exacerbate trends in the aging workforce to leave the industry” (ES-15). According to the Louisiana Department of Wildlife and Fisheries (LDWF) (2016b), shrimp landings in the Barataria Basin averaged over 27 million pounds per year between 2000-2013. Brown shrimp landings in the basin represented 44% of all landings statewide and were the highest in Louisiana during the same period (LDWF, 2016b). The mitigation measures proposed in Appendix R would not sufficiently offset economic impacts to the Barataria Basin shrimp industry due to the proposed project.

The EIS also references major, permanent, and adverse impacts on the oyster fishery. Persistent low salinity is expected to drastically reduce oyster abundance. Additionally, “the introduction of Mississippi River water containing elevated fecal coliform concentrations into oyster propagation areas could cause permanent, major, direct adverse impacts” (ES-9). Oyster landings in the Barataria Basin averaged over 2.8 million pounds per year between 2000-2014, second only to the Pontchartrain Basin (LDWF, 2016a). Oyster value per pound (\$3.62) landed in the basin was the highest and average total annual value (over \$10.8 million) was the second highest in Louisiana during the same period (LDWF, 2016a). The mitigation measures proposed in Appendix R would not sufficiently offset economic impacts that to the Barataria Bay oyster industry due to the proposed project.

***The EIS describes the project’s likely severe adverse impacts on the socioeconomic well-being of coastal communities.***

Many coastal communities are also *fishing communities*, which the Magnuson-Stevens Fishery Conservation and Management Act defines as “geographic areas encompassing a specific locale where residents are dependent on fishery resources or are engaged in the harvesting or processing of these resources” and who are “substantially dependent on or substantially engaged in the harvest or processing of fishery resources to meet social and economic needs” (Shaw & Conway, 2007, p. 12). It has been estimated that resource-dependent communities in the United States are five to ten times less economically stable than other communities around the country (Freudenburg & Frickel, 1994). This is primarily because such communities rely heavily upon favorable environmental conditions and government regulations but are often unable to effectively control either (Shaw & Conway, 2007). The EIS appropriately points out that:

The Project area includes numerous coastal communities that rely heavily on commercial fishing activities. Community members are employed as captains or crew on fishing boats, as seafood dealers, or as employees of businesses serving the commercial seafood industry (3-184).

The health of commercial fisheries and the socioeconomic well-being of coastal communities in Louisiana are closely intertwined. Commercial fisheries have a combined annual economic impact of over \$2 billion and account for at least 22,000 jobs (State of Louisiana, 2019). Landings in Louisiana (nearly 900 million pounds in 2017) are second only to Alaska, and 70% of all oysters in the United States are harvested from the state (State of Louisiana, 2019). Twenty-five percent (25%) of all seafood consumed nationwide comes from coastal Louisiana (Jones, 2015). The EIS describes immediate, major, and permanent adverse impacts on several critical species in the Barataria Basin, including shrimp and oysters. Such impacts will undoubtedly change the commercial fishing industry and inflict economic harm on area businesses, families, and individuals.

The proposed Project is expected to cause minor to moderate, permanent, adverse impacts on economy, population, housing and property values, tax revenues, public service, and community cohesion in communities near the outfall area (ES-13).

However, the adverse economic impacts described above will not be limited to communities located near the outfall area. Entire parishes and municipalities within the affected region will face a decline in overall tax revenue and the associated consequences: poor fiscal health, a decline in public services and quality of life, and the prospect of an increased per capita tax burden.

***The EIS identifies many particularly vulnerable communities that are likely to be disproportionately impacted by the proposed project.***

*Vulnerability* has been defined as “the characteristics of a person or group and their situation that influences their capacity to anticipate, cope with, resist, and recover from the impact of a hazardous event” (Wisner et al., 2004, p. 11). Factors contributing to vulnerability include race, class, gender, political influence, and access to critical resources (Cutter, Boruff, & Shirley, 2003). The EIS identifies Myrtle Grove, Hermitage, Grand Bayou, and Happy Jack as low-income and minority communities that might experience disproportionately high and adverse economic impacts as a result of the proposed project, particularly as such impacts relate to commercial and subsistence fishing (ES-14).

The EIS also identifies vulnerable communities located outside of structural risk reduction systems as being more likely to experience the following as a result of the proposed project: 1) increased days of inundation due to tidal flooding; 2) impacts on public health and safety due to increased risk of storm surge flooding; and 3) outmigration and permanent adverse impacts on community cohesion (ES-13 & 19).

***The land-building capacity of the proposed project is likely overstated and the EIS supports previous findings regarding the possibility of the project causing land loss and increasing flood risk.***

The gradual depletion of the Mississippi River sediment budget has been well documented and increased periods of inundation have been found to adversely impact existing vegetation and contribute to land loss. Consequently, the Expert Panel on Diversion Planning and Implementation (convened by the Water Institute of the Gulf) previously expressed concerns regarding the possibility of largescale sediment diversions causing land loss during at least the first ten years of operation (<http://www.coastal.louisiana.gov/diversion-resources/>).

A modeling report recently commissioned by the USACE Engineer Research and Development Center (ERDC) similarly concluded that:

[...] diversion-induced inundation results in a reduction in plant productivity, which induces an acceleration of land loss. Significant uncertainty exists with respect to the response of the existing wetland vegetation to diversion-induced inundation. (Brown et al., 2019, p. iii)

The EIS projects that the proposed project will increase water levels in the Barataria Basin by 1.1 feet and prolong inundation periods (ES-8). With regard to communities outside of existing

structural risk reduction systems, it is expected that increased water surface elevations and tidal durations will not only have adverse impacts on public health and safety (ES-13 & 19) but will also flood local roadways and other property at grade (Appendix R, 21 & 22). Finally, it is reasonable to expect that increased periods of inundation outside of existing structural risk reduction systems will hamper the ability of responsible parties to access and maintain such systems, thereby adversely impacting system functionality and useful life.

***The operational regime for the project may evolve in a manner that exacerbates adverse impacts to the natural and human environment over time.***

CPRA's stated commitment to *adaptive management* may eventually result in the agency making substantial adjustments to the operational regime of the proposed project. CPRA has made similar adjustments to the operational regime of other diversion projects for decades (specifically the Caernarvon freshwater diversion), adversely impacting local fisheries with minimal oversight while providing virtually no recourse for affected stakeholder groups.

EXTRACT OF THE OFFICIAL PROCEEDINGS OF THE COUNCIL OF THE PARISH OF ST. BERNARD, STATE OF LOUISIANA, TAKEN AT A REGULAR MEETING HELD IN THE COUNCIL CHAMBERS OF THE ST. BERNARD PARISH GOVERNMENT COMPLEX, 8201 WEST JUDGE PEREZ DRIVE, CHALMETTE, LOUISIANA ON TUESDAY, APRIL 20, 2021 AT THREE O'CLOCK P.M.

On joint motion of the Chair, without objection and by unanimous consent, it was moved to **adopt** the following resolution:

**RESOLUTION SBPC #2124-04-21**

A RESOLUTION OPPOSING THE PROPOSED MID-BARATARIA SEDIMENT DIVERSION PROJECT.

**WHEREAS**, The Coastal Protection and Restoration Authority is proposing the Mid-Barataria Sediment Diversion Project; and,

**WHEREAS**, water, and the wildlife that inhabits it, does not respect parish boundaries, any project effecting Plaquemines water quality and estuaries will have similar impact on the waters and related businesses of St. Bernard Parish; and,

**WHEREAS**, while the loss of coastal wetlands is a valid concern, the resolution or remediation of that problem must avoid ancillary damages to the people and wildlife of Plaquemines and St. Bernard Parish; and,

**WHEREAS**, the Environmental Impact Statement related to the current proposed Mid-Barataria Sediment Diversion Project indicates that the project will do permanent harm to the wildlife of Plaquemines and St. Bernard Parish and their respective seafood industries; and,

**WHEREAS**, the seafood industry of Plaquemines and St. Bernard Parish are central to their respective economies, culture, and heritage; and,

**WHEREAS**, the environmental remediation efforts related to the potential harm caused by the current proposed Mid-Barataria Sediment Diversion Project is insufficient; and,

**WHEREAS**, the potential benefits in the minimal land development that is predicted are far outweighed by the unremediated damage that the Mid-Barataria Sediment Diversion Project will cause to the people and wildlife of Plaquemines and St. Bernard Parish; and,

Page -2-  
Extract #16 continued  
April 20, 2021

WHEREAS, the long term damage caused by the Mid-Barataria Sediment Diversion Project to the wildlife and fisheries of Plaquemines and St. Bernard Parish will destroy the livelihood of countless local businesses and people; and,

WHEREAS, the destruction of those livelihoods will lead to the loss of the St. Bernard tax revenues that are used to fund vital services to the people of St. Bernard Parish.

NOW THEREFORE, BE IT RESOLVED, that the St. Bernard Parish Council, the Governing Authority, opposes the proposed Mid-Barataria Sediment Diversion Project.

BE IT FURTHER RESOLVED, that this Resolution be forwarded to all of the following:

- Governor John Bel Edwards
- The Coastal Protection and Restoration Authority
- The House Natural Resources and Environment Committee
- The Senate Natural Resource Committee
- Representative Mack Cormier, Representative Ray Garofalo, Senator Sharon Hewitt, Senator Joseph Eouie and Senator Troy Carter
- U.S. Army Corps of Engineers, Brad Laborde

The above and foregoing having been submitted to a vote, the vote thereupon resulted as follows:

YEAS: McCloskey, Moran, Luna, Alcon, Everhardt, Callais

NAYS: None

ABSENT: None

The Council Chair, Mr. Lewis, cast his vote as YEA.

And the motion was declared adopted on the 20<sup>th</sup> day of April, 2021.

**April 21, 2021 Letter from Parish President Guy McInnis**

*St. Bernard Parish Government*

[www.sbpq.net](http://www.sbpq.net)

**Guy McInnis**  
*Parish President*

April 21, 2021

At its April 20, 2021 regularly scheduled council meeting, the St. Bernard Parish Council unanimously approved Resolution SBPC #2124-04-21, "A Resolution opposing the proposed Mid- Barataria Sediment Diversion project". As Parish President, I join with the council in objecting to this proposed project. As the draft Environmental Impact Statement from the US Army Corps of Engineers confirms, this project will do irreparable harm to the wildlife and estuaries of St. Bernard and Plaquemines Parish, and therefore to our respective seafood and tourism industries. We respectfully request alternative projects be considered to rebuild our all-important coastlines in St. Bernard Parish, while preserving our economy, culture, and heritage.

Respectfully,

A handwritten signature in blue ink, appearing to read "Guy McInnis".

Guy McInnis  
Parish President  
St. Bernard Parish

**Concern ID: 61873**

**The proposed Project's impacts are in contradiction with the Project's stated purpose and need to restore habitat and ecosystems damaged by the DWH oil spill given the permanent adverse impacts on fisheries, marine mammals, and water quality. The proposed Project is incompatible with both a healthy environment and healthy economy.**

**Response ID: 15829**

USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities), and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. If implemented, the proposed Project would deliver sediment, fresh water, and nutrients into the Barataria Basin. While there would be short- and long-term, adverse and beneficial impacts to physical, biological, and socioeconomic resources in the Project area due to the proposed Project, the sediment, fresh water, and nutrients are expected to restore habitat and ecosystems services injured in the northern Gulf of Mexico as a result of the DWH oil spill.

---

**Concern ID: 61875**

**The purpose and need is false and misleading and does not follow NEPA guidelines for a concise, basic, essential, and irreducible purpose. The statement is misleading by making the proposed Project itself part of the purpose. The DWH oil spill, including restoring for injuries caused by the DWH oil spill, has nothing to do with the proposed Project other than justifying its use as a source of funding.**

**Response ID: 15831**

As described in Chapter 1, Section 1.4 Purpose and Need of the EIS, NEPA regulations (40 CFR 1502.13) state that an EIS "shall briefly specify the underlying purpose and need to which the agency is responding in proposing the alternatives including the proposed action." The purpose and need statement should be clear and concise in order to facilitate development of a reasonable range of alternatives. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities), and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS.

Separate from the USACE process, as discussed in the PDARP/PEIS, the SRP/EA #3, and the Restoration Plan, the LA TIG found that impacts of the injuries from the DWH oil spill were particularly detrimental to the resources of the Barataria Basin, which were already in peril as a result of the separation of sediment-loaded river water by levees, subsidence and a changing climate. In the Barataria Basin, marshes already suffering from significant coastal erosion experienced heavy oiling and subsequently experienced double or triple the rate of marsh loss. The Final PDARP/PEIS (DWH NRDA Trustees, 2016a) documented the nature, degree, and extent of injuries from the DWH oil spill to both natural resources and the

services they provide, and the nexus between those injuries and need for restoration within the Barataria Basin. Evaluating restoration strategies that could restore for injuries in the Barataria Basin, the SRP/EA #3 found that a combination of “marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats” (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in the EIS and Restoration Plan. The LA TIG’s Restoration Plan concludes that the proposed Project would best restore for injuries caused by the DWH oil spill by reconnecting and reestablishing sustainable deltaic processes between the Mississippi River and the Barataria Basin through the delivery of sediment, fresh water, and nutrients to support the long-term viability of existing and planned coastal restoration efforts.

---

**Concern ID: 61938**

**The EIS identifies and acknowledges that there are low-income and minority communities that might experience disproportionately high and adverse economic impacts as a result of the proposed Project, particularly as such impacts relate to commercial and subsistence fishing.**

**Response ID: 16296**

The EIS Chapter 4, Section 4.15 Environmental Justice acknowledges that disproportionately high and adverse impacts on low-income and minority populations could occur in some communities where reductions in abundance of oysters, brown shrimp, and certain fish species are anticipated as a result of the proposed Project. These impacts would depend in part on the extent to which affected populations engage in or are heavily reliant on commercial and subsistence fishing for these species. The EIS Chapter 4, Section 4.15 Environmental Justice recognizes the presence of low-income and minority populations in communities that depend on shrimp and oyster fishing in Barataria Bay, including Grand Isle, Galliano, the Lafitte area, Barataria, Belle Chasse, Live Oak, West Pointe à la Hache, Ironton, Grand Bayou, and Port Sulphur. However, as discussed in the EIS, there are insufficient data to correlate fisheries harvests with specific low-income and minority populations. Consequently, the precise extent to which impacts on shrimp and oyster fisheries would affect specific low-income and minority populations cannot be determined.

CPRa has expanded and refined the Mitigation and Stewardship Plan, Appendix R1 to the EIS, since issuance of the Draft EIS and LA TIG’s Restoration Plan based on community and resource agency input. The mitigation and stewardship measures now provide additional detail regarding specific efforts targeted at assisting low-income and minority populations in addressing the potential impacts of the Project.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRa and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRa had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the

---

final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62009**

**The negative socioeconomic consequences would devastate southeast Louisiana, destroy people's livelihoods, displace people living near the diversion, and destroy property in the areas impacted by the proposed MBSD Project.**

**Response ID: 16207**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.13 Socioeconomics, discusses impacts of the proposed Project on the economy of Louisiana, including impacts on population, property values, and community cohesion. As noted in these sections, the proposed Project would have both beneficial and adverse socioeconomic impacts on the people and communities within the Project area. Minor to moderate, permanent adverse socioeconomic impacts are expected to occur near the immediate outfall area outside of flood protection. Minor to moderate, permanent, beneficial socioeconomic impacts are expected to occur in the west bank New Orleans area north of the diversion. Moderate to major, beneficial, temporary impacts from job creation and economic activity in the proposed Project area are anticipated. In addition, the Socioeconomics Technical Report in Appendix H1 provides additional details on these projected effects.

As part of its restoration planning efforts, the LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. The LA TIG believes the proposed MBSD Project is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net benefits of the proposed Project meet OPA's requirement of restoration, rehabilitation,

---

replacement, or acquisition of the equivalent, of the natural resources injured by the DWH oil spill.

The commenters' concern regarding the potential impacts of the diversion were considered by CPRA and the LA TIG in developing the Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included mitigation to address and offset some of the projected impacts of the Project on fisheries and surrounding communities outside levee protection including providing structural mitigation and stewardship measures for increased water levels that are projected to result due to the Project, such as raising roads or improving bulkheads. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

In communities south of the Project site outside of federal levee protection where the proposed Project is projected to cause increased water levels, CPRA plans to take one of two approaches. In Myrtle Grove, CPRA is planning to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision. By improving this bulkhead, CPRA would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions without the Project. See Table 1 in the Final Mitigation and Stewardship Plan for more details. CPRA plans to acquire a temporary right-of-way to permit improvement of the bulkhead, voluntarily or through eminent domain if necessary, from the property owners in the Myrtle Grove Marina Estates Subdivision.

In other communities south of the Project site outside of federal levee protection, from Woodpark south to the communities of Grand Bayou and Happy Jack, CPRA plans to elevate the portions of public roads outside of levee protection that provide access to each of these communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62014**

**The proposed MBSD Project would reduce tax revenue for the parishes located in the impacted area and the funds to support vital services in these areas.**

**Response ID: 16211**

The EIS considers and describes impacts on tax revenue in Chapter 4, Section 4.13.4 and 4.13.5 in Socioeconomics. There is also a discussion of Public Services and Utilities in this chapter (Section 4.13 Socioeconomics). As described, the proposed Project construction would have minor to moderate short-term benefits on sales and use taxes in local jurisdictions and the state associated with construction spending. Negligible to minor permanent adverse impacts on tax revenues from sales and use taxes, including associated with impacts on commercial fishing activities, as well as property tax collections associated with reduced property values are anticipated in Plaquemines Parish due to operation of the proposed Project. Potential adverse effects on utilities associated with reduced property taxes are also anticipated during the operations phase of the proposed Project.

---

**Concern ID: 62029**

---

**The EIS describes immediate, major, and permanent adverse impacts on several critical species in the Barataria Basin, including shrimp and oysters. The health of commercial fisheries and the socioeconomic well-being of coastal communities are closely intertwined. Such impacts would inflict economic harm on businesses, families, and individuals.**

**Response ID: 16225**

The issues raised by the commenters were considered in the Draft EIS. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted. The EIS also acknowledges the importance of commercial fisheries to the Louisiana economy and communities, as described by commenters. Chapter 4, Section 4.13 Socioeconomics, discusses impacts of the proposed Project on the economy of Louisiana and Section 4.14 Commercial Fisheries describes impacts to commercial fisheries. As summarized in Section 4.14.5, moderate to major adverse impacts to shrimp and oyster fisheries in the proposed Project area are anticipated under the Applicant's Preferred Alternative. Changes in abundance may exacerbate trends of aging fishers leaving the industry and would have adverse impacts on the overall fishery. Adverse impacts may be partially offset by changes in fisher behavior. Additional details on the regional and community level economic impacts on commercial fisheries due to the proposed MBSD Project can be found in Section 4.14 Commercial Fisheries.

CPRA's Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures

---

contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62159**

**The land-building capabilities of this Project are highly exaggerated, and the EIS supports previous findings that the Project may actually accelerate land loss, increasing flood risks. The depletion of historic sediment loads of the Mississippi River is well documented. Given the projected 2000 to 3000-acre land loss in the birdfoot delta cited in the EIS, the projected land-building capabilities of the proposed Project is obviously exaggerated.**

**Response ID: 16181**

The Draft EIS has considered the commenter's concerns regarding the rates of land loss and land projected to be built during diversion operations. To help address these concerns, a discussion has been added to clarify currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to proposed diversion operations. This discussion has been added to the Executive Summary, Section ES.4.1 Geology and Soils and to Chapter 4, Section 4.2.3.2.2.1 Geology of the Final EIS.

Although the Mississippi River is carrying much less sediment than it did in the past, it still carries a massive sediment load. As explained in Chapter 3, Section 3.4.2.5 in Surface Water and Coastal Processes, the river formerly carried over 400 million tons of sediment annually, but a more than 50 percent reduction in annual sediment load has occurred since the early 1900s. Studies show that from 1968 through 2007 the overall annual sediment reduction has been more gradual, with the rate estimated as a loss of 1.1 million metric tons per year.. The possible causes of the diminished sediment load include trapping by dams, hardening of banklines, improved farming practices, and other processes. The Draft EIS Appendix E Delft3D Modeling Section 5.2.2 took this diminished sediment load into account when computing the sediment load that would be delivered to the Barataria Basin.

---

**Concern ID: 62224**

---

**Communities like Happy Jack, Lake Hermitage and Myrtle Grove, some of which have homes that are not above the new base flood elevation, already experience some degree of flooding which would be made worse by the diversion. This would affect the ability of residents to access and enjoy their homes and communities.**

**Response ID: 15757**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discuss the anticipated increased flooding impacts outside of federal levee systems to be caused by the operation of the diversion. Final EIS Appendix R1 Mitigation and Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties. In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes, which would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final

Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62709**

**The 2019 opening of the Bonnet Carré Spillway caused significant impacts to aquatic fauna from the release of river water, and resulted in a declared fisheries disaster of at least \$58 million.**

**Response ID: 16087**

A summary of select natural and man-made diversions in southeastern Louisiana, including the Bonnet Carré Spillway, has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment, including area fisheries. This summary is available in Appendix U of the Final EIS. However, it is important to note that the Bonnet Carré Spillway is an emergency flood control structure that is not operated for ecological purposes. The anticipated impacts of the proposed Project on aquatic fauna from the release of river water is discussed in detail in Chapter 4, Section 4.10 Aquatic Resources.

---

**Concern ID: 62782**

**A large number of commenters expressed general opposition to the proposed Project.**

**Response ID: 16364**

The commenter's opposition to the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

---

**Concern ID: 62784**

**Prior or proposed diversions and diversion-like projects (including the Caernarvon Diversion, MRGO, Mardi Gras Pass, Maurepas Bonnet Carré Spillway openings) did not work or caused adverse impacts on area resources.**

**Response ID: 16366**

The commenter's concern regarding the effectiveness and adverse impacts of existing diversions and diversion-like structures is noted. A summary of select natural and man-made diversions (and diversion-like structures) in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary, which includes discussions on the Caernarvon Diversion, MRGO, Mardi Gras Pass, and Bonnet Carré Spillway, is available in Appendix U of the Final EIS. The Maurepas Diversion is subject to an ongoing NEPA analysis, which is anticipated to be finalized in 2022.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The referenced projects all had unique goals, and, where goals existed, each of those projects have achieved their goals. Those achievements increase confidence in the ability of the LA TIG to set goals and select approaches appropriate for achieving those goals. The proposed Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the current geomorphological features of the Lower Mississippi River, as well as data and knowledge gained from the referenced projects.

---

**Concern ID: 62836**

**What are the conditions for closure of the diversion? For example, would the diversion be shut down if there is community flooding or a large amount of wetland loss in the first 5 years? CPRA's stated commitment to adaptive management may eventually result in the agency making substantial adjustments to the operational regime of the proposed Project without providing recourse for affected stakeholder groups.**

**Response ID: 16663**

Information regarding Project operations, including the plan for when the diversion would be shut down for emergencies and storm events, is set forth in CPRA's Operations (Water Control) Plan issued with the Draft EIS (Appendix F2).

With regard to community flooding, the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) details mitigation strategies that would address increased water levels in impacted communities. With regard to ensuring Project performance, in accordance with the Monitoring and Adaptive Management (MAM) Plan, CPRA would monitor Project performance over the life of the Project and adaptively manage the Project to ensure Project success (for examples of potential adaptive management actions, see Tables 4.1-1 through 4.1-3 in the MAM Plan in Appendix R2 to the Final EIS). If the Project is implemented, CPRA would continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship,

---

monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62986**

**The Project would drive decreases in salinity that would reduce the overall health, survival, and reproduction of bottlenose dolphins that reside in the Barataria Basin, a species that was negatively affected by the Deepwater Horizon oil spill (NMFS, 2013). Some commenters felt that because of this, the Project should either not move forward or its operation should be altered.**

**National Marine Fisheries Service (NMFS). 2013. Roy Crabtree (NMFS) to Elizabeth Davoli (CPRA). <https://s3.documentcloud.org/documents/726710/national-marine-fisheries-service-comments-on.pdf>**

**Response ID: 16701**

The concerns raised by the commenters about the projected decreases in salinity and resulting effects on Barataria Bay dolphins were considered in the Draft EIS. More specifically, Chapter 4, Section 4.11.5.2 in Marine Mammals of the EIS acknowledges that the proposed Project would likely have significant, adverse impacts to Barataria Basin dolphins, a species that suffered significant impacts from the DWH oil spill. This section also discusses the physiological changes caused by exposure to low-salinity water, the duration of those changes that leads to mortality, and the anticipated mortality of a large portion of the dolphin population in the Barataria Basin within the first decade. These sections of the EIS provide a more in-depth analysis of potential impacts to dolphins than the letter cited by the commenter.

The concerns raised by the commenters were also considered in the LA TIG's Draft Restoration Plan (see Section 3.2.1.5 [Collateral Injury]); the Final Restoration Plan has been

---

edited consistent with changes made to the Final EIS and see below regarding new, related content included in Appendix R.

The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree collateral injuries, to natural resources, like dolphins, that were injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the Restoration Plan). The intended restoration of freshwater flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, without the proposed Project, there would also be adverse impacts to some of the same species due to large-scale wetland loss over time, as is anticipated from ongoing sea-level rise, subsidence, and other existing stressors, which is anticipated to reduce the suitability of habitat for many of the species that currently occur in Barataria Basin.

The LA TIG must weigh the potential for and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed Project against its benefits). The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that creates and maintains wetlands. As described in Section 3.2.1.6 (Benefits Multiple Resources – Alternative 1) of the Restoration Plan, this sustained ecosystem would be expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing deltaic processes, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Restoration Plan because it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

Since release of the Draft EIS and the LA TIG's Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible (if it is possible), the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized.

In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures to benefit dolphins in Louisiana (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include more details regarding strategies and protocols that would be used at the onset of operations to minimize impacts on dolphins, as well as the process through which operational data would be used to evaluate potential modifications to those strategies and protocols; see Appendix R2 (Monitoring and Adaptive Management Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63020**

**The Draft EIS highly exaggerated the land-building capabilities of the proposed Project, given that the depletion of historic sediment loads of the Mississippi River is well documented (including by the Expert Panel on Diversion Planning and Implementation [convened by the Water Institute of the Gulf] and USACE's ERDC) and that increased periods of inundation have been found to adversely impact existing vegetation and contribute to land loss. Further, significant uncertainty exists with respect to the response of the existing wetland vegetation to diversion-induced inundation (Brown et al., 2019, p. iii).**

**Response ID: 16032**

The Draft EIS considered the commenter's concerns regarding the rates of land loss and land projected to be built during diversion operations. The Mississippi River is carrying much less sediment than it did in the past. As explained in Chapter 3, Section 3.4.2.5 in Surface Water and Coastal Processes, the river formerly carried over 400 million tons of sediment annually, but a more than 50 percent reduction in annual sediment load has occurred since the early 1900s. Studies show that from 1968 through 2007 the overall annual sediment reduction has been more gradual, with the rate estimated as a loss of 1.1 million metric tons per year. The Delft3D Basinwide Modeling accounts for those sediment supply changes as described in Appendix E Delft3D Modeling of the EIS, Sections 5.2.2 and 8.

Further, the Delft3D Basinwide Model incorporates inundation depths in the critical vegetation parameters to simulate vegetation losses and gains as a result of the diversion, as well as other sources of inundation (such as subsidence and sea-level rise). The model results should be interpreted in light of the uncertainties involved. The USACE-ERDC report cited by the comment (Brown et al. 2019), which documents the development and validation of the Adaptive Hydraulics (AdH) model to simulate hydrodynamic, salinity, sedimentation, and morphodynamic processes in the Mississippi River and Delta, was reviewed and used in preparing the navigation analyses in the EIS (see Appendix Q1 Dredging Analysis). The USACE-ERDC report also describes the SEDLIB-VEG model, which is less complex than the vegetation model (LaVegMod) used to project impacts from the proposed Project. While the AdH model was not used in preparing the land-building analyses in the EIS and the SEDLIB-VEG model was not used for the assessment of vegetation impacts from the Project, uncertainties identified in the report for numerical modeling (including uncertainty in the sediment rating curve, subsidence rates, and inundation effects on vegetation) were considered. As discussed in Chapter 4, Section 4.1.3.3 in Approach to Evaluation of Environmental Consequences and Section 8 of Appendix E Delft3D Modeling, those uncertainties include the parameters used to simulate vegetation growth and mortality. Vegetation ranges were determined by the probability of establishment and mortality of each species used in modeling simulations, based on salinity and inundation depth tolerances. Where feasible, uncertainties have been examined through sensitivity tests and model-to-model comparisons and incorporated in the conclusions. However, to further address the concern of exaggerated land building, Chapter 4, Section 4.1.3.3 in Model Limitations and Uncertainty, has been revised in the Final EIS to clarify uncertainty related to currently ongoing and future projected land loss and the amount of land that would be created, sustained, or lost due to proposed diversion operations.

---

**Concern ID: 63067**

**The majority of the bottlenose dolphin population of this area will be destroyed... not just killed but sentenced to a horrific death. Freshwater releases at Bonnet Carré Spillway in 2019 resulted in an unusual mortality event (UME), demonstrating the harm that freshwater releases can cause to dolphins. A study by the Galveston Bay Dolphin Research Program also found that dolphins in upper Galveston Bay developed skin lesions after flooding from Hurricane Harvey. Additional studies further support the harm that the diversion could cause by demonstrating negative impacts to dolphins from exposure to low-salinity conditions (Deming and Garrison, 2021; Duignan et al., 2020; McClain et al., 2020).**

---

**Deming, A., and L. Garrison. 2021. 2019 Northern Gulf of Mexico bottlenose dolphin unusual mortality event. Marine Mammal Commission meeting/webinar on “Effects of Low Salinity Exposure on Bottlenose Dolphins,” 23 March 2021. Oral presentation. <https://www.mmc.gov/events-meetings-and-workshops/other-events/effects-of-low-salinity-exposure-on-bottlenose-dolphins-webinar/>**

**Duignan, P.J., N.S. Stephens, and K. Robb. 2020. Fresh water skin disease in dolphins: a case definition based on pathology and environmental factors in Australia. *Scientific Reports* 10:21979.**

**McClain, A.M., R. Daniels, F.M. Gomez, S.H. Ridgway, R. Takeshita, E.D. Jensen, and C.R. Smith. 2020. Physiological effects of low-salinity exposure on bottlenose dolphins (*Tursiops truncatus*). *Journal of Zoological and Botanical Gardens* 1:61-75.**

**Response ID: 16590**

The Draft EIS included an analysis based on extensive literature and soon-to-be published data (now published) demonstrating the impacts of low-salinity conditions on dolphins. These data were considered as part of an Expert Elicitation (a garnering of expert opinions to determine or quantify an unknown) that resulted in dose-response curves (Booth et al. 2020) and summarized in Chapter 4, Section 4.11.3 (Marine Mammals - Overview of Impact Analysis Approach) of the EIS. While Deming and Garrison (2021) was presented after the release of the Draft EIS, the presentation was based on data that were fully considered in the Draft EIS, including as part of the Expert Elicitation. Along with other relevant data (for example, BBES tagging studies), the analysis contained in the Draft EIS determined that there would be a significant, adverse, permanent impact on the BBES Stock. Further, the analysis in the Draft EIS concluded that if the 75,000 cfs Alternative were implemented, impacts would be immediate and only a remnant population would be likely to exist near the barrier islands after 50 years of operation.

After release of the Draft EIS, at the request of the Marine Mammal Commission, the National Marine Mammal Foundation and University of St. Andrews released a population impact projection based on the information presented in the Draft EIS (including annual survival rates from Garrison et al. 2020) coupled with an updated population model for BBES dolphins (Schwacke et al.2022, Thomas et al. 2021). This new, additional analysis has been incorporated into the Final EIS in Chapter 4, Sections 4.11.5.2 Barataria Bay Estuarine Stock and supports the original determination in the Draft EIS of major, permanent, adverse impacts on the BBES dolphin population. The research presented in the McClain et al. (2020) study cited by commenters was considered in the Draft EIS [cited at the time as McClain et al. (in prep)]; the research presented by Duignan et al. (2020) is consistent with the established literature and does not change the conclusions of the Draft EIS, but this study has been incorporated in Chapter 4, Section 4.11.5.2.2.1 General Effects on Dolphin Health of the Final EIS. Similarly, the information included in the Deming and Garrison presentation was considered in the Draft EIS, is consistent with the conclusions of the Draft EIS, and the presentation has now been cited in Section 4.11.5.2.2.

Since release of the Draft EIS and the LA TIG’s Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response

---

actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible, the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized. In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include specific marine mammal response triggers that may affect Project operation mitigation efforts; see Appendix R2 (Monitoring and Adaptive Management [MAM] Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in these Plans, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

***RE: Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion Project, USACE Project MVN-2021-2806-EOO and Draft Phase II Restoration Plan#3.2: Mid-Barataria Sediment Diversion, Deepwater Horizon Natural Resource Damage Assessment Louisiana Trustee Implementation Group (LA TIG)***

Dear Colonel Murphy,

The members of the Restore the Mississippi River Delta appreciate this opportunity to share our collective comments and recommendations on the *Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2 and Draft Environmental Impact Statement (hereon referred to as the Draft Restoration Plan and DEIS, respectively)*. We write in strong support of the Preferred Alternative, **Alternative 1, Variable Flow up to 75,000 CFS**. We submit these comments on behalf of our coalition which comprises conservation, policy, science and outreach experts from Environmental Defense Fund, National Audubon Society, the National Wildlife Federation, Coalition to Restore Coastal Louisiana and Pontchartrain Conservancy, and several other local partnering organizations. Our organizations represent thousands of Louisiana-based members and supporters, as well as many more nationally that care about the future of Louisiana's unique and nationally significant coast.

Restore the Mississippi River Delta (MRD) works to protect people, wildlife, and jobs by rebuilding coastal Louisiana's nationally significant landscape. As our region faces an ongoing and severe land loss crisis, we offer science-based solutions through a comprehensive approach to restoration. As organizations with long-standing interest in coastal projects, we commend Louisiana's Coastal Protection and Restoration Authority (CPRA), the U.S. Army Corps of Engineers (USACE) and the Louisiana NRDA Trustee Implementation Group (LA TIG), for working tirelessly on this keystone project for Louisiana's future and producing one of the most extensive scientific analysis and robust public engagement efforts we are aware of for any NEPA document.

Having worked for over a decade toward the restoration of Louisiana's critical coastal ecosystems, and having participated and contributed to the scientific, socio-economic and policy analysis that led to the identification of this project as a critical component of Louisiana's coastal restoration efforts, our organizations proffer our very strong support for the preferred alternative of a 75,000 cfs sediment diversion.

The Mid-Barataria Sediment Diversion (MBSD) will reconnect the river to its shrinking delta; end our misguided reliance on only gray infrastructure; work with nature, rather than against it in a losing battle; provide a sustainable solution to our on-going land loss crisis; and help restore habitat and ecosystem services in the Barataria Basin that were injured by the Deepwater Horizon (DWH) Oil Spill.

However, based on the DEIS analysis of impacts in Alternative 5, the optimal diversion volume balancing land building against water level impacts, likely falls between 75,000 and 150,000 cfs. We, therefore, encourage the TIG to build as much capacity into the structure as possible, given cost limitations, to build and sustain land in the future, as part of a robust adaptive management strategy. Future operations beyond 75,000 cfs would of course be subject to additional NEPA analysis.

The DEIS analyzes the decades of study on the Mid-Barataria Sediment Diversion (also known as the Myrtle Grove Diversion) that has already occurred and the clear scientific support that demonstrates that reconnecting the Mississippi River's sediment, water and nutrients is the only sustainable, long-term solution to reverse the cycle of marine transgression and to build new deltaic wetlands, while sustaining existing wetlands otherwise doomed by relative sea level rise.

The MBSD is also the optimal way to restore sustainable functionality to the ecosystem injured by DWH, including providing benefits to the northern Gulf of Mexico ecosystem injured by the spill. We strongly agree with the Louisiana TIG that the proposed MBSD project is "critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River delta plain in Louisiana" (Draft Phase 3.2 Restoration Plan, pg 1-9).

Below we provide more detailed comments regarding our perspective on the importance of the MBSD, and various components of the DEIS and Draft Restoration Plan. There are also two appendices attached to this comment letter: Appendix A contains more detailed recommendations related to the draft Monitoring and Adaptive Management Plan; Appendix B contains a series of recent op-eds and other statements of support for the project from various stakeholders. We request that the materials in Appendix B be considered as part of the Army Corps' public interest review and by the LA TIG as evidencing consistency with the OPA criteria.

## **ADDITIONAL COMMENTS AND RECOMMENDATIONS:**

### **PROJECT CONTEXT**

Three hundred years ago Europeans arrived and began the settlement of the delta and set out upon a disastrous program of modification that guaranteed the eventual physical and ecological collapse of the system. We have known for nearly fifty years (if not much longer) the magnitude of their, and our, mistakes and the consequences of short-sighted philosophy and action, and yet today we are only just embarking on adopting a solution. We cannot undo the past, but because of the dynamic nature of a delta, where change is constant and, in a geological sense, instantaneous, we can take relatively straightforward action now that allows us to substantially change the future trajectory of the system.

Our predecessors made structural changes to the Mississippi River and its distributaries, which inevitably allowed marine processes to dominate as a consequence. The Gulf of Mexico has reclaimed over 2,000 square miles of Louisiana's coastal wetlands. Just as significantly, salt has fundamentally changed the very nature of most of the system from the barrier islands to our dying interior swamps. This is especially true in the Barataria Basin. Just over a century ago crops were harvested and sent to market from Grand Isle on land where saltmarsh or saline scrub grows today; there was an intact sandy barrier rim with small brackish bays confined by surrounding marsh and narrow shallow passes to the Gulf; forests grew on the natural levees of Bayou Lafourche, Bayou Barataria, Grand River and a half dozen other abandoned distributaries all the way to edge of the bays or the Gulf.

We visited vast injuries upon that system with canals, oil spills, subsurface fluid withdrawal, navigation channels, jetties, and much more, all of which contributed significantly to the loss of wetlands. But we took away its lifeblood when we cut it off from the river, its ability to heal and revive itself. We have been watching it die for a century. What is left is literally on its last legs—a system about to let go and give itself up to the Gulf of Mexico. The red maps that we have become accustomed to through Louisiana's Coastal Master Plan tell the grim story: on our current trajectory the future is virtually all loss.

Building river diversions is the only answer fit to the scale of the problem, the only means by which the system can heal and recover on its own. If we want to remain here, we can't abandon the levees and the river to its own devices, to go where it will. Instead, if we want to reap the benefit of the river and the lifeblood it carries, we need to build large diversions that we can carefully control. While we will continue to depend upon the engineering and gray infrastructure that got us into our current predicament, we cannot rely upon it alone. We need it to augment it with sustainable natural infrastructure.

But the beauty of the diversion is that once opened into the basin, the water, sediment and nutrients that the river carries will behave much like they would in a natural avulsion, and begin to rebuild, transform and sustain the system just as if there was no gray infrastructure there. For human communities that means protective natural infrastructure between them and the Gulf of Mexico. For the natural community it means ecological release, and the rich profusion of life that is a river-fed deltaic estuary. That is why building the Mid-Barataria Sediment Diversion is absolutely necessary.

To help readers understand this overall context, we feel that both the DEIS and the Draft Restoration Plan would benefit from additional reflections on the natural and human history of the project geography, including the points we raised above, that resulted in such fundamental changes to the landscape and set us on the course of the land loss crisis that Louisiana faces today.

## **PROJECT PURPOSE AND NEED**

The Proposed MBSD project-specific statement of purpose and need is: “Consistent with the LA TIG’s Strategic Restoration Plan and Environment Assessment #3 (SRP/EA #3) and the Louisiana Coastal Master Plan. The purpose is to restore for injuries caused by the DWH oil spill by implementing a large-scale sediment diversion in the Barataria Basin that will reconnect and re-establish sustainable deltaic processes between the Mississippi River and the Barataria Basin through the delivery of sediment, freshwater, and nutrients to support the long-term viability of existing and planned coastal restoration efforts. The proposed project is needed to help restore habitat and ecosystem services injured in the northern Gulf of Mexico as a result of the DWH oil spill.” (DEIS 1-9).

The DEIS recognizes the long history of studies that have explored reintroducing sediment-laden river water into the Barataria Basin for ecosystem restoration and the plans that have identified the Mid-Barataria Sediment Diversion as a needed land-building restoration tool. In the LA TIG’s SRP/EA #3, the Mid-Barataria Sediment Diversion was identified as part of a suite of restoration projects that would provide the greatest benefit to injured wetlands and the living resources that depend on them. In that plan the TIG acknowledged that sediment diversions “are the only technique capable of producing the full suite of ecological benefits to the Gulf of Mexico ecosystem provided by the reestablishment of deltaic processes” and “have the potential to reduce impacts from relative sea level rise in the Barataria Basin, by providing a sustainable source of sediment to replenish land as it is inundated, thus contributing to long-term resiliency” (SRP/EA #3, pg xvi). **Based on this, we fully support the Purpose and Need Statement upon which the alternatives analysis is built. The statement appropriately captures the need to restore for injuries from the DWH oil spill through the reestablishment of sustainable deltaic processes between the Mississippi River and the Barataria Basin and serves as a solid foundation against which to evaluate alternatives.**

## **ALTERNATIVES ANALYSIS**

**The range of alternatives evaluated in the DEIS is reasonable, and we support the applicant’s preferred alternative of a 75,000 cfs sediment diversion.** This alternative would meet the purpose and need of the project by reconnecting and re-establishing sustainable deltaic processes between the Mississippi River and the Barataria Basin and help restore habitat and ecosystem services injured as a result of the Deepwater Horizon Oil Spill.

The DEIS considered a robust list of functional alternatives, including marsh creation, structural barriers, freshwater diversions, and barrier islands, but found that only alternatives that involved using a large-scale river diversion would meet the purpose and need of this project, which includes the need to “reconnect and re-establish sustainable deltaic processes between the Mississippi River and the Barataria Basin through the delivery of sediment, freshwater, and nutrients to support the long-term

viability of existing and planned coastal restoration efforts” (DEIS, 1-9). While other restoration project types, such as marsh creation, have been suggested in lieu of large-scale diversions, these project types would fail to build and sustain significant amounts of land in the Barataria Basin over the 50-year project lifespan due to subsidence, sea level rise, and erosion. Additionally, the acreage of marsh creation that is possible in that area is restricted due the limited number of nearby borrow areas in the Mississippi River along with the refill rate for those sites. Furthermore, dredging projects depend upon utilizing the sand fraction of the river’s sediment load, meaning they cannot get access to the approximately 75-80% of the total sediment load of the river which is carried in suspension (Allison et al. 2012). Overall, all other available restoration techniques are inadequate in the face of accelerating sea level rise, and none provide the level of ecosystem services that a naturally forming sub-delta lobe can provide.

Furthermore, as recognized in the LA TIG’s SRP/EA #3, coupling a marsh creation project with a large-scale sediment diversion can increase the lifespan of the marsh creation project. The LA TIG’s Large-Scale Barataria Marsh Creation: Upper Barataria Component project is currently headed to bid and will work in tandem with and benefit from the Mid-Barataria Sediment Diversion to build and sustain land in the Barataria Basin.

The applicant’s preferred alternative, a 75,000 cfs diversion, would build and maintain more than 13,000 acres of wetland over the next 50 years under the modeled conditions. The smaller 50,000 cfs alternative that was evaluated resulted in similar changes to salinity distribution and increased water levels in the basin, but also provided far less wetland acreage over the project’s lifespan. In contrast, the 150,000 cfs alternative would also result in similar changes in salinity distribution but would result in an additional 15,000 acres more land than the preferred alternative. However, this amount of flow would also result (in the near term) in a significant increase in water levels for some nearby coastal communities. While we understand why the 150,000 cfs alternative was not selected to move forward at this time, we do urge the TIG to take this opportunity to build in as much capacity into the structure as possible to build and sustain land in the future as part of a robust adaptive management strategy.

## **PUBLIC INVOLVEMENT**

We recognize the immense effort CPRA has committed to public engagement around Mid-Barataria Sediment Diversion. For decades, the USACE and the state of Louisiana have led public discussions around this project concept. We commend the USACE and LA TIG for their efforts to ensure robust awareness and input into this process. Such engagement is critical to a successful restoration effort, and we recognize the difficulty of designing an engagement process around a project of this scale and scope.

The more than 200 public outreach and engagement events referenced in the DEIS and NRDA plan demonstrate a notable effort made by CPRA. It is essential that CPRA continue to maintain strong levels of engagement and transparent communication with affected stakeholders as this process progresses.

We recognize that meaningful public engagement under the conditions imposed by the COVID-19 pandemic required a new approach to the public comment period and community engagement.<sup>3227</sup>

USACE and LA TIG handled the circumstances well, attending dozens of online meetings and following safety protocols for in-person meetings to ensure the public was aware of the comment period and project details, while also protecting public health. Extension of the comment period and the combination of the DEIS & Restoration Plan comment portal aided in the public's ability to participate in the comment period.

CPRA attempted to reach out to low-income and minority communities that would potentially be impacted by the project. However, these communities are historically difficult to reach, a problem compounded by COVID-19 for individuals in areas where internet access is unequally distributed. CPRA should continue to seek alternative outreach tools to reach typically hard-to-reach audiences including low-income and minority communities. In addition, the results of those meetings should be reported in the FEIS.

As noted above, public engagement should not end after this comment period, or even after the Final EIS is issued. CPRA should remain committed to engagement and open communication around the mitigation and stewardship actions that will need to be taken. A concerted effort to inform and engage in a productive dialogue with the public and impacted constituents should continue through construction, adaptive management, and operations of the sediment diversion.

As part of a long-term strategy for public engagement and involvement, we encourage the LA TIG and **CPRA to include a recreation and education area near the diversion with a viewing platform, trails, bike paths, along with a boat launch into the diversion outfall area.** This would provide amenities for the communities near the structure, provide eco-tourism opportunities, and provide an opportunity for our local communities as well as travelers to learn about coastal restoration and watch the growth of a delta over time. This area could also include educational materials such as signage, and perhaps even real-time monitoring data from the basin, to explain what the diversion is, how it operates, and what it is doing.

**In summary, we commend CPRA engagement efforts around this project to date, and recommend that CPRA make a commitment to continue regular outreach, to explore tools for co-creation of mitigation and stewardship actions for the project, as well as continue to improve engagement of low-income and minority communities. The Final EIS should include a summary of comments and responses and should uphold and further elaborate upon the commitment stated in the DEIS (Appendix R2, section 2) for regular stakeholder engagement through the adaptive management program.**

## **ENVIRONMENTAL JUSTICE**

A challenge for any project in discussing the past, present, and foreseeable considerations contributing to heightened EJ conditions/risks, is the history of forced migration, segregationist policies, or other systemic inequities entrenched at the governmental level. Elements of this history have varying degrees of responsibility for some of the existing barriers to adaptation that residents must now grapple with (i.e. economic hardships, educational background, language barriers, etc.). For example, before 1980, despite being only two miles from a pipeline carrying drinking water, the roughly 200 residents of the

African-American town of Ironton, located just south of the project, obtained their drinking water by filling containers from a truck that delivered twice a week. According to local news accounts, Plaquemines Parish afforded itself a helicopter and a golf course during that period but couldn't provide access to safe drinking water to a black community (Sneath, 2017). The analysis for this project, and virtually every other project, would be improved by such a discussion around historical context and its meanings for today.

Having said that, we do believe that this document meets the minimum requirements of EO No. 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, by identifying disproportionately high and adverse human health or environmental impacts of the proposed Mid-Barataria Sediment Diversion on minority, low-income, and Tribal populations in the relevant project area.

CPRA held in-person meetings in the low-income and minority communities that potentially could be impacted by the project. **We recommend a discussion about what was learned at those meetings or CPRA's proposed response be included in the FEIS.**

We would like to make a couple of broader points relative to environmental justice, as well. A project such as this one, which seeks to restore a functional and sustainable ecosystem to an area degraded and challenged by historical management decisions, as well as climate driven impacts such as rising sea levels, will provide significant ecosystem benefits over time. Among other beneficiaries, these benefits will accrue to:

- all who use the area for recreation or commercial fishing pursuits as estuarine balance to the ecosystem is restored over time; and
- all those who need essential protection from storms and sea level rise, as existing land is sustained, and new land built. The DEIS analyzes only the effect of this project on a small suite of storms, and only at 1 in 25 and 1 in 100 frequency. It concludes there will be some small near-term adverse effects for communities downriver from the diversion canal. However, the MBSD is actually part of the larger suite of projects outlined in the Coastal Master Plan. In concert, these projects will provide very significant long-term storm surge and sustainability benefits for communities in Plaquemines and Jefferson parishes, whether within or without structural storm risk reduction systems.

Each of these benefits will be particularly helpful over time to:

- those who depend on subsistence fishing - a grouping which is made up of disproportionately poor members of minority groups; and
- those who live in particularly flood prone areas that, because of historic discriminatory settlement patterns, is a grouping which is also disproportionately poor and of color.

A healthier and more protective system -- the purpose of this project -- will have positive environmental justice outcomes, as the project goes forward, over time.

The local beneficial economic impacts associated with design or construction job opportunities from the project, while substantial, will depend, from a direct employment perspective, on focused efforts on the part of Louisiana state and local economic development authorities, through communication, recruitment and training activities, in order to be significantly translated into jobs for local residents, including minority residents. Historically, 75% of workers across all industries in Plaquemines Parish have commuted from other areas. It will take work to change that, and to make sure that minority communities are directly targeted, encouraged and supported in this effort. In addition, the same type of focused workforce development effort is likely necessary in order for these local jobs to translate into longer term economic benefits for affected communities.

**Though outside of the direct scope of this project, we would strongly encourage the broader Louisiana economic development efforts to focus and organize around the enormous and direct employment opportunities being generated by this project (thousands of jobs over multiple years), as well as recognizing and organizing around the long-term economic benefits of the coastal restoration program across south Louisiana (tens of thousands of jobs over decades) (Scott, 2019). This longer-term picture creates the direct opportunity for local jobs to translate into career opportunities, if managed for those outcomes.**

**We recommend the following for the Final EIS:**

- Describe historic, systemic inequities affecting EJ communities in the project outfall area to provide authentic and more complete context for the discussions.
- Encourage targeted economic incentive plans for contractors associated with project design or construction to prioritize economic opportunities for all interested residents in the project footprint/outfall area wherever relevant.
- Specifically include the proposed *Plaquemines Liquids Terminal* project for analysis on impacts on the preferred alternative (discussed further below).
- Consider air, water, and noise quality mitigation for people living near the construction zone, and in-community dialog during the construction process, to mitigate adverse impacts to surrounding communities and environments.

**BEST AVAILABLE SCIENCE**

The DEIS lays out the massive scientific and research effort that has been conducted to understand the benefits and the impacts of the Mid-Barataria Sediment Diversion. The DEIS and previous investigations used a combination of state-of-the-art modeling tools, increased monitoring, and extensive expertise to predict likely outcomes. The DEIS also clearly acknowledges the uncertainties in these predictions, both due to unknown future environmental conditions and also due to inherent uncertainties in the modeling.

The DEIS outlines uncertainties in the modeling that tend to underestimate salinity by 1ppt, water level by 0.1 m, and temperature by 1.5°C and the level of uncertainty varies spatially through the basin. The model limitations section in Appendix E mentions that the dilution factor is uncertain as well as the effect of the barrier islands over time on the tidal exchange. There is also uncertainty around

restoration efforts. For instance, the modeling assumes that the barrier islands are drowned with relative sea level rise, however the State has been committed to maintaining these important features, and that commitment is likely to continue, therefore reducing salinity increases. The passes, however, are likely to deepen and enlarge and increase salinity influences. Taken all together, these factors may underestimate salinity enough that the biological impacts forecasted may be a worst-case scenario for saltwater species, such as oysters and dolphins. The complexity of these uncertainties has been well handled in the DEIS and demonstrates the importance of the adaptive management program to reduce uncertainties over time.

**The Final EIS should make a continued commitment to using best available science and input from extensive external expertise to inform the decision-making process around construction, operations, and outfall management.**

### **SOCIO-ECONOMIC ANALYSIS**

We are encouraged to see the significant job creation projections, averaging 2,200 jobs annually, and both direct and indirect impacts of nearly \$300 million. A total economic impact of \$1.5 billion output over the five-year construction, on top of a \$1.4 billion construction price tag, is potentially an economic game changer for this region. We also conclude that the trades and skills the workforce will acquire will be transferable to a growing regional and state economy in the future. Additionally, with an average of 1,600 workers in the region during the construction period, other service industries will need to prepare for this influx, including retail, gas stations, restaurants, health care, housing, etc. CPRA should prepare materials on the skills needed to obtain these construction jobs, as well as the average annual salaries. It will take time to create the labor line to get workers trained, and the State should be working with our trade schools, community colleges and universities early and often to prepare a local workforce.

The DEIS cites Oxfam America's Social Vulnerability Index from 2009, but the Water Institute of the Gulf and the Louisiana Coastal Protection and Restoration Authority have developed some work in this area through their 2017 Coastal Master Plan process. We would like to see how this more current application could be useful in analyzing this project. **In addition, we strongly suggest integrating more current data and information before the release of the Final EIS, including and especially the 2020 census data.** We believe this will show important population shifts to communities in Jefferson, Lafourche and Plaquemines Parish, as well as the major metropolitan area of Greater New Orleans.

### **CUMULATIVE IMPACTS: REASONABLY FORESEEABLE PROJECT BEARING ON MBSD –PLAQUEMINES LIQUIDS TERMINAL**

We were surprised to see minimal inclusion of the proposed Plaquemines Liquids Terminal (PLT) project as a part of the Cumulative Impacts Analysis, given its proximity to the project -- literally upriver and adjacent to the project. We are aware that permitting for PLT is not the subject of this analysis, or decision making here. But with the possible storage of 20 million barrels on the site, and the transfer of that oil through pipelines regularly connected and disconnected from large, river-borne vessels, there is

serious concern about regular oil spillage into the diversion, as well as potentially catastrophic impacts resulting from accidents, or hurricanes. Any of those could have serious impacts on the operation of the diversion. In addition, we also strongly suggest inclusion in the FEIS of data from AECOM/ARCADIS indicating that the *Tallgrass Plaquemines Liquids Terminal* project (PLT), could potentially reduce MBSD land-building significantly - possibly greater than 17%. A previous 2012 study conducted by the Water Institute of the Gulf for a proposed coal terminal on the same site also indicated a docking facility in the river upstream of the MBSD is very likely to result in decreased effectiveness of sediment capture by the diversion, and therefore decreased land-building.<sup>1</sup> The docking structure for the PLT proposal is larger than that which had been proposed for the RAM terminal.

Our overall judgement is that this project (PLT) is entirely inconsistent with MBSD, and therefore with Louisiana's Coastal Master Plan. The remedy for this situation is direct -- Executive Order 2016-09 -- which "directs all state agencies "to administer regulatory practices, programs, contracts, grants and all other functions vested in them in a manner consistent with the Louisiana Master Plan for a Sustainable Coast and the public interest to the maximum extent possible."<sup>2</sup> It is the responsibility of the Governor, through his executive assistant for coastal affairs, to exercise this authority.

## **IMPACTED RESOURCES**

### **Habitat and Wildlife**

The Mid-Barataria Sediment Diversion is critical to support future bird and wildlife populations in the region. The freshwater habitat components of Louisiana's estuaries are under tremendous threat from erosion, saltwater intrusion, and sea level rise, and are at risk of completely disappearing given physical limitations preventing inland marsh migration (Glick et al., 2013). Although the saltwater component of the estuaries also support conservation priority species, such as Brown Pelican, Sandwich Tern, Piping Plover, and others, Delft modeling indicates these habitats will continue to exist in some form under both a No Action and the 75,000 cfs alternative scenario (Appendix E; Figures VC 7 and VC 28). As such, the Mid-Barataria Sediment Diversion will ensure a sustainable future for freshwater wetland habitats and create biologically productive areas where salinities mix, critical to sustaining birds and other wildlife.

The importance of the Barataria Basin to wildlife is well documented, and much of it is covered in the DEIS (Chapter 3). The DEIS likely underestimates the value of the diversion to wildlife, and the ecological release that will likely take place in a moribund system following riverine re-introduction. This has already been seen at the sites of several new planned and accidental riverine avulsions, such as West Bay, Mardi Gras Pass, Fort St. Philip, Delta-wide Crevasses in the Birdfoot, Davis Pond, Caernarvon and Wax Lake. Biophysically, the introduction of carbon, nitrogen and phosphorus into declining marshes will automatically trigger concomitant increases in net primary productivity, with

<sup>1</sup> Lawsuits were filed to challenge issuance of RAM Coal Oil Export Terminal air and coastal use permits. Also see [https://www.nola.com/news/environment/article\\_dfb99ea7-26a4-5ac8-b923-b27bfeb4cc93.html](https://www.nola.com/news/environment/article_dfb99ea7-26a4-5ac8-b923-b27bfeb4cc93.html)

<sup>2</sup> Executive Order 2016 – 09, which directs all state agencies "to administer regulatory practices, programs, contracts, grants and all other functions vested in them in a manner consistent with the Louisiana Master Plan for a Sustainable Coast and the public interest to the maximum extent possible."  
3232

beneficial effects amplified up the trophic pyramid (Day et. al., 2021; Tupitza and Glaspie, 2020; Wissel and Fry, 2005).

The freshening of systems allows the revival and recolonization of freshwater and brackish species. This is dramatically true in the case of trees and shrubs, few of which tolerate higher salinities. In the outfall areas of existing recent diversions, early successional willows are growing in profusion (for example, see CRMS3169), and succession to longer lived species like bald cypress will very likely follow. Meanwhile, on higher ground, stressed and dying natural levee and chenier vegetation like live oak may be revived, and recruitment of new woody vegetation can begin again.

## **Birds**

As just one example, Louisiana's coastal wetlands were recently shown (Remsen et al. 2019) to support some of the most important and largest bird populations of any state in the Gulf of Mexico and Eastern United States. Yet because of the collapsing coastal ecosystem, the future of these birds is in question. The DEIS and the alternatives scenario analysis demonstrated the importance of the Mid-Barataria Sediment Diversion to birds that depend on the freshwater end of the estuary -- notably Mottled Duck and Green-winged Teal, which are representative of other important waterfowl species. Wintering waterfowl, of course, are important to hunters and birders, and therefore to the economy that supports waterfowl hunting and ecotourism (Southwick Associates, Inc., 2006).

In addition, the project will almost certainly benefit other conservation priority marsh species including King Rail, Little Blue Heron, and Bald Eagle. At present, these species are the beneficiaries of a collapsing ecosystem--organic plant biomass is being converted to animal biomass as marsh loss occurs, serving as a prey base. But there is a fixed quantity of stored organic biomass. Once it is gone, it is gone. Therefore, it is clear that a No Action scenario would have dire consequences overall for coastal bird and wildlife populations and the habitats on which they depend, because the system's energy is on a path to zero.

Only by restoring deltaic and estuarine processes through riverine diversions can a new equilibrium be achieved in the Barataria Basin -- a balance between riverine inputs coming in from the continent and marine influences pushing in from the sea. If we manage to arrest climate change and stabilize sea level over the coming decades, the river might once again be able to win the battle. But even if we remain in a losing battle, the river can buy people and wildlife several decades of continued viability and productivity.

## **Marine Mammals**

The Mid-Barataria Sediment Diversion project has an important relationship to marine mammals and marine mammal habitat. Available information indicates that while the long-term impacts of the project to dolphin populations will be beneficial, there could be significant adverse impacts on BBES dolphins in the near term. The DEIS and associated studies (Garrison et al. 2020) and other cited literature recognize this impact and fully discuss the potential consequences on the stock. In doing so, the DEIS and administrative record for the project set the stage for important efforts to monitor and minimize

those impacts and develop the measures necessary to provide the stock with the best prospects for survival and eventual recovery. Because the goal of the project is to restore natural systems and a healthy coastal and marine ecosystem, its approval and successful establishment will eventually lead to long-term benefits for marine mammals and dolphin populations. In doing so, the project advances the primary goal of the Marine Mammal Protection Act (MMPA) to bring about the health and stability of the marine environment. Consistent with the purpose and need for the project, the principal objective for project construction and operation, with regards to the resident stock, should be to take those steps that are available minimize the short-term impacts of lower salinity levels on dolphins and to assist with the sustainability of the BB stock while the long-term benefits of the estuary restoration efforts come to be realized for all marine species, including dolphins.

In considering the impacts of the project on dolphins, the record should recognize that there is a general lack of definitive information on the impacts of exposure to low salinity on dolphins in coastal ecosystems. The recent technical report by Garrison et al. 2020 simulated one scenario for the project's effects on Barataria Basin resident bottlenose dolphin stock due to changes in salinity based on the operational flow outlined in the DEIS and concluded that substantial declines in bottlenose dolphin survival rates are likely under the simplified modelled diversion operation scenario. From the results of that work, the population's survival rate is projected to decline by 15.3% to 62.7% (mean reduction in survivorship=34%) with wide uncertainty stemming from modeling salinity predictions, future conditions, and the expected relationship between salinity exposure and survival, developed through expert elicitation due to knowledge gaps about the timing and degree of low salinity effects on health.

The wide range of uncertainty in the modelling stemming from a lack of detailed information is a common issue for marine mammals, where under the MMPA Congress and the courts have recognized that little is known about the biology of many marine mammals and the effect of human activities on them (Baur et al. 2015). This general lack of knowledge calls for a cautious and conservative approach for actions that have effects on marine mammals, but also means that predictions about future effects may be inaccurate.

While Congress found the project to be consistent with the purposes of the MMPA, and has waived the MMPA take prohibition as it applies to this project and impacts on BBES dolphins, the project itself can still proceed carefully and with full attention to the ways in which impacts can be lessened. The DEIS sets the foundation for doing so by taking into account the best available science and information and supporting a rigorous pre and post construction monitoring program that can reduce key uncertainties about the population and measure project effects. The MMPA itself recognizes the importance of gathering additional scientific information, setting forth the policy declaration that "there is inadequate knowledge of the ecology and population dynamics of such marine mammals and the factors which bear upon their ability to reproduce themselves successfully." 16 U.S.C. 1361(3). With this lack of scientific information available, Congress directed that marine mammals should be protected and managed to the greatest extent feasible commensurate with sound policies of resource management and that the primary objective of their management should be to maintain the health and stability of the marine ecosystem." Id. 1361(6). Congress defined "management" to include the "entire scope of activities that constitute a modern scientific research program, including but not limited to, research, census, law enforcement and habitat acquisition and improvement." Id. 1362(2). The research program that will be undertaken as part of the project will be consistent with these MMPA policies by

calling for rigorous monitoring and follow-up research, long-term habitat improvement, and actions that are essential to the health and stability of the Gulf ecosystem.

With this information and ongoing monitoring and review of new data, project operations can be guided under an adaptive management approach to undertake actions to further reduce adverse short-term impacts, consistent with the project purpose and long-term ecosystem restoration goals and directives. **In this regard, we believe that the FEIS and supporting record should include additional information on possible operational minimization measures that may be considered through the adaptive management process, based on monitoring and new information.** For example, evaluation of constructing landscape features that might provide higher salinity refuge areas within the basin might be an option. The alternatives analysis in the DEIS, including the consideration of alternatives rejected for further review, is adequate for purpose of the FEIS and a Record of Decision, but more information on minimization measures that may be considered to address the emerging information about impacts on BBES dolphins is needed to provide a full and complete picture of how the long-term benefits of the project for the marine ecosystem can be achieved without causing avoidable and mitigatable short-term impacts.

We support the inclusion of all three additional Stewardship Measures for BB dolphins and other coastal populations throughout Louisiana, including 20 years of funding for the Statewide Stranding Program which has suffered over time from inconsistent and insufficient support. **However, we recommend that CPRA provide additional details in the FEIS regarding human interaction/anthropogenic stressor reduction stewardship measures, including details on how and by whom it might be administered and implemented, and on what timeframe.**

### **Harvestable Aquatic Resources**

As is the case with the terrestrial ecosystem, the DEIS describes but may underestimate likely increases in net primary productivity for aquatic estuarine organisms. Increases in net primary productivity will translate into more biomass, and the effect will be felt not only in Barataria Bay and the waters of the basin, but in the northern Gulf of Mexico as well. By shifting the zone of interaction between Mississippi River water, sediment and nutrients from the open Gulf of Mexico to the middle estuary, part of the Gulf's productivity will shift inland with it, perhaps ameliorating some of the imbalances which often lead to hypoxic conditions in the open Gulf. The shift will certainly lead to increases in many estuarine organisms, as the DEIS documents.

Nevertheless, as the DEIS analysis indicates, some estuarine organisms important to fishers may decline, at least in the near term, though the difference between *future with* and *future without* will decrease as sea level rises.

### **Brown Shrimp**

This near-term decline is especially true of organisms like brown shrimp which have a life cycle that will be disrupted by seasonal salinity changes. If a limiting factor on Barataria's harvestable brown shrimp populations is availability of marsh and shallow water at appropriate salinities in spring, then brown shrimp will decline. On the other hand, if other factors such as survival are the limiting factor

rather than habitat, the declines may not be as pronounced. Despite this uncertainty, the DEIS appropriately and conservatively predicts a significant decline in the brown shrimp population within the project area.

Already, many businesses in Louisiana's seafood supply chains are experiencing low to negative profit margins, a problem that is particularly true for the shrimp industry. Finding a strategy for mitigation that takes into account all of the issues facing the industry, and all of the resources that might be available beyond the mitigation funding identified by the TIG for this project available from other agencies and initiatives will be critically important for the future growth and survival of the inshore brown shrimp fishery. **We recommend a targeted mitigation effort for inshore shrimpers which includes educational training, grants to acquire necessary gear, and other mitigation identified in consultation between shrimpers and the state that could strengthen the resilience of the industry, not only to deal with the changes coming with the MBSD, but all of the other forces that will affect the ecosystem and the shrimping economy.**

## **Oysters**

For sessile oysters the area of suitable habitat conditions may actually increase as the mixing zone where ideal salinities might be found expands into the lower basin and a more reliable source of fresh water is provided by the diversion. The issue then is not habitat changes, but changes in location and loss of currently productive leases on state and private water bottoms. While oyster lease locations can eventually be moved as appropriate, the impracticality of and cost to harvesters involved with travelling longer distances from home ports becomes the issue.

Oysters in the mid-basin areas will be most adversely affected from the operation of the diversion. Appropriately, the proposed mitigation efforts for the commercial oyster industry laid out in Appendix R section 6.3.3 of the DEIS along with the initiatives in the oyster management and strategic plan provide significant resources that can help the commercial oyster industry adapt to the changes brought on by the proposed sediment diversion.

**In keeping with our environmental justice recommendations above, we suggest that specialized mitigation efforts should be targeted to economically vulnerable oyster fishers with leases that have a high probability of becoming unproductive as a result of the sediment diversion.** In this context, economically vulnerable oyster fishers are those with lower incomes that are at a higher risk of becoming unprofitable. The state should also consider giving oyster fishers who heavily rely on leases in this area alternate leases in an area that will likely be productive with the diversion.

For all impacted fisheries -- and we recognize that some of this is beyond the scope of the DEIS -- we recommend that the CPRA, working with LDWF and other appropriate state agencies:

- Continue to work with impacted fishers to identify appropriate mitigation and stewardship measures for the Final EIS, including strategies identified in Louisiana Fisheries Forward Report.<sup>3</sup>
- Adopt policies and projects that benefit the most at-risk communities in the region, including African American and Native American communities.
- Advance education and technical assistance and targeted mitigation efforts for inshore shrimpers and oyster fishermen. This could include providing educational training, grants, low interest loans and technical assistance to acquire necessary gear, so the fishers could become more resilient to the sediment diversion and other events that affect the ecosystem.
- Examine laws, policies and regulatory barriers that are not flexible enough for changing times or serve to discourage innovation and business diversification.
- Connect coastal priorities with other regional economic development and workforce initiatives, including those connected to climate, and develop pathways into the restoration economy. That way, CPRA can leverage its participation in partnerships and fund efforts strategically using existing and new resources for restoration and adaptation initiatives.

## **MONITORING AND ADAPTIVE MANAGEMENT PROGRAM: SUMMARY RECOMMENDATIONS**

A project of the size and complexity of the MBSD will require a robust monitoring program and nimble adaptive management. It is essential that the approved plan and permits allow for the full benefits of effective Monitoring and Adaptive Management Plan (MAMP). The DEIS for the Mid-Barataria Sediment Diversion Project (Appendix R2) **includes several steps and elements that would be considered appropriate for adaptive management** (as per Murray et al. 2015), such as:

- A definition that includes many essential aspects of adaptive management (see lines 272-282 from page 2 in Section 1.1.1).
- An articulation of the project's restoration objectives (see lines 354-361 from pages 3-4 in Section 1.2).
- A representation of the system and relevant pathways of effect with a conceptual ecological model (see page 6 in Figure 1.3-1 in Section 1.3).
- A description of the sources and different types of critical uncertainties of relevance to the project (see pages 9-11 in Section 1.4).
- A summary of the parameters for monitoring and evaluating performance as related to the project's restoration objectives (see pages 28-68 in Section 3.7).
- Approaches for benchmarking (see lines 2754-2778 on pages 69-70 and Table 4.2-1 in Section 4) and evaluating the data around monitoring parameters to understand project performance (see pages 70-80 in Section 4) within a broader process and schedule for annual and multi-year science synthesis and decision making (see pages 81-84 in Section 5).

<sup>3</sup><https://www.lafisheriesforward.org/louisianas-seafood-future-releases-2019-findings-report-on-fishing-industry-and-change/>

- A multi-agency governance structure and elements to oversee and guide implementation of decisions, synthesis, and evaluation of science, and adjust decisions based on the emerging science that will provide an understanding of project performance (see pages 15-20 in Section 2).

We commend CPRA for committing to a “basin-wide operations and basin monitoring data repository.” **CPRA should make this data available in a user-friendly way to the public and stakeholders, to foster a clear understanding of the project operations and measured impacts to the basin.** Development of an “information dashboard” or “clearinghouse” model for a project-specific repository, where the basin-wide data can be kept and accessed, would be useful to the public as well as diversion operators, state agencies, researchers, and other stakeholders. It could also serve as a model for similar restoration projects along the Mississippi River, or in other locations worldwide. Some of the data could even be integrated into a public facing education and recreation center on-site with the project, as has been done in other nationally significant projects around the country.

The importance of the Monitoring and Adaptive Management (MAM) Plan for this project cannot be overstated. The Barataria Basin must be continually monitored due to the complexity of the natural ecosystem, so that the impacts from this project are fully understood. This provides an opportunity for CPRA to modify project operations, if needed, to maximize restoration benefits and minimize negative impacts to fish and wildlife or communities. **Governance and decision-making should be a science-based, inclusive, and transparent process with genuine engagement and input from external experts and community stakeholders.**

Once operational, the most dramatic change resulting from MBSD will be a decrease in average salinities during operation. That change could be ameliorated by gradually decreasing average basin salinities before MBSD operation begins, and a ready tool for accomplishing that is available in the Davis Pond Freshwater Diversion. Davis Pond could be available for such an adaptive management use because of the Modification of Davis Pond feasibility study authorized in 2007 in the Water Resources Development Act (WRDA), Section 7006(e)(1)(D). A Feasibility Study was conducted, but not completed because the local sponsor (CPRA) and Corps could not agree on a preferred alternative. At the time the possibility of using Davis Pond to gradually freshen the basin was explored, and Alternative 18 which allowed this was CPRA’s Preferred Alternative. The Corps however concluded that freshening the basin in anticipation of future as-yet un-permitted diversions would be “pre-decisional”, and therefore violate NEPA. That objection will no longer apply if a favorable Record of Decision is reached for the Preferred Alternative. Using Davis Pond during the final design and construction phases of the MBSD would allow both a more gradual transition, and opportunities to study anticipated diversion effects on estuarine organisms.

In Appendix A we outline in greater detail our recommendations for a MAMP.

## **CONCLUSION**

**In conclusion, as previously articulated, we strongly support the preferred alternative of a 75,000 cfs sediment diversion, and of advancing the Mid-Barataria Sediment Diversion for funding through the LA TIG. We are grateful to USACE, the LA TIG, and the State of Louisiana for their work to advance this critical project. The future of our coast depends upon its implementation.**

A delta cannot survive without the river that built it and sustains it. That lesson has been brought home to the people of coastal Louisiana by tragedy, by the near destruction of communities by storm surge, and by ongoing deterioration of the habitats and ecosystem that sustain and define our culture. The MBSD is an important beginning to what will be an ongoing effort to re-integrate the river into the delta while preserving our precarious foothold here. Time is not on our side, and forces that we cannot control make our position more and more perilous every day. We can't continue fighting against nature--we will ultimately lose. But we can learn to better live with nature, to take advantage of what it has to offer. That road to that begins in earnest for Louisiana with the MBSD.  
Thank you for your consideration of our comments.

Sincerely,

# **APPENDIX A**

## **MONITORING AND ADAPTIVE MANAGEMENT: DETAILED RECOMMENDATIONS**

We believe there are **three fundamental improvements** to the MAMP which would increase its ability to serve the stated purpose and definition of adaptive management for the project. These improvements include: (1) clear adaptive management process, (2) better problem definition, and (3) expanding from centralized governance. These improvements can develop over time as the project is constructed, however the Final EIS should provide a roadmap for how CPRA plans to develop the AM program over the next few years prior to construction.

### **Improvement #1: Define a clear adaptive management process**

Although the MAMP includes several of the necessary and common steps / elements of adaptive management (AM), **there can be increased clarity around the adaptive management process that will be implemented.** There are a variety of different interpretations and approaches that could be adopted to support implementation of adaptive management of the project (e.g., CPRA 2017; Carruthers et al. 2020; TWIG 2020) with different programs from elsewhere tending to tailor their AM processes to suit their unique needs (e.g., Williams and Brown 2012; DSC 2013; Fischenich et al. 2016). For instance, The NRDA Monitoring and Adaptive Management Procedures and Guidelines Manual Version 1.0 (2017) (MAMPG) recommends project-level AM processes which might be suitable. The MAMP should include a similar process diagram for AM to clarify how the steps and elements described in the MAMP relate to and support the envisioned process. Lessons have been learned about some of the common elements that enable the effective implementation of AM since there is documented variability in its success (Gunderson 2015; Greig et al. 2013). Having an explicit reference to the adaptive management process to which the project is committing (i.e., the steps and supporting elements), will allow the MAMP and the envisioned AM process to be successful in serving its intended purpose.

The MAMP also **needs a clear alignment and integration of elements across steps in the envisioned AM process.** In particular, the MAMP would be strengthened by clarifying the explicit linkages between the restoration objectives (and related sub-objectives) for the project, the management actions that are within scope and will affect performance of the project, the critical management uncertainties that can be tested through adjustments in the management actions, the critical research questions that scientists can resolve through supplementary studies and learning strategies, the monitoring parameters that will be used to evaluate effectiveness of the actions and changes in status and trends of valued components, as well as the specific analytical tools, evaluation approaches, and/or learning strategies that will be used to provide answers to the critical management questions and evaluate success of project relative to its restoration objectives. The line of sight across elements can improve the AM process to provide clarity on elements and their relationship (see Improvement #2).

The MAMP can address Improvement #1 by implementing the following suggestions:

- Include a process diagram for AM which represents the process to which the MAMP is committed.
- Commit to implementing an effective AM process after the FEIS Record of Decision that draws upon experiences from elsewhere and the guidance of AM practitioners.
- Improve communication of the “line of sight” across steps and elements of the AM process to clarify how they are linked, integrated, and mutually supporting each other in the MAMP and related components of the DEIS (e.g., the impact analysis, mitigation and stewardship plan).

### **Improvement #2: Clarify the problem definition**

A second improvement in the MAMP would be to provide **clarity around the definition, scope, and framing of three fundamental elements of adaptive management**. Having a clear problem definition is fundamentally important for clarifying the focus of adaptive management for practitioners. Having a clearly defined problem was noted by Greig et al. (2013) as a fundamental enabler of success for AM programs to ensure that the approach is appropriately and clearly applied by practitioners.

A first element that can be more clearly articulated in the MAMP relates to the **measurable restoration objectives (and sub-objectives)** against which success of the project and related actions would be evaluated. The MAMP describes three objectives and then cross-references those with a list of monitoring parameters (see pages 28-68 in Section 3.7). There is an implied linkage between the restoration objectives and related monitoring parameters, but it is difficult to directly and measurably link them to the desired outcomes that are under the direct influence of the management actions within the scope of the MAMP, and relate to the valued components of most relevance to decision makers of agencies with decision authorities across the Louisiana coast. For instance, as described, the three restoration objectives do not explicitly represent the objectives of relevance to decision makers as implied in Appendix R1 (Mitigation and Stewardship Measures) which include aspects related to the decision authorities and interests of various agencies and stakeholders (e.g., marine mammals, navigation, flooding, and fisheries). The listed monitoring parameters provide a heavy emphasis on monitoring parameters related to physical conditions and it is difficult to determine how changes in these variables will relate to the outcomes that matter to relevant decision makers of affected agencies. If the performance targets and related performance measures are not clearer, it will be difficult for decision-makers to evaluate the trade-offs amongst alternative operations and effectively evaluate performance of the project.

A second element that needs to be more clearly defined involves the **decisions / management actions** to which AM would apply. Specifically, there are a range of possible interpretations

around the scope of management actions which include different points of emphasis around: (1) restoration projects as noted in the definition of AM in MAMP (see lines 272-282 from page 2 in Section 1.1.1), (2) project operations as referenced in the purpose and need in the MAMP, and (3) mitigation and stewardship strategies as listed in Appendix R1. Having agreement and a clear understanding of the scope of management actions is fundamentally important so scientists can articulate the conceptual models and related hypotheses of effect for these actions, which in turn can be tested, monitored, and evaluated through the implementation of the project by operators and decision makers.

Lastly, there should be an improved definition and additional details on the list of **critical uncertainties / questions** that affect the ability of decision makers to understand the effectiveness of their actions. Conceptual models can be a useful tool for identifying critical uncertainties. The one provided in the MAMP (see page 6 in Figure 1.3-1 in Section 1.3) could be tailored to serve this purpose and provide more detail to help identify and clarify the most important and relevant critical uncertainties for decision making. Moreover, how the modelling and assessment work from the DEIS (i.e., the impact analysis) has been or could be used to rigorously identify critical management uncertainties and how these unknowns will be evaluated / tested during the operations of the project could be clarified. The critical uncertainties are described with a mix of management uncertainties and scientific uncertainties. As noted by Nichols and Williams (2006), there is an important distinction between management uncertainties and scientific uncertainties for AM. Since it would not be appropriate to resolve all uncertainties described in the MAMP using AM, there is a need for more information about the learning strategies that are being proposed to resolve different critical uncertainties. Clearly identifying, specifying, and prioritizing the most critical uncertainties is important for an effective AM process to ensure that there is a clear focus for learning and that the proposed learning strategies can provide answers to these questions.

The MAMP can address Improvement #2 by implementing the following suggestions in the FEIS or during the development of the AM program:

- Provide greater specificity to each of the three objectives identified in the MAMP by including more specific sub-objectives that are more relevant to the valued components that matter to decision makers, are more directly measurable, and are under the influence of relevant management actions for the project (i.e., create an objectives hierarchy).
- Provide an explicit list of the specific management actions that are within scope of the MAMP.
- Use more detailed conceptual models to represent, identify, and specify the priority list of critical uncertainties that are of relevance to the management actions for the project and affect progress towards the objectives / sub-objectives. This could include development of near real-time models and decision-support tools to support the operations of the diversion after the FEIS Record of Decision but prior to operation of the diversion.

- Separate the list of identified critical uncertainties into management uncertainties or hypotheses that relate to questions about the effectiveness of management actions of relevance to the project (resolved through passive or active management experiments) and scientific uncertainties that may be important research questions for better understanding the system, but can be resolved through learning strategies other than AM (e.g., model development / application, a literature review, data synthesis / analysis, a targeted field study, long term monitoring activity, a field experiment).
- Clarify the proposed learning strategies that will be used to provide answers to the identified critical uncertainties (whether management or scientifically oriented uncertainties).

### **Improvement #3: Centralized governance**

An effective governance structure is an important ingredient for successful environmental management, generally (Dietz et al. 2003), and adaptive management, specifically (Greig et al. 2013). Effective governance structures provide an important set of functions which include: (1) trust-building, (2) knowledge generation, (3) collaborative learning, (4) preference formation, and (5) conflict resolution (Green et al. 2015). Governance systems vary in their ability to effectively provide these functions and their design has an important influence on their effectiveness. Adaptive management programs tend to require a robust governance system to effectively execute decisions, learn, and innovate in the face of uncertainty (Duit and Galaz 2008). A review of the organizational structures of four large scale AM programs across North America provides the following insights of relevance to the MAMP (Marmorek et al. 2015):

- There is no “one-size fits all” approach to effective governance since success depends on the specific context in which a governance will function.
- Statutory decision makers tend to hold the ultimate responsibility for its relevant decision authority and this decision maker can consider the views of other entities and levels of governance, but they do not relinquish their decision authority to others.
- Effective governance structures for AM tend to separate (though vertically integrate) policy, management, and technical levels of interaction and decision making with external agencies and stakeholders having roles that are integrated at one or more of these levels of interaction.
- Processes to generate technical information (i.e., synthesize the science) are separated from processes to explore preferences, resolve conflicts, and make decisions.
- The synthesis of scientific information to inform decision making tends to be completed independently by technical organizations/agencies with some form of independent peer review.

Based on this understanding of the need for effective governance and factors that contribute to its success, the proposed governance structure in the MAMP can be improved in several ways. Although there is some need for clarity about who would serve on each governance element, the

governance structure in the MAMP focuses all roles and responsibilities for project governance with CPRA (see Figure 2.1-2 on page 16). It appears that the input from any outside entities would only be provided as advisory opportunities with CPRA (i.e., a one-way dialogue). As well, the proposed governance structure seems to mix technical responsibilities with management responsibilities across multiple governance elements. For instance, the Data Management Team and AM Team both have technical responsibilities (e.g., data management, assessment/analysis, reporting). Likewise, the AM Team and Operations Team both have management responsibilities. Based on the experience of effective governance structures for AM programs elsewhere, it could be difficult for the AM Team to have responsibilities for both generating science and contributing to management recommendations. External audiences will be less likely to trust the impartiality of the science being provided to decision makers because they are one and the same. A more effective structure would include a Technical Team that is clearly tasked with managing data, analyzing it, being responsive to peer review, and providing an impartial interpretation / reporting of the evidence to decision makers. This team should comprise an interdisciplinary team of experts, both internal and more importantly external to CPRA, and include good-faith representation of traditional ecological knowledge. Traditional ecological knowledge could be included through researchers that are tasked with gathering information from a large number of fishers and community members and synthesizing information for decision-makers. The Technical Team should be designed to provide independent, science-based assessments to the other teams. In addition to the Technical team, CPRA should consider standing up an interdisciplinary group of national experts to periodically review the science and management actions. This project is of national significance and engaging experts outside of Louisiana, such as the LCA Science and Technical Board or the Coastal Master Plan Science and Engineering Board, can provide decision-makers with additional science support.

The Management Team could then be responsible for ensuring the Technical Team and any external science panel understands the management relevant science around which to focus, evaluating the evidence that emerges from that Team, considering trade-offs among different performance objectives, integrating the different perspectives and risk tolerances of different internal / external audiences, and then developing a management recommendation or a summary of options for approval by senior executives with the ultimate decision authority. Operators will also have an essential voice in iteratively developing management recommendations with a Management Team so that what is being proposed can feasibly be implemented, but decisions should be guided by a clear structure and process that considers the scientific evidence and carefully evaluates trade-offs among alternative decisions.

Over the course of 2020, Environmental Defense Fund in partnership with Restore the Mississippi River Delta coalition convened a group of local stakeholders wanting to learn more about adaptive management for a sediment diversion and how to effectively communicate this topic back to their communities. In addition, the participants provided a number of recommendations on AM

governance that are reflected in the improvements suggested as the DEIS moves forward including identifying a process for how members of the governance structure are chosen or nominated and how long they may serve in a group.

The MAMP can address Improvement #3 by implementing the following suggestions in the FEIS or during the development of the AM program:

- Provide additional clarity about the size, membership from representative organizations, and process for selecting members in the different elements of the governance structure.
- Provide additional clarity around the specific types / examples of decisions that would be considered by each element in the governance structure.
- Separate technical roles (i.e., Technical Focus Group, Peer Review, Data Management Team) from management roles (i.e., AM Team, Operations Team, Executive Team) and clarify that the responsibility of technical roles is to maintain credibility and provide impartial evidence for decision making which involves much more than just data management (e.g., data management, modelling / analysis, scientific interpretation, knowledge synthesis, reporting). Consider engaging experts external to Louisiana.
- Link activities of the Technical Focus Groups / Peer Review to the Data Management Team, as opposed to the AM Team, or provide some alternate governance arrangement that appropriately concentrates technical responsibilities and separates these responsibilities from representatives with management responsibilities.
- Decentralize management responsibilities in the governance structure to enable broader engagement, two-way dialogue, and development of joint recommendations involving multiple interests into decision making (as opposed to a one-way consideration of inputs from a Stakeholder Review Panel or Stewardship Group). Broader engagement may be more appropriate for an AM Team (those involved in recommending a decision) as opposed to an Operations Team (those involved in implementing a decision). A decentralized management structure could still retain a single entity as the ultimate decision authority (e.g., Executive Team), and could allow for an engagement process that recognizes differences in decision authority of different entities (e.g., authorities of federal agencies).
- Provide additional clarity about the engagement process and capacity that will be provided to support implementation of a multi-agency and stakeholder governance structure.
- Clarify linkages between the governance elements, annual / multi-year schedule (as noted in Figure 5.2-1 on page 82), and specific activities that would be conducted to support science and decision-making in the AM process (i.e., clarify linkages between the who, when, and what).

As illustrated by the three fundamental improvements described above, additional work can be done to strengthen and improve the effectiveness of the AM process in the MAMP. Developing a robust AM plan and committing to an effective AM process will serve the mutual interests of CPRA and other decision makers / stakeholders. An effective AM plan and process would increase

the scientific defensibility and evidence base that supports decision-making, focus costs of monitoring on parameters that are of most relevance to decision makers, ensure that investments in mitigation and stewardship measures are targeting outcomes that can be attributed to the project (as opposed to addressing outcomes that are attributable to broader ecosystem changes outside the influence of the project), and contribute to greater transparency, buy-in, and support for the project and its operations. Ultimately, a strong AM process will help reduce disagreements around the scientific evidence serving decision makers (i.e., disputes around causation) and help ensure the dialogue among interests are focused on resolving underlying disagreement in desired outcomes (i.e., disputes around preferences, see Lee 1993).

# Mark Davis: More than past time to move with Mid-Barataria diversion

BY MARK DAVIS

MAY 21, 2021 - 6:00 PM

Coastal Louisiana is in trouble. The state's once vast system of coastal wetlands and estuaries has shrunk by more than 1,800 square miles and more loss is on the way. We can debate the causes for that, but what is not debatable is that our state is disappearing fast and our options for keeping any significant part of it are extremely limited.

For years, the Mid-Barataria Sediment Diversion has been a linchpin of Louisiana's coastal protection and restoration plans. Basically, the project will reintroduce the waters and sediments of the Mississippi River back into a landscape the river once built but has been divorced from. Despite all of that planning and discussion, there are still uncertainties about the project and questions about its negative impacts and who will bear them. Some of those uncertainties involve questions of science and engineering that are way beyond my expertise to

process that authorized and funded the project and there is little prospect of doing something meaningful other than the MBSD.

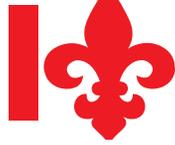

---

The MBSD alone won't save our coast. It will need to be supplemented by a wide array of other projects and programs to help communities adapt to the changes ahead. But it is inconceivable that our coast has a fighting chance without projects of the MBSD's scale — projects that reengage the river with the coast it built and do it soon. The choice is not between dropping MBSD and keeping our coast as it is. The choice is between not doing the MBSD and losing our coast and all that entails. Because, if we are unable to find a way to move the MBSD forward, then I don't see us coming together around any other major projects in time for them to matter. That is where we are.

## OP-ED: The Mississippi River is our strongest asset to hold onto our Coast, it

By: CityBusiness Guest Perspective ⌚ May 21, 2021 💬 1 Comment

Throughout my life and career — growing up in Louisiana, working during college summers on a towboat pushing oil and chemical barges up the river from Baton Rouge, working to “Save Our Lake” in the early years of the Lake Pontchartrain Basin Foundation (now Pontchartrain Conservancy), and working from D.C., and now New Orleans, to rebuild our disappearing coast — I have remained in awe of the power and beauty of the Mississippi River. This river is an ecological treasure, an economic engine for the world, and it literally built the delta on which we live today.

Efforts to control the river for shipping and protect our communities from annual floods resulted in walls (levees) that severed the vital connection between the river and the land-building necessary to sustain its delta. That connection was to the sediment and freshwater delivered by the spring floods every year, which built and sustained the land outside of the river banks. While this management approach allowed us to maintain a degree of control over the river, it also created a false perception that things would remain relatively constant along our river and across our coast.

One thing about Louisiana’s coast is clear — there is no status quo. Change is the constant. There was a time when people learned to live with the nature and adapt to the changes it brought us. We built elevated homes that could withstand regular flooding events. We harvested and managed the natural cycles of our estuaries.

When prior generations leveed the river, they disrupted a natural cycle, the consequences of which we are now confronting in a big way. With climate change onto the scene, that disruption has become critical.

In a few generations, Louisiana has lost a land mass equivalent to Delaware. As those losses have continued, communities have been pushed north with each subsequent storm — confronted by increased tidal flooding during even sunny days, and more severe storm surges that have encroached further inland, throwing out of balance our estuaries and threatening the natural resources that helped shape our state, the Sportsman's Paradise.

Despite these challenges, we can still effect change for the positive. While we won't be able to get back to the coast of yesterday or have today, we have a very powerful asset to deploy as we work to maintain a sustainable coast for tomorrow.

How do we get there? Louisiana is currently advancing a powerful project to reconnect the Mississippi River to build and maintain the Barataria Basin — one of our nation's most productive, and most threatened, estuaries. The project is called the Mid-Barataria Basin, the largest individual ecosystem restoration project in U.S. history.

When operating in concert with the range of other projects in Louisiana's Coastal Master Plan, this is our greatest asset against land loss, and it is one that no other coastal region in the U.S. has at its disposal. As cities like Miami and New York confront how to protect against stronger hurricanes and rising seas, they would be so lucky to have our powerful river and its annual supply of sediment to push back the forces. Shame on us if we don't use it.

Sediment diversions are backed by decades of research, and scientists, engineers and coastal planners have all pointed to these projects as vital to maintaining a future for Louisiana's coast.

There are, of course, some opposed to the project who claim that we can somehow maintain the status quo of our coast, our fisheries without this project. That is simply not true.

A future without the Mid-Barataria Sediment Diversion will give in to massive change and disruption. And, if we don't take action, the projected sea level rise will significantly add to that disruption.

That's not to say that the diversion won't cause some near-term disruptions on its own, as it restores the health and balance to the ecosystem. From this perspective, "restoring" will mean moving the Barataria Basin in the direction of how it was decades ago — a healthier, more freshwater system of the restored flow of the river, rather than the more weakened, saline system of today. And this movement has direct implications for the people who have come to depend economically on the system as it exists now. The places to harvest commercial species like oysters, shrimp and crab will most likely move in the direction of their earlier habitats supported by higher salinity levels. So growers and harvesters will need to be viable, meaning oyster leases in different places than today, and shrimp and salt water fin-fish in different areas as habitats as history have moved, so we know how to adapt, because we always have; but that doesn't mean it's easy.

To help manage these short-term changes, the state is advancing a mitigation and stewardship plan to help people and wildlife adapt, and to advance coastal monitoring systems and science. Now is the time for all parties to come to the table and be upfront about what their next steps are, and their part to help meet them. Our state has to do its job to restore the coast that protects our region, and that can be done without leaving people behind.

The project will also bring desperately needed jobs and economic growth. It would spur \$1.4 billion in regional investment through the Deepwater Horizon oil spill. With that investment, Plaquemines Parish, where the project would be constructed, and the surrounding Terrebonne and Jefferson parishes — would expect to see a significant economic boost. Overall household earnings in our region could increase annually, supporting 12,400 additional local jobs and boosting sales to regional businesses by nearly \$1.5 billion.

These are exactly the types of investments that Louisiana, and other coastal areas across the country, need to confront the challenges of climate change. During this month's trip to New Orleans and Lake Charles, an area still recovering from last year's hurricanes, President Biden proposed a Jobs Plan. This plan recognizes that revitalizing our economy must include investing in natural infrastructure that can help protect our coast from sea level rise and hurricanes. In Louisiana, our coast is vital infrastructure.

We can no longer afford to sit on the sidelines as more of our coast and our future sink into the Gulf. We must accept that our coast is changing. However, if we make the right decisions today, future generations will still have a coast to keep.

## ONE COMMENT

---

*John Tesvich*

May 27, 2021 at 11:13 am

Steve Cochran's column regarding the proposed \$2 billion Mid Barataria diversion project is levels that it is hard to know where to begin. His fascination with flooding southeast Louisiana polluted Mississippi River water runs far counter to his profession of love and concern for the habitat and heritage. And he conveniently ignores the fact that the people who live, work in Plaquemines and St. Bernard Parish universally condemn and oppose this project (unlike the contractors who will earn huge fees from the project or the bureaucrats who comfortably ride Baton Rouge while conceiving these things up at taxpayer expense).

Predictably, like his bureaucrat colleagues, Cochran seems more obsessed with building "the ecosystem restoration project in US history" than doing the right thing.

Perhaps most insulting about Cochran's comments is how dismissive he is of the negative Louisiana's fisheries, claiming that "near term disruptions" will be easy for the approximately 100,000 people who earn their livings off commercial fisheries to adjust to. Bottom line is that this project is bad for Louisiana and poison for our commercial fisheries and the families that make their livings off them. Alternatives exist although CPRA, Cochran and their allies have conveniently ignored them. This is a US record for creating more misery than land mass.

# Guest column: Many ways to help the coast, but sediment diversion is a big and important way

BY KIMBERLY DAVIS REYHER and KRISTI TRAIL

**APR 9, 2021 - 6:00 PM**

Just over 30 years ago, two new nonprofits sprang to life in south Louisiana, one to improve the health of Lake Pontchartrain and its basin, at a time when that body of water was closed to recreation because of pollution; the other to rally action around restoration of the state's coastal wetlands, which had been disappearing since the 1930s.

The Pontchartrain Conservancy (originally known as the Lake Pontchartrain Basin Foundation) and the Coalition to Restore Coastal Louisiana were new organizations, but the problems they sought to correct were not.

In the past three decades, our organizations have grown and evolved. We study our coastal issues and potential solutions, and we advocate for the best policies, rooted in the certainty of science. We host volunteer events during which we plant grasses and trees to anchor the fragile soil on which our communities have been built. We build oyster reefs to protect the wetlands that provide seafood and a paradise for sportsmen and women, and that buffer us from storms. There is much we can do to restore and maintain our coast.

Now the challenges and opportunities of coastal land loss are well known, and the level of restoration activity along the coast of Louisiana is at an all-time high, fueled mostly by funding resulting from the Deepwater Horizon settlement.

A guiding principle in our efforts, whether through oyster shell recycling or in taking the lake from impaired to open for recreation, has been re-establishing a natural balance. But we must do more.

Our land loss continues, and our most powerful tool in stopping it has not been deployed — yet. Just as human manipulation led to the unhealthy conditions in the lake, the artificial controlling of the Mississippi River by strictly leveeing it from one end to the other has led to unhealthy conditions in the adjacent wetlands that comprise our coast. The levees have protected our communities from flooding — usually — but they also have choked off the annual supply of sediment and nutrients that built this great delta in the first place, instead sending them downriver and into the Gulf.

Correcting this unsustainable situation is what the Mid-Barataria sediment diversion will do. The project, to be sited about 25 miles downriver from New Orleans, will build a channel that will allow water and sediment to flow from the river into adjacent wetlands when sediment levels are high. It will allow nature to return to work by feeding the starving wetlands Louisiana is losing so quickly.

We know from scientific modeling, not guesswork, that it is our best shot — *our only shot* — at stopping the disappearance of our wetlands. More than 2,000 square miles of our coast have vanished, so we have moved past the point of deciding whether we should implement this project. We are now at the point of figuring out the specifics of how to do it.

Louisiana's coast is not just a geographical area. It is the habitat for untold numbers of birds and other wildlife. It is the first line of defense between millions of people and the hurricane-fueling waters of the Gulf. It is the lifeblood of fishing. And it is where people live.

But this isn't about just the environment. It's also about jobs. This massive public works project will create thousands of them, and it will protect thousands more. The coast of Louisiana will prosper, economically and environmentally, once it is restored.

If you want to safely live, work and play in coastal Louisiana into the future, support this project and urge state and federal officials to proceed through the permitting process without delay.

We urge you to support the sediment diversion, which is now in the public comment period, but we also urge you to ask questions about it. Just as we believe this is a project that will benefit all south Louisiana residents, we want all voices to be part of the solution. This problem of coastal land loss is ours, and it is our responsibility to solve it.

*Kimberly Davis Reyher is executive director of the Coalition to Restore Coastal Louisiana. Kristi Trail is executive director of Pontchartrain Conservancy.*

# Louisiana's shrinking wetlands puts communities and cultures at risk | Charles Allen

## *Vulnerable populations need to provide input on the Mid-Barataria Sediment Diversion*

By **Charles Allen** - May 11, 2021

*The Louisiana Highway 1 Bridge, also known as the Gateway to the Gulf Expressway, rises above the marshland and coastal waters on August 25, 2019, in Leeville. Louisiana has been losing its coastal landscape at the rate of almost a football fields worth of land every hour.. (Photo by Drew Angerer/Getty Images)*

Last year, I had the opportunity to board a small plane and fly over Louisiana's coast. Taking off from the New Orleans Lakefront Airport, recognizable landmarks like the Louisiana Superdome quickly faded into the background, and in only 20-30 minutes, we were flying over open water. We often hear that our wetlands are vanishing, but to see firsthand how sparse they are is shocking.

Communities in South Louisiana are the poster children for climate change, and our state's future is at a pivotal turning point. For decades, we've been losing land at an alarming rate from coastal erosion, sea-level rise and other threats. And communities of color are right on the front lines. New Orleans is a majority-Black city, where the people most at risk are also vital to its sense of place. We need systemic change and environmental restoration to protect our people and culture. Often people of color are left out of the conversation, denied the opportunity to discuss possible solutions or provide insight into how they're affected.

We now have an opportunity to turn the tide by raising our voices in support of the single-largest restoration project in U.S. history, the Mid-Barataria Sediment Diversion. This game-changing project will reconnect the Mississippi River and its rich, life-giving sediment to the wetlands. The sediment diversion will mimic the natural spring floods that once replenished the marshes, benefiting birds, wildlife and fisheries.

The coastal landscape, including areas that are home to communities of Indigenous people and people of color, is dynamic and changing. The Mid-Barataria Sediment Diversion will build and sustain wetlands in the Barataria Basin that provide storm protection for countless communities in Southeast Louisiana, from small towns such as Lafitte to population centers such as Belle Chasse and the Greater New Orleans region. Healthy wetlands act as a natural buffer that, in addition to hard structures such as levees and floodwalls, protect our communities from rising seas and storm surge.

Since the 1930s, the Barataria Basin has lost nearly 295,000 acres of land. That loss has displaced communities, threatened critical infrastructure and jobs, and devastated habitat for birds and other wildlife. The Barataria Basin was also ground zero for the 2010 Deepwater Horizon oil spill, causing the wetlands there to disappear three times faster than those in the rest of the state. The levees that protect our communities are also partly to blame for this land loss; by walling in the Mississippi River, we've starved our coast of the sediment it needs to survive. We need levees to protect our communities, but if

we don't address the vanishing wetlands, we can expect to be flooded more often, which would further put our diverse and culturally rich communities at risk.

The unique cultures and way of life for millions of Louisianians are inextricably connected to the natural resources of the state's coast. With its special cuisine and traditions and its destination as a place to hunt and fish, Louisiana is world-renowned for its distinctive coastal culture, which relies on areas like wetlands and the resources they produce. In many local areas, generations of families have occupied the same communities — and even the same land and family homes — for generations. These ties to the land are woven into the history and culture of local areas and communities and are at risk of being lost as Louisiana's land loss crisis continues.

Now is the time for all of us to get involved. The U.S. Army Corps of Engineers is asking for our input on the Mid Barataria Sediment Diversion. This procedural milestone for the Mid-Barataria Sediment Diversion gives an opportunity for locals to be part of the process. A public comment period is open through June 3, offering individuals and organizations an opportunity to play an active role in the restoration process.

Like any significant issue that affects all the people in our area, it is critical that we diversify the voices who are represented and become more inclusive. The environmental movement should reflect all of the communities it serves. By offering public comment on the record, the real people impacted by and receiving benefits from this project can make their voices heard to state and federal agency officials and other decision makers. Visit [mississippiriverdelta.org](https://mississippiriverdelta.org) to add your voice to this pivotal moment for Louisiana's coast.

# Guest column: Mid-Barataria Sediment Diversion will build land, and economy

BY GAY LEBRETON and BRANDON NELSON

APR 2, 2021 - 6:00 PM

The Mississippi River's West Bank levee is shown Thursday March 4, 2021, near Myrtle Grove, where Louisiana structure to divert sediment-laden water from the river, right, into a channel leading to Barataria Basin. (Staff NOLA.com | The Times-Picayune | The New Orleans Advocate)

PHOTO BY DAVID GRUNFELD DIRECTOR OF PHOTOGRAPHY

At the beginning of March, we reached a critical moment in Louisiana's battle to combat coastal land loss and rebuild our coast. The U.S. Army Corps of Engineers released its draft Environmental Impact Statement on the Mid-Barataria Sediment Diversion, a key step in permitting for a major component of the state's Coastal Master plan.

The Mid-Barataria Sediment Diversion is a game-changing coastal restoration project that must move forward if we are to turn the tide on Louisiana's land loss crisis. We are voicing support for this project, which implements an innovative and sustainable

approach to reducing our land loss, rebuilding our wetlands, and creating significant economic benefit.

Being the largest individual restoration project in U.S. history, the Mid-Barataria Sediment Diversion will build more wetlands than any other project of its kind in the world. The project, funded by the BP Deepwater Horizon settlement, will develop new land and sustain existing wetlands by using the power of the Mississippi River to move sediment and fresh water from the river into nearby basins, mimicking nature's historic land-building processes. Without this project, over the next 50 years the Barataria Basin alone could lose an additional 550 square miles of land, which is approximately one and a half times the size of the city of New Orleans. Such an outcome would jeopardize the safety and prosperity of the entire region, threaten our way of life and eviscerate coastal habitat that wildlife need to survive.

In the words of Michael Hecht, President and CEO of GNO, Inc., "Coastal restoration is truly where the economy meets the environment." Economic development and coastal restoration are intrinsically linked: By committing to restoring the coast, we protect existing and future investment in Louisiana while developing an exportable knowledge-based industry and specialized workforce. Implementation of projects outlined in Louisiana's Comprehensive Master Plan for a Sustainable Coast, such as the Mid-Barataria Sediment Diversion, will preserve our working coast, reduce hurricane storm surge, and encourage business growth.

Coastal projects foster diversity and growth for our economy, as highlighted by GNO, Inc.'s 2019 Coastal Restoration Workforce Outlook, which found that Coastal Master Plan projects will yield thousands of jobs in operations, maintenance and monitoring, as well as construction. The Army Corps of Engineers analysis indicates that the Barataria project could generate an impressive 12,400 jobs in the state, mostly in the greater New Orleans region, during its three to five-year construction period. Particularly if coupled with training, these jobs will expand opportunities for locals to enter good-paying career paths as dredge operators, carpenters, plumbers, pipefitters, drafters, engineers, architects, computer analysts and programmers, and more. In a 2017 report, Dr. Stephen Barnes of LSU found that coastal restoration and protection jobs yield an average wage of \$59,000/year, significantly higher than the state's median wage of \$34,9000/year.

Businesses will benefit, too. According to a 2019 report by economist Dr. Loren Scott, construction of the Mid-Barataria and Mid-Breton Sediment Diversion projects will support an increase in regional business sales by \$3.1 billion.

While the Mid-Barataria Sediment Diversion is the right step in the right direction, we recognize that there will be inevitable environmental impacts that will have to be addressed. We are encouraged that the state has outlined mitigation strategies and designated significant resources to lessen the potential impacts, such as job training programs and startup financial assistance for impacted industry members. Along those same lines, organizations such as GNO, Inc. are postured to serve as connectors to bring together industry and higher education/workforce development training partners to aid those seeking to transition.

Coastal restoration and protection is a cornerstone to securing a thriving economy in the greater New Orleans region, presently and for future generations. We support the construction of the Mid-Barataria Sediment Diversion, as it is our best shot at protecting vulnerable communities, reducing hurricane storm surge, and fostering economic growth for years to come. The Mid-Barataria Sediment Diversion is where the economy meets the environment, and thrives.

*Gay LeBreton is chair of the GNO Inc. Board. Brandon Nelson is chair of GNO Inc.'s Coalition for Coastal Resilience and Economy.*

**OPINION** *This piece expresses the views of its author(s), separate from those of this publication.*

## Guest column: River diversion important to Louisiana coast

**Ted Falgout** Guest Columnist

Published 6:03 p.m. CT Mar. 16, 2021

As a fourth generation Louisianaian living in the Barataria Basin for my entire life, some of my fondest memories involve trapping, hunting, fishing and alligatoring with my grandfather, father, siblings, and now my own sons and grandchildren. But this way of life and Louisiana's bounty -- its fisheries, wildlife habitat, and abundant natural resources -- are at risk of complete collapse without large-scale coastal restoration projects like the Mid-Barataria Sediment Diversion.

The urgency to build the Mid-Barataria Sediment Diversion cannot be overstated. Without this project the future for our coast, communities, economy and wildlife is dire. The Barataria Basin alone could lose an additional 550 square miles of land over the next 50 years, a nightmare scenario that would jeopardize the safety and prosperity of not only Lafourche Parish, but our entire

region, threatening our unique culture and our status as Sportsman's Paradise.

With an extensive educational background in fisheries biology and Louisiana's coastal zone, I understand the science behind the basin and its current collapse. As the former executive director of Port Fourchon, I was also directly involved in building offshore breakwaters, coastal dune and beach restoration projects and the creation of thousands of acres of marsh and maritime forest ridges by beneficial use of hydraulic dredge material. As a landowner of over a thousand acres of Barataria's wetlands, I personally have a huge stake in its survival.

**More:** Study marks major milestone for river diversion and Louisiana coastal plan

These experiences have shaped my views on what it will take to address Louisiana's very dire land loss crisis. Today, as a retiree, my "office" is now the basin as I get to enjoy full-time the natural treasures that have sustained me and my family for generations. I know that unless bold and aggressive measures are taken, future generations will not get to experience this bounty or live where we have lived unless we act with urgency and commitment. Both time and the tide are not on our side.

However, we have an opportunity to avoid this worst-case scenario. Louisiana has a resource that many other states, and even other regions of our own coast, would kill for – the Mighty Mississippi

and its land-building sediment. This river built our great delta, producing an unparalleled abundance of natural resources, and it is our best hope of hanging onto all we know and love of our coast.

**More:** State plan outlines coastal work underway or soon to get started in Terrebonne and Lafourche

For decades, scientists and engineers have considered all the tools available and overwhelmingly agree the Mid-Barataria project is the best long-term solution necessary to match the challenges we face from land loss, sea level rise and climate change. No project that has the capability to be such a game changer will be without impacts, but these impacts can be managed and pale in significance to what is at stake if we squander this opportunity. A “future without action” would mean a future without South Louisiana, and that is something we owe to future generations.

---

**Concern ID: 61716**

**The ongoing loss of Louisiana’s coastal wetlands makes communities increasingly vulnerable to stronger hurricanes and sea-level rise and threatens the health and stability of the entire Barataria Basin upon which a number of communities, wildlife, fish nurseries, sportsman culture, economy, and vital resources depend.**

**Response ID: 16026**

The importance of maintaining wetlands for the protection of coastlines, coastal communities, wildlife resources, and recreation was considered in the Draft EIS in Sections 3.6 Wetland Resources and Waters of the U.S., 3.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, and 3.16 Recreation and Tourism.

---

**Concern ID: 61848**

**Commenters expressed the opinion that the Mid-Barataria Sediment Diversion Project would help support and enhance the lifespan of other coastal restoration and protection projects.**

**Response ID: 16462**

The commenters correctly note that, as discussed in Chapter 4, Section 4.25.6 Cumulative Impacts, Wetland Resources and Waters of the U.S., “Cumulative impacts on wetland accretion from operation of the reasonably foreseeable future projects combined with operation of the MBSD Project action alternatives would likely result in fewer losses in wetlands in both the Barataria Basin and birdfoot delta, but most notably in the Barataria Basin, where implementation of the MBSD Project action alternatives would prevent the loss of an additional 26,000 acres.”

---

**Concern ID: 61871**

**Alternative 5, Variable Flow up to 150,000 cfs, should be chosen for implementation because it provides substantially greater benefits at the higher flow, with only marginally increased adverse effects, most of which could be mitigated by the same measures being proposed for the 75,000 cfs Applicant’s Preferred Alternative.**

**Response ID: 15944**

CPRA submitted a joint Section 10/404 permit application and Section 408 permission request to USACE for the construction, operation, and maintenance of a 75,000 cfs sediment diversion (Applicant’s Preferred Alternative). The EIS evaluates the Applicant’s Preferred Alternative and five additional action alternatives as well as the No Action Alternative in order to inform USACE’s permit and permission decisions and the LA TIG’s NRDA decision in compliance with the statues, orders, and policies outlined in EIS Chapter 5 Consultation and Coordination.

In the Restoration Plan, the LA TIG evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54, and made every effort to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. As noted in the LA TIG’s Restoration Plan, while the 150,000 cfs Alternative was projected to provide greater ecological benefits than the LA TIG’s Preferred Alternative, it was also expected to cause

---

greater collateral injury and greater risks to public health and safety. See Chapter 3, Section 3.2.4 of the Final Restoration Plan for a discussion of how the LA TIG came to its decision. Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

The Mitigation and Stewardship Plan (Appendix R1 to the EIS) has been designed by CPRA to mitigate the projected impacts of the 75,000 cfs sediment diversion (Applicant's Preferred Alternative). Different or additional mitigation could be needed to address the projected impacts of the proposed Project if a large capacity diversion (150,000 cfs) were to be selected.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61872**

**The purpose and need Statement upon which the alternatives analysis was built meets the intentions and goals of the proposed Project and appropriately captures the need to restore injury by reestablishing deltaic processes between the Mississippi River and Barataria Basin.**

**Response ID: 15828**

---

The commenter's support for and approval of the Project's purpose and need is acknowledged.

---

**Concern ID: 61881**

**The Mid-Barataria Sediment Diversion has been well researched, the range of alternatives evaluated in the Draft EIS is reasonable and meets the purpose and need, and seems a prudent plan of action versus the choice of doing nothing.**

**Response ID: 15837**

The commenter's support of the proposed Project is acknowledged.

---

**Concern ID: 61910**

**The MBSD Project would help wildlife, fisherman, recreationalists, and hunters who depend on a healthy coast in the long term.**

**Response ID: 16240**

EIS Chapter 4, Sections 4.16.4.2 and 4.16.5.2 in Recreation and Tourism describe anticipated effects of the MBSD Project on wildlife viewing, recreational fishing, hunting, and other recreational activities that utilize the Project area. As compared to the No Action Alternative, long term minor to moderate adverse impacts on-site accessibility, recreational boating, and boat-based recreational fishing due to increased tidal flooding at access points at Lafitte, Myrtle Grove, and Grand Bayou, as well as introduction and spread of invasive species, are anticipated. The proposed Project would also cause minor, permanent, adverse impacts on recreational fishing for spotted seatrout and moderate, permanent, beneficial impacts on recreational fishing for red drum throughout the basin. Beneficial impacts on hunting and wildlife watching due to an increase in wetland habitat in some areas of the Barataria Basin are also anticipated.

CPRA has developed a suite of mitigation and stewardship measures to help address and offset Project impacts, including those related to recreation (see the Draft Mitigation and Stewardship Plan in Appendix R1 to the Draft EIS). In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as

---

conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61930**

**The proposed MBSD Project is an inequitable use of public funds because its negative impacts fall most directly on marginalized ethnic groups, including African American, Native American, Latin American, Asian American, Canary Islander American (Islenos), and Croatian American and unjustly places the burden on Louisiana's coastal fishers. Risks often fall disproportionately on low-income or minority communities due to ongoing institutional injustices. These low-income and minority communities, including homes, cultures, and livelihoods of Indigenous people and other people of color are often sacrificed for the benefit of the "greater good", particularly for the larger tax bases upstream of the proposed MBSD Project. For example, when the levee breached at Mardi Gras Pass, nothing was done to re-protect the mostly African American oyster farmers and fishers whose oyster farms in Breton Sound were destroyed by the fresh water from Mardi Gras Pass. But a levee breach anywhere else along the Mississippi River would be quickly rebuilt and the impacted people would be indemnified. Also, the most effective flood risk reduction solutions, like home buyouts, are not offered to low-income populations in areas south of New Orleans. Both the Draft EIS and the LA TIG's Draft Restoration Plan would benefit from additional reflections on the natural and human history of the Project geography that resulted in such fundamental changes to the landscape and set us on the course of the land-loss crisis that Louisiana faces today. The EIS should describe historic, systemic inequities affecting communities with environmental justice concerns in the Project area to provide authentic and more complete context for the discussions.**

**Response ID: 16281**

The Draft EIS (including Section 4.15 Environmental Justice and Appendix H, Socioeconomics Technical Report at Chapter 2) included a discussion of communities with low-income and minority populations, including information about factors that have contributed to historic and systemic inequities in southeast Louisiana. As discussed in the EIS, the Project may have disproportionately high and adverse, long-term impacts on some low-income and minority populations in communities engaged in commercial and subsistence fishing and dependent on adversely impacted fisheries, as well as communities located near the immediate outfall area (within approximately 10 miles north and 20 miles south) and outside of federal levee protection. In addition, negligible to minor, adverse impacts related to increased risk of levee overtopping during certain 1 percent storm events south of the immediate outfall area may occur, which may impact the community of Ironton. Commenters also raised concerns about Mardi Gras Pass; however, the closure of Mardi Gras Pass is outside of the scope of the EIS.

CPRA has expanded and refined the Mitigation and Stewardship Plan, Appendix R1 to the Final EIS, since publication of the Draft EIS and LA TIG's Draft Restoration Plan based on community and resource agency input. The mitigation and stewardship measures now provide additional detail regarding specific efforts targeted at assisting low-income and minority populations in addressing the potential impacts of the Project.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61934**

**Commenters asked that the EIS provide details about the in-person meetings that CPRA held in the low-income and minority communities potentially impacted by the Project.**

**Response ID: 16287**

CPRA has engaged in public outreach meetings with the communities projected to be impacted by the MBSD to solicit input on mitigation strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities. Outreach efforts were undertaken to better understand and address potential impacts on communities impacted by the MBSD, including those with environmental justice concerns, such as low-income and minority populations, that may be disproportionately impacted by the Project; these are discussed in Chapter 7 of the Final EIS. CPRA has expanded and refined its Mitigation and Stewardship Plan, Appendix R1 to the Final EIS, since publication of the Draft EIS and the LA TIG Draft Restoration Plan based on community and resource agency input. The updated mitigation and stewardship measures now provide additional detail regarding

---

specific efforts targeted at assisting low-income and minority populations in addressing the potential impacts of the Project.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61935**

**Commenters noted that the MBSD Project would have positive environmental justice outcomes, as the Project goes forward, over time. The proposed MBSD Project is actually part of the larger suite of projects outlined in the Coastal Master Plan. In concert, these projects will provide very significant long-term storm surge and sustainability benefits for communities in Plaquemines and Jefferson parishes, whether within or without structural storm risk reduction systems. Each of these benefits would be particularly helpful over time to those who depend on subsistence fishing and those who live in particularly flood prone areas that, because of historic discriminatory settlement patterns, is made up of disproportionately poor members of minority groups.**

**Response ID: 16290**

The EIS evaluated anticipated impacts of the action alternatives and a No Action Alternative over a 50-year analysis period. The Delft3D model production runs also projected conditions over a 50-year period. Anticipated impacts beyond that timeframe were not evaluated in the EIS.

As discussed in Chapter 4, Section 4.15 Environmental Justice, the EIS acknowledges that low-income and minority populations in areas north of the diversion and inside of federal risk

---

reduction levees would experience some beneficial impacts related to additional protection from storm hazards due to reduced storm surge and wave heights as a result of the Project's land building. Low-income and minority populations within 10 miles to the north and 20 miles to the south of the diversion outside federal risk reduction levees would experience increased tidal flooding relative to the No Action Alternative, particularly in the first 2 decades of operations. Low-income and minority populations south of the diversion and outside federal risk reduction levees would experience increased risk of storm surge. In addition, negligible to minor, adverse impacts related to increased risk of levee overtopping during certain 1 percent storm events south of the immediate outfall area may occur, which may impact the community of Ironton.

Low-income and minority populations that depend on subsistence fishing activities may experience both beneficial and adverse impacts depending on the specific resources and areas where subsistence activities are practiced, as discussed in Chapter 4, Section 4.15.4.2. With regards to other restoration and flood risk reduction projects, Chapter 4, Section 4.25 Cumulative Impacts discusses other restoration and flood risk reduction projects in concert with the proposed Project. The operations of those reasonably foreseeable projects combined with the MBSD Project have the potential to result in minor to moderate, adverse and minor, long-term or permanent, beneficial impacts on low-income and minority communities in the Barataria Basin.

---

**Concern ID: 61939**

**The EIS meets the minimum requirements of Executive Order No. 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations by identifying disproportionately high and adverse human health or environmental impacts of the proposed Mid-Barataria Sediment Diversion on minority, low-income, and Tribal populations in the relevant Project area.**

**Response ID: 16308**

Acknowledged.

---

**Concern ID: 61962**

**The commenters commend the USACE and LA TIG for their efforts to ensure robust awareness and input into this process. Such engagement is critical to a successful restoration effort, and the commenters recognize the difficulty of designing an engagement process around a project of this scale and scope. The more than 200 public outreach and engagement events referenced in the Draft EIS and NRDA plan demonstrate a notable effort made by CPRA. It is essential that CPRA continue to maintain strong levels of engagement and transparent communication with affected stakeholders as this process progresses. The Final EIS should include a summary of comments and responses and should uphold and further elaborate upon the commitment stated in the Draft EIS (Appendix R2 Monitoring and Adaptive Management Plan, Section 2) for regular stakeholder engagement through the adaptive management program.**

**Response ID: 15907**

USACE and LA TIG acknowledge the comment. Public input is an integral part of the NEPA process, the OPA process, and the DWH oil spill restoration planning effort. USACE and the LA TIG undertook a coordinated and concurrent public review process for the EIS and the LA

TIG's Restoration Plan. Allowing submission of comments on either document to the same locations provided commenters a "one-stop shop" and was done to reduce confusion by commenters about where to direct their comments regarding the MBSD Project. Additionally, this ensured the LA TIG reviewed and considered all relevant comments to both the Restoration Plan and the Draft EIS in its decision-making process. All public comments received have been reviewed by both USACE and the LA TIG and will be considered as appropriate under relevant regulations by USACE and by the LA TIG, respectively, as each makes its decision on the proposed MBSD Project.

USACE and LA TIG conducted public outreach and provided public comment opportunities throughout the development of the EIS and the LA TIG's Restoration Plan. Details on USACE's and the LA TIG's outreach activities and the opportunities provided for public participation can be found in Chapter 7 Public Involvement in the Final EIS. The Final EIS includes a Public Meeting Report which includes all comments submitted and the responses to those comments.

Examples of public outreach provided by USACE for the EIS include providing special public notices for the permit application, the scoping process, and for the Draft EIS through Federal Register notices, press releases, newspapers, mail outs to distribution lists, and provision of hard copies of the Executive Summary and other materials to local libraries. USACE and the LA TIG also coordinated with the SELA Voice organizations to understand the needs of the local communities regarding the best ways to reach out to these communities prior to the release of the Draft EIS and the LA TIG's Draft Restoration Plan and during the public comment period.

Language interpretation and translation in Spanish, Vietnamese, and Khmer were provided at each of the virtual public meetings on the Draft EIS and the LA TIG's Draft Restoration Plan. Also, the Public Notice to announce the Draft EIS Notice of Availability, the Executive Summary for the Draft EIS, and the Executive Summary for the LA TIG's Draft Restoration Plan, were translated into Spanish and Vietnamese. The consolidated pre-recorded public meeting presentation was also translated into Spanish, Vietnamese, and Khmer and available on the Project webpage.

Throughout the public comment period and concurrent with the preparation of the Final EIS and the LA TIG's Final Restoration Plan, CPRA has engaged the public through meetings with the communities and groups projected to be impacted by the proposed MBSD Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities and groups. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward.

In addition, the Programmatic Agreement developed for the proposed Project through the NHPA 106 consultation sets forth the alternative mitigation to be implemented by CPRA as part of implementing the Project. A website and public education materials are included as products to be developed through the alternative mitigation. See Section 4.9 of the Final Mitigation and Stewardship Plan for the proposed Project (in Appendix R1 to the Final EIS).

Refer to Appendix R1 for the Final Mitigation and Stewardship Plan which describes mitigation and stewardship measures that would be implemented as a result of the public

involvement and engagement efforts. Also refer to the Monitoring and Adaptive Management (MAM) Plan in Appendix R2 for a description of the adaptive management, governance, and monitoring that CPRA has committed to along with stakeholder engagement during the adaptive management process if the proposed MBSD Project is implemented. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to proposed Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61977**

**While other restoration project types, such as marsh creation, have been suggested in lieu of large-scale diversions, these project types would fail to build and sustain significant amounts of land in the Barataria Basin over the 50-year Project lifespan due to subsidence, sea-level rise, and erosion. Dredging alone cannot save the wetlands, the processes that originally built them must be reestablished. The power of the river**

---

**allows more land-building potential to be harnessed than could be had with dredges at a fraction of the cost, and the benefits are long-lasting, even in the face of sea-level rise and hurricanes.**

**Response ID: 15977**

The commenter's support of the proposed Project is acknowledged. The EIS concludes that a large-scale sediment diversion meets the purpose and need of the proposed Project while large-scale marsh creation does not meet the purpose and need. Details on marsh creation alternatives including sustainability and the reasons for elimination from further detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. Additional information related to the marsh creation alternative have been added to Section 2.3.5 Large-Scale Marsh Creation for the Final EIS.

---

**Concern ID: 62022**

**The Draft EIS lays out how many jobs would be created through construction and the proposed Project would also bring desperately needed jobs and economic growth. Plaquemines Parish, where the proposed Project would be constructed, and the surrounding region - including Orleans and Jefferson Parishes - would expect to see a significant economic boost.**

**Response ID: 16218**

The EIS describes the jobs impact from the construction of the diversion in Chapter 4, Section 4.13.4.2 in Socioeconomics. The EIS finds that moderate to major, temporary economic benefits are anticipated from proposed Project construction.

---

**Concern ID: 62027**

**The Draft EIS cites Oxfam America's Social Vulnerability Index from 2009, but the Water Institute of the Gulf and the Louisiana Coastal Protection and Restoration Authority have developed some work in this area through their 2017 Coastal Master Plan process. This more current application could be useful in analyzing this proposed Project.**

**Response ID: 16223**

Chapter 3, Section 3.15 Environmental Justice of the EIS cites community social vulnerability data from NOAA from 2019. While the Coastal Master Plan is a valuable and detailed document, the NOAA data used in the EIS represents the best data available to the USACE and LA TIG since it is more recent and provides community-specific metrics for many areas near the proposed Project. The commenter is correct that the Socioeconomics Technical Report in Appendix H1 cites the older Oxfam report. For the Final EIS, Appendix H1 Socioeconomics Technical Report has been updated to be consistent with the main body of the EIS and utilize the NOAA data.

---

**Concern ID: 62028**

**Commenters suggest integrating more current data and information before the release of the Final EIS, including and especially the 2020 Census data. This data would show important population shifts to communities in Jefferson, Lafourche, and Plaquemines Parish, as well as the major metropolitan area of greater New Orleans. However, the use of census data may not accurately identify the individuals and businesses economically reliant on the Barataria Basin resources and does not reflect long-term or**

---

**more recent income levels of those directly involved in businesses or jobs related to the resources.**

**Response ID: 16224**

The EIS uses a variety of data sources to best describe the regional economy and populations, including relatively recently released statistics from the U.S. Census Bureau American Community Survey (ACS), data from 2010 Decennial Census, as well as a variety of state and local sources. Initial data from the 2020 Decennial Census was released in fall 2021 for Congressional redistricting purposes, with the bulk of the remaining 2020 Decennial Census data projected to be released over the next few years. The Final EIS has been revised to update the 2010 Decennial Census data to 2020 Census data. This update provides the most recent population and demographic data available for some of the very small communities described in the EIS. Data for particular industries that may be affected by the Project, such as commercial fishing, are presented using state sources or other local data as available.

---

**Concern ID: 62071**

**The proposed MBSD Project would negatively impact the seafood industry, including shrimp, crab, and oyster fisheries. Commercial fisheries are directly linked to the favorable conditions of the estuary and its resources being healthy, abundant, and consistently available but that would be forever changed by the introduction of polluted Mississippi River water.**

**Response ID: 16241**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated under the Applicant's Preferred Alternative.

The LA TIG's Final Restoration Plan also acknowledges these impacts, and notes that such impacts are also anticipated under the No Action Alternative, but on a longer timeline. The Restoration Plan also notes that some benefits to the blue crab fishery and some finfish are anticipated.

CPRA has developed a plan to mitigate the potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to public comments, CPRA has expanded and refined the Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)

- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62103**

**The Draft EIS does not fully address the anticipated destruction of multiple components of the commercial oyster fishery, including oyster habitat, off-bottom oyster farms, and the oyster hatchery at Grand Isle resulting from impacts to water quality and changes in salinity.**

**Response ID: 16258**

---

Impacts of the proposed Project on eastern oysters are discussed in the Aquatic Resources section of the EIS in Chapter 4, Section 4.10.4.5, Key Species. The section identifies that most adverse impacts on oysters are anticipated at mid-basin locations, while some beneficial impacts may occur in the lower basin, including the Grand Isle area. The off-bottom and hatchery components of the oyster fishery would not be affected by the Project, or may benefit from it. Specifically, the only significant off-bottom oyster fisheries in Barataria Basin occurs in the lower basin. As indicated in Chapter 3, Section 3.14.6, Aquaculture, the Mike Voisin Oyster Hatchery in Grand Isle is the only commercially available source of oyster larvae and seed. These areas could benefit from the Project. Final EIS Chapter 4, Section 4.14 Commercial Fishing has been revised to discuss these effects.

CPRA's Mitigation and Stewardship Plan includes measures to increase funding for the development of broodstock reefs, enhancing public and private oyster areas, creating a new public oyster seed ground and to further develop alternative oyster culture methods, including off-bottom oyster culture. See the Mitigation and Stewardship Plan, Appendix R1 to the Final EIS for more information.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62233**

**Restoration of coastal habitat and the delta would provide protection from storm damage.**

**Response ID: 15752**

---

While the intent of the proposed Project is to reestablish deltaic processes to restore resources injured by the DWH oil spill, the Draft EIS Chapter 4, Section 4.20.4.2 Public Health and Safety described the ancillary benefit of storm damage risk reduction on communities north of the proposed diversion due to the creation and maintenance of wetland habitat and increases in topography and land acreage within the delta formation area. At the same time, operation of the Project would have permanent, minor to moderate, adverse impacts on storm hazards in communities south of the diversion, with anticipated increases in storm surge of up to 1.7 feet near Myrtle Grove (as compared to the No Action Alternative). Section 4.20.4.2.2.2 in Public Health and Safety of the Final EIS has been revised to include additional information and figures further explaining the impacts of the Project on storm surge and wave height

---

**Concern ID: 62280**

**The Draft EIS outlines uncertainties in the modeling that tend to underestimate salinity by 1ppt, water level by 0.1 m, and temperature by 1.5°C. The level of uncertainty reported in the Draft EIS varies spatially throughout the basin. Section 8.0 (Model Limitations and Uncertainties) of Appendix E (Delft3D Basinwide Model) mentions that the dilution factor is uncertain as well as the effect of barrier islands on tidal exchange over time. The Draft EIS also describes uncertainty around other restoration efforts. For instance, the model assumes that the barrier islands are drowned by relative sea-level rise. However, the State of Louisiana has been committed to maintaining these important features, and that commitment is likely to continue, therefore reducing salinity increases. The Mississippi River birdfoot delta passes, however, are likely to deepen, enlarge, and increase salinity influences. Taken all together, these factors may underestimate salinity enough that the biological impacts forecasted may be a worst-case scenario for saltwater species, such as oysters and dolphins.**

**Response ID: 16486**

The Delft3D Basinwide Model results should be interpreted in light of the uncertainties discussed in the EIS. As discussed in the Draft EIS in Chapter 4, Section 4.1.3.3 in Approach to Evaluation of Environmental Consequences, and in detail in Appendix E Delft3D Modeling, Section 8.0 Model Limitations and Uncertainties, those uncertainties were examined through sensitivity tests and by the use of a Base-to-Plan (No Action Alternative compared to Action Alternatives) comparison method and incorporated into the Draft EIS conclusions throughout Chapter 4 (Environmental Consequences). No related edits have been made to the Final EIS.

As part of developing the EIS, the USACE, together with the members of the LA TIG, reviewed the Delft3D Basinwide Model, including its parameters, methods of validation and calibration, inputs for the alternative production runs used in the EIS, and outputs, and concluded that the Delft3D Basinwide Model production runs and outputs were adequate and sufficient to inform the MBSD EIS impacts analysis of the alternatives.

---

**Concern ID: 62331**

**The EIS is comprehensive and well-prepared, and used the best available information and data.**

**Response ID: 15782**

---

Acknowledged.

---

**Concern ID: 62404**

**Appendix A contains more detailed recommendations related to the draft Monitoring and Adaptive Management Plan; Appendix B contains a series of recent op-eds and other statements of support for the Project from various stakeholders. We request that the materials in Appendix B be considered as part of the Army Corps' public interest review and by the LA TIG as evidencing consistency with the OPA criteria.**

**Response ID: 15928**

The USACE and LA TIG have reviewed Appendices A and B. Revisions were made to the Monitoring and Adaptive Management Plan to respond to "Improvement #1: Define a clear adaptive management process" and "Improvement #2: Clarify the problem definition" in Appendix A of the commenter's comment letter.

---

**Concern ID: 62405**

**Commenter suggested that the Final EIS should include targeted economic incentive plans for contractors associated with Project design or construction to prioritize economic opportunities for all interested residents in the Project footprint/outfall area wherever relevant.**

**Response ID: 15940**

Provision of economic incentives for contractors would be the responsibility of CPRA and therefore has not been added to the Final EIS. CPRA is required to follow the provisions of the Louisiana Public Bid Law, including those contained in Title 39, Chapter 17 (the Louisiana Procurement Code) and in Title 38, Chapter 10 Public Contracts. The comment has been provided to CPRA.

---

**Concern ID: 62407**

**CPRA should prepare materials on the skills needed to obtain these construction jobs, as well as the average annual salaries. It will take time to create the labor line to get workers trained, and the State should be working with our trade schools, community colleges and universities early and often to prepare a local workforce.**

**Response ID: 15858**

Comment noted.

---

**Concern ID: 62408**

**It is the responsibility of the Governor, through his executive assistant for coastal affairs, to exercise this authority to stop the PLT Project as it is inconsistent with the MBSD Project and Coastal Master Plan.**

**Response ID: 15859**

While EIS Chapter 4, Section 4.25 Cumulative Impacts considers past, present, and reasonably foreseeable future structures or actions in the Project area which could affect the same resources as the proposed Project, such as the PLT, State approval of other structures or actions is outside the scope of this EIS.

---

**Concern ID: 62413**

**The MBSD diversion structure, outfall channel, and outfall area would constitute the world's single largest engineered restoration project. The LA TIG and CPRA should**

---

**include a recreation and education area near the diversion with a viewing platform, trails, bike paths, along with a boat launch into the diversion outfall area.**

**Response ID: 15951**

Due to concerns about safety of the public and security for the Project facilities, there is not a plan to make the diversion structure or immediate outfall area accessible for public use. CPRA is, however, planning to provide signage and other public space near the Project to educate the public regarding the purpose and functioning on the Project. Ownership of any lands created by operation of the Project would be determined in accord with current state law, including ownership of mineral rights pursuant to La. R.S. 31:149 and La. R.S. 49:214.5.5(E). Pursuant to La. R.S. 49:214.5.5(B), the Project would not create any rights of access to the public in or on private property.

---

**Concern ID: 62442**

**Commenters requested that additional information about the reasonably foreseeable Plaquemines Liquids Terminal be added to the Final EIS, Chapter 4, Section 4.25 (Cumulative Impacts), such as the potential for the project to affect sediment transport capabilities of the proposed MBSD Project.**

**Response ID: 16467**

Furthermore, CPRA entered into a Memorandum of Understanding with the Plaquemines Port Harbor & Terminal District (PPHTD) and the Plaquemines Liquid Terminal, LLC (PLT) requiring PPHTD and PLT to perform sediment transport modeling and a navigation study to determine the impact, if any, that the PLT Project may have on the proposed MBSD Project, and to agree to certain terms and conditions, as needed, to ensure that the PLT, once constructed and operated, does not have unreasonable adverse impacts on the design, construction, or operation of the proposed MBSD Project. These steps would help ensure that the PLT Project remains consistent with the Louisiana Coastal Master Plan.

Since publication of the Draft EIS, the Tallgrass/PLT facility's sponsors PPHTD/PLT have withdrawn their Joint Permit application (Louisiana Department of Natural Resources Coastal Use Permit [CUP] number P20180379 and DA Permit number MVN-2012-0123-EPP), and terminated the Memorandum of Understanding (MOU) (originally dated April 24, 2019) between CPRA and PPHTD/PLT pertaining to the facility. A footnote has been added in Section 4.25.1.3.2 Reasonably Foreseeable Future Projects of the Final EIS to reflect the withdrawal of the PLT Project.

---

**Concern ID: 62460**

**The commenter expressed concern that with the possible storage of 20 million barrels on the reasonably foreseeable Plaquemines Liquids Terminal and the transfer of that oil through pipelines regularly connected and disconnected from large, river-borne vessels would cause frequent oil spillage into the proposed MBSD diversion, as well as potentially catastrophic impacts resulting from accidents or hurricanes. Any of those could have serious impacts on the operation of the proposed MBSD Project.**

**Response ID: 16470**

Potential impacts of the reasonably foreseeable Plaquemines Liquids Terminal were considered in the Draft EIS in the Sediment Transport subsection of Chapter 4, Section 4.25.4.4 Cumulative Impacts. Since publication of the Draft EIS, the Tallgrass/PLT facility's

---

sponsors PPHTD/PLT have withdrawn their Joint Permit application (Louisiana Department of Natural Resources Coastal Use Permit [CUP] number P20180379 and DA Permit number MVN-2012-0123-EPP), and terminated the Memorandum of Understanding (MOU) (originally dated April 24, 2019) between CPRA and PPHTD/PLT pertaining to the facility. A footnote has been added in Section 4.25.1.3.2 Reasonably Foreseeable Future Projects of the Final EIS to reflect the withdrawal of the PLT Project.

Potential oil spills from the terminal were also assessed in the Permitted Discharges Section of 4.25.5.4 Cumulative Impacts of the Draft EIS. As described in the Draft EIS in Chapter 2, Section 2.8.1.4 Project Operations and in Appendix F MBSD Design Information, in the event of oil spills and other hazardous discharges into the Mississippi River upstream of the proposed MBSD intake structure, the diversion structure would be closed. Information regarding closing the structure in the event of hazardous spills has been added to the Cumulative Impacts section, Section 4.25.5.4 of the Final EIS.

---

**Concern ID: 62663**

**Decades of study demonstrate the MBSD is the optimal way to restore the sustainable functionality to the ecosystem injured by the DWH oil spill, including providing benefits to the northern Gulf of Mexico ecosystem injured by the spill. The Project would rebuild and restore coastal wetland habitat, which is vital to the health of the Gulf of Mexico ecosystem and the species that reside within it. It would address a multitude of concerns on an ecosystem-wide and economic scale, would work synergistically with ecosystem restoration projects in the basin, and would create jobs. The Draft Restoration Plan demonstrates the likely benefits of the Project, and the Project would likely help mitigate consequences of future natural disasters and climate change. Not implementing the Project would not only prevent the area from recovering, but would accelerate its degradation over time.**

**Response ID: 16622**

The LA TIG acknowledges the comment and agrees that the Project would deliver fresh water, sediment, and nutrients to the Barataria Basin; reconnect and reestablish sustainable deltaic processes between the Mississippi River and the Barataria Basin (for example, sediment retention and accumulation, new delta formation); and create, restore, and sustain wetlands and other deltaic habitats and associated ecosystem services.

---

**Concern ID: 62698**

**Brown shrimp are not well adapted to prolonged periods of low salinity and would experience higher mortality and lower reproductive success as a result of the proposed Project.**

**Response ID: 16076**

The commenter correctly notes the impacts on brown shrimp from low salinity, as discussed in Chapter 4, Section 4.10.4.5 in Aquatic Resources; however, as noted in the Draft EIS, brown shrimp reproduce offshore and, although the number of shrimp surviving to reproduce may change, the reproductive success of surviving shrimp is not anticipated to change. Overall, the Draft EIS anticipated a permanent, major adverse impact on brown shrimp from the proposed Project, due in part to reduced salinity in portions of the Barataria Basin.

---

**Concern ID: 62710**

**The Draft EIS may underestimate likely increases in net primary productivity for aquatic estuarine organisms, which would translate into more biomass in both the proposed Project area and into the northern Gulf of Mexico.**

**Response ID: 16088**

Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS identifies the overall effects of increased nutrients to the Barataria Basin as minor to moderate and beneficial based on benefits to the food web, and Section 4.10.4.5 accounts for these food web benefits in the individual determinations for each key species. Because this issue was addressed in the Draft EIS, no related edits have been made to the Final EIS. The potential for nearshore and offshore ecosystem benefits are also described in Chapter 3, Section 3.2.16 in OPA Evaluation of the Alternatives of the LA TIG's Restoration Plan.

---

**Concern ID: 62754**

**The proposed Project, once operating, would create a river-fed deltaic estuary with an abundance of life.**

**Response ID: 16132**

The proposed Project would have both beneficial and adverse effects on aquatic life during operations, as discussed throughout Chapter 4, Section 4.10 Aquatic Resources of the Draft EIS. The benefits of the proposed Project are also discussed in detail in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Final Restoration Plan.

---

**Concern ID: 62755**

**The diversion of nutrient delivery from the mouth of the Mississippi River to the mid-basin may ameliorate some of the imbalances which often lead to hypoxic conditions in the open Gulf, and would certainly lead to increases in many estuarine organisms.**

**Response ID: 16133**

As discussed in Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS, nutrient levels in water diverted from the Mississippi River may result in increased primary productivity in the Barataria Basin, which would lead to benefits for aquatic fauna. The birdfoot delta is projected to have negligible changes in nutrient loads. Further, Section 4.25.5 in Cumulative Impacts, Surface Water and Sediment Quality of the Final EIS has been revised to discuss the Gulf Hypoxia Action Plan, which highlights the important role that river diversions could play in reducing nutrient loads. In addition, substantial nutrient load reduction could be achieved through the measures being implemented by the other states and entities involved with the Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. These combined efforts could lessen the potential impacts of excess nutrient loads to Barataria Basin and the northern Gulf of Mexico.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62838**

**Near-term, long term, and real-time monitoring in the Barataria Basin will be essential to the operation of the diversion as well as to public communication about the performance, over space and time, of the diversion and its area of influence. Governance and decision making for the Project should be a science-based, inclusive, and transparent process with genuine engagement and input from external experts and community stakeholders.**

**Response ID: 16665**

---

According to the LA TIG, the monitoring issues raised by the commenter were considered in CPRA's Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the Draft EIS), which was jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan included input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]). In response to public comments, CPRA would develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

With specific regard to the inclusion of scientific expertise, in addition to the expertise within CPRA, the governance provisions of the MAM Plan call for establishing a Technical Focus Group/Peer Review Group with subject matter expertise to provide technical support on long-term Project planning, assist in the evaluation and interpretation of monitoring data, and evaluate the state of the science concerning adaptive management. See Section 2.2.2.3 (Technical Focus Group(s)/Peer Review) of the MAM Plan (Appendix R2 to the Final EIS).

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62857**

**The complexity of the proposed Project, and the multitude of uncertainties that have been identified while estimating its benefits and impacts, demonstrates the importance**

**for real-time monitoring protocols in the adaptive management program to reduce uncertainties over time.****Response ID: 16667**

According to the LA TIG, the monitoring measures raised by the commenters were considered in CPRA's Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the Draft EIS). Monitoring, including collection of real-time data, is essential for increasing the likelihood of achieving desired Project outcomes given the uncertainties inherent to predicting the Project's effects. For example, post-construction, hydrographic station readings in the Mississippi River would be posted in real time and accessible from remote networks to enable forecasting water and sediment arrival. Along the gradient from the Mississippi River through the diversion and into the basin, CPRA is planning for the use of real-time data for key hydrographic variables (turbidity, stage, velocity, and water quality). As CPRA's plan to perform real-time monitoring was included in the Draft EIS, no changes have been made in the Final EIS in response to this comment. See CPRA's MAM Plan (Appendix R2 to the EIS) for additional details regarding the monitoring efforts planned in anticipation of and during Project operations.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62859**

**The Final EIS and supporting record should include additional information about possible operational minimization measures that may be considered through the adaptive management process, based on monitoring and new information. For**

**example, evaluation of the construction of landscape features that might provide higher-salinity refuge areas within the basin might be an option.**

**Response ID: 16668**

The Draft EIS considered measures for adaptively managing the Project as part of the Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the Draft EIS). Since issuance of the Draft EIS, CPRA modified the MAM Plan to include additional information regarding strategies for minimizing impacts through monitoring and adaptive management (see Section 3.7.1.1.7 [Topography/bathymetry of the Project Influence Area] of the MAM Plan in Appendix R2 to the Final EIS).

The EIS considered potential features in the outfall area such as canals, bayous, impoundments, weirs, and chenier-like ridges to manipulate the flow of water and sediment for water quality and sediment retention benefits, to create barriers for storm surge and wind, and to redirect waters away from oyster production and sensitive areas. However, flow-directing outfall features within the initial delta formation area were eliminated from consideration because of the potential for such features to impede the development of the delta formation. See Chapter 2, Section 2.5 Step 3: Evaluation of Sediment Diversion Outfall Features for evaluation of these alternative outfall features as part of the alternatives screening process. Because these features were previously eliminated, they will not be considered as part of future adaptive management.

As described in the MAM Plan (Appendix R2 to the Final EIS), CPRA would monitor salinities in the basin after Project operations commence to help inform potential relocation of seed grounds to more environmentally suitable areas within the basin or the establishment of broodstock reefs to address larval supply. The Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) includes a full suite of oyster mitigation measures totaling \$32 million.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal

Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62860**

**The Draft EIS Monitoring and Adaptive Management (MAM) Plan in Appendix R2 includes several steps and elements that would be considered appropriate for adaptive management and allow for full benefits of such measures.**

**Response ID: 16669**

The MAM Plan steps and elements noted and supported by the commenters were included in Appendix R2 to the Draft EIS. These measures have been further refined in CPRA's MAM Plan issued with the Final EIS (Appendix R2).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62862**

**Taking advantage of operational changes authorized in WRDA 2007, Davis Pond should be used as an adaptive management tool to achieve a gradual transition to lower estuarine salinities in the Barataria Basin. During the transition, the response of**

**estuarine organisms, including brown shrimp, oysters and bottlenose dolphins could be monitored.**

**Response ID: 16671**

The Draft EIS did not consider using Davis Pond as an adaptive management tool. Based on the comparative size and location of the Davis Pond Freshwater Diversion relative to the Project, operational limitations on Davis Pond during low river flows and existing limitations on the flexibility of Davis Pond's operational regime, Davis Pond cannot effectively be used to ease the transition to a fresher estuary. In addition, increasing flows from Davis Pond in advance of commencement of Project operations could reduce the pre-construction time period available for fishers to continue their fishing activities while beginning to adapt to changes that occur once Project operations commence. Accordingly, no changes have been made to the Final EIS.

---

**Concern ID: 62867**

**The Final EIS should not be published unless there are commitments to monitor the following parameters at the diversion site or in Barataria Bay: Project operations, the flow and quality of the water flowing through the diversion, wetland type coverage over time, water surface elevation, water quality in the basin, salinity, contaminant concentrations in diverted sediments, fish and shellfish abundance, oyster reef parameters, benthic community composition and abundance, SAV coverage, finfish and oyster contaminant concentrations, and shellfish harvest restrictions. These same data should also be collected in two reference basins.**

**Response ID: 16676**

Basin-side monitoring of water surface elevation, water quality in the basin, salinity, fish and shellfish abundance, and benthic community composition and abundance to evaluate how the Project is meeting Project objectives were included in the Monitoring and Adaptive Management (MAM) Plan of the Draft EIS (Appendix R2 ). Riverside monitoring parameters include river discharge, suspended sediment concentrations, nutrient concentrations in water conveyed to the Barataria Basin, sedimentology of the Alliance South sand bar, and Mississippi River sediment load were also included in the MAM Plan of the Draft EIS. Additionally, in the Fish and Wildlife Coordination Act Report (CAR) section of Chapter 5 (Consultation and Coordination) of the Draft EIS, CPRA accepted USFWS' recommendation on pre- and post-construction periodic sampling of Contaminants of Concern in fish, shellfish, and wildlife from the outfall area and the Mississippi River (see Section 3.7.3.23 of the MAM Plan [Appendix R2 to the EIS]). Therefore, no changes were made in the Final EIS on these issues. The Louisiana Department of Health will continue to monitor shellfish harvest restrictions. Additionally, the majority of the parameters above are collected via the State's System Wide Assessment and Monitoring Program that will allow comparison of the Project variables within and among other estuarine basins across the Louisiana coast.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA

---

intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62871**

**This Project can proceed carefully and with full attention to the ways in which impacts to bottlenose dolphins can be lessened. Supporting a rigorous pre- and post-construction monitoring program can reduce key uncertainties about the populations of bottlenose dolphins and can help measure Project effects.**

**Response ID: 16679**

The marine mammal related monitoring issue raised by the commenters was considered in CPRA's Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the Draft EIS). The MAM Plan describes pre- and post-construction monitoring to document baseline and changes to the abundance, distribution, population demography, density, survival, health, and reproduction of the Barataria Bay Estuarine System (BBES) stock of bottlenose dolphins, their prey, and their habitat, including effects that may result from the operation of the Project and resulting low salinity. For more information, refer to Section 3.7.3.19 (Atlantic Bottlenose Dolphins [*Tursiops truncatus*]) of the MAM Plan (Appendix R2 to the EIS). As these marine mammal monitoring measures were already considered in the Draft EIS, no changes were made in the Final EIS in response to this comment.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the

---

Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62878**

**The EIS and Mitigation Plan does not adequately consider or mitigate for impacts to Ironton. The EIS should include air pollution buffers for Ironton and flood protection easement areas for Ironton and other vulnerable communities outside of levee protection.**

**Response ID: 16505**

The concerns raised by the commenters were considered in the Draft EIS in Chapter 3, Section 3.7.2 Air Quality, Existing Conditions; and Chapter 4, Sections 4.8 Noise, 4.13 Socioeconomics, 4.15 Environmental Justice, 4.22 Land-Based Transportation and 4.25 Cumulative Impacts. Chapter 3, Section 3.7.2 Air Quality - Existing Conditions identifies the existing air quality in the proposed Project area and provides that Plaquemines Parish is designated as "unclassifiable/in attainment" for all criteria pollutants. The resource sections in Chapter 4 address potential air quality, noise, transportation, and tidal flooding impacts specifically concerning the community of Ironton. In addition, Chapter 2 of Appendix H1 Socioeconomics Technical Report to the EIS provides contextual information about the Ironton community.

CPRA committed to implementing best management practices (BMPs) to minimize construction impacts in the EIS in Chapter 4, Section 4.27.1 Avoidance and Minimization and Appendix R1 Mitigation and Stewardship Plan; additional information on BMPs is also included in the Mitigation Summary Table in Appendix R3. Construction emissions would be highly localized, and consequently the Project is only anticipated to impact air quality within 0.5 mile of the construction footprint; however, Ironton is located approximately 0.5 mile from the construction footprint (see EIS, Chapter 4, Section 4.7.1 Area of Potential Impacts). As stated in the EIS in Chapter 4, Section 4.15 Environmental Justice, populations in Ironton would experience minor to moderate, temporary adverse, impacts due to increased noise levels, dust, and transportation delays during the approximately 5-year construction period. During operations, air emissions would be negligible since the diversion structure would be electric-powered (see EIS Chapter 4, Section 4.7.4.2).

Beyond the near-term impacts of construction, operation of the Applicant's Preferred Alternative may have impacts on Ironton. Because it is within the New Orleans to Venice

---

(NOV) Non-Federal Levee (NFL) W-05a.1 (La Reussite to Myrtle Grove levee reach) levee system, Ironton is not expected to be impacted by increases in frequency and duration of tidal flooding due to Project operations (see Section 4.15.4.2.2 Storm Hazards and 4.20.4.2 Public Health and Safety). Further, guide levees constructed parallel to the diversion channel will be constructed to an elevation of approximately 15.6 feet and will serve as hurricane and storm damage risk reduction against storm surges. However, negligible to minor increases in risk of NOV-NFL Levee overtopping south of the immediate outfall area (following the delta formation in the outfall area) due to storm surge during certain 1 percent storms, may impact low-income and minority populations within Ironton. These potential impacts may be exacerbated to the extent that Ironton residents experience unique vulnerabilities.

To ensure that impacts on the community of Ironton have been adequately disclosed and to make that analysis readily accessible in one location within the EIS (rather than throughout the various resource sections), a section has been added to the Final EIS that provides a summary of impacts on the community of Ironton under the Applicant's Preferred Alternative (see Chapter 4, Section 4.15.5.1 Environmental Justice).

CPRA is not proposing specific mitigation to address or offset the negligible to minor increased risk in levee overtopping that could affect the community of Ironton inside the NOV-NFL system because this potential increased risk does not accrue until Project operations have resulted in the development of a delta (wetlands and marsh) in the area outside the NOV-NFL Levee adjacent to Ironton (circa 2040), and because this risk was identified for only one of the 100-year storm scenarios modeled. However, to help Ironton prepare for and mitigate flood risk from storms generally, CPRA would designate a liaison to work with residents in Ironton prior to commencing operations of the Project on community preparedness for storm-based flooding and damage.

CPRA has engaged in public outreach meetings with the communities projected to be impacted by the MBSD to solicit input on mitigation and stewardship strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities. Outreach efforts were undertaken to better understand and address potential impacts on communities with environmental justice concerns, such as low-income and minority populations, that may be disproportionately impacted by the Project, as discussed in Chapter 7 of the Final EIS. This included meetings in the community of Ironton. CPRA has expanded and refined the Mitigation and Stewardship Plan, Appendix R1 to the Final EIS, since publication of the Draft EIS and LA TIG's Draft Restoration Plan based on community and resource agency input. The mitigation and stewardship measures now provide additional detail regarding specific efforts targeted at assisting low-income and minority populations in addressing the potential impacts of the Project. CPRA will continue to engage with potentially impacted environmental justice communities and organizations concerning the implementation of the mitigation and stewardship measures.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS

Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62890**

**The wetlands and coastal habitats of Louisiana are essential to the bird populations (both resident and migratory) and must be protected and restored. The proposed Project is important to maintaining and rebuilding important bird habitat.**

**Response ID: 16190**

Chapter 3, Section 3.9.2.1 in Terrestrial Wildlife and Habitat of the Draft EIS identified the importance of area habitats and resources to migratory, and other, birds in the Barataria Basin. Further, Chapter 4, Section 4.9.4.2 in Terrestrial Wildlife and Habitat of the Draft EIS, discussed the maintenance and creation of marsh, as well as initial land accretion and creation of mudflats, that is projected to occur as part of the proposed Project, and identified that the net addition of these habitats would generally be beneficial to waterfowl and shorebirds.

The potential benefits of the proposed Project to resources in the Gulf, including birds, are also described in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Restoration Plan.

---

**Concern ID: 62892**

**The proposed MBSD Project would create wetlands supportive of birds (bald eagles, spring and fall migrants, waterbirds, and marsh birds) and other wildlife that are experiencing a high rate of coastal land (habitat) loss.**

**Response ID: 16191**

Chapter 4, Section 4.9.4.2 in Terrestrial Wildlife and Habitat of the Draft EIS, discussed the maintenance and creation of marsh that is projected to occur as part of the proposed Project, and identified that the net addition of wetlands would generally be beneficial to area birds. As identified in Section 4.12.3.2 in Threatened and Endangered Species of the Draft EIS, the

---

creation and maintenance of wetlands could affect bald eagle aquatic foraging habitat and prey species, but would likely result in negligible effects on the bald eagle itself.

The potential benefits of the proposed Project to resources in the Gulf, including birds, are also described in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Restoration Plan.

---

**Concern ID: 62897**

**Organic plant biomass is being converted to animal biomass as marsh loss occurs, serving as a prey base. But there is a fixed quantity of stored organic biomass and once it is gone, it is gone. Therefore, the No Action Alternative would have dire consequences overall for coastal bird and wildlife populations and the habitats on which they depend, because the system's energy continues to be depleted.**

**Response ID: 16195**

The comment is consistent with the EIS (Chapter 4, Section 4.9.4.1 in Terrestrial Wildlife and Habitat) that identifies continued wetland loss to be a major adverse impact on wetland wildlife due, in part, to a decreasing food source. In addition, as stated in Section 4.10.4.4 in Aquatic Resources, the current Barataria Basin food web is relatively complicated with a high degree of resilience, although detritus plays an important role. In a system that would become predominantly open water and soft bottom habitat with a low amount of wetlands, the food web would likely become more plankton-based and less detrital-based. This would represent a reduction in net system energy flow, trophic diversity, and faunal diversity compared to the existing system. The system could therefore be less resilient compared to one with multiple trophic pathways and detrital subsidies. Because this issue was addressed in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 62899**

**The Draft EIS likely underestimated the value of the riverine reintroduction to wildlife and the estuarine system, as seen at the sites of several new planned and accidental riverine avulsions, such as West Bay, Mardi Gras Pass, Fort St. Philip, delta-wide crevasses in the birdfoot delta, Davis Pond, Caernarvon, and Wax Lake. Biophysically, the introduction of carbon, nitrogen, and phosphorus into declining marshes would automatically trigger concomitant increases in net primary productivity, with beneficial effects amplified up the trophic pyramid (Day et al. 2021, Tupitza and Glaspie 2020, Wissel and Fry 2005).**

**Response ID: 16197**

A summary of select natural and man-made diversions in southeastern Louisiana, including those noted by the commenter, has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary, which includes the impacts of these other diversions on wildlife and the respective estuarine systems, is available in Appendix U of the Final EIS. In addition, the impacts of nutrient input from the proposed Project on the food web were discussed in Chapter 4, Section 4.10.4.4 in Aquatic Resources of the Draft EIS, which is consistent with the commenter's referenced statement and acknowledges the anticipated increase in primary productivity (and associated benefits to the food web) from nutrient input during Project operations and no changes to the Final EIS were warranted.

**Concern ID: 62903**

The freshening of systems allows the revival and recolonization of freshwater and brackish species. This is dramatically true in the case of trees and shrubs, few of which tolerate higher salinities. In the outfall areas of existing recent diversions, early successional willows are growing in profusion (for example, see CRMS3169), and succession to longer lived species like bald cypress would very likely follow. Meanwhile, on higher ground, stressed and dying natural levee and chenier vegetation like live oak may be revived, and recruitment of new woody vegetation can begin again.

**Response ID: 16200**

A summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary is available in Appendix U of the Final EIS. Chapter 4, Section 4.9.4.2.1 Vegetation has also been revised to supplement the analysis of proposed Project's impacts on vegetation.

---

**Concern ID: 62919**

**Commenters suggested that the proposed Project should include additional details and measures to minimize adverse impacts on dolphins, including additional adaptive management measures, such as operational minimization measures (and other measures to minimize short-term impacts from lower salinity levels) as well as additional details about human interaction/anthropogenic stressor reduction stewardship measures, and about how the goals of those measures will be achieved. One commenter noted that while the alternatives evaluated in the Draft EIS, including those rejected for further review, are adequate for purposes of an Final EIS and Record of Decision, more information on minimization measures that may be considered to address impacts to dolphins through the adaptive management process is needed**

**Response ID: 16707**

In recognition of the potential collateral injury to bottlenose dolphins and in response to public comments on this issue, the CPRA has revised the Monitoring and Adaptive Management (MAM) Plan included in the Draft EIS (see Appendix R2 [Monitoring and Adaptive Management Plan] to the Final EIS) to include more specific details regarding strategies and protocols to be used to minimize impacts on dolphins at the onset of operations and the process through which operational data would be used to evaluate potential modifications to those strategies and protocols. As stated in the MAM Plan, adaptive management strategies are largely reliant upon data that would only be available once operations commence, but may also be informed by new information gained during the preoperational period. At that time, such data would be used to evaluate modifications to operations that may further minimize impacts to marine mammals while achieving Project goals. In the updated MAM Plan, the CPRA has included a framework by which recommendations on operational management actions designed to minimize impacts on marine mammals would be made and CPRA's final determination on whether they would implement those measures.

The LA TIG has also developed a Marine Mammal Intervention Plan (see Appendix R5 to the Final EIS), which outlines a spectrum of response actions for dolphins affected by the operation of the diversion, ranging from recovery/relocation to no intervention to euthanasia.

While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible, the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized. With respect to achieving the goals of the stewardship measures that are incorporated in the Mitigation and Stewardship Plan addressing other anthropogenic stressors, the NMFS' Southeast Regional Office and Southeast Fisheries Science Center will lead those efforts. The Final Mitigation and Stewardship Plan has been updated to include additional information regarding this topic (see Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in these Plans, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Concern ID: 62934**

**A commenter noted the role of gathering scientific information under the MMPA and stated that the research undertaken as part of the Project would be consistent with MMPA policies by calling for monitoring and follow-up research, long-term habitat improvement, and actions for the health and stability of the Gulf ecosystem.**

**Response ID: 16549**

The Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the Final EIS) contains a monitoring program. Congress required the State of Louisiana to establish a monitoring program to "[m]onitor and evaluate the impacts of the projects on [marine

---

mammal] species and population stocks” as part of the legislation that required the Secretary of Commerce to issue a waiver for MMPA Sections 101(a) and 102(a). See Bipartisan Budget Act of 2018, Section 20201(a).

---

**Concern ID: 62963**

**Mitigation compensation should prioritize those most affected, likely those who rely on oyster leases in the mid-basin areas or smaller operations, as well as economically vulnerable oyster fishers.**

**Response ID: 16533**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers as compared to No Action conditions in Chapter 4, Sections 4.10 Aquatic Resources, 4.14 Commercial Fisheries, 4.15 Environmental Justice and 4.16 Recreation and Tourism.

In response to public comments and resource agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined the oyster mitigation and stewardship measures. CPRA’s mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to oyster fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for oysters in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to oyster fisheries in the early years of the Project’s operational life. The revised mitigation and stewardship measures include allocating \$4 million to establish new public seed ground, \$15 million to enhance public and private oyster grounds, \$4 million to create or enhance broodstock reefs and \$8 million for alternative oyster culture. While the focus of the proposed mitigation and stewardship measures are on establishing sustainable fisheries, oyster mitigation and stewardship measures have been crafted to focus on those impacted by the Project specifically. For example, a portion of each of the stewardship measures for impacts to oyster harvesters would be expressly designated for use by low-income and minority oyster harvesters. See the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the

---

Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62966**

**The MAM Plan and Mitigation Plan provide significant resources that can help the oyster industry adapt to Project impacts.**

**Response ID: 16534**

The Mitigation and Stewardship Plan (Appendix R1) included in the Draft EIS proposed mitigation and stewardship measures to assist the oyster industry to adapt to changing conditions. Since issuance of the Draft EIS, CPRA further expanded and refined the Mitigation and Stewardship Plan based on community and resource agency input (see Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA

---

TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62978**

**Collaboration is needed to minimize impacts on oyster industry, including developing innovative uses for bottom oysters and supporting collaboration between CPRA and LDWF.**

**Response ID: 16539**

CPRA and other state agencies, such as LDWF, recognize the importance of collaboration to support the fishing industry in adapting the ongoing changes in the environment. As explained in Section 4.14.4.1 Commercial Fisheries of the Draft EIS, without the Project, adverse impacts to oyster fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for oysters in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to oyster fisheries in the early years of the Project's operational life. bCPRA and LDWF worked together with numerous oyster fishers as part of Louisiana Sea Grant's Seafood Futures Initiative to develop mitigation and stewardship measures aimed at maintaining a sustainable oyster fishery. CPRA anticipates working with other agencies, such as Louisiana Economic Development, on the workforce development, education and training programs included in the Mitigation and Stewardship Plan (see Appendix R1 to the Final EIS). In addition, CPRA engaged the fishing community potentially impacted by the Project through public meetings to solicit input on mitigation and stewardship strategies and engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures from affected fishers. A summary of these public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

Refer to the Mitigation and Stewardship Plan for mitigation measures to be implemented as a result of these engagement efforts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of

---

specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63059**

**The freshwater habitat components of Louisiana's estuaries are under tremendous threat from erosion, saltwater intrusion, and sea-level rise, and are at risk of completely disappearing given physical limitations preventing inland marsh migration (Glick et al. 2013).**

**Response ID: 16065**

The literature cited by the commenter (Glick et al. 2013) was reviewed. Chapter 3, Section 3.6.2.2 in Wetland Resources and Waters of the U.S. of the EIS describes the causes of historic wetland losses in the Barataria Basin and is consistent with those documented by Glick et al. (2013), including sea-level rise. Because this issue was considered in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 63071**

**The dire forecasts about the near-term effects on dolphin populations in parts of Barataria Bay depend upon a number of unproven and improbable assumptions about dolphin adaptability and tolerance for living in the delta (Garrison et al., 2020). Conversely, the continued collapse of the marsh platform in the Barataria Basin will eventually reach a tipping point at which the prey base of dolphins in the bay would shrink and could eventually collapse. The long-term health of dolphins in the northern Gulf of Mexico depends on reconnecting the river to the delta and reestablishing the deltaic cycle.**

**Garrison, L.P, Litz, J. and Sinclair, C. 2020. Predicting the effects of low salinity associated with the MBSD Project on resident common bottlenose dolphins (*Tursiops truncatus*) in Barataria Bay, LA. NOAA Technical Memorandum NOAA NMFS-SEFSC-748: 97 p.**

**Response ID: 16594**

The Draft EIS recognized that the loss of wetlands under the No Action Alternative would result in a gradually increasing, from negligible to moderate, adverse impact on dolphins (see Chapter 4, Section 4.11.5.1 [Operational Impacts]). The impacts on bottlenose dolphins from freshwater exposure have been well documented, including observations and data collected in association with the release of fresh water in Louisiana (see Chapter 4, Section 4.11 [Marine Mammals] of the EIS for more details). Most recently, a freshening event in 2019 resulted in the declaration of an unusual mortality event (UME) in the northern Gulf of Mexico.

---

Existing data on low-salinity exposure were used to develop a dose-response model that formed the basis for the evaluation of impacts in the Draft EIS (see Chapter 4, Section 4.11.3 [Overview of Impact Analysis Approach]). The dose-response model was coupled with an updated population model to evaluate potential changes in survival rates with in BBES. These potential decreases in survival rates caused by the diversion were compared to future conditions without the diversion (the No Action Alternative). The analysis contained in the Draft EIS determined that there would be a major, adverse, long-term impact on the BBES Stock. That conclusion is also supported by Thomas et al. (2021), which built on earlier studies and concludes that, after 1 year of operation of the Applicant's Preferred Alternative, there would be 61 percent fewer dolphins in the Central stratum than under the No Action Alternative, 35 percent fewer in the West stratum, 12 percent fewer in the Southeast stratum, and 2 percent fewer in the Island stratum, with 25 percent fewer overall. Thomas, et al. 2021 further concluded that after 10 the planned 50 years of operation, there would be 100 percent reduction in the populations of dolphins in the Central and West strata, an 82 percent reduction in the population of the Southeast stratum dolphins, and a 34 percent reduction in the population of the Island stratum dolphins as compared against the No Action Alternative, with an overall difference in population of 78 percent. (Note that Thomas, et al. 2022 slightly refined some of these projections.) After 50 years of operation, in three out of the four strata, dolphins are predicted to be functionally extinct under the Applicant's Preferred Alternative, with the remaining Island stratum being severely reduced relative to the No Action Alternative (that is, the median predicted population size of the Island stratum would be 85 percent lower [95 percent CI 28-99] under the Applicant's Preferred Alternative than under the No Action Alternative). Overall, by the year 2076, the median predicted stock size across all of Barataria Bay under the Applicant's Preferred Alternative is 143 dolphins (95 percent CI 11-706) compared to a predicted 3,363 (95 percent CI 2,831-4,289) predicted to inhabit the Barataria Bay under the No Action Alternative. In other words, the BBES dolphin stock would be 96 percent smaller (95 percent CI 80-100) under the Applicant's Preferred Alternative than then No Action Alternative. Chapter 4, Section 4.11 Marine Mammals of the Final EIS has been updated to reflect the results of Thomas et al (2021). The impacts of Project-induced wetland changes on dolphins is discussed in Chapter 4, Section 4.11.5 Operational Impacts of the EIS.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such

measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63197**

**While recognizing that their recommendations may be outside the scope of the EIS, commenters suggested continuing to work with fishers and to examine fishing laws and policies.**

**Response ID: 16568**

The LA TIG acknowledges the desire of the commenters for ongoing engagement with fishers regarding the fishing laws and policies. Existing task forces within the State, such as the Joint Fisheries Task Force Working Group within the Louisiana Department of Wildlife and Fisheries (LDWF), would be an appropriate forum to suggest the examination of fishing laws and policies, given the many factors resulting in changed conditions in the State.

---

**Concern ID: 63332**

**A large number of commenters expressed general support for the proposed Project.**

**Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

---

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Concern ID: 63382**

**The Mid-Barataria Sediment Diversion is a linchpin project from the plan that is critical to building a more climate resilient future for Louisiana. For decades, scientists and engineers have considered all the tools available and overwhelmingly agree that this proposed Project, and projects like it, are the best long-term solution and necessary to match the challenges faced from land loss due to sea-level rise and other climate change impacts. The proposed Project would build and maintain thousands of acres of vital wetlands to protect people from flooding from more intense hurricanes and sea-level rise. Without action, some communities would see increased vulnerability to floods, continued loss of wetlands, and a collapse of key fisheries. Finally, the proposed Project would work in concert with nearby marsh creation projects and would extend the lifespan of the millions of dollars that have been invested in nearby marsh creation projects.**

**Response ID: 16344**

The commenter's support for the proposed Project is noted. The No Action and proposed Project alternatives' impacts on flooding potentials, wetland extent, and key fisheries were discussed in Chapter 4, Sections 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk, 4.6 Wetland Resources and Waters of the U.S., and 4.10 Aquatic Resources of the Draft EIS, respectively. Similarly, the cumulative impacts of the proposed Project and other restoration projects were discussed in Section 4.25 Cumulative Impacts of the Draft EIS, as applicable.

---

**Concern ID: 63580**

**CPRA should seek alternative outreach tools to reach typically hard to reach audiences including low-income, minority, and non-English speaking communities.**

**Response ID: 15914**

USACE and LA TIG coordinated with the SELA Voice organizations to understand the needs of the local communities regarding the best ways to reach out to these communities prior to the release of the Draft EIS and the LA TIG's Draft Restoration Plan. Recommendations for where to make the Draft EIS and the LA TIG's Draft Restoration Plan available as well as translation of material related to the Draft EIS and Restoration Plan were implemented. USACE and LA TIG tailored the public meeting process for the Draft EIS and the LA TIG's Draft Restoration Plan based on COVID-related restrictions in place at the time. Public meetings were virtual and allowed an open exchange during the public comment portion. Meetings could be accessed via internet/web-based conferencing application or via telephone. Spanish, Vietnamese, and Khmer translators facilitated participation by non-English speakers; key messages from the meeting presentations were translated during the meetings and the translators were available to interpret participant comments in any of those languages.

In addition to the public meetings, commenters were able to submit their comments via multiple means. Dedicated toll-free numbers were provided through which English-speaking and non-English speaking individuals could listen to pre-recorded presentation information and provide public comment on the Draft EIS and LA TIG's Draft Restoration Plan in their language of choice. The pre-recorded presentation information consisted of an explanation of how to comment, an update on the proposed MBSD Project design, information concerning the ongoing restoration planning efforts and the LA TIG's Draft Restoration Plan, and details about how to navigate and review the contents of the Draft EIS. The Draft EIS was (and is) available on the USACE website. The LA TIG's Restoration Plan was also made available on the LA TIG's website.

The Executive Summary for the Draft EIS and the LA TIG's Draft Restoration Plan were translated into Spanish and Vietnamese and were available at libraries and community centers/organizations. The complete Draft EIS and Draft Restoration Plan with appendices were also available as either a printed copy and/or electronically (thumb drive) at these locations.

Since the release of the Draft EIS and the LA TIG's Draft Restoration Plan, CPRA conducted public outreach to communities projected to be impacted by the Project to solicit input on mitigation and stewardship strategies, including reaching out to local non-profits to assist with and facilitate meetings with impacted fishers and communities, including Indigenous communities and low-income and minority communities. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward including through Coastal Connections meetings and use of community non-profit, non-governmental organizations for additional outreach. CPRA has also committed to stakeholder engagement and input during the adaptive management process if the proposed MBSD Project is implemented. CPRA would provide annual operations plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

---

**Concern ID: 63630**

**The Project will lead to long-term benefits for marine mammals and dolphin populations by restoring the marine ecosystem and by carrying out monitoring and mitigation of the near-term impacts described by the Draft EIS and associated studies (Garrison et al., 2020).**

**Response ID: 16706**

The Draft EIS included an analysis of the impacts to marine mammals, including BBES dolphins in Chapter 4, Section 4.11 Marine Mammals. While the analyses in the EIS suggest that some prey resources upon which dolphins rely may benefit from the proposed Project, the analyses overall suggest that the impact of the proposed Project on dolphins would be immediate, significant, and adverse. These analyses incorporated studies from Booth and

---

Thomas (2021), Garrison et al. (2020), and Schwacke et al. (2017) and the Final EIS includes additional analyses that were complete by Thomas et al. (2021) after the Draft EIS was released for public comment.

The impact conclusion in the Draft EIS was based in large part on Garrison et al. (2020), which predicts that only a “remnant population” of dolphins would continue to exist in Barataria Basin after diversion operations commenced. That conclusion is confirmed by Thomas et al. (2021), which concludes that, after 1 year of operation of the Applicant’s Preferred Alternative, there would be 61 percent fewer dolphins in the Central stratum than under the No Action Alternative, 35 percent fewer in the West stratum, 12 percent fewer in the Southeast stratum and 2 percent fewer in the Island stratum, with 25 percent fewer overall. Thomas, et al. further concluded that after 10 years of operation, there would be 100 percent reduction in the populations of dolphins in the Central and West strata, an 82 percent reduction in the population of the Southeast stratum dolphins and a 34 percent reduction in the population of the Island stratum dolphins as compared against the No Action Alternative with an overall difference in population of 78 percent. After the planned 50 years of operation, dolphins in three out of the four strata are predicted to be extinct under the Applicant’s Preferred Alternative, with the remaining Island stratum population being 85 percent lower [95 percent CI 28-99] under the Applicant’s Preferred Alternative than under the No Action Alternative). Overall, by the year 2076, the median predicted stock size across all of Barataria Bay under the Applicant’s Preferred Alternative is projected to be 143 dolphins (95 percent CI 11-706) compared to a predicted 3,363 dolphins (95 percent CI 2831-4289) predicted to inhabit Barataria Bay under the No Action Alternative. In other words, the BBES dolphin stock is predicted to be 96 percent smaller (95 percent CI 80-100) under the Applicant’s Preferred Alternative than then No Action Alternative. Section 4.11 Marine Mammals of the Final EIS has been updated to reflect the results of Thomas et al (2021).

To respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals, the LA TIG has developed a new Marine Mammal Intervention Plan to further (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible, the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized.

In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures to benefit dolphins (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include more details regarding strategies and protocols that would be used at the onset of operations to minimize impacts on dolphins, as well as the process through which operational data would be used to evaluate potential modifications to those strategies and protocols; see Appendix R2 (Monitoring and Adaptive Management [MAM] Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship,

monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63710**

**Commenter requests that EJ mitigation efforts be made specifically for economically vulnerable oyster fishermen, potentially by providing them with alternate lease locations.**

**Response ID: 16510**

The Draft EIS (Chapter 4, Section 4.15.4.2 - Environmental Justice - Operational Impacts) identified the potential for the Project to result in disproportionately high and adverse impacts on some low-income and minority commercial oyster fishers. In response to these identified impacts and based on public comments, CPRA expanded and refined its Mitigation and Stewardship Plan, Appendix R1 to the Final EIS, since publication of the Draft EIS and LA TIG's Draft Restoration Plan. CPRA's Mitigation and Stewardship Plan included with the Final EIS provides additional details on specific mitigation measures for impacts on oysters (see Appendix R1 of the EIS, Section 6.3.3). According to CPRA, a portion of the funding for several of these mitigation and stewardship measures would be prioritized for low-income and minority fishers to ensure that such fishers receive the benefits of these programs. Additionally, rulemaking by LDWF effective April of 2020 ended a moratorium on new leases on state-owned water bottoms enacted in 2002. The LDWF oyster lease process establishes a phased approach for settling previous applications and providing for new lease opportunities. More information on this program is available at <https://www.wlf.louisiana.gov/page/oyster-lease-moratorium-lifting> or within the LDWF Rule found in LAC 76:VII.505.

---

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63775**

**The MAM Plan should develop an information dashboard or clearinghouse where the basin-wide data can be kept and accessed, would be useful to the public as well as diversion operators, state agencies, researchers, and other stakeholders.**

**Response ID: 16686**

In response to public comments, CPRA would develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

This dashboard has been added to the Monitoring and Adaptive Management (MAM) Plan included in the Final EIS (Appendix R2).

---

**Concern ID: 63827**

**CPRA should consider constructing landscape features to provide higher-salinity refuge areas within the basin.**

**Response ID: 16552**

Based on Coastal Master Plan modeling, CPRA does not anticipate that ridge restoration would effectively deflect freshwater flows from the larger basin. The size and scope of ridges necessary to isolate areas in the basin from fresh water makes this solution infeasible.

---

Construction of outfall features, including ridges, was identified as an alternative that was considered but eliminated in Section 2.6 Summary of Alternatives Considered but Eliminated from Detailed Analysis. No related edits have been made to the Final EIS.

---

**Concern ID: 63942**

**Commenters requested mitigation actions be taken to minimize air, water and noise impacts near the construction site.**

**Response ID: 16583**

If the Project is permitted, approved, and funded, CPRA has stated that it would implement certain BMPs during Project construction to avoid and minimize construction impacts listed in Chapter 4, Section 4.27.1 (Mitigation Summary - Avoidance and Minimization) and Appendix R1 (Mitigation and Stewardship Plan) of the Draft EIS. In response to comments, CPRA expanded and refined the BMPs and EPMs between the Draft and Final EIS in the Mitigation Summary Table (Appendix R3 to the Final EIS).

---

**Concern ID: 64089**

**Commenters asked that the jobs that are created by construction of the proposed Project spur inclusive and equitable economic development. The Louisiana State and local economic development authorities should focus efforts through communication, recruitment, and training activities, into creating jobs for local residents, including minority residents. The same type of focused workforce development effort is likely necessary in order for these local jobs to translate into longer term economic benefits for affected communities. Work with the community to identify future needs of this workforce, including: providing adequate emergency and routine medical care for workers, facilitating the start and growth of small business to provide services to this workforce, and educating skilled workers who can later pivot to other jobs along our coast long after construction is complete.**

**Response ID: 16234**

With respect to the award of contracts, CPRA is required to follow the provisions of the Louisiana Public Bid Law, including those contained in Title 39, Chapter 17 (the Louisiana Procurement Code) and in Title 38, Chapter 10 (Public Contracts). CPRA has sought and regularly seeks engagement and participation from the public, agency, and stakeholder groups wishing to be involved in the coastal restoration process. Over the past several years, CPRA has conducted outreach associated with its Sediment Diversion Program, including Coastal Connections meetings throughout the proposed MBSD Project area. In addition, since the release of the Draft EIS, CPRA has engaged the public through meetings with the communities projected to be impacted by the proposed MBSD Project to solicit input on mitigation strategies, including reaching out to local non-profits to assist with and facilitate meetings with the impacted communities. CPRA states that it would provide additional opportunities for public engagement if the proposed Project moves forward. A summary of these public engagement meetings can be found in Chapter 7 Public Involvement of the Final EIS.

---

**Concern ID: 64130**

**Commenters suggested the Draft EIS is insufficient in terms of its definition and analysis of affected communities, particularly low-income and communities of color. The analysis would be improved by a discussion of historical context and systemic**

**inequities to describe the existing barriers (that is, economic hardships, educational background, language barriers) these communities, particularly Ironton, must deal with.**

**Response ID: 16301**

The issues raised by the commenters were considered in the Draft EIS. The EIS Chapter 3, Section 3.15 Environmental Justice and Chapter 2 of Appendix H1 Socioeconomics Technical Report discusses existing barriers faced by populations in the Project area affected by the proposed Project, including economic hardships, and describes specific communities with low-income and minority populations. Chapter 2 of Appendix H1 Socioeconomics Technical Report, also provides information regarding historical context and systemic inequities affecting these communities. Chapter 4, Section 4.15 in Environmental Justice describes potential impacts on low-income and minority populations from construction and operation of the proposed Project. In the Final EIS, Chapter 4 Section 4.15.5.1 Environmental Justice, a summary of impacts to the Ironton community has been added to facilitate access to that information. Information concerning additional outreach to communities with environmental justice concerns has also been added.

US Army Corps of Engineers

New Orleans District

Attn: CEMVN-OD-SE, MVN-2012-2806-EOO 7400 Leake Avenue New Orleans, LA 70118

Submitted via email to: CEMVN-Midbarataria@usace.army.mil

To Whom it may concern:

Established in 1984, the Institute for Marine Mammal Studies is a Mississippi 501 (c)(3) nonprofit organization dedicated to the conservation and research on marine mammals and sea turtles in the north central Gulf of Mexico. It has conducted pioneering research on the biology and natural history, stranding response, and rehabilitation of marine mammals and sea turtles in the region for decades. A summary of programs and accomplishments of the Institute are presented on it's website Blockedwww.imms.org

Based on the information that we have reviewed and the research that we have conducted, it is our opinion that the proposed mid-Barataria diversion as planned will have a catastrophic effect on the local dolphin population and the ecosystem that supports it. In addition to the loss of marine fishery resources resulting from the diversion of polluted Mississippi River water into the Bay, there will be serious economic and cultural losses that will occur, which need to be considered. We recommend that extensive studies be done on the marine resources and their habitat to evaluate the effect of the polluted Mississippi River that will be redirected into Barataria Bay. Furthermore, other alternate options should be seriously considered prior to the issuance of the requested permit.

In 2019, the redirection of the polluted Mississippi River water to the Mississippi Sound and adjacent waters resulted in massive losses of marine resources (dolphins, oysters, crabs, fish) and significantly affected the local economy. This Unusual Mortality Event was investigated by NOAA, and the results of this investigation should be considered in the evaluation of the mid- Barataria project, which would be introducing the River water to the Bay estuary year after year.

Finally, the DWH settlement money that is being used to construct the mid-Barataria diversion was specifically for the restoration and recovery of the marine species and their habitat that were damaged by the oil spill. Therefore, these funds should not be used to further destroy the very resources that these monies were to be used for their restoration. A legal opinion on the possible violation of the BP Settlement Agreement should be sought before using these monies for the construction of the diversion, which will result in the destruction of the marine resources.

Sincerely,

Moby Solangi, Ph.D.

President and Executive Director

Institute for Marine Mammal Studies, Inc.

**Concern ID: 61879**

**Commenters questioned why other alternatives are not being considered other than No Action and a sediment diversion with various levels of flow rates. CEQ's regulations require that the EIS rigorously explore and objectively evaluate all reasonable alternatives, which is a requirement that the Draft EIS does not meet. Consider analyzing a range of other alternatives, options, and tools that better preserve and protect the environment and minimize the severe impacts to Louisiana fisheries, the communities, and the entire Gulf Coast ecosystems.**

**Response ID: 15835**

The range of reasonable alternatives evaluated in the EIS was based on the purpose and need statement set forth in Chapter 1, Section 1.4 Purpose and Need of the EIS. As described in Chapter 2 of the Draft EIS (Alternatives), an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and its evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria were described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for details on why these alternatives were not carried forward for further evaluation in the EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment

---

diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

Prior to the development of the EIS and Restoration Plan, the LA TIG evaluated various restoration alternatives in its SRP/EA #3 and found that a combination of “marsh creation and ridge restoration plus a large-scale sediment diversion would provide the greatest level of benefits to injured Wetlands, Coastal, and Nearshore habitats and to the large suite of injured resources that depend in their life cycle on productive and sustainable wetland habitats” (LA TIG, 2018) in the basin and in the broader northern Gulf of Mexico. As a result, the LA TIG pursued the development of a large-scale sediment diversion, specifically the proposed Mid-Barataria Sediment Diversion evaluated in its Restoration Plan. The LA TIG has funded other marsh creation restoration efforts that provide ecosystem services lower in the basin (that is, Barataria Basin Ridge and Marsh Creation Project: Spanish Pass Increment and Queen Bess Island Project). These activities complement and reinforce the restoration that would be provided by the proposed MBSD Project. Section 2.3 of the LA TIG’s Restoration Plan provides a detailed discussion of process used to identify restoration alternatives.

---

**Concern ID: 62009**

**The negative socioeconomic consequences would devastate southeast Louisiana, destroy people’s livelihoods, displace people living near the diversion, and destroy property in the areas impacted by the proposed MBSD Project.**

**Response ID: 16207**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.13 Socioeconomics, discusses impacts of the proposed Project on the economy of Louisiana, including impacts on population, property values, and community cohesion. As noted in these sections, the proposed Project would have both beneficial and adverse socioeconomic impacts on the people and communities within the Project area. Minor to moderate, permanent adverse socioeconomic impacts are expected to occur near the immediate outfall area outside of flood protection. Minor to moderate, permanent, beneficial socioeconomic impacts are expected to occur in the west bank New Orleans area north of the diversion. Moderate to major, beneficial, temporary impacts from job creation and economic activity in the proposed Project area are anticipated. In addition, the Socioeconomics Technical Report in Appendix H1 provides additional details on these projected effects.

As part of its restoration planning efforts, the LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. The LA TIG believes the proposed MBSD Project is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net benefits of the proposed Project meet OPA’s requirement of restoration, rehabilitation, replacement, or acquisition of the equivalent, of the natural resources injured by the DWH oil spill.

The commenters' concern regarding the potential impacts of the diversion were considered by CPRA and the LA TIG in developing the Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included mitigation to address and offset some of the projected impacts of the Project on fisheries and surrounding communities outside levee protection including providing structural mitigation and stewardship measures for increased water levels that are projected to result due to the Project, such as raising roads or improving bulkheads. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

In communities south of the Project site outside of federal levee protection where the proposed Project is projected to cause increased water levels, CPRA plans to take one of two approaches. In Myrtle Grove, CPRA is planning to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision. By improving this bulkhead, CPRA would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions without the Project. See Table 1 in the Final Mitigation and Stewardship Plan for more details. CPRA plans to acquire a temporary right-of-way to permit improvement of the bulkhead, voluntarily or through eminent domain if necessary, from the property owners in the Myrtle Grove Marina Estates Subdivision.

In other communities south of the Project site outside of federal levee protection, from Woodpark south to the communities of Grand Bayou and Happy Jack, CPRA plans to elevate the portions of public roads outside of levee protection that provide access to each of these communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or

will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62666**

**It would be inappropriate, and contrary to the stated purpose of restoring injured resources, to use DWH settlement funds to implement a project that would harm the same wildlife (for example, shrimp, oysters, bottlenose dolphins, *Spartina alterniflora*) and ecological services that were negatively affected by the oil spill.**

**Response ID: 16625**

USACE is not evaluating the proposed Project for compliance with the OPA and is not involved in the process to restore the damage caused by the DWH oil spill. USACE's involvement with the proposed Project is limited to its permitting decisions and associated NEPA and other evaluations of the proposed Project under the CWA Section 404 and RHA Sections 10 and 14 (33 USC Section 408). USACE is not executing any DWH restoration actions under the OPA. As explained in the Restoration Plan, the LA TIG is responsible for deciding the appropriate use of NRDA funds to restore natural resources injured by the DWH spill in the Louisiana Restoration Area. As explained in the Final EIS, Appendix B2 DEIS Public Review and Public Meetings, Section 2.0 Agency Roles in the Responses to Public Comments, response content pertaining to the LA TIG's Draft Restoration Plan, the OPA and/or NRDA processes or other Trustee Planning was developed by the LA TIG and states only the LA TIG's views.

---

In the Restoration Plan, the LA TIG explained that the DWH oil spill resulted in the oiling of more than 1,100 kilometers of wetlands, nearly all of which were located in coastal Louisiana (DWH NRDA Trustees, 2016). The heaviest oiling occurred in the Barataria Basin, resulting in substantial injuries to natural resources in the basin (DWH NRDA Trustees, 2016).

Recognizing that the resulting loss of marsh productivity affected resources throughout the northern Gulf of Mexico ecosystem, the State of Louisiana and the federal Trustees that negotiated the DWH Natural Resource Damages settlement allocated \$4 billion, almost half of the total settlement amount, to restoring Louisiana's wetland, coastal, and nearshore habitats.

The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree of collateral injuries, to natural resources injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the LA TIG's Restoration Plan). The intended restoration of freshwater flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, as noted in the LA TIG's Restoration Plan, without the proposed Project, sea-level rise, subsidence, and other existing stressors would result in additional marsh loss over time reducing the suitability of habitat for many of the same species.

The LA TIG must weigh the potential and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed Project against its potential benefits). The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that more closely resembles historic conditions. As described in Section 3.2.1.6 (Benefits Multiple Resources) of the Restoration Plan, this sustained ecosystem is expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing a deltaic process, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Final Restoration Plan because the LA TIG believes it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the NRDA Trustee's Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

In its Strategic Restoration Plan for Barataria Basin (2018), the LA TIG evaluated the potential and extent of collateral injury for a range of restoration techniques. Unfortunately, almost all large-scale restoration comes with some potential for collateral injury. The LA TIG evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54. In the Restoration Plan, the LA TIG strives to identify an alternative that would provide what it

considers the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. Again, see Section 3.2.4 of the Restoration Plan for a discussion of how the LA TIG came to its decision.

In recognition of the potential for collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, the LA TIG has designed and CPRA will implement a suite of stewardship measures (see Section 3.2.1.1.5 [Associated Stewardship Measures] of the Restoration Plan and Appendix R1 to the EIS). The LA TIG is also committed through these measures to continuing efforts to restore the resources that would be adversely affected by the diversion, many of which were also injured by the DWH oil spill.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62742**

**The commenter recommends that extensive studies be done on the marine resources and their habitat to evaluate the effect of the polluted Mississippi River that would be redirected into Barataria Bay**

**Response ID: 16120**

Chapter 4, Section 4.10.4.4 in Aquatic Resources of the EIS includes the results of Delft 3D Basinwide modeling for projected nutrient loading in the Barataria Basin, including nitrogen and phosphorus inputs from the Mississippi River. Individual assessment of potential contaminants, including nitrogen, phosphorus, sulfate, fecal coliform, and atrazine were modeled and discussed in Sections 4.5.5.3, 4.5.5.4, 4.5.5.7, 4.5.5.8, and 4.5.5.9 (respectively) in Surface Water and Sediment Quality. These sections indicate that the

---

proposed Project would result in beneficial decreases in sulfate in the Barataria Basin and would have negligible impacts on atrazine levels and they are therefore not specifically discussed in Section 4.10; however, a discussion of fecal coliform has been added to Section 4.10.4.4.2.5 Dissolved Oxygen of the Final EIS. In addition, CPRA's Mitigation and Stewardship Plan (Appendix R1 of the EIS) describes CPRA's mitigation and stewardship measures, including the agency's agreement with the USFWS' recommendation to monitor for certain contaminants, (through sampling of fish, shellfish, and potentially bald eagle feces and blood) during diversion operations, if applicable.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62986**

**The Project would drive decreases in salinity that would reduce the overall health, survival, and reproduction of bottlenose dolphins that reside in the Barataria Basin, a species that was negatively affected by the Deepwater Horizon oil spill (NMFS, 2013). Some commenters felt that because of this, the Project should either not move forward or its operation should be altered.**

**National Marine Fisheries Service (NMFS). 2013. Roy Crabtree (NMFS) to Elizabeth Davoli (CPRA).** <https://s3.documentcloud.org/documents/726710/national-marine-fisheries-service-comments-on.pdf>

**Response ID: 16701**

The concerns raised by the commenters about the projected decreases in salinity and resulting effects on Barataria Bay dolphins were considered in the Draft EIS. More

---

specifically, Chapter 4, Section 4.11.5.2 in Marine Mammals of the EIS acknowledges that the proposed Project would likely have significant, adverse impacts to Barataria Basin dolphins, a species that suffered significant impacts from the DWH oil spill. This section also discusses the physiological changes caused by exposure to low-salinity water, the duration of those changes that leads to mortality, and the anticipated mortality of a large portion of the dolphin population in the Barataria Basin within the first decade. These sections of the EIS provide a more in-depth analysis of potential impacts to dolphins than the letter cited by the commenter.

The concerns raised by the commenters were also considered in the LA TIG's Draft Restoration Plan (see Section 3.2.1.5 [Collateral Injury]); the Final Restoration Plan has been edited consistent with changes made to the Final EIS and see below regarding new, related content included in Appendix R.

The LA TIG recognizes that any of the large-scale sediment diversion alternatives considered would potentially result in varying degrees of collateral injuries, including some high degree collateral injuries, to natural resources, like dolphins, that were injured by the spill (see the Executive Summary and Section 3.2.1.5 [Avoids Collateral Injury] of the Restoration Plan). The intended restoration of freshwater flows from the Mississippi River, which historically had characterized and shaped the Barataria Basin ecosystem before levee construction, would result in collateral injury to species that depend on the current higher-salinity conditions that exist without freshwater flows. However, without the proposed Project, there would also be adverse impacts to some of the same species due to large-scale wetland loss over time, as is anticipated from ongoing sea-level rise, subsidence, and other existing stressors, which is anticipated to reduce the suitability of habitat for many of the species that currently occur in Barataria Basin.

The LA TIG must weigh the potential for and extent of collateral injury against the benefits of the proposed Project (see Section 3.2.4 [Overall OPA Evaluation Conclusions] of the Restoration Plan for a discussion of how the LA TIG weighed the potential collateral injury of the proposed Project against its benefits). The LA TIG believes that a sediment diversion is the only way to achieve a self-sustaining ecosystem in the Barataria Basin that creates and maintains wetlands. As described in Section 3.2.1.6 (Benefits Multiple Resources – Alternative 1) of the Restoration Plan, this sustained ecosystem would be expected to benefit many fish and wildlife species in the basin, including many of those negatively affected by the spill, such as red drum, blue crab, white shrimp, Gulf menhaden, and migratory waterfowl. These benefits to fish and wildlife species also would translate to benefits to recreational users who watch, fish, or hunt those species. In addition, these benefits would not only accrue throughout the Barataria Basin but, through the transport of productivity, also in the offshore ecosystems of the northern Gulf of Mexico. By reestablishing deltaic processes, the proposed Project would be expected to enhance the ecological productivity of the estuary and improve food web dynamics that would provide benefit to the northern Gulf of Mexico ecosystem.

The LA TIG has selected the proposed Project as its Preferred Alternative in the Restoration Plan because it is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

Since release of the Draft EIS and the LA TIG's Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible (if it is possible), the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized.

In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures to benefit dolphins in Louisiana (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include more details regarding strategies and protocols that would be used at the onset of operations to minimize impacts on dolphins, as well as the process through which operational data would be used to evaluate potential modifications to those strategies and protocols; see Appendix R2 (Monitoring and Adaptive Management Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**The majority of the bottlenose dolphin population of this area will be destroyed... not just killed but sentenced to a horrific death. Freshwater releases at Bonnet Carré Spillway in 2019 resulted in an unusual mortality event (UME), demonstrating the harm that freshwater releases can cause to dolphins. A study by the Galveston Bay Dolphin Research Program also found that dolphins in upper Galveston Bay developed skin lesions after flooding from Hurricane Harvey. Additional studies further support the harm that the diversion could cause by demonstrating negative impacts to dolphins from exposure to low-salinity conditions (Deming and Garrison, 2021; Duignan et al., 2020; McClain et al., 2020).**

**Deming, A., and L. Garrison. 2021. 2019 Northern Gulf of Mexico bottlenose dolphin unusual mortality event. Marine Mammal Commission meeting/webinar on “Effects of Low Salinity Exposure on Bottlenose Dolphins,” 23 March 2021. Oral presentation. <https://www.mmc.gov/events-meetings-and-workshops/other-events/effects-of-low-salinity-exposure-on-bottlenose-dolphins-webinar/>**

**Duignan, P.J., N.S. Stephens, and K. Robb. 2020. Fresh water skin disease in dolphins: a case definition based on pathology and environmental factors in Australia. Scientific Reports 10:21979.**

**McClain, A.M., R. Daniels, F.M. Gomez, S.H. Ridgway, R. Takeshita, E.D. Jensen, and C.R. Smith. 2020. Physiological effects of low-salinity exposure on bottlenose dolphins (*Tursiops truncatus*). Journal of Zoological and Botanical Gardens 1:61-75.**

**Response ID: 16590**

The Draft EIS included an analysis based on extensive literature and soon-to-be published data (now published) demonstrating the impacts of low-salinity conditions on dolphins. These data were considered as part of an Expert Elicitation (a garnering of expert opinions to determine or quantify an unknown) that resulted in dose-response curves (Booth et al. 2020) and summarized in Chapter 4, Section 4.11.3 (Marine Mammals - Overview of Impact Analysis Approach) of the EIS. While Deming and Garrison (2021) was presented after the release of the Draft EIS, the presentation was based on data that were fully considered in the Draft EIS, including as part of the Expert Elicitation. Along with other relevant data (for example, BBES tagging studies), the analysis contained in the Draft EIS determined that there would be a significant, adverse, permanent impact on the BBES Stock. Further, the analysis in the Draft EIS concluded that if the 75,000 cfs Alternative were implemented, impacts would be immediate and only a remnant population would be likely to exist near the barrier islands after 50 years of operation.

After release of the Draft EIS, at the request of the Marine Mammal Commission, the National Marine Mammal Foundation and University of St. Andrews released a population impact projection based on the information presented in the Draft EIS (including annual survival rates from Garrison et al. 2020) coupled with an updated population model for BBES dolphins (Schwacke et al. 2022, Thomas et al. 2021). This new, additional analysis has been incorporated into the Final EIS in Chapter 4, Sections 4.11.5.2 Barataria Bay Estuarine Stock and supports the original determination in the Draft EIS of major, permanent, adverse impacts on the BBES dolphin population. The research presented in the McClain et al. (2020) study cited by commenters was considered in the Draft EIS [cited at the time as McClain et al. (in prep)]; the research presented by Duignan et al. (2020) is consistent with the established

---

literature and does not change the conclusions of the Draft EIS, but this study has been incorporated in Chapter 4, Section 4.11.5.2.2.1 General Effects on Dolphin Health of the Final EIS. Similarly, the information included in the Deming and Garrison presentation was considered in the Draft EIS, is consistent with the conclusions of the Draft EIS, and the presentation has now been cited in Section 4.11.5.2.2.

Since release of the Draft EIS and the LA TIG's Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible, the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized. In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include specific marine mammal response triggers that may affect Project operation mitigation efforts; see Appendix R2 (Monitoring and Adaptive Management [MAM] Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in these Plans, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

To Whom it may Concern:

My letter is to show support for the Mid-Barataria Sediment Diversion Project. This intelligent and carefully planned project is essential for our state and must be given priority by the Corps of Engineers regardless of protests that put private property interests above public good.

The future of our state is at risk and any action less than the proposed sediment diversion project is dangerous and short sighted. Please do not let the big issues of public safety and environmental responsibility become compromised and clouded by short sighted private concerns that seek to protect the few at the expense of the many.

**Although the proposed MBSD Project would have adverse impacts the benefits described in the EIS outweigh those impacts.**

**Response ID: 16289**

The commenters' support for the proposed Project, even considering the projected adverse impacts, is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Comments on Draft EIS for the Mid-Barataria Sediment Diversion Project (CEMVN-ODR-E,MVN-2012-2806-EOO)

I am submitting the following comments on the Draft EIS for the Louisiana Hypoxia Working Group. The Group was organized in 2003 and functions as a forum for the exchange of information to facilitate, promote, and support implementation of the Action Plan to Reduce Hypoxia in the Gulf of Mexico (2001, 2008, 2015) in the state of Louisiana. The Action Plan was developed and revised under the Mississippi River/Gulf of Mexico Watershed Nutrient Task Force, which was formed in 1997 and includes key federal agencies (EPA, USDA, USACE, USGS, NOAA) and the 12 states along the Mississippi and Ohio Rivers (AR, IA, IL, IN, KY, LA, MN, MO, MS, OH, TN, WI).

The current version of the Action Plan has two key components: an Interim Target of achieving a 20% reduction in loading of nitrogen (N) and phosphorus (P) from the Mississippi-Atchafalaya River Basin to the Gulf of Mexico by the year 2025; and reaching an average annual size of the Gulf of Mexico hypoxic zone of 5,000 square kilometers (1950 square miles) by the year 2035.

These comments are made on the Draft EIS for the Mid-Barataria Project as it pertains to the Action Plan. The Action Plan and the Project are being pursued under different auspices. The Plan's Target for a 20% reduction in N and P loading to the Gulf by the year 2025, along with the reductions that would achieve the 2035 goal, which would result from a significant reduction in nutrient loads in the Mississippi River, would seem to have relevance for the Project and the Draft EIS.

Yet the Action Plan, its goals, and their potential impacts are not mentioned or referenced in the Draft EIS. This is the case for the modeling of N and P trends and water quality impacts of the Project that are described in Chapter 4 and elsewhere, as well as the "Past, Present, and Reasonably Foreseeable Future Projects and Trends" for N and P (also in Chapter 4). The Action Plan is similarly not included in the 49 "Reasonably Foreseeable Future Projects Considered in the Cumulative Impacts Analysis" that are listed in Table 4.25.1-1, nor among the Laws, Regulations, and Executive Orders that are listed under Consultation and Coordination in Chapter 5.

There are several discussions of Gulf Hypoxia in the Draft EIS that provide opportunities to reference the Action Plan and the substantial body of science that has informed its development, but none do so. The discussion in Chapter 3 of "excessive nutrient (N and P) loads [that] create.. hypoxic conditions, or 'dead zones' that persist for a prolonged duration" treats the problem as a global issue without mentioning the large annual hypoxic zone that forms each year in the Project area.

The "Draft Phase II Restoration Plan #3.2", issued by the Louisiana Trustee Implementation Group (TIG) in conjunction with the Draft EIS, does mention the Gulf Hypoxic Zone and the Hypoxia Task Force in its Chapter 3 (on page 3-44), but in a somewhat misleading way. Following a discussion of nutrient issues that focuses on their positive impacts, a 2018 report from the Hypoxia Task Force is quoted to cite channelization and impoundment of the

Mississippi River and loss of coastal wetlands as two factors that contribute to "excess nutrients reaching Gulf water."

The 2018 report does include those two factors but states clearly that "the leading causes" of increased amounts of nutrients delivered to the Gulf are "the nitrogen and phosphorus loads [that] come mainly from sources upstream of the Gulf. Sources of nitrogen include agriculture (both row crop agriculture and animal feeding operations), atmospheric deposition, urban runoff, and point sources such as wastewater treatment plants." (Progress Report on Coordination for Non-point Source Measures in Hypoxia Task Force States; [https://www.epa.gov/sites/production/files/2018-05/documents/nps\\_measures\\_progress\\_report\\_1-\\_may\\_2018.pdf](https://www.epa.gov/sites/production/files/2018-05/documents/nps_measures_progress_report_1-_may_2018.pdf))

Mention of the Action Plan is also absent from the discussion of Mitigation Measures in Chapter 4 and Appendix R of the Draft EIS, though as a currently operating as well as long-standing effort involving conservation and management to reduce nutrient loads upstream of the Project area, the Plan would seem to merit consideration as one way to avoid and minimize at least some of the potential negative impacts of the Project, specifically those caused by high nutrient loads in the river water conveyed by diversions.

Finally, as noted in our comments made last year for the NEPA Scoping Process for the Project, the Corps and a number of federal Cooperating Agencies (EPA, NOAA, USDA, USGS) and the State of Louisiana have all made commitments under the Hypoxia Action Plan to help fulfill its Target and Goal. Those commitments make the complete lack of mention of the Hypoxia Action Plan in the Draft EIS all the more notable.

Sincerely,

Doug Daigle

Coordinator

Louisiana Hypoxia Working Group

**Concern ID: 61815**

**The discussion in Chapter 3 of excessive nutrient (N and P) loads that create hypoxic conditions treats the problem as a global issue without mentioning the large annual hypoxic zone that forms each year in the proposed Project area.**

**Response ID: 16426**

The Gulf of Mexico hypoxic zone was considered in the Draft EIS in Chapter 3, Section 3.5 Surface Water and Sediment Quality. The proposed Project would not have more than negligible impacts on the Gulf of Mexico hypoxic zone because it is located outside of the Project's area of potential impacts (defined in Chapter 3, Section 3.1.1 [Project Area] of the Draft EIS). Although the Gulf hypoxic zone is not expected to be impacted by proposed diversion operations, because it is near the proposed Project area, the USACE did include a description and map of the Gulf hypoxic zone in Section 3.5.2.6 in Surface Water and Sediment Quality (see Figure 3.5-6). In response to this comment, the USACE has revised

the title of Section 3.5.2.6 (Dissolved Oxygen) to 3.5.2.6 (Dissolved Oxygen and Hypoxia) in the Final EIS so that information about hypoxia in and near the proposed Project area can be more readily found by EIS readers. As explained in the EIS, Chapter 4, Section 4.25.5.2 in Cumulative Impacts, the combined impact of several Mississippi River diversions operating simultaneously may reduce nutrient flow from the river to the Gulf, having a beneficial impact on the Gulf of Mexico hypoxic zone. Chapter 4, Section 4.25.5.4.4 Nitrogen and Section 4.25.5.4.5 Phosphorus in Cumulative Impacts of the Final EIS have been updated to include a summary of the Gulf Hypoxia Action Plan.

---

**Concern ID: 61817**

**Commenters stated that information about the Gulf Hypoxia Action Plan (Louisiana Hypoxia Working Group), which calls for a 20 percent reduction in nitrogen and phosphorus loading to the Gulf by 2025, is pertinent to the Draft EIS but is not mentioned. Commenters requested that the plan should be included in the Final EIS.**

**Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. 2008. Gulf Hypoxia Action Plan 2008 for Reducing, Mitigating, and Controlling Hypoxia in the Northern Gulf of Mexico and Improving Water Quality in the Mississippi River Basin. Washington, DC.**

**Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. 2013. Looking Forward, The Strategy of the Federal Members of the Hypoxia Task Force. Washington, DC.**

**Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. 2016. December 2016 Update, Looking Forward, The Strategy of the Federal Members of the Hypoxia Task Force. Washington, DC.**

**Response ID: 16428**

The USACE and the LA TIG agree that the Gulf Hypoxia Action Plan is relevant to the proposed Project area. Therefore, in response to these comments, a discussion about the Gulf Hypoxia Action Plan has been added to Section 4.25.5.4.4 Nitrogen and 4.25.5.4.5 Phosphorus in Cumulative Impacts of the Final EIS. The Hypoxia Action Plan has highlighted the important role that river diversions could play in reducing nutrient loads. In addition, substantial nutrient load reduction could be achieved through the measures being implemented by the other states and entities involved with the Mississippi River/Gulf of Mexico Watershed Nutrient Task Force. These combined efforts could lessen the potential impacts of excess nutrient loads to Barataria Basin and the northern Gulf of Mexico.

---

**Concern ID: 62638**

**The Restoration Plan should be clear that, as stated in the Progress Report on Coordination for Non-point Source Measures in Hypoxia Task Force states, the leading causes of increased amounts of nutrients delivered to the Gulf are upstream sources of nitrogen and phosphorus (that is, agriculture, atmospheric deposition, urban runoff, and point sources like wastewater treatment plants).**

**Response ID: 16649**

Chapter 3, Section 3.10.5.1.4 Nutrient Loading of the Final EIS has been revised to reference the Hypoxia Task Force report and further identify the types of anthropogenic sources that have resulted in increased nutrient loading in the Gulf.

The LA TIG acknowledges the comment about the leading causes of increased amounts of nutrients being delivered to the Gulf and has revised Section 3.2.1.6.5 (Alternative 1 - Benefits to Offshore Ecosystems) of the LA TIG's Final Restoration Plan accordingly.

---

**Concern ID: 63190**

**Commenters recommend Hypoxia Action Plan be seen as a mitigation effort already in place and/or that its recommended actions be considered as part of the mitigation for Project.**

**Response ID: 16564**

The commenters accurately noted that the Gulf Hypoxia Action Plan is relevant to the Project area. In response to these comments, a discussion of the Gulf Hypoxia Action Plan has been added to Chapter 4, Section 4.25.5 (Cumulative Impacts - Surface Water and Sediment Quality) of the Final EIS. Similar text has been added to the LA TIG's Final Restoration Plan. The proposed Project is anticipated to reduce the amount of nitrogen and phosphorus that reaches the Gulf of Mexico through nutrient uptake in the marshes that would be created and/or sustained by the proposed diversion. Because the proposed Project is already anticipated to reduce the nutrients that contribute to the Gulf Hypoxia Zone (GHZ), further mitigation actions with respect to the GHZ for the proposed Project are not considered necessary. However, CPRA has committed to implement water quality monitoring for nitrogen and phosphorus (and other parameters) in the outfall area and to make the results of that monitoring available online to the public and interested parties in real time. Consequently, while the Hypoxia Action Plan would not be considered as mitigation for impacts associated with the Project, the anticipated reduction in nutrients reaching the Gulf through wetlands restoration and the water quality monitoring/access to water quality monitoring data would be consistent with the Hypoxia Action Plan.

Juan Valdez

Dear Army Corps,

My grandfather was born in Louisiana. Although he eventually migrated to California, Louisiana continues to play an important role in my life. It's where I visit my best friend in New Orleans, where I go to events and conferences, and where I find my history.

Given that, I request that you work to advance the Mid-Barataria Sediment Diversion by selecting the preferred alternative in the Draft Environmental Impact Statement for the project and by funding the project using Deepwater Horizon settlement dollars as outlined in the draft Restoration Plan.

Living in California — with wildfires, droughts, and earthquakes — I know how precarious it can be to have both manmade and natural disasters. Despite that, Louisiana and California share a resilient population with a thriving cultural and economic community. I hope you can work to protect that.

Sincerely,

John Valdez

San Francisco, CA

Mark Tucker

Dear Mr. Laborde and Mr. Landry,

As longtime Louisiana tourists who love and appreciate the Louisiana coast for its vibrant culture as well as its abundant fish and game, we are writing to express our strong support for the Mid-Barataria Sediment Diversion. The Mid-Barataria Sediment Diversion is a crucial first step to ensuring the long-term health of Louisiana's coastal communities, ecosystems and wildlife in the face of rising sea levels, increasing storm intensity, and continued land loss.

The Mississippi River has been altered and confined by levees for over 100 years, leading to the extensive land loss crisis that caused over 2,000 square miles to disappear into the Gulf of Mexico. Without action, this loss could accelerate to an additional 4,000 square miles lost by the end of this century. But it's called the "Muddy Mississippi" for a reason. The river is the very tool best suited to start rebuilding critical wetlands and habitat, as well as provide a line of defense to storms and ongoing sea level rise for many coastal communities. Utilizing the river is Louisiana's best chance at protecting critical infrastructure, including key ports, as well as the beloved bayou communities and city of New Orleans.

We understand that changing the ecosystem to a more natural state will mean unfortunate impacts to some resources that have benefited over the past decades from the artificially-created estuary, such as oysters, brown shrimp, and dolphins. We appreciate your efforts to address those impacts with stewardship measures and funding and encourage you to continue to take a holistic approach to address local resident and fisher concerns. But we also understand that by not reconnecting the Mississippi River, these precious resources may suffer even greater impacts in the future, along with the local ecology, economy, communities, and culture. Mitigation measures will be key to addressing impacts to communities from the Mid-Barataria Sediment Diversion and must be coupled with robust adaptive management to ensure the project's long-term success for the benefit of people, wildlife, and jobs.

We support the selection of the 75,000 cfs sediment diversion, but also encourage the continued exploration of increased capacity and the acceleration of other sediment diversions that are identified in Louisiana's Coastal Master Plan to maximize use of the natural resources of the river. Restoring a more natural state to the Louisiana delta will not be easy, but is fundamentally essential for future generations to have the opportunity to enjoy the bounty and culture of Louisiana's coastal marshes, barrier islands, and wildlife. The Mid-Barataria Sediment Diversion is the single largest ecosystem restoration project in the history of the US, and is exactly the scale of project that's needed to address the seriousness of the coastal land loss problem in Louisiana.

There's no time to lose to reconnect the sediment, nutrients and freshwater of the Mississippi River to its wetlands and start to rebuild the coast. The future of New Orleans, the bayou communities, local fisheries and wildlife, and Louisiana's unique culture desperately depend on it. Thank you for your tireless efforts for this and generations to come.

Mark, Katherine, and Grace Tucker

---

**If no action is taken, the resources may suffer even greater impacts in the future, along with the local ecology, economy, communities, and culture.**

**Response ID: 15941**

The concerns raised by the commenters were considered in the Draft EIS. The EIS evaluates anticipated conditions in the Barataria Basin if no action is taken. Within the EIS, the No Action Alternative enables a comparison of anticipated future conditions without the proposed Project to anticipated future conditions with the proposed Project and the alternatives. Refer to Chapter 4 Environmental Consequences of the EIS, for a description of anticipated conditions under the No Action Alternative for each of the resource areas evaluated. The Delft3D Basinwide Model was used to forecast conditions that would occur under the No Action Alternative which helped to inform the analysis in Chapter 4.

---

**Concern ID: 62390**

**Commenter supports the selection of the 75,000 cfs sediment diversion, but also encourages the continued exploration of increased capacity and the acceleration of other sediment diversions that are identified in Louisiana's Coastal Master Plan to maximize use of the natural resources of the river.**

**Response ID: 15918**

The commenter's support for the Project is noted. The relative impacts, both beneficial and adverse, for the various capacity alternatives are explained throughout Chapter 4 of the EIS. Although the 150,000 cfs Alternative would result in the greatest degree of benefits (including the most land building), it also would result in the greatest degree of adverse impacts, particularly to marine mammals (see Section 4.11.5 Operational Impacts), shrimp and oysters (see Section 4.10.4.5 Key Species), and public health and safety (through increased water levels and inundation in areas closer to the immediate outfall, see Section 4.20.4.2 Operational Impacts). Sections 4.10.4.5 Key Species and 4.11.5 Operational Impacts in the Final EIS have been revised to further discuss the impacts of the 150,000 cfs Alternative to brown shrimp, oysters, and dolphins.

The LA TIG's Restoration Plan evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54 and strove to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. While a 150,000 cfs diversion would be expected to deliver more ecological benefits in terms of land creation and marsh building than the Preferred Alternative, it would also incur more collateral injuries and pose a greater risk to human health and safety; thus it was not selected as the LA TIG's Preferred Alternative in the Final Restoration Plan. See Section 3.2.4 Overall OPA Evaluation Conclusions of the Final Restoration Plan for a discussion of how the LA TIG came to its decision.

---

**Concern ID: 62637**

**The proposed Project will benefit habitat, fish and wildlife, levee protection, flood control and navigation. These benefits will help protect coastal resources and communities in Louisiana.**

**Response ID: 16647**

The potential benefits of the Project were considered in the Draft EIS. As described in Chapter 4 (Environmental Consequences), the proposed Project would result in both

---

beneficial and adverse effects on habitat, fish and wildlife, levee protection, flood control, and navigation, depending on the specific characteristics of the species or location involved (for example, a species' life history or salinity preferences, or a levee's height).

The potential benefits of the Project were also considered in the LA TIG's Draft Restoration Plan. As described in Section 3.2.1.6 (Benefits Multiple Resources) of the Restoration Plan, the proposed Project is expected to benefit multiple resources in the Barataria Basin and the northern Gulf of Mexico, including nearshore marine ecosystems, water column resources (including fish and invertebrates), birds, and terrestrial wildlife. The LA TIG also anticipates that the Project would provide public health and safety benefits to the populated areas north of the diversion through increased wetland acreage that would decrease storm surge and wave height.

---

**Concern ID: 62801**

**State and federal decision makers should commit to developing a robust adaptive management program utilizing the best available science and that incorporates knowledge gained from monitoring the Project over time and also considers input from key stakeholders. The adaptive management program should engage affected communities in developing adaptation ideas, use protocols for transparent decision making regarding Project operations, and provide accessible communication regarding how Project operation decisions are changing the environment.**

**Response ID: 16658**

The issues raised by the commenters were considered in the Monitoring and Adaptive Management (MAM) Plan, which was issued with the Draft EIS (Appendix R2) and jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan includes many of the specific provisions requested by the commenter, including input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]).

In addition, in response to public comments, CPRA intends to develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement.

The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued.

Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not

---

know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63151**

**Some commenters stated general support and appreciation for the mitigation plan.**

**Response ID: 16555**

Comments offering general support and appreciation for the Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) are acknowledged. CPRA has expanded and refined the Mitigation and Stewardship Plan, Appendix R1 to the Final EIS, since publication of the Draft EIS and LA TIG's Draft Restoration Plan based on community and resource agency input.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63179**

---

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Orleans Audubon Society

Jennifer Coulson

Subject: DEIS for the Mid-Barataria Sediment Diversion (MBSD)

Dear Mr. Brad Laborde (Corps) and Mr. Mel Landry (NOAA, on behalf of LATIG):

On behalf of the 1,052 members of Orleans Audubon Society (OAS) living in eleven parishes in southeast Louisiana, please accept these comments on the proposed MBSD.

We urge adoption of Alternative 5, Variable Flow up to 150,000 CFS, rather than the applicant's

preferred alternative, Alternative 1, Variable Flow up to 75,000 CFS.

We urge adoption of Alternative 5 not only for the benefit of wildlife in southeast Louisiana, but also to promote the continued viability of the communities in which our members live. Without the wholesale re-ordering of the management of the Lower Mississippi River, of which this project is just one incremental step as laid out in the Coastal Master Plan, southeast Louisiana will cease to be inhabitable in the coming decades.

We reach our conclusion to support a larger diversion because the analysis for the DEIS finds substantially greater benefits for the higher flow, with concomitantly only marginally increased adverse effects, most of which will be mitigated by the measures being proposed for the 75,000 cfs Preferred Alternative.

We have also concluded that the DEIS both over-estimates adverse effects and underestimates positive effects.

Importantly, in our analysis, we believe the DEIS underestimates likely benefits, including:

- The total amount of land to be built. Conservative projections of land built are used, along with high projections of relative sea level rise. While this is an acceptable modelling strategy, it nevertheless very likely underestimates net land to be built.
- Total sediment added to the basin and availability for transport and marsh nourishment. There is little acknowledgment of the amount of sediment that will be contributed to the entire basin, exclusive of that which will build new land or be captured by existing vegetation. But a vast amount of sediment will end up deposited beneath the water's surface, changing bathymetry, and making these sediments available for resuspension and deposition on marsh surfaces far from the diversion. Because the MBSD is so far inland, little sediment is likely to escape to the open Gulf. And yet even in systems where high amounts of sediment escape to the Gulf, as in Atchafalaya Bay, area marshes and swamps benefit from resuspension during frontal passages and tropical storms, so much so that the area has seen virtually no retreat over the last decades, in marked contrast to the Barataria, Terrebonne and Breton basins.
- Far field effects on marsh soil bulk density and marshes sustained against climate change and rising seas. Related to the total sediment phenomenon, existing models underestimate capture of fines carried in suspension by diverted waters far from the diversion, and modelling underestimates the effect of this capture on renewed marsh vigor and organic soil formation, largely because while the effect is obvious, the specifics are difficult to capture numerically.

- Effects on wildlife and habitat are underestimated in the extreme. Decades of field experience in Louisiana indicate that areas receiving annual inputs of Mississippi or Atchafalaya river water are vastly more productive and show greater wildlife diversity and abundance than comparable areas of fresh and brackish marsh with no riverine input. A few select instances where this is apparent include:
  - o waterfowl and wading bird abundance;
  - o foraging habitat for migratory shorebirds and neotropical migrants;
  - o nesting habitat for marsh birds;
  - o prey availability for predators, including, to name only a small sample, game fish, frogs, snakes, turtles, alligators, terns, gulls, cormorants, pelicans, ducks, falcons, eagles, ospreys, rails, marsh rice rats, muskrats, mink, otters and dolphins;
  - o net benthic and fisheries productivity;
  - o growth rates and density for submerged aquatic vegetation;
  - o the revival of woody vegetation, important for local songbirds, neotropical migrants and wintering birds—
    - pioneer species like black willow (which is exploding in the Davis Pond, Caernarvon and Mardi Gras Pass outfall areas);
    - bald cypress retention and recruitment in areas formerly too saline or submerged;
    - and survival and recruitment of live oaks and other maritime forest vegetation on natural levees and cheniers where saline soils have inhibited their growth, recruitment and survival for decades.

All of these benefits are ignored or downplayed in the DEIS. Obviously, all of these complex benefits are difficult to quantify and model, but they are apparent at each outlet of the Mississippi and Atchafalaya rivers.

Operation of such a transformative project will require a robust program of monitoring, which will also allow for a more detailed analysis to be incorporated in evaluations of future diversions, diversions that are anticipated in the Coastal Master Plan and plan process, and that will be absolutely necessary for the continued viability of coastal southeast Louisiana and adjacent Mississippi.

Doubling the land to be built will only marginally affect salinity changes. The analysis indicates that the 150,000 cfs alternative roughly doubles the net amount of land which could be built over fifty years. At the same time, the adverse effects—most conjectural—would increase only marginally, especially compared to the Future Without Action. In other words, the 150,000 cfs alternative roughly doubles the benefits in terms of wetlands created, but nowhere near doubles adverse impacts like near-term salinity decreases and induced flooding.

Given this reality, the diversion structure should be designed and constructed to maximize the ability to capture sediment at the highest possible flow rates. Mitigation measures will be roughly the same whether the diversion is run at 75,000 cfs or 150,000 cfs. If Barataria Bay is fresh for a few weeks, then it can't be freshened more, and, in any case, no amount of water through the diversion can increase what is already entering the Gulf. A change in the outlet can only freshen a few localities around the edges, while increasing the salinity elsewhere

(by, for instance, reduced discharge on the east bank and in the Birdsfoot); the net effect is the same, though the system will be more naturally balanced.

Simply having the capacity to flow at 150,000 cfs during peak river floods does not require that such flows be utilized in every case, but it gives operational flexibility and a greater capacity for adaptive management, especially as conditions change in the basin in response to climate change.

Similarly, mitigation measures adopted for communities that might experience increased localized flooding for a few weeks will work whether the flooding is for a few inches or for twice that much, and whether an event lasts for a week or two weeks. Once you are raised and armored against one flood, you are raised and armored against any comparable food.

Because of subsidence and sea level rise, such increased flooding is coming in any case. Using mitigation dollars available for this project will prepare communities now for the inevitable, and obviate the need for such expenditures in the future, when funds cannot be guaranteed.

We are well aware of the concerns raised by commercial seafood harvesters, and we support measures to minimize and mitigate these effects, as long as the project purpose, which is to re-establish the deltaic cycle and build and sustain wetlands, is not compromised. As a matter of simple biophysics, we know that the Barataria Estuary will be more productive as a result of the increased input of carbon and the vital building blocks of life, which will mean opportunities for increased seafood harvest.

The DEIS and supporting studies make a potentially dire forecast about near-term effects on dolphin populations in parts of Barataria Bay. We note that these forecasts depend upon a number of unproven assumptions about dolphin adaptability and tolerance for living in the delta, assumptions which seem improbable given the nature of the delta landscape that now supports them. In any case, what is abundantly clear is that the continued collapse of the marsh platform in the Barataria Basin will eventually reach a tipping point and the prey base of dolphins in the bay, and indeed beyond into northern Gulf, will begin to shrink and could eventually collapse, to the detriment of dolphins and countless other estuarine dependent organisms. That would be an unacceptable outcome. For the long-term health of dolphins in the northern Gulf of Mexico, reconnecting the river to the delta and re-establishing the deltaic cycle at sufficient scale is absolutely essential.

The DEIS notes minor acceleration of land-loss in the Birdsfoot Delta, which will have impacts on public lands important to birds, wildlife and our members. Of course, all models suggest the Birdsfoot is unsustainable, given its high rate of subsidence, and accelerating sea level rise. Obviously, each upstream diversion will hasten its demise, though any losses will be more than offset by land building on more stable upstream platforms. However, the loss of public lands will be an issue, and OAS recommends creating state and federal public lands in the diversion outfall area to fill the need for public lands in an active delta that will be lost at Delta NWR and Pass a Loutre WMA.

Given the massive investment of public funds and potential for misunderstanding and controversy, public access and provisioning for recreational and educational opportunities should be a priority. The diversion structure should be designed with ample opportunities for the public to witness and learn from the operation of the diversion. Just as importantly, the

new delta lobe that forms as a result of public investment should not be closed to public access and enjoyment.

In conclusion, we urge the adoption of Alternative 5. In the event Alternative 5 is not adopted, our second choice would be Alternative 1, the Preferred Alternative.

Thank you for the opportunity to comment.

Sincerely,

Jennifer O. Coulson, Ph.D. President

Orleans Audubon Society

---

**Concern ID: 61842**

**Commenter is concerned about the accuracy of the sea-level rise projections used in the Delft3D Basinwide Model to predict land changes. In particular, the commenter suggests that if updated sea-level rise rates (as provided in Sweet et al. 2017 and Church et al. 2014) were applied, the modeling would project no land-gain benefits from the diversion.**

**Response ID: 16480**

Large variability in projected relative sea-level rise does introduce corresponding uncertainty into land-loss and land-gain projections. The literature provided by the commenters has been reviewed. Measured and projected relative sea-level rise rates vary substantially by location, and using projections at a station in Florida, such as Cedar Key, are not useful for projections in the central Gulf Coast. Citing the USACE and NOAA sea-level projection tool (USACE 2019d), the MBSD Project Modeling Work Group chose a sea-level rise scenario based on the 2017 Coastal Master Plan “moderate” scenario, which is slightly higher than the USACE’s “Intermediate” rate for the Barataria Basin water level station at Grand Isle, LA, as shown in Chapter 4, Figure 4.1.3 of the Draft EIS. The USACE rate reflects sea-level rise data collected at Grand Isle over the period 1947 to 2007. The MBSD Project Modeling Work Group determined that the use of that 2017 Coastal Master Plan Intermediate Sea-Level Rise curve was an appropriate choice at the time the modeling was conducted in 2019.

The sea-level rise value used in the Delft3D Basinwide Model simulation for the Draft EIS considered “intermediate” at the time of the modeling, is close to the low projection (0.3 m Global Mean Sea Level) given by Sweet et al. (2017) for Grande Isle. The commenter’s suggestion of the Church et al. 2014 reference, which provides useful information, has been added as a reference in the Final EIS in Chapter 4, Section 4.1.3.2 Sea-Level Rise. Use of a different sea-level rise rate would affect the impact projections of all the alternatives considered in the EIS, including the No Action Alternative. If the relative sea-level rise rate used in the model is an underestimate, the effect on model results was mitigated, but not eliminated, by the use of a “No Action Alternative compared to Action Alternatives” comparison method. (In other words, if sea-level rise was underestimated, it was underestimated for all alternatives, including No Action Alternative. The impacts of the proposed Project presented in the Draft EIS are the net difference in impact magnitude between the No Action Alternative and the proposed Action Alternatives). Chapter 4, Section 4.1.3.2 Sea-level Rise states that higher sea-level rise rates would reduce anticipated land creation. However, in light of the commenters’ concern, the USACE has amended the last

sentence of the next to last paragraph of that section in the Final EIS to say, “If actual sea-level rise is higher (as is predicted by Sweet et al. 2017) than the value used in the Delft3D Basinwide Model, water levels would be higher and loss rates and land gains would be different than what the Delft3D Basinwide Model projects.”

---

**Concern ID: 61871**

**Alternative 5, Variable Flow up to 150,000 cfs, should be chosen for implementation because it provides substantially greater benefits at the higher flow, with only marginally increased adverse effects, most of which could be mitigated by the same measures being proposed for the 75,000 cfs Applicant’s Preferred Alternative.**

**Response ID: 15944**

CPRA submitted a joint Section 10/404 permit application and Section 408 permission request to USACE for the construction, operation, and maintenance of a 75,000 cfs sediment diversion (Applicant’s Preferred Alternative). The EIS evaluates the Applicant’s Preferred Alternative and five additional action alternatives as well as the No Action Alternative in order to inform USACE’s permit and permission decisions and the LA TIG’s NRDA decision in compliance with the statutes, orders, and policies outlined in EIS Chapter 5 Consultation and Coordination.

In the Restoration Plan, the LA TIG evaluated each alternative against a variety of factors, including those outlined in 15 CFR §990.54, and made every effort to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, and avoiding collateral injury. As noted in the LA TIG’s Restoration Plan, while the 150,000 cfs Alternative was projected to provide greater ecological benefits than the LA TIG’s Preferred Alternative, it was also expected to cause greater collateral injury and greater risks to public health and safety. See Chapter 3, Section 3.2.4 of the Final Restoration Plan for a discussion of how the LA TIG came to its decision. Additional detail can be found in the LA TIG’s Restoration Plan explaining the LA TIG’s evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

The Mitigation and Stewardship Plan (Appendix R1 to the EIS) has been designed by CPRA to mitigate the projected impacts of the 75,000 cfs sediment diversion (Applicant’s Preferred Alternative). Different or additional mitigation could be needed to address the projected impacts of the proposed Project if a large capacity diversion (150,000 cfs) were to be selected.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without

---

implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62089**

**The Barataria Estuary would be more productive as a result of the increased input of carbon and the vital building blocks of life, which would mean opportunities for increased seafood harvest. The proposed MBSD Project is of critical importance for this transformation to one of our nation's most productive fisheries.**

**Response ID: 16250**

The commenter's support of the proposed Project is acknowledged. Chapter 4, Section 4.10 Aquatic Resources in the Draft EIS describes anticipated impacts from the proposed Project on aquatic species. As described, impacts would range from adverse to beneficial, depending on the species.

---

**Concern ID: 62209**

**There is little discussion in the Draft EIS about the amount of sediment that would be deposited beneath the water's surface by the diversion, changing bathymetry and making sediment available for resuspension and deposition on marsh surfaces far from the diversion.**

**Response ID: 16421**

The Draft EIS includes consideration and discussion of the benefits of the sediment that would be deposited below the Barataria Basin's water surface. Sediment deposited below the water surface can contribute in one of two ways - by being resuspended and transported elsewhere for deposition, as the commenter suggests, and by forming a base layer upon which future pulses of sediment can form marsh or land. These benefits are discussed in Chapter 4, Section 4.2.3.2 in Geology in Soils, Section 4.4.4 Hydrology and Hydrodynamics, and in Section 4.6 Wetland Resources and Waters of the U.S. They are part of the model computations described in Appendix E Delft3D Modeling and are fully incorporated in the results and conclusions of the Draft EIS. No related edits have been made to the Final EIS.

---

**Concern ID: 62267**

---

**The commenter expressed concern that the proposed MBSD Project's adverse impacts on wetland loss in the birdfoot delta would cause a loss of public lands in the Delta National Wildlife Refuge (NWR) and in the Pass A Loutre Wildlife Management Area (WMA). The commenter recommended that these adverse impacts on public lands be mitigated by creating state and federal public lands in the Project outfall area.**

**Response ID: 16439**

The commenter's concern that the proposed Project would cause a loss of wetlands in the Delta NWR and in the Pass A Loutre WMA, both of which are located in the birdfoot delta, was addressed in the Draft EIS in Chapter 4, Section 4.17.4 Operational Impacts in Public Lands. As part of its responsibilities under the Fish and Wildlife Coordination Act and as operator of the Delta NWR, the USFWS recommended the creation of crevasses to build land in the birdfoot delta to offset MBSD Project-induced wetland losses of 926 acres in the Delta NWR and 37 acres in the Pass A Loutre WMA (see Appendix T, USFWS Coordination Act Report (CAR), of the Final EIS). In response to USFWS' CAR Recommendation, CPRA agreed that, "Within 5 years of the commencement of Project operations, CPRA or the LA TIG will provide \$10,000,000 of additional funding for wetland preservation and restoration work in the Delta NWR and the [Pass A Loutre] PAL WMA to offset modeled acres of indirect wetland losses in those areas. That funding may be accomplished through additional funding through the CWPPRA program, through additional restoration work sponsored by the LA TIG (for example, construction of the Engineering and Design work discussed in the DWH LA TIG's Restoration Plan and Environmental Assessment #7), or through a direct contribution for additional work. The funding will be proportioned between the Delta NWR and the PAL WMA based on the magnitude of the predicted wetland loss in each area" (Final EIS, Appendix R1 Mitigation and Stewardship Plan, Section 4.6 Fish and Wildlife Coordination Act).

This information was updated in the Final EIS, Chapter 4, Section 4.27.1 in Mitigation Summary and in the Final EIS, Section 4.17.4.2.2 Birdfoot Delta in Public Lands.

---

**Concern ID: 62310**

**The 150k Alternative would roughly double the wetland creation benefits without doubling adverse impacts such as induced flooding.**

**Response ID: 15818**

CPRA submitted a joint Section 10/404 permit application and Section 408 permission request to USACE for the construction, operation, and maintenance of a 75,000 cfs sediment diversion (LA TIG's Preferred Alternative). The EIS evaluates the Applicant's Preferred Alternative and five additional action alternatives as well as the No Action Alternative in order to inform USACE's permit and permission decisions and the LA TIG's NRDA decision in compliance with the statutes, orders, and policies outlined in EIS Chapter 5 Consultation and Coordination.

Although the 150,000 cfs Alternative would result in the greatest degree of benefits (including the most land building), it also would result in the greatest degree of adverse impacts, particularly to dolphins (see Draft EIS Chapter 4, Section 4.11.5, Operational Impacts), shrimp and oysters (see Draft EIS Section 4.10.4.5, Key Species), and public health and safety (through tidal flooding in areas closer to the immediate outfall, see Draft EIS Section 4.20.4.2, Operational Impacts).

See Sections 3.2.4.7, 3.2.1.5, and 3.2.2.5 of the LA TIG's Restoration Plan for a discussion regarding the LA TIG's evaluation of the range of alternatives and identification of the LA TIG's Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG evaluated a reasonable range of alternatives under the factors outlined in 15 CFR §990.54 and it strove to identify an alternative that would provide the right balance in terms of being cost-appropriate, meeting LA TIG goals, having a high likelihood of success, avoiding collateral injury, benefiting multiple resources, and protecting public health and safety.

---

**Concern ID: 62389**

**The Draft EIS both overestimates adverse effects and underestimates positive effects. All of these complex benefits are difficult to quantify and model, but they are apparent at each outlet of the Mississippi and Atchafalaya rivers.**

**Response ID: 15917**

In preparing the EIS, USACE, together with members of the LA TIG (including cooperating agencies and CPRA), utilized high-quality information, ensured the professional and scientific integrity and accuracy of its analyses, and identified its methodologies and sources. Where information is unavailable or incomplete, those data gaps are disclosed in the document.

The Delft3D Basinwide Model represents the best tool currently available to USACE and the LA TIG to inform impact analyses for the EIS. Chapter 4, Section 4.1.3 Overview of Delft3D Basinwide Model for Impact Analysis of the EIS acknowledges that the outputs of the model are projections generated using defined inputs, often based on historical conditions. Because it is not possible to precisely predict future conditions such as weather patterns and degree of sea-level rise, the model inputs are necessarily based on trends, averages, and best professional judgment as well as reasonable assumptions about future behaviors. Model outputs are not predictions of actual future conditions (see EIS Chapter 4, Section 4.1.3.3 Model Limitations and Uncertainty and Section 8 of Appendix E Delft3D Modeling). The outputs are instead used to compare the degree of difference between the impacts projected for each alternative and as compared to the No Action Alternative.

---

**Concern ID: 62413**

**The MBSD diversion structure, outfall channel, and outfall area would constitute the world's single largest engineered restoration project. The LA TIG and CPRA should include a recreation and education area near the diversion with a viewing platform, trails, bike paths, along with a boat launch into the diversion outfall area.**

**Response ID: 15951**

Due to concerns about safety of the public and security for the Project facilities, there is not a plan to make the diversion structure or immediate outfall area accessible for public use. CPRA is, however, planning to provide signage and other public space near the Project to educate the public regarding the purpose and functioning on the Project. Ownership of any lands created by operation of the Project would be determined in accord with current state law, including ownership of mineral rights pursuant to La. R.S. 31:149 and La. R.S. 49:214.5.5(E). Pursuant to La. R.S. 49:214.5.5(B), the Project would not create any rights of access to the public in or on private property.

---

**Concern ID: 62865**

---

**Such a transformative project will require a robust program of monitoring, which will not only support the proposed Project, but also will support the evaluation of future diversions that are anticipated in the Coastal Master Plan.**

**Response ID: 16674**

The robust monitoring raised by the commenters was considered by CPRA and the LA TIG in the Monitoring and Adaptive Management (MAM) Plan included in the Draft EIS (Appendix R2). CPRA's MAM Plan included with the Final EIS (Appendix R2) provides additional detail on the substantial monitoring CPRA would undertake as part of Project implementation. The MAM Plan identifies monitoring needs and the key performance measures associated with each objective that would be used to evaluate progress toward meeting the Project's restoration objectives and to inform CPRA's adaptive management decisions.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62900**

**The Draft EIS underestimated likely benefits of the proposed Project on wildlife and habitat, as indicated by the receiving areas of the Mississippi and Atchafalaya Rivers, which are vastly more productive and show greater wildlife diversity and abundance than comparable areas of fresh and brackish marsh with no riverine input. A few select instances where this is apparent include:**

- **waterfowl and wading bird abundance;**
- **foraging habitat for migratory shorebirds and neotropical migrants;**

- 
- **nesting habitat for marsh birds;**
  - **prey availability for a wide variety of predators (birds, amphibians, reptiles, fish, and terrestrial and marine mammals);**
  - **net benthic and fisheries productivity;**
  - **growth rates and density for submerged aquatic vegetation;**
  - **the revival of woody vegetation, important for local songbirds, neotropical migrants and wintering birds;**
  - **pioneer species like black willow (which is exploding in the Davis Pond, Caernarvon and Mardi Gras Pass outfall areas);**
  - **bald cypress retention and recruitment in areas formerly too saline or submerged;**  
**and**

**survival and recruitment of live oaks and other maritime forest vegetation on natural levees and cheniers where saline soils have inhibited their growth, recruitment, and survival for decades.**

**Response ID: 16198**

Chapter 4, Section 4.9.4.2 in Terrestrial Wildlife and Habitat of the EIS, discusses the benefits to waterfowl (and other birds) and general wildlife from the wetlands projected to be built or maintained in the Barataria Basin by the proposed Project. In addition, Sections 4.10.4.1 and 4.10.4.4 in Aquatic Resources indicate major beneficial impacts on SAV and minor to moderate beneficial impacts on fauna (through food web production), respectively, in the Barataria Basin from operation of the proposed Project.

A summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and to discuss their recorded impacts on the natural environment. This summary, which includes observed changes in wildlife, wildlife habitat, and vegetation growth from other diversions, is available in Appendix U of the Final EIS.

In addition, the potential benefits of the proposed Project to multiple resources in the Gulf are described in Section 3.2.1.6 (Benefits Multiple Resources) of the LA TIG's Restoration Plan.

---

**Concern ID: 62957**

**Commenter expressed support for implementation and recognizes the cross benefit of mitigation measures to address increased localized flooding. The commenter noted that once in place those measures would result in protection to the communities from both localized flooding associated with the Project as well as from increased flooding associated with subsidence and sea-level rise.**

**Response ID: 16614**

The LA TIG acknowledges the commenter's support of the Project and agrees that the mitigation and stewardship measures would address some Project impacts, as well as flooding from sea-level rise and subsidence.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures

---

(collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63019**

**The Draft EIS likely underestimated the benefits of far field effects on marsh soil bulk density and marshes sustained against climate change and rising seas. Related to the total sediment phenomenon, existing models underestimate capture of fines carried in suspension by diverted waters far from the diversion, and modeling underestimates the effect of this capture on renewed marsh vigor and organic soil formation, largely because while the effect is obvious, the specifics are difficult to capture numerically.**

**Response ID: 16031**

As described in Appendix E Delft 3D Modeling of the EIS, to account for the complexity of fine-sediment transport patterns, a hysteresis curve has been developed and incorporated into the sediment transport module of the Delft3D Basinwide Model. Therefore, while the model results must be interpreted in light of the uncertainties involved, hysteresis sediment rating curves have been used to project fine-sediment transport in a way that simulates observed transport to the extent practicable in the modeling analysis. Where feasible, uncertainties have been examined through sensitivity tests and model-to-model comparisons and incorporated in the conclusions (see Chapter Section 4.1.3.3 in Approach to Evaluation of Environmental Consequences and Appendix E Delft 3D Modeling, Section 8). Because this issue was considered in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 63071**

**The dire forecasts about the near-term effects on dolphin populations in parts of Barataria Bay depend upon a number of unproven and improbable assumptions about**

---

**dolphin adaptability and tolerance for living in the delta (Garrison et al., 2020). Conversely, the continued collapse of the marsh platform in the Barataria Basin will eventually reach a tipping point at which the prey base of dolphins in the bay would shrink and could eventually collapse. The long-term health of dolphins in the northern Gulf of Mexico depends on reconnecting the river to the delta and reestablishing the deltaic cycle.**

**Garrison, L.P, Litz, J. and Sinclair, C. 2020. Predicting the effects of low salinity associated with the MBSD Project on resident common bottlenose dolphins (*Tursiops truncatus*) in Barataria Bay, LA. NOAA Technical Memorandum NOAA NMFS-SEFSC-748: 97 p.**

**Response ID: 16594**

The Draft EIS recognized that the loss of wetlands under the No Action Alternative would result in a gradually increasing, from negligible to moderate, adverse impact on dolphins (see Chapter 4, Section 4.11.5.1 [Operational Impacts]). The impacts on bottlenose dolphins from freshwater exposure have been well documented, including observations and data collected in association with the release of fresh water in Louisiana (see Chapter 4, Section 4.11 [Marine Mammals] of the EIS for more details). Most recently, a freshening event in 2019 resulted in the declaration of an unusual mortality event (UME) in the northern Gulf of Mexico. Existing data on low-salinity exposure were used to develop a dose-response model that formed the basis for the evaluation of impacts in the Draft EIS (see Chapter 4, Section 4.11.3 [Overview of Impact Analysis Approach]). The dose-response model was coupled with an updated population model to evaluate potential changes in survival rates within BBES. These potential decreases in survival rates caused by the diversion were compared to future conditions without the diversion (the No Action Alternative). The analysis contained in the Draft EIS determined that there would be a major, adverse, long-term impact on the BBES Stock. That conclusion is also supported by Thomas et al. (2021), which built on earlier studies and concludes that, after 1 year of operation of the Applicant's Preferred Alternative, there would be 61 percent fewer dolphins in the Central stratum than under the No Action Alternative, 35 percent fewer in the West stratum, 12 percent fewer in the Southeast stratum, and 2 percent fewer in the Island stratum, with 25 percent fewer overall. Thomas, et al. 2021 further concluded that after 10 the planned 50 years of operation, there would be 100 percent reduction in the populations of dolphins in the Central and West strata, an 82 percent reduction in the population of the Southeast stratum dolphins, and a 34 percent reduction in the population of the Island stratum dolphins as compared against the No Action Alternative, with an overall difference in population of 78 percent. (Note that Thomas, et al. 2022 slightly refined some of these projections.) After 50 years of operation, in three out of the four strata, dolphins are predicted to be functionally extinct under the Applicant's Preferred Alternative, with the remaining Island stratum being severely reduced relative to the No Action Alternative (that is, the median predicted population size of the Island stratum would be 85 percent lower [95 percent CI 28-99] under the Applicant's Preferred Alternative than under the No Action Alternative). Overall, by the year 2076, the median predicted stock size across all of Barataria Bay under the Applicant's Preferred Alternative is 143 dolphins (95 percent CI 11-706) compared to a predicted 3,363 (95 percent CI 2,831-4,289) predicted to inhabit the Barataria Bay under the No Action Alternative. In other words, the BBES dolphin stock would be 96 percent smaller (95 percent CI 80-100) under the Applicant's Preferred Alternative than

---

then No Action Alternative. Chapter 4, Section 4.11 Marine Mammals of the Final EIS has been updated to reflect the results of Thomas et al (2021). The impacts of Project-induced wetland changes on dolphins is discussed in Chapter 4, Section 4.11.5 Operational Impacts of the EIS.

---

**Concern ID: 63196**

**Mitigation will be about the same regardless of the diversion capacity.**

**Response ID: 16567**

The purpose of CPRA's Mitigation and Stewardship Plan (see Appendix R1 to the EIS) is to demonstrate how some adverse impacts of the Project (75,000 cfs capacity) would be avoided, minimized, or mitigated. The mitigation and stewardship measures are focused on the construction and operation of the diversion with a capacity of 75,000 cfs. If a different diversion capacity were selected for implementation, the Mitigation and Stewardship Plan would be reviewed and adjusted, as appropriate, to reflect the revised Project impacts.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Jessie Ritter

RE: Draft Environmental Impact Statement for the Mid-Barataria Sediment Diversion Project, USACE Project MVN-2021-2806-EOO and Draft Phase II Restoration Plan#3.2: Mid-Barataria Sediment Diversion, Deepwater Horizon Natural Resource Damage Assessment Louisiana Trustee Implementation Group (LA TIG)

Dear Colonel Murphy,

Thank you for the opportunity to provide comment on the Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2 and Draft Environmental Impact Statement. I submit these comments, in my personal capacity as a private citizen, in strong support of the Preferred Alternative, Alternative 1, a Sediment Diversion with Variable Flow up to 75,000 CFS.

Although I live in Washington, DC, I have had the good fortune of spending a significant amount of time in Louisiana for both personal and professional reasons over the past six years. As a person who once conflated "wetlands" with "mosquitos" and swore I would never set foot in a wetland if I could avoid it, I have grown to deeply love and value the landscapes of southeast Louisiana. Over the course of my many visits, I saw firsthand from the air and the water the devastating results of Louisiana's land loss crisis - mottled and sinking wetlands, interspersed with the harsh lines of abandoned oil and gas canals. I have also seen firsthand the incredible capacity of these ecosystems for restoration and renewal- evidenced by lush vegetation and abundant wildlife in those places along Louisiana's coast where a connection has been reestablished - either accidentally or intentionally - between the life-sustaining river and its wetlands, from Mardi Gras Pass, to the Wax Lake Outlet, to Davis Pond freshwater diversion. I have spent many afternoons in small boats exploring these vibrant places, and can say with complete conviction - we can rebuild and sustain a healthy and functioning ecosystem if we only allow the river - in a controlled way - to do what it did for millennia prior to human intervention.

In my professional capacity, I work on large scale ecosystem restoration efforts all around the country. In that regard, I know that the opportunity before Louisiana is unique: the river itself creates an opportunity for a long-term, sustainable solution to combat the land loss crisis, something that no other alternative restoration technique examined can provide. Additionally, the Deepwater Horizon Natural Resources Damage settlement dollars provide the financial wherewithal to get it done quickly. We cannot squander these incredible natural and financial resources.

Thank you for the opportunity to provide comment, and for your tireless work in support of the restoration and resilience of Louisiana's coastal wetlands, wildlife, and communities.

Sincerely,

Jessie Ritter

---

**Concern ID: 63342**

**Other natural or man-made diversions have successfully built land, such that the proposed MBSD Project would also be expected to build land.**

**Response ID: 16302**

---

The commenter's support for the proposed Project is noted. Consistent with the comment, Chapter 4, Section 4.2.3.2 in Geology and Soils indicates that the proposed Project is anticipated to build land in the Barataria Basin (with smaller amounts of land loss projected in the birdfoot delta). To facilitate comparisons between the proposed Project and other natural or man-made diversions, a summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary is available in Appendix U of the Final EIS.

Restore or Retreat, Inc.

G. Michael Plaisance

Re: Mid-Barataria Sediment Diversion (MBSD) Draft Environmental Impact Statement (DEIS)

Restore or Retreat, Inc. is a non-profit coastal advocacy group created by coastal Louisiana residents and stakeholders who recognize the Barataria and Terrebonne basins are the two most rapidly eroding estuaries on earth. Representing businesses and individuals throughout the region, Restore or Retreat (ROR) would like to respectfully submit the following comments of support on the U.S. Army Corps of Engineers' Draft Environmental Impact Statement for the Proposed Mid-Barataria Sediment Diversion Project, as well as the Louisiana Trustee Implementation Group's (LA TIG) Draft Phase II Restoration Plan #3.2: Mid-Barataria Sediment Diversion.

Restore or Retreat strongly supports the adoption of the Preferred Alternative in the U.S. Army Corps of Engineers' Draft EIS and Alternative 1 in the Louisiana TIG's Draft Phase II Restoration Plan #3.2. The urgency to build the Mid-Barataria Sediment Diversion cannot be overstated: Without this project, the future for our coast, communities, economy and wildlife is dire, and a nightmare scenario could be realized that would jeopardize the safety and prosperity of not only Lafourche Parish, but our entire region, threatening our unique culture and our status as Sportsman's Paradise.

The Barataria Basin is the heart of Louisiana's working coast, providing thousands of jobs based on our natural resources from oil and gas to food and fun. But our basin is in a critical state of emergency because of our calamitous land loss rates. Without action, the Barataria Basin's exponential land loss will increase by 550 square miles of land over the next 50 years, a risk that imperils much more than the surrounding communities and parishes—it will have a ripple effect on both the gulf-wide and national economies and environments.

The Mid-Barataria Sediment Diversion, a fundamental cornerstone restoration project, offers a turning point for our state and coast as the most sustainable long-term solution to Louisiana's existential land loss crisis. By allowing the Mississippi River to naturally build thousands of land acres through sediment deposition and nourish the existing depleted marshes with nutrients and fresh water, the same way this very landscape was created, we can greatly reduce the threat of entire ecosystem collapse. Additionally, vulnerable communities in the Barataria Basin affected by increased water levels due to sea level rise and storm surge which causes both economic and ecological travesties, could also be reduced.

Moreover, the Mid-Barataria Sediment Diversion project, the best eligible use of NRDA settlement dollars, addresses a multitude of concerns on an ecosystem-wide and economic scale by operating synergistically with neighboring restoration projects, leveraging millions of invested restoration dollars while also offering thousands of jobs and regional economic sales.

In conclusion, ROR fully encourages the selection of the preferred alternative in the Draft EIS for the Mid-Barataria Sediment Diversion, funded as an eligible project using Deepwater Horizon settlement dollars as outlined in the LA TIG's Draft Restoration Plan. Furthermore,

---

ROR requests that this project be aggressively expedited and implemented, ensuring the long-lasting viability of our coast and communities, and the future of Louisiana. We would also like to continue to be a community partner by offering our continued assistance in project development in respect to mitigation, workforce development and recruitment.

Sincerely,

G. Michael Plaisance President

Restore or Retreat, Inc.

---

**Concern ID: 62663**

**Decades of study demonstrate the MBSD is the optimal way to restore the sustainable functionality to the ecosystem injured by the DWH oil spill, including providing benefits to the northern Gulf of Mexico ecosystem injured by the spill. The Project would rebuild and restore coastal wetland habitat, which is vital to the health of the Gulf of Mexico ecosystem and the species that reside within it. It would address a multitude of concerns on an ecosystem-wide and economic scale, would work synergistically with ecosystem restoration projects in the basin, and would create jobs. The Draft Restoration Plan demonstrates the likely benefits of the Project, and the Project would likely help mitigate consequences of future natural disasters and climate change. Not implementing the Project would not only prevent the area from recovering, but would accelerate its degradation over time.**

**Response ID: 16622**

The LA TIG acknowledges the comment and agrees that the Project would deliver fresh water, sediment, and nutrients to the Barataria Basin; reconnect and reestablish sustainable deltaic processes between the Mississippi River and the Barataria Basin (for example, sediment retention and accumulation, new delta formation); and create, restore, and sustain wetlands and other deltaic habitats and associated ecosystem services.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63337**

**A large number of commenters expressed support for the Applicant's Preferred Alternative, as outlined in the Draft EIS, and the use of funds from the DWH settlement**

---

**fund, as outlined in the LA TIG's Draft Restoration Plan, to protect and restore coastal resources in the proposed Project area that were affected by the DWH oil spill.**

**Response ID: 16294**

The USACE and LA TIG acknowledge the commenter's support for the Applicant's Preferred Alternative. The USACE is evaluating the projected impacts of the proposed Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. The LA TIG further acknowledges the commenters' support for using DWH restoration dollars to fund construction of the proposed Project. If approved, the proposed Project would be largely funded through funds provided by the DWH oil spill settlement as determined by the LA TIG. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Southeast Louisiana Voices of Impacted Communities & Environments

Kimberly Reyher

June 3, 2021

U.S. Army Corps of Engineers  
New Orleans District  
Attn: CEMVN-ODR-E; MVN-2012-2806-EOO  
7400 Leake Avenue  
New Orleans, LA 70118

To Whom It May Concern,

We, Southeast Louisiana Voices of Impacted Communities & Environments (SELA VOICE), write to share our comments regarding the DEIS and Draft Restoration Plan for the Mid-Barataria Sediment Diversion (MBSD). SELA VOICE is a coalition of community-based and environmental organizations convened by the Greater New Orleans Foundation.

The coalition includes Coalition to Restore Coastal Louisiana; Coastal Communities Consulting, Inc.; Healthy Gulf; Lower Ninth Ward Center for Sustainable Engagement and Development; Mary Queen of Viet Nam, Community Development Corporation; South Louisiana Wetlands Discovery Center; United Houma Nation; and Zion Travelers Cooperative Center. Each

organization works with the Indigenous, historically Black, immigrant, migrant, and low-income Southeast Louisianian communities whose lives and livelihoods will be most impacted by the MBSD as proposed.

We appreciate that both the DEIS and TIG Draft Restoration Plan included preliminary mitigation and stewardship measures for affected communities and industries. We would like to help facilitate the equitable application of these measures. Currently, the DEIS and draft Restoration Plan seem to indicate that CPRA and other entities will only begin mitigation when they have proof of impact, leaving fishers and affected communities at risk in the meantime. CPRA and TIG should presume impact and help communities begin to adapt throughout the diversion's construction so they are already in the process of adaptation as the MBSD begins operation.

Below, we recommend actions regarding the mitigation and stewardship measures currently identified in both draft documents. We believe that for the MBSD to be equitably carried forward, CPRA and other state agencies will benefit from doing the following:

1. Use community expertise to carry out mitigation — community-based organizations will identify their expertise in mitigation (see below for SELA VOICE members' mitigation expertise); CPRA and TIG will use a percentage of budgets to help CBOs continue to carry out their efforts they have already been working on that align with the DEIS.
  - a. Partner with community-based organizations to effectively and accessibly disseminate information to affected populations.
  - b. Use CBO expertise to co-design effective community-specific adaptation programs, where communities are able to effectively respond to MBSD's impacts in the near- and long-term.
2. Establish and implement an equitable approach to assessing just compensation and equitable buyout programs for:
  - a. Homes and other structures throughout Southeast Louisiana in areas that will be affected by the diversion—this process should allow residents to buy equivalent or better homes elsewhere.
  - b. Coast-dependent businesses like commercial fishing boats and docks in areas that will be affected by the diversion.
3. Use allocated mitigation funding to support community adaptation.
  - a. Establish and maintain a fund to offset the negative outcomes of MBSD on coast-dependent businesses over the lifetime of the project.
  - b. Establish a program to mitigate the increase in coast-dependent businesses' operating costs in light of the MBSD. This includes payment for costs of upgrading vessels and purchasing necessary equipment.
  - c. Create and maintain a 10-year loan program for coast-dependent small business owners to establish a secondary or alternative small business to generate income as their primary businesses are impacted by the operation of the MBSD.
  - d. While proposed fisheries mitigation supports workforce training—and in the case of commercial oyster businesses, implementing new culching and harvesting

practices—many fisheries-dependent residents do not have the language acumen or access to technology that might be required to transition to new fields. To address this, CPRA and other agencies can provide an annual stipend to offset their losses. This stipend would be used at each person’s discretion, as best suits their specific needs.

- e. Elderly fisherfolk need support to maintain current businesses for the next 5-10 years until retirement. There is a need for specific programming aimed at maintaining the extant operations of elder small business owners who formally identify that they will leave coast-dependent industries within the next 10 years.
4. Broadband access is imperative for communities—make sure all residents of MBSD-affected areas have affordable and easy access to the internet at home and work.
  5. Rigorously explore how restoring natural landscape features, such as ridges, might reduce the impacts of freshwater, thereby mitigating the impact of freshwater on oysters, shrimp and other species to reduce the effect of the diversion on fishers and communities dependent upon them.

Regarding CPRA partnering with CBOs for mitigation and stewardship: each member of SELA VOICE either has expertise or is already carrying out programming in one or more mitigation and/or stewardship measures included in the TIG Restoration Plan and DEIS.

- Coastal Communities Consulting, Inc. - workforce and business training; grant and loan programs for coast-dependent families and commercial fisheries; fisheries: gear improvement, marketing, and vessel refrigeration; supporting commercial and subsistence fishers following disasters like the 2019 Bonnet Carre Spillway opening.
- Lower Ninth Ward Center for Sustainable Engagement and Development - Community engagement and community resilience education and training; community outreach in New Orleans Lower 9th Ward and other underserved neighborhoods; coastal and community science research on climate action issues.
- Mary Queen of Viet Nam, Community Development Corporation - Language Access; Vietnamese translation and interpretation; community outreach in New Orleans East; workforce development programming.
- South Louisiana Wetlands Discovery Center - Resilience Training and Education; Wetlands-Based STEM Education Programs.
- United Houma Nation - Tribal services offered through community based programs and vocational rehabilitation for tribal citizens with disabilities. All services target the state

recognized tribal enrollment of over 13,000 tribal members residing within a six-parish service area along the southeastern coast of Louisiana.

- Zion Travelers Cooperative Center - Disaster recovery and rebuilding, youth programming and entrepreneurship, and other community services in and around Phoenix, LA on the eastbank of Plaquemines Parish.

As trusted community practitioners, our organizations should be consulted on best practices and mitigation models as the MBSD is constructed and over the life of its operation.

While mitigation is intended to address the negative outcomes of natural and human-made processes, stewardship is intended to foster more reciprocal and healthy relationships with the coast and its people. In submitting these comments, members of SELA VOICE look forward to working with you to ensure that the region’s communities remain stewards of their ecosystems, and are in turn supported by the state as MBSD is carried forward.

Sincerely,

Kimberly Davis Reyher

**Concern ID: 63096**

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits

---

prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63134**

**Commenters suggested that job training would not be helpful for older workers or for those facing language or technological barriers. Direct payments should be considered for these fisherman that cannot change careers easily.**

**Response ID: 16518**

The Draft EIS considered how changes in the Project area both with and without implementation of the Project would potentially impact commercial fisheries, including shrimp, in Chapter 4, Section 4.14 (Commercial Fisheries). In response to public comments and resource agency input about proposed mitigation and stewardship measures, CPRA has expanded and refined the fisheries mitigation and stewardship measures since the release of the Draft EIS. CPRA's mitigation and stewardship strategies and expenditures focus on

---

establishing sustainable fisheries for oysters and shrimp rather than on compensating individual shrimpers or oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for fisheries in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to fisheries in the early years of the Project's operational life.

The revised mitigation and stewardship measures allocate approximately \$54 million to commercial fisheries, which supplement other restoration actions and programs being funded by the LA TIG and by the State through LDWF. This includes \$2 million for Workforce/Business training which can be used for older workers facing language or technical assistance barriers (see Appendix R1 to the Final EIS). Additionally, if the MBSD Project is permitted by the USACE and funded by the LA TIG, it would take approximately 5 years to complete construction of the Project and to begin operations. This relatively long period would provide affected senior fishers with the time and opportunity to decide how they want to go forward, ranging from taking advantage of the adaptation opportunities offered through the Mitigation and Stewardship Plan to transition out of the fishing industry. The final fishery mitigation plan can be found in the Mitigation and Stewardship Plan (Appendix R1 to the EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63146**

---

**Commenters suggested that CPRA should consider restoring natural landscapes such as ridges to minimize impact on oysters, shrimp, and other species (as well as the fisherman and communities that rely on them).**

**Response ID: 16528**

As part of the Louisiana Coastal Master Plan, CPRA has funded a number of projects to restore landscapes such as natural ridges in appropriate locations, such as Spanish Pass Ridge and Marsh Restoration, and anticipates continuing to fund such projects in the future. However, based on Coastal Master Plan modeling, CPRA does not believe that ridge restoration would effectively deflect freshwater flows from the larger basin. The size and scope of ridges necessary to isolate areas in the basin from fresh water makes this solution infeasible. Therefore, no changes have been made to the Final EIS in response to this comment.

---

**Concern ID: 63179**

**Mitigation should be clear and adequate and should focus on community needs, which requires collaboration with potentially impacted communities and should be facilitated through community-based organizations.**

**Response ID: 16556**

In developing its Mitigation and Stewardship Plan and its Monitoring and Adaptive Management (MAM) Plan, CPRA engaged the communities potentially impacted by the Project through public meetings to solicit input on mitigation strategies. CPRA also engaged community-based organizations to assist in soliciting additional feedback on the proposed mitigation measures. A summary of CPRA's public engagement meetings and other outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the Project is approved and funded.

---

**Concern ID: 63194**

**The Draft EIS and Draft Restoration Plan seem to indicate CPRA and other entities will only begin performing mitigation when they have proof of impact. Instead, they should help communities begin to adapt throughout construction so adaptations will be in process as the MBSD operation begins.**

**Response ID: 16566**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) contained information on steps that would be taken before Project construction to protect fisheries. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS, including specifying mitigation and stewardship measures that would be undertaken before Project construction (see Appendix R1 to the Final EIS for additional details). For example, the Final Mitigation and Stewardship Plan outlines the structural mitigation and stewardship measures that CPRA plans to implement in the communities south of the diversion outside of levee protection (Myrtle Grove to Happy Jack/Grand Bayou) prior to beginning Project operations.

Structural measures such as raising roads or improving bulkheads in the Mitigation and Stewardship Plan were not included in CPRA's MBSD DA permit application and are not part

---

of the currently-proposed MBSD Project. Many of these structural measures would require USACE and other permits prior to installation. No applications have been filed with USACE. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63948**

**Public comment asked for provision of affordable broadband internet access for all residents impacted by the MBSD.**

**Response ID: 16587**

Under USACE regulations, compensatory mitigation is intended to address significant resource losses that are specifically identifiable, reasonably likely to occur and of importance to the human or aquatic environment. Mitigation must be directly related to the impacts of the proposal, appropriate to the scope and degree of those impacts and reasonably enforceable. Because the proposed Project is not anticipated to adversely impact cable, internet or communication access, or infrastructure, the suggested provision of broadband internet access would not relate to resource losses caused by the proposed Project and would not be required by USACE.

CPRA has proposed mitigation and stewardship measures to address and partially offset some of the projected impacts of the Project, including providing mitigation for impacts to

fisheries and increased water surface elevations caused by the Project (see Appendix R1 [Mitigation and Stewardship Plan] to the EIS). These measures have been designed to target specific impacts, and while broadband would likely benefit some of the impacted communities, CPRA and the LA TIG have chosen a targeted approach to mitigation based on the projected impacts of the Project.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40580**

The Nature Conservancy

Karen Gautreaux

RE: Mid-Barataria Sediment Diversion Draft Environmental Impact Statement (DEIS)

The Nature Conservancy in Louisiana (The Conservancy) appreciates being able to offer the following comments relative to the Draft Environmental Impact Statement (DEIS) for the Mid-Barataria Sediment Diversion.

Reestablishing connectivity between the sediment and freshwater carried by the Mississippi River and the state's coastal wetlands is of paramount importance. The reconnection of the river to the coast is foundational in slowing the rate of habitat loss and increasing the resiliency of coastal wetlands, communities and infrastructure. The Mid-Barataria Sediment Diversion is an important component of a much broader program to restore and maintain southeast Louisiana's coastal zone. It is also a project that acknowledges both the essential nature watersheds play to the integrity of the coast and a "greater good" effort that accounts for a majority of stakeholders. Further, the development of the Wax Lake delta and mouth of the Atchafalaya River, plus the occasional levee breach, demonstrate that a reliable, ecologically sound introduction of sediment and freshwater are capable of building land while enhancing conditions for both natural habitats and the plants and animals that comprise them.

We find the DEIS to be a thorough consideration of the impacts to natural systems and processes that stand to be influenced by the creation and operation of the diversion. The Conservancy also believes that long-term monitoring in the Barataria Basin will be essential to the operation of the diversion as well as communication to all stakeholders on the performance, over space and time, of the diversion and its area of influence. The changes in land loss and gain and response of plant communities on those land forms, as well as habitat and species changes as a response to changes in water quantity will be essential to learn from across gradients of influence in the basin.

We recognize that some commercial and recreational fisheries may be variably impacted depending on their proximity to the diversion. It is importance to continue to consider and plan for how to transition those with fishery interests though the period of change such that their connection to place and resources is maintained as much as can be.

Overall, the Conservancy believes the net environmental response and benefits will be positive, and that the anticipated changes are addressed in the DEIS. We are grateful for the opportunity to review and respond on a project which is both a monumental undertaking and key to the coastal protection and management of Louisiana.

Sincerely,

Karen Gautreaux

State Director

---

**Concern ID: 62838**

**Near-term, long term, and real-time monitoring in the Barataria Basin will be essential to the operation of the diversion as well as to public communication about the performance, over space and time, of the diversion and its area of influence.**

---

**Governance and decision making for the Project should be a science-based, inclusive, and transparent process with genuine engagement and input from external experts and community stakeholders.**

**Response ID: 16665**

According to the LA TIG, the monitoring issues raised by the commenter were considered in CPRA's Monitoring and Adaptive Management (MAM) Plan (Appendix R2 to the Draft EIS), which was jointly developed by CPRA and its LA TIG federal partners based on best information available to them. The MAM Plan included input from key stakeholders (see Section 2.2.2.2 [Stakeholder Review Panel]) and transparent decision making (see Section 6.4 [Data Sharing] and Section 7 [Reporting]). In response to public comments, CPRA would develop a web-based informational dashboard that would make operational information available to the public through the internet in real time. This dashboard would allow CPRA to continue to keep stakeholders informed about Project progress, timing, construction, and operation.

With specific regard to the inclusion of scientific expertise, in addition to the expertise within CPRA, the governance provisions of the MAM Plan call for establishing a Technical Focus Group/Peer Review Group with subject matter expertise to provide technical support on long-term Project planning, assist in the evaluation and interpretation of monitoring data, and evaluate the state of the science concerning adaptive management. See Section 2.2.2.3 (Technical Focus Group(s)/Peer Review) of the MAM Plan (Appendix R2 to the Final EIS).

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana

---

Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

---

**Concern ID: 63342**

**Other natural or man-made diversions have successfully built land, such that the proposed MBSD Project would also be expected to build land.**

**Response ID: 16302**

The commenter's support for the proposed Project is noted. Consistent with the comment, Chapter 4, Section 4.2.3.2 in Geology and Soils indicates that the proposed Project is anticipated to build land in the Barataria Basin (with smaller amounts of land loss projected in the birdfoot delta). To facilitate comparisons between the proposed Project and other natural or man-made diversions, a summary of select natural and man-made diversions in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary is available in Appendix U of the Final EIS.

---

**Correspondence ID:40581**

Caroline Corona

My name is Caroline Corona and I'm totally against the mid-barataria diversion. This will take away our species of our redfish which will make our water fresher and we don't want it. I'm totally against it.

---

**Concern ID: 62737**

**The proposed Project would result in the loss of red drum.**

**Response ID: 16115**

As identified in Chapter 4, Section 4.10, Table 4.10-6 in Aquatic Resources of the EIS, the proposed Project is not expected to have an adverse impact on, or resulting loss of, red drum. Rather, changes in the Barataria Basin are anticipated to have an overall beneficial effect on red drum abundance. Because these issues were addressed in the Draft EIS, no related edits have been made to the Final EIS.

---

**Concern ID: 62782**

**A large number of commenters expressed general opposition to the proposed Project.**

**Response ID: 16364**

The commenter's opposition to the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

---

**Correspondence ID:40582**

Albertine Kimble

My name is Albertine Marie Kimble. I reside at [REDACTED], Carlisle, LA 70040. First, I would like to say that Plaquemines Parish Government doesn't speak for all the people. NOT everyone is against the Mid-Barataria Sediment Diversion. The project is NOT all negative. Plaquemines Parish needs the Mississippi River for survival and the residents who live and work here understand how to utilize the Mississippi River to have a positive impact.

I am pro-Diversion and always will be. I know the Mississippi River built Plaquemines Parish and will definitely save the Parish. The mistrust for me is past construction of freshwater structures that were not maintained and then abandoned. This is unacceptable. I know the people of Plaquemines Parish are resilient. We have had to adapt to the leveeing of the Mississippi River which caused an increase to salinities in the region. Now we are asked to accept another change: more freshwater, BUT with more sediment! I feel the parish is an experiment. We have numerous structures already in place but need major maintenance and proper operation to achieve maximum benefits. I believe that this would alleviate any mistrust people have about the state coastal master plan.

I am thankful that Plaquemines Parish is gaining instant wetlands through dredging. We are blessed that the Spanish Pass II project in Venice will be the largest marsh creation project to date. The majority of people want dredge material now versus 75,000 cfs whenever it is possible.

Flooding will definitely increase with operations of the diversion to adjacent landowners. Landowners need to be compensated for negative impacts. When we reconnect to the River, things change, people adjust. Our climate is changing so quickly; I believe the time to act is now. We need all the sediment from the Mississippi River we can receive, any kind of restoration project that creates land instantly, but sustainability is mandatory, and that is from a diversion. You need to water the plants.

In my opinion, when a landowner is negatively impacted by a coastal restoration project by not being able to utilize his property, he should be compensated justly.

Sincerely,

Albertine Marie Kimble

---

**Concern ID: 61917**

**Commenters expressed concerns over CPRA's potential for mishandling of the operation and long-term maintenance of the proposed MBSD Project, particularly pointing to CPRA's past inadequate operations and maintenance of other diversions.**

**Response ID: 16004**

CPRA would operate the proposed MBSD Project as detailed in the Operations Plan, which is found in Appendix F2 Preliminary Operations Plan in the Final EIS. In addition, refer to Final EIS Appendix R2 for the Monitoring and Adaptive Management (MAM) Plan for details on the proposed Project operational and adaptive management governance. In the context of the proposed Project, governance refers to how CPRA, with input from other stakeholders, would make decisions over the life of the Project. Decisions would include, but not be limited to, continuation of and changes to Project operations, riverside management, monitoring, maintenance, and adaptive management actions. CPRA would provide annual operations

---

plans, annual operations performance reports, annual monitoring reports, and multi-year monitoring and adaptive management reports (at five-year intervals) on CPRA's CIMS website (<https://cims.coastal.louisiana.gov/default.aspx>), as well as, on NOAA's Data Integration, Visualization, Exploration, and Reporting (DIVER) Explorer tool and Trustee Council websites. These plans would be available to stakeholders and the public. The stakeholders and the public would have an opportunity to participate in public meetings held to solicit comments, perspectives, and insights on the annual operations plans.

The Mitigation and Stewardship Plan and the MAM Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated proposed Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section

---

1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process. CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 63096**

---

**Commenters request information and mitigation to compensate for impacts to properties, especially in Myrtle Grove and Happy Jack, (including compensation for acquisition; compensation for raising docks, roads, property, and facilities; relocation expenses; and insurance costs).**

**Response ID: 16699**

Chapter 4, Sections 4.13.5 Operational Impacts in Socioeconomics and 4.20.4.2 Operational Impacts in Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, of the Draft EIS considered the increased water levels and corresponding inundation outside of federal levee systems potentially caused by the proposed Project.

CPRA is interested in assisting affected communities to remain in place as long as they would like. In response to public comments, CPRA expanded its Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) to include mitigation and stewardship measures to partially offset some of the projected effects of the proposed Project on water levels in the communities south of the outfall outside of levee protection from Myrtle Grove south to Grand Bayou and Happy Jack.

The particular mitigation and stewardship measures vary based on the community, taking into consideration the degree of effect from the proposed Project, as well as the characteristics of the community. For example, the Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS) explains CPRA's plan to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision which should reduce the incidence of tidal flooding in Myrtle Grove compared to future conditions without the proposed Project. In Grand Bayou and Happy Jack, where the increased water levels due to the proposed Project are projected to be less, CPRA plans to raise the road to improve access to the communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be in the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation and stewardship measures.

As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations.

---

The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Ralph and Cindy Hermann

Continued Opposition to Mid-Barataria Flooding Diversion since scoping meetings in 2003

Please do not approve this poorly prepared DRAFT of a so-called Environmental Impact Statement that disregards both human life as well as other mammals such as the spotted dolphins. Eco-tourism this is not, nor was it honest or ethical as this was pushed through in a budget bill. During the short term flow of Mississippi River polluted freshwater from the Bonnet Carre spillway over 200 dolphins perishes & more suffered severe ulcerations. Protection for dolphins is covered under the Marine Mammal Protection Act by NOAA in other states but not Louisiana.

In our humble opinion, this project equates to the USACE permitted and dug Mississippi River Gulf Outlet infamously known as the MRGO that flooded & destroyed St. Bernard for over a decade as well as Orleans Parish Ninth Ward, New Orleans East, St. Tammany & Jefferson Parishes.

The MRGO was dug as an outlet to the Gulf that measure 250 feet wide at construction with the Paris Road Bridge piers constructed on dry land never meant to be in 35 feet of salt water due to erosion at a width of 2,250 wide when Hurricane Katrina hit Louisiana. This was not overtopping of levees but a total washing away of levees in name only.

This diversion plans to cut a hole in the Mississippi River Levee to pump the most polluted river water into the Barataria Bay Estuary all the while possibly weakening a longtime strong levee. Do we ever learn from these failures or the false promises from politicians?

Is it really a good idea to punch a hole in the Mississippi River levee to attempt to capture enough sediment that is already trapped by the multitude of dams & weirs up the Missouri River & other western rivers trapped by the sills of these structures? They do not know what to do with all that sediment up there that is silting up their small lakes.

In my opinion, this diversion project will have permanent & detrimental effects to the destruction of Plaquemines Parish as a whole as capturing any sediment will starve the delta further down the river at the Migratory Management area.

Dr. Sherwood Gagliano, now deceased, trumpeted the issues of coastal erosion but Louisiana was fat, dumb and happy due the promises of jobs & wealth. Don't try to sell and market this Draft of a false EIS. Put more consideration into Pipeline Sediment Dredging that will provide faster results and protection.

Ralph and Cindy Hermann

Port Sulphur, LA 70083

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has**

---

**numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.****Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve

---

and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62271**

**The proposed Project would have permanent and detrimental impacts on Plaquemines Parish as a whole because it would starve the birdfoot delta, including the Delta NWR and Pass A Loutre WMA, of needed sediment.**

**Response ID: 16442**

The commenter's concern that the proposed Project would cause a loss of wetlands in the Delta NWR and in the Pass A Loutre WMA, both of which are located in the birdfoot delta, was addressed in the Draft EIS in Chapter 4, Section 4.17.4 Operational Impacts in Public Lands. As part of its responsibilities under the Fish and Wildlife Coordination Act and as operator of the Delta NWR, the USFWS recommended the creation of crevasses to build land in the birdfoot delta to offset MBSD Project-induced wetland losses of 926 acres in the Delta NWR and 37 acres in the Pass A Loutre WMA (see Appendix T USFWS Coordination Act Report (CAR) of the Final EIS). In response to USFWS' CAR Recommendation, CPRA agreed that "Within 5 years of the commencement of Project operations, CPRA or the LA TIG will provide \$10,000,000 of additional funding for wetland preservation and restoration work in the Delta NWR and the [Pass A Loutre] PAL WMA to offset modeled acres of indirect wetland losses in those areas. That funding may be accomplished through additional funding through the CWPPRA program, through additional restoration work sponsored by the LA TIG (for example, construction of the Engineering and Design work discussed in the DWH LA TIG's Restoration Plan and Environmental Assessment #7), or through a direct contribution for additional work. The funding will be proportioned between the Delta NWR and the PAL WMA based on the magnitude of the predicted wetland loss in each area" (Final EIS, Appendix R1 Mitigation and Stewardship Plan, Section 4.6 Fish and Wildlife Coordination Act).

This information was updated in the Final EIS, Chapter 4, Section 4.27.1 in Mitigation Summary and in the Final EIS, Section 4.17.4.2.2 Birdfoot Delta in Public Lands.

---

**Concern ID: 62777**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the biota of the Barataria Basin (including but not limited to endangered species, dolphins, shrimp, crab, oysters, and finfish).**

**Response ID: 16359**

The commenter's opposition to the proposed Project is noted. As discussed throughout Chapter 4 Environmental Consequences of the Draft EIS, the proposed Project would result in impacts on the general character of the Barataria Basin, including, but not limited to, salinity, temperature, land accretion, and water quality. These impacts would generally be either adverse or beneficial on a given species depending on habitat tolerances of area plants and animals, with moderate to major adverse impacts anticipated for those plants and animals that are unable to tolerate the modified habitat. In many cases, impacts in the

Barataria Basin resources would be higher near the diversion outfall, where land building/sedimentation, salinity, and water level impacts would be greatest, and would decrease with distance from the outfall. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate proposed Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62784**

**Prior or proposed diversions and diversion-like projects (including the Caernarvon Diversion, MRGO, Mardi Gras Pass, Maurepas Bonnet Carré Spillway openings) did not work or caused adverse impacts on area resources.**

**Response ID: 16366**

The commenter's concern regarding the effectiveness and adverse impacts of existing diversions and diversion-like structures is noted. A summary of select natural and man-made diversions (and diversion-like structures) in southeastern Louisiana has been developed to compare the purpose and/or characteristics of these diversions to the proposed MBSD Project, and their recorded impacts on the natural environment. This summary, which includes discussions on the Caernarvon Diversion, MRGO, Mardi Gras Pass, and Bonnet

---

Carré Spillway, is available in Appendix U of the Final EIS. The Maurepas Diversion is subject to an ongoing NEPA analysis, which is anticipated to be finalized in 2022.

Chapter 3, Sections 3.2.1.4 and 3.2.2.4 in OPA Evaluation of the Alternatives of the LA TIG's Final Restoration Plan address the likelihood of success of the proposed Project and other action alternatives. The referenced projects all had unique goals, and, where goals existed, each of those projects have achieved their goals. Those achievements increase confidence in the ability of the LA TIG to set goals and select approaches appropriate for achieving those goals. The proposed Project's goal is ecosystem restoration through the reestablishment of sustainable deltaic processes, only one of which is land building. The computer and physical models used to analyze Project benefits consider the current geomorphological features of the Lower Mississippi River, as well as data and knowledge gained from the referenced projects.

---

**Concern ID: 63067**

**The majority of the bottlenose dolphin population of this area will be destroyed... not just killed but sentenced to a horrific death. Freshwater releases at Bonnet Carré Spillway in 2019 resulted in an unusual mortality event (UME), demonstrating the harm that freshwater releases can cause to dolphins. A study by the Galveston Bay Dolphin Research Program also found that dolphins in upper Galveston Bay developed skin lesions after flooding from Hurricane Harvey. Additional studies further support the harm that the diversion could cause by demonstrating negative impacts to dolphins from exposure to low-salinity conditions (Deming and Garrison, 2021; Duignan et al., 2020; McClain et al., 2020).**

Deming, A., and L. Garrison. 2021. 2019 Northern Gulf of Mexico bottlenose dolphin unusual mortality event. Marine Mammal Commission meeting/webinar on "Effects of Low Salinity Exposure on Bottlenose Dolphins," 23 March 2021. Oral presentation. <https://www.mmc.gov/events-meetings-and-workshops/other-events/effects-of-low-salinity-exposure-on-bottlenose-dolphins-webinar/>

Duignan, P.J., N.S. Stephens, and K. Robb. 2020. Fresh water skin disease in dolphins: a case definition based on pathology and environmental factors in Australia. *Scientific Reports* 10:21979.

McClain, A.M., R. Daniels, F.M. Gomez, S.H. Ridgway, R. Takeshita, E.D. Jensen, and C.R. Smith. 2020. Physiological effects of low-salinity exposure on bottlenose dolphins (*Tursiops truncatus*). *Journal of Zoological and Botanical Gardens* 1:61-75.

**Response ID: 16590**

The Draft EIS included an analysis based on extensive literature and soon-to-be published data (now published) demonstrating the impacts of low-salinity conditions on dolphins. These data were considered as part of an Expert Elicitation (a garnering of expert opinions to determine or quantify an unknown) that resulted in dose-response curves (Booth et al. 2020) and summarized in Chapter 4, Section 4.11.3 (Marine Mammals - Overview of Impact Analysis Approach) of the EIS. While Deming and Garrison (2021) was presented after the release of the Draft EIS, the presentation was based on data that were fully considered in the Draft EIS, including as part of the Expert Elicitation. Along with other relevant data (for example, BBES tagging studies), the analysis contained in the Draft EIS determined that there would be a significant, adverse, permanent impact on the BBES Stock. Further, the

---

analysis in the Draft EIS concluded that if the 75,000 cfs Alternative were implemented, impacts would be immediate and only a remnant population would be likely to exist near the barrier islands after 50 years of operation.

After release of the Draft EIS, at the request of the Marine Mammal Commission, the National Marine Mammal Foundation and University of St. Andrews released a population impact projection based on the information presented in the Draft EIS (including annual survival rates from Garrison et al. 2020) coupled with an updated population model for BBES dolphins (Schwacke et al. 2022, Thomas et al. 2021). This new, additional analysis has been incorporated into the Final EIS in Chapter 4, Sections 4.11.5.2 Barataria Bay Estuarine Stock and supports the original determination in the Draft EIS of major, permanent, adverse impacts on the BBES dolphin population. The research presented in the McClain et al. (2020) study cited by commenters was considered in the Draft EIS [cited at the time as McClain et al. (in prep)]; the research presented by Duignan et al. (2020) is consistent with the established literature and does not change the conclusions of the Draft EIS, but this study has been incorporated in Chapter 4, Section 4.11.5.2.2.1 General Effects on Dolphin Health of the Final EIS. Similarly, the information included in the Deming and Garrison presentation was considered in the Draft EIS, is consistent with the conclusions of the Draft EIS, and the presentation has now been cited in Section 4.11.5.2.2.

Since release of the Draft EIS and the LA TIG's Draft Restoration Plan, the LA TIG has developed a new Marine Mammal Intervention Plan to further respond to and recognize expressed public concerns about the potential impacts of the proposed Project on marine mammals (see Appendix R5 to the Final EIS). The Plan outlines a spectrum of response actions ranging from recovery/relocation to no intervention to euthanasia. While the more severe actions (that is, euthanasia) may not offset the ultimate outcome of dolphin mortality associated with the proposed Project, it can alleviate animal suffering. Where relocation is possible, the goal would be to release dolphins into more hospitable habitat where any health impacts would be minimized. In addition, in recognition that the proposed Project would likely result in significant marine mammal collateral injuries, and acknowledging the inability to fully avoid or mitigate collateral injuries, CPRA has designed and would implement a suite of stewardship measures (see Appendix R1 [Mitigation and Stewardship Plan] of the Final EIS for more details about these actions). CPRA has also updated marine mammal related monitoring and adaptive management activities since the release of the Draft EIS to include specific marine mammal response triggers that may affect Project operation mitigation efforts; see Appendix R2 (Monitoring and Adaptive Management [MAM] Plan) to the Final EIS for more information.

The Mitigation and Stewardship Plan and the MAM Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans, including the additional Marine Mammal Intervention Plan, and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures

are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in these Plans, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

Chhay Lim

To Whom It May Concern:

I understand the reasoning for releasing fresh waters into the gulf coast. Although, these procedures will affect many peoples that work in the commercial fisherman industry. For most, this is the only source of income and job that we can get. My husband and I don't have a strong education background, so shrimping was always our occupation. We've been in this industry since 1998 and want to continue till we retire. When this procedure happens, we won't be able to work. The shrimp will leave which will cause us to have to go out in deeper waters. But our boat isn't big enough to be going out too deep in the ocean. This is going to cause a financial struggle for us. It would be so appreciated by many if we were assisted with some help.

Here are a few ideas that can help us stay financially stable. Maybe the government can compensate us so that we can buy a bigger boat or have money to start a business. Or if the shrimp business fails and causes us to move out of here, help us financially to be able to move and start our business elsewhere. Or help buy our lands and properties if we had to move. My husband and I don't have much experience in the workforce, we've been commercial fishermen for a long time. We would like aid in helping to find another career or get us in an occupation that can financially support us.

Thank you

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments,

CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Concern ID: 62029**

**The EIS describes immediate, major, and permanent adverse impacts on several critical species in the Barataria Basin, including shrimp and oysters. The health of commercial fisheries and the socioeconomic well-being of coastal communities are closely intertwined. Such impacts would inflict economic harm on businesses, families, and individuals.**

**Response ID: 16225**

The issues raised by the commenters were considered in the Draft EIS. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted. The EIS also acknowledges the importance of commercial fisheries to the Louisiana economy and communities, as described by commenters. Chapter 4, Section 4.13 Socioeconomics, discusses impacts of the proposed Project on the economy of Louisiana and Section 4.14 Commercial Fisheries describes impacts to commercial fisheries. As summarized in Section 4.14.5, moderate to major adverse impacts to shrimp and oyster fisheries in the proposed Project area are anticipated under the Applicant's Preferred Alternative. Changes in abundance may exacerbate trends of aging fishers leaving the industry and would have adverse impacts on the overall fishery. Adverse impacts may be partially offset by changes in fisher behavior. Additional details on the regional and community level economic impacts on commercial fisheries due to the proposed MBSD Project can be found in Section 4.14 Commercial Fisheries.

CPRA's Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. Since

publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Ellen Davison

Dear Mr. LaBorde and Mr. Landry,

I am writing to let you know that as a Louisiana native, who lives elsewhere but who is concerned about the coastlands of this nation, especially Louisiana, I support the preferred alternative: Alternative 1, Variable Flow up to 75,000 cfs for the Mid-Barataria Sediment Diversion in the Corp's Draft Environmental Impact Statement and Alternative 1 in the Louisiana Deepwater Horizon Trustee Implementation Group's Mid-Barataria Sediment Diversion Draft Restoration Plan 3.2.

Thank you so much. I hope this letter does not arrive too late.

Ellen M. Davison

Greer, SC 29651

**Concern ID: 63332****A large number of commenters expressed general support for the proposed Project.****Response ID: 16288**

The commenter's support for the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and the NEPA analysis of the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

**Correspondence ID:40587**

Calvin Wade

When this diversion opens, it will affect Lafitte gravely, as far as brown shrimp will completely end. Not to mention, water level will rise life on the bayou.

---

**Concern ID: 62011**

**Commenters are concerned about the impacts of the proposed MBSD Project operations on the coastal communities including Jean Lafitte, lower Lafitte, Barataria, Crown Point, and the island of Grand Isle.**

**Response ID: 16209**

The impacts raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.13 Socioeconomics considers impacts on community populations, housing and property values, community infrastructure, as well as community cohesion and other potential socioeconomic impacts on affected communities in the proposed Project area. As described, communities near the immediate outfall area (within 10 miles north and 20 miles south) outside of flood protection are anticipated to experience increased tidal flooding and storm surge that may increase ongoing trends in outmigration and cause minor to moderate, permanent, adverse impacts on community cohesion in these areas. Long-term benefits of the proposed Project are also anticipated in communities in the west bank New Orleans area north of the diversion, where decreases in storm damages are anticipated over time due to the Project. The communities of Lafitte and Des Allemands are located in areas anticipated to experience permanent, minor to moderate beneficial impacts associated with storm hazards. The proposed Project is projected to increase surge heights by only up to 0.1 foot in the community of Grand Isle. Chapter 4, Sections 4.13 Socioeconomics, 4.14 Commercial Fisheries, and 4.15 Environmental Justice provide detailed analyses of impacts from the proposed Project. The Socioeconomics Technical Report in Appendix H1 provides additional details.

As part of its restoration planning efforts, the LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. The LA TIG believes the proposed MBSD Project is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana.

---

**Concern ID: 62224**

**Communities like Happy Jack, Lake Hermitage and Myrtle Grove, some of which have homes that are not above the new base flood elevation, already experience some degree of flooding which would be made worse by the diversion. This would affect the ability of residents to access and enjoy their homes and communities.**

**Response ID: 15757**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discuss the anticipated increased flooding impacts outside of federal levee systems to be caused by the operation of the diversion. Final EIS Appendix R1 Mitigation and

---

Stewardship Plan describes mitigation and stewardship measures planned by CPRA for areas exposed to Project-related inundation. CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties. In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes, which would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application, and if a permit is approved, would not be authorized under the DA permit. Many of these structural measures would require DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued.

Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62772**

**The diversion would end the brown shrimp fishery in the upper/mid-basin.**

**Response ID: 16150**

As discussed in Chapter 4, Section 4.10.4.5 in Aquatic Resources and Section 4.14.4 in Commercial Fisheries of the EIS, habitat suitability for brown shrimp in the Barataria Basin would decrease, particularly in the mid- to lower basin (see Figure 4.10-16). Brown shrimp, and particularly earlier life stages of brown shrimp, may be precluded from the immediate outfall area in periods of high flow, instead being transported into areas west and south of the outfall, where water flow would be generally unaffected by diversion operation. Larger juvenile and sub-adult brown shrimp would remain in the southern basin, where salinities would generally be below optimal, but still relatively suitable. Salinity in the Lower Barataria Basin may decrease below optimal levels for large juveniles and sub-adults in the spring and summer, but these life stages can tolerate low-salinity conditions and would remain in these lower basin habitats. The species is anticipated to have decreased abundance over time; however, the viability of the population is not anticipated to be affected, such that brown shrimp would remain in the Barataria Basin. As identified in Section 4.14.4.2 in Commercial Fisheries, impacts on the brown shrimp fishery are also anticipated to be major, permanent, and adverse associated with adverse impacts on brown shrimp abundance over time as compared to No Action Alternative. Adverse impacts to the fishery may be partially offset by changes in fisher behavior, especially given that the greatest impacts may be occurring later in the analysis period, but these adjustments could increase operating costs. Impacts could further encourage fishers to exit from the industry. Potential new entrants may adapt more easily by investing in more flexible vessels/gear than they would have otherwise, or they may pursue alternative employment. Communities reliant on employment and expenditures associated with this industry would be adversely affected. Because this issue was addressed in the Draft EIS, no related edits have been made to the Final EIS.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

---

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Kin Khon

I need help because right now I am too old. I can't go in the water anymore. I need some money to do a small business, a small donut shop or with ale or work force business training.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based

organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Gareth LeBlanc

Will put brown shrimp out of business. Will rise tides higher and will lose a lot of our shrimp grounds. We have to depend on brown shrimp and white to make a living. All fishermen (shrimp, crab, oyster) are not for it. Use dredging.

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional

---

Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement.

---

Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62772**

**The diversion would end the brown shrimp fishery in the upper/mid-basin.**

**Response ID: 16150**

As discussed in Chapter 4, Section 4.10.4.5 in Aquatic Resources and Section 4.14.4 in Commercial Fisheries of the EIS, habitat suitability for brown shrimp in the Barataria Basin would decrease, particularly in the mid- to lower basin (see Figure 4.10-16). Brown shrimp, and particularly earlier life stages of brown shrimp, may be precluded from the immediate outfall area in periods of high flow, instead being transported into areas west and south of the outfall, where water flow would be generally unaffected by diversion operation. Larger juvenile and sub-adult brown shrimp would remain in the southern basin, where salinities would generally be below optimal, but still relatively suitable. Salinity in the Lower Barataria Basin may decrease below optimal levels for large juveniles and sub-adults in the spring and summer, but these life stages can tolerate low-salinity conditions and would remain in these lower basin habitats. The species is anticipated to have decreased abundance over time; however, the viability of the population is not anticipated to be affected, such that brown shrimp would remain in the Barataria Basin. As identified in Section 4.14.4.2 in Commercial Fisheries, impacts on the brown shrimp fishery are also anticipated to be major, permanent, and adverse associated with adverse impacts on brown shrimp abundance over time as compared to No Action Alternative. Adverse impacts to the fishery may be partially offset by changes in fisher behavior, especially given that the greatest impacts may be occurring later in the analysis period, but these adjustments could increase operating costs. Impacts could further encourage fishers to exit from the industry. Potential new entrants may adapt more easily by investing in more flexible vessels/gear than they would have otherwise, or they may pursue alternative employment. Communities reliant on employment and expenditures associated with this industry would be adversely affected. Because this issue was addressed in the Draft EIS, no related edits have been made to the Final EIS.

---

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Chhiet Lat

I am a commercial fisherman since 1986. I do not want sediment diversion because the sediment diversion will cause the shrimp to disappear/loss a lot. However, if the sediment diversion happens, then I want the government to help me. For example, if I switch from a skimmer boat to a travel boat, I need gears improvement. Or, if I am not a commercial fisherman, then I need help with changing jobs, like becoming a farmer in a different place. I need help. I need help from the government. I also might need help with the vessel refrigeration to sustain the shrimp longer. If I become a farmer in a different state, then I need the government to help me relocate. Buy my house/land and my boat.

Kim Mao

I do not want sediment diversion as a commercial fisherman because I will lose my job. However, if I cannot decide, I need the government to help me. Because, as a skimmer, if there's more land, then I have to go (shrimp) in deeper water. If I go shrimping in deeper water, then I need to change my gears and switch to a travel boat. If the government can help me, then please help me. If I need help with income, then the state or government, please help me so I can live with my kids in the future. Thank you

- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Le Kim

I am a new commercial fisherman. I just have a vessel (oyster). I do not know how it will impact me yet; however, I will need the assistance if it impacts me when the sediment diversion happens. I will need help with housing or moving if I cannot live here anymore - transition to a new place or state.

---

**Concern ID: 62961**

**Project mitigation must adequately compensate impacts on the oyster industry, including financial compensation for economic losses. Commenters provided suggestions for mitigation such as compensating for increased costs of travel, providing direct financial payments to lease holders whose areas become unproductive, supporting new oyster leases or lease swaps, investing in research and development, using devices to move oysters to higher-salinity water, providing loans to oystermen to develop alternative income streams, providing support for elderly fisherfolk and buying out boats and businesses.**

**Response ID: 16532**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers as compared to No Action conditions in Chapter 4, Sections 4.10 (Aquatic Resources), 4.14 (Commercial Fisheries), 4.15 (Environmental Justice) and 4.16 (Recreation and Tourism).

In response to public comments and resource agency input about the proposed mitigation efforts, CPRA has expanded and refined the oyster mitigation and stewardship measures. CPRA's mitigation and stewardship strategies and associated expenditures would focus on establishing sustainable fisheries for oysters rather than on compensating individual oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to oyster fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for oysters in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to oyster fisheries in the early years of the Project's operational life. The revised mitigation and stewardship measures include allocating \$4 million to establish new public seed grounds, \$15 million to enhance public and private oyster grounds, \$4 million to enhance broodstock reefs and \$8 million for alternative oyster culture.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Dang Kim

When the sediment diversion happens, I cannot work because the oysters will die. I need help like (any assistance) such as housing or moving because I could not live here anymore. I need help with finding jobs because the oysters will die. There's nothing at all if the oysters die! I need to pay bills and miscellaneous expenses, like groceries. If possible, please help me during my difficult times. Any assistance would be greatly appreciated.

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public

Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. I'm selling my vessel.

---

**Concern ID: 63135****Commenters state that they plan to sell their vessels.****Response ID: 16519**

Because the Project is projected to impact commercial fisheries, the CPRA has developed a range of measures in its Mitigation and Stewardship Plan to minimize adverse effects on commercial fisheries resources. The intention of CPRA's mitigation and stewardship measures is to establish sustainable fisheries for oysters and shrimp. These measures are described in more detail in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), and include funding allocations for new oyster public seed grounds, to enhance public and private oyster seed grounds, for Alternative Oyster Cultures, and for oyster broodstock reefs. In addition, the mitigation and stewardship measures are aimed at assisting fishers to continue in the industry through measures such as equipping shrimping vessels with refrigeration to extend the time the vessel can transit to and remain on the fishing grounds (or fish new areas), marketing and outreach support, workforce training, and grants to help offset costs of rigging vessels with different types of gear or to substitute gear to improve efficiency and lower costs.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. **Concern ID: 63135****Commenters state that they plan to sell their vessels.****Response ID: 16519**

Because the Project is projected to impact commercial fisheries, the CPRA has developed a range of measures in its Mitigation and Stewardship Plan to minimize adverse effects on commercial fisheries resources. The intention of CPRA's mitigation and stewardship measures is to establish sustainable fisheries for oysters and shrimp. These measures are described in more detail in the Mitigation and Stewardship Plan (Appendix R1 to the Final EIS), and include funding allocations for new oyster public seed grounds, to enhance public and private oyster seed grounds, for Alternative Oyster Cultures, and for oyster broodstock reefs. In addition, the mitigation and stewardship measures are aimed at assisting fishers to continue in the industry through measures such as equipping shrimping vessels with refrigeration to extend the time the vessel can transit to and remain on the fishing grounds (or fish new areas), marketing and outreach support, workforce training, and grants to help offset costs of rigging vessels with different types of gear or to substitute gear to improve efficiency and lower costs.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

When the freshwater diversion hits, it will negatively impact my livelihood. I want to change my job. I want to have a greenhouse in my backyard so I could grow fruits & vegetables to sell. I want you guys to build me a greenhouse.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public

Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

Denice Fazende

To Whom it May Concern,

My opinion of the Diversion is that, if this is built, the majority of the shrimping industry will be destroyed along with recreational fishing.

I am a commercial shrimper, 68 years old, my husband is 71 years old; this is our occupation for over 50 years. At our age, we cannot start over or buy bigger boats in order to go into deeper water.

What good is it to put refrigeration equipment on our boats when the Diversion will kill off the shrimp.

The majority of the shrimping industry in Louisiana is worked by people over 50 years of age who have done this all their lives; it had passed on to generation after generation, but now it will die off if this Diversion is built.

Thank you,

Denice Fazende

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement.

---

Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63134**

**Commenters suggested that job training would not be helpful for older workers or for those facing language or technological barriers. Direct payments should be considered for these fisherman that cannot change careers easily.**

**Response ID: 16518**

The Draft EIS considered how changes in the Project area both with and without implementation of the Project would potentially impact commercial fisheries, including shrimp, in Chapter 4, Section 4.14 (Commercial Fisheries). In response to public comments and resource agency input about proposed mitigation and stewardship measures, CPRA has expanded and refined the fisheries mitigation and stewardship measures since the release of the Draft EIS. CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries for oysters and shrimp rather than on compensating individual shrimpers or oyster harvesters for their particularized economic losses (see the Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). Without the Project, adverse impacts to fisheries would be expected over the next 50 years. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for fisheries in a large portion of the currently suitable habitat. With implementation of the diversion, the Project would cause significant adverse impacts to fisheries in the early years of the Project's operational life.

The revised mitigation and stewardship measures allocate approximately \$54 million to commercial fisheries, which supplement other restoration actions and programs being funded by the LA TIG and by the State through LDWF. This includes \$2 million for Workforce/Business training which can be used for older workers facing language or technical assistance barriers (see Appendix R1 to the Final EIS). Additionally, if the MBSD Project is permitted by the USACE and funded by the LA TIG, it would take approximately 5 years to complete construction of the Project and to begin operations. This relatively long period would provide affected senior fishers with the time and opportunity to decide how they want to

---

go forward, ranging from taking advantage of the adaptation opportunities offered through the Mitigation and Stewardship Plan to transition out of the fishing industry. The final fishery mitigation plan can be found in the Mitigation and Stewardship Plan (Appendix R1 to the EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)

- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62078**

**The proposed MBSD Project would cause the loss of Louisiana shrimp, oyster, crab and finfish production which would impact the seafood based supply chain of southern Louisiana, including corresponding impacts on restaurants in New Orleans and southern Louisiana.**

**Response ID: 16243**

---

The impacts raised by the commenters were considered in the Draft EIS. The EIS acknowledges in Chapter 3, Section 3.14.7 in Commercial Fisheries that the seafood industry represents a major source of jobs and income in Louisiana, which includes commercial harvesters, seafood processors and dealers, seafood wholesalers and distributors, and retail sales. Chapter 4, Section 4.14 Commercial Fisheries discusses regional economic impacts and community impacts on the shrimp, oyster, crab, and finfish fisheries, noting that communities with a high reliance on these landings may be most heavily impacted, and that indirect effects may include impacts to fish license holders, crew, dealers, suppliers, and seafood processors. While availability of shrimp and oysters from the basin would decrease with the Project, shrimp and oysters from Louisiana would continue to be available to restaurants, potentially at higher prices. Restaurants willing to pay a premium for local seafood would likely do so, and additional importing would likely also occur. Under both the Applicant's Preferred Alternative and the No Action Alternative, consumers in Louisiana would experience higher prices for locally caught seafood, or would consume additional imported shrimp over time. However, impacts would occur decades sooner under the Applicant's Preferred Alternative than under the No Action Alternative. This discussion has been added to Section 4.14 Commercial Fisheries in the Final EIS.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Commenters suggested that there will be detrimental impacts on the tourism economy and on restaurants, which are partly dependent on fisheries in the Barataria Basin. Commenters express concerns about adverse effects on Louisiana's attractiveness as a fishing area and place for swamp tours and authentic seafood.**

**Response ID: 16238**

EIS Chapter 4, Section 4.16.5.2 in Recreation and Tourism describes how the MBSD Project would impact the tourism economy that is dependent on fisheries. Relative to the No Action Alternative, the proposed Project would cause minor, permanent, adverse impacts on recreational fishing for spotted seatrout and moderate, permanent, beneficial impacts on recreational fishing for red drum, which are the most targeted species by recreational anglers in the basin (targeted in 87 percent of angler trips between 2014 and 2018). Other species that are targeted include southern flounder, largemouth bass, sheepshead, black drum, sand seatrout, gafftopsail catfish, and blue crab. Both adverse and beneficial impacts on these species are anticipated over time relative to the No Action Alternative, but are anticipated to have negligible effects on angling effort in the basin, as these species are targeted in less than 2 percent of angling trips. As described in the EIS, these changes would not substantially impact the broad tourism economy, which includes more than fisheries.

While availability of shrimp and oysters from the basin would decrease with the Project, shrimp and oysters from Louisiana would continue to be available to restaurants, potentially at

---

higher prices. Restaurants willing to pay a premium for local seafood would likely do so, and additional importing would likely also occur. Under both the Applicant's Preferred Alternative and the No Action Alternative, consumers in Louisiana would experience higher prices for locally caught seafood, or would consume additional imported shrimp over time. However, impacts would occur decades sooner under the Applicant's Preferred Alternative than under the No Action Alternative.

This discussion has been added to Section 4.14 Commercial Fisheries in the Final EIS.

Lap Bui

Do not let the freshwater out to Barataria Bay. I shrimp for a livelihood. That's what my income comes from. I just started to shrimp. I will need help to improve my gear, cooler, and other things for my boat. Any grant or the boat buy back will set me in a new life.

---

**Concern ID: 62782****A large number of commenters expressed general opposition to the proposed Project.****Response ID: 16364**

The commenter's opposition to the proposed Project is noted. The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
  - Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
-

- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Please don't let the freshwater out to Barataria Bay, we have to shrimp for a living. The buy back boat program will help out. I will need grant money to improve my boat.

---

**Concern ID: 62779****Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.****Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

David Nguyen

This project will negatively affect many fishermen and their families. The community as a whole will suffer. If this plan is necessary, then financial compensation is needed to support fishermen considering the drastic change.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public

Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Koung Lim

This restoration plan will have a great impact on my business. I am a fisherman and rely on saltwater crustaceans. With freshwater entering, it will kill the crabs and I will have no options for income. This has been my way of living for over 30 years. I plan on working for another 10 years to work on retiring. Please take this into consideration, lots of us living in the area all rely on saltwater.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the

final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40614**

Huy Ung

This restoration plan will greatly affect the way and only way I make my income. I am a fisherman and rely on the saltwater crustaceans. If freshwater enters, it will not only kill the crabs, but also the only job I have. This has been my way of living for 20 years and I plan on working another 20 years. Please take this into consideration that lots of people will be forced to be unemployed and we'd rather be working.

---

**Concern ID: 63136****Commenters were concerned that proposed mitigation does not include measures for crab fishermen.****Response ID: 16520**

As noted in Chapter 4, Section 4.10 Aquatic Resources of the Draft EIS, impacts on blue crab from the Project are anticipated to be neutral to beneficial. In addition, as stated in Section 4.14 Commercial Fisheries impacts on the blue crab fishery are anticipated to be negligible to minor beneficial. This determination considers potential impacts on blue crab abundance as well as the anticipated response from the commercial fishing industry. In response to public comments, CPRA has included \$1 million in funding for a crab marketing and outreach program and improvements to crab fishing gear as part of the Final Mitigation and Stewardship Plan (see Appendix R1 to the Final EIS).

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Philip Trinh

Once the Mid-Barataria Sediment Diversion starts, it will impact my job and livelihood. I am retired and because I don't get much from my retirement, I still work as a captain of a shrimp boat to support my family. If I lose my job or my income reduces, I would like financial assistance until I am financially stable to support my family.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A

summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Once the Mid-Barataria Sediment Diversion starts, it will impact my job and livelihood. I just recently retired but still work as a deckhand on a shrimp boat because I do not get much from my retirement. If I am not able to work anymore because there are no more brown shrimp, I would like for you to pay me at least half of what I will make as a deckhand until the shrimping industry gets back to normal.

If you start pouring freshwater into the Mid-Barataria Bay, that would kill the brown shrimp. I am a deckhand who works on a shrimp boat and this project will affect my livelihood once it starts. My income would be cut significantly and I would like for you to reimburse me my income at least 50% of what I would make.

I would like for USACE to know that if they pass the Mid-Barataria Sediment Diversion Project, it will for sure kill the brown shrimp or push them out to further water, which will negatively impact the inshore shrimp boats, which I am one of them. If this were to happen, I would like for you to buy me out because there is no way I could survive in the shrimping industry after this.

Gerry Helmer

I have been fishing shrimp, crab or oysters out of Barataria Basin for over 60 years. As a small boy, I've watched my father and his father fish in these same waters and grew up hearing the stories of their fathers doing the same. As a man., I have taught my son all that I know, and the tradition of fishing out of the Barataria Basin will live on. Key details were passed down from generation to generation on how to be a successful fisherman. Where to fish when the tides were high, the location of underwater snags to avoid., and how to anticipate where to go next. So in addition to my 60 years, I have 100 years of experience behind me. I have watched these waters long enough to know better.

When we heard of the proposed Mid Barataria Sediment Diversion, the local fisherman in this area knew one thing: this project would destroy our way of living. In south Louisiana, many families rely on the land and the water to make a living. From the hundreds of fisherman like myself, to the lucrative hunting and fishing industries that promote areas like Myrtle Grove and Lafitte as a Sportsman Paradise. This diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.

It's not only personal experience that support my opinion against the Mid Barataria Sediment Diversion, but several key factors. For one, the amount of freshwater pouring in to the Barataria Basin would disparately impact the salinity of the sounding estuaries of the area. How is this important? Various studies can prove that the higher the salinity of the water, the less mortality rate of brown and white shrimp and the higher percentage of reproduction. The introduction of nearly 6.5 BILLION cubic feet of freshwater PER DAY would significantly decrease the amount of shrimp and other seafood from reproducing, and would increase their mortality rate.

The next key factor is the water temperature. The Mississippi river starts in Lake Itasca, Minnesota, not very far from the Canadian border. Starting as a small glacial lake, the river winds its way down 2000 miles to deposit here. On average, the Mississippi river gets up to 79 degrees Fahrenheit at the height of the reproductive cycle of white shrimp. The Barataria Basin during that same time frame measures on average 91 degrees Fahrenheit. Over 10 degree difference makes significant adverse reactions: species of shrimp will be less likely to grow or survive, and of those that do, the Barataria Basin will no longer be the optimal breeding ground. The shrimp will move to a more favorable habitat.

It was reported that 75,000 cubic feet of freshwater and sediment will flood the Barataria Basin EVERY SECOND it is open. That's nearly 6.5 BILLION cubic feet per day. The sheer current of the water will force shrimp and other species out of the area, pushing them further in to the Gulf. Have this level of current continue for over a long period of time, these species will not return again.

When combined with a lower salinity, temperature of the water, and the current, the once prosperous Barataria Basin will be a void. Shrimp, crab, fish, oysters will be gone. With the absence of these species, other species below and above the food chain will also be impacted.

In conclusion, continuing with the Mid Barataria Sediment Diversion project will end the prosperity of the Barataria Basin. It will negatively impact the Commercial Fishing industries, along with other industries that benefit from the area as well. In addition, the environmental

impacts will effect this area for generations, and ensure the end to the traditions of south Louisiana and its families.

---

**Concern ID: 62009**

**The negative socioeconomic consequences would devastate southeast Louisiana, destroy people's livelihoods, displace people living near the diversion, and destroy property in the areas impacted by the proposed MBSD Project.**

**Response ID: 16207**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.13 Socioeconomics, discusses impacts of the proposed Project on the economy of Louisiana, including impacts on population, property values, and community cohesion. As noted in these sections, the proposed Project would have both beneficial and adverse socioeconomic impacts on the people and communities within the Project area. Minor to moderate, permanent adverse socioeconomic impacts are expected to occur near the immediate outfall area outside of flood protection. Minor to moderate, permanent, beneficial socioeconomic impacts are expected to occur in the west bank New Orleans area north of the diversion. Moderate to major, beneficial, temporary impacts from job creation and economic activity in the proposed Project area are anticipated. In addition, the Socioeconomics Technical Report in Appendix H1 provides additional details on these projected effects.

As part of its restoration planning efforts, the LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. The LA TIG believes the proposed MBSD Project is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net benefits of the proposed Project meet OPA's requirement of restoration, rehabilitation, replacement, or acquisition of the equivalent, of the natural resources injured by the DWH oil spill.

The commenters' concern regarding the potential impacts of the diversion were considered by CPRA and the LA TIG in developing the Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included mitigation to address and offset some of the projected impacts of the Project on fisheries and surrounding communities outside levee protection including providing structural mitigation and stewardship measures for increased water levels that are projected to result due to the Project, such as raising roads or improving bulkheads. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

In communities south of the Project site outside of federal levee protection where the proposed Project is projected to cause increased water levels, CPRA plans to take one of two approaches. In Myrtle Grove, CPRA is planning to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision. By improving this bulkhead, CPRA would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions without the Project. See Table 1 in the Final Mitigation and Stewardship Plan for

more details. CPRA plans to acquire a temporary right-of-way to permit improvement of the bulkhead, voluntarily or through eminent domain if necessary, from the property owners in the Myrtle Grove Marina Estates Subdivision.

In other communities south of the Project site outside of federal levee protection, from Woodpark south to the communities of Grand Bayou and Happy Jack, CPRA plans to elevate the portions of public roads outside of levee protection that provide access to each of these communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures

contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

Lanvin LeBlanc

They want to put diversions in; we are against. It will destroy my living (commercial shrimper). They spending all this money not realizing, there's better things to help our living. Will make shrimpers extinct. I am 63 years old, shrimping is my whole life.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)

- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62779**

**Implementation of the proposed MBSD Project would result in unacceptable adverse impacts on the fishing industry.**

**Response ID: 16361**

The commenter's opposition to the proposed Project is noted. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5 in Commercial Fisheries, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated from the proposed Project, primarily by accelerating the decline of species abundance that is also anticipated under the No Action Alternative after the year 2050. Benefits to the blue crab fishery and some finfish are also anticipated.

CPRA would implement a fishery mitigation plan, which has been revised for the Final EIS in response to public comments (see the Mitigation and Stewardship Plan, Appendix R1 of the Final EIS). The USACE is evaluating the projected impacts of the Project in the EIS. As part of its Section 10/404 permitting decision-making process, USACE also conducts a public interest review, which weighs the probable harms of the proposed action against its potential benefits. In making its NRDA decision, the LA TIG will evaluate Project alternatives using the OPA evaluation criteria in 15 CFR §990.54 and NEPA evaluation from the Final EIS, consider public input, and review proposed Project mitigation, stewardship, and monitoring and adaptive management actions.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Juan Tran

For the restoration plan for my opinion is that I need help from you guys during the season from May-Nov to support our low income during the period you guys start the project. Because that will affect our job as a fishermen because we can't trawl anymore or less income for us to support our family. So we need you guys help to grant us money to support our family during the shrimp season. That is my thought. Thank you

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. To Whom it May Concern,

The project of Mid-Barataria Sediment Diversion Draft Restoration will affect a lot with our business because we are fishermen (shrimper). We will need your help to support us during our season. Our income may lower during the season (May-Nov). You can help us with some grants to help us support our family during the season for bills and food. Thank you

USACE,

We as a majority of the citizens of our parish of Plaquemines are not in favor and are firmly in opposition to this project and are in favor of strategic placing of dredged material to fill the gaps to promote a more strategic approach to restoring our coastal infrastructure and marsh rehabilitation wildlife and seafood industry friendly...

Plaquemines Parish is NOT in favor nor do we want this in our parish... operate what you already have correctly and DREDGE DREDGE DREDGE...

Sincerely,

Rob Forshee

---

**Concern ID: 61966**

**The Draft EIS did not provide adequate alternative proposals to a sediment diversion. Dredging was not considered as a viable alternative to diversions in the Draft EIS. It would be much better money spent to dredge material from the Mississippi River or the Gulf of Mexico and create land immediately. These options would create land immediately not 20 or 30 years from now which would be too late. Dredging has numerous and immediate beneficial results that do not entail generating the negative impacts of adding fresh water.**

**Response ID: 15971**

As described in Chapter 2 Alternatives of the Draft EIS, an alternatives screening process was conducted where screening criteria were identified and a range of alternatives were considered, including other available coastal restoration tools and methods. The screening criteria incorporated key concepts from the purpose and need statement (Chapter 1, Section 1.4) including: reconnecting and reestablishing deltaic processes between the Mississippi River and the Barataria Basin in a sustainable manner; delivering sediment, fresh water, and nutrients in a sustainable manner; supporting the long-term viability of existing and planned coastal restoration projects; helping to restore habitat and ecosystem services in the northern Gulf of Mexico injured by the DWH oil spill consistent with the SRP/EA #3; and consistency with the Louisiana Coastal Master Plan. CPRA's purpose and need for the Project was built on analyses in the LA TIG's SRP/EA #3, including screening of strategic restoration approaches including sediment diversions, large-scale marsh creation, ridge restoration, and breakwater construction, and evaluation of a range of restoration strategies that could restore for injuries in the Barataria Basin. USACE generally focused on CPRA's purpose and need for the proposed Project and considered the public's and other perspectives, including input from the LA TIG and cooperating agencies (identified in Section 1.8 Agency Roles and Responsibilities) and input from representatives of the Council for Environmental Quality (CEQ) and the Federal Permitting Improvement Steering Council (FPISC), in its process to define the Project's purpose and need for the EIS. After examining whether the various alternatives met the screening criteria developed from the purpose and need, only large-scale sediment diversions with varying capacities were brought forward as alternatives to the Applicant's Preferred Alternative for detailed analysis in the Draft EIS. Details of the screening process including screening criteria are described in Chapter 2, Sections 2.2 through 2.5. The alternatives that did not meet the screening criteria were then eliminated

from further detailed analyses as described in Section 2.6 Summary of Alternatives Considered But Eliminated From Detailed Analysis. Refer to Appendix D2 Eliminated Alternatives Matrix of the EIS for further details on why these alternatives were not carried forward for further evaluation in the EIS.

Details specific to marsh creation alternatives and the reasons for elimination from detailed analysis in the EIS can be found in Chapter 2, Section 2.3 Step 1: Evaluation of Functional Alternatives. As described in Section 2.3.5 Large-Scale Marsh Creation, a marsh creation (dredge) alternative does not meet the purpose and need for the proposed Project; such an alternative does not deliver enough fresh water, nutrients, and fine sediments to sustain adjacent wetlands beyond the marsh creation area and over time would require periodic lifts and maintenance through placement of additional dredged material. Additional information related to the marsh creation alternative and reasons for elimination have been added to Section 2.3.5 for the Final EIS.

Additional detail can be found in the LA TIG's Restoration Plan explaining the LA TIG's evaluation of a range of alternatives and its identification of a Preferred Alternative (sediment diversion with variable flow up to 75,000 cfs). The LA TIG believes that the Preferred Alternative provides the right balance in terms of the likely benefits the Project would achieve and the risks related to collateral injury for its NRDA decision. This evaluation was completed by the LA TIG for its restoration planning efforts. USACE did not participate in that process.

CPRA and the LA TIG are pursuing multiple dredge-based restoration projects in Barataria Basin and throughout coastal Louisiana (for example, the Spanish Pass Ridge and Marsh Creation Project). More details can be found in Louisiana's Coastal Master Plan and on the LA TIG's web page (see <https://la-dwh.com/restoration-plans/>).

Drew Martin

The project would restore and sustain a significant amount of wetland habitat—tens of thousands of acres—and the resources that depend on them, over the next several decades. At peak capacity, the proposed preferred alternative would transport up to 75,000 cubic feet per second of freshwater and its sediment and nutrients—harnessing nature through engineering to re-establish the natural process that originally built Louisiana's coastal wetlands.

Regards,

Drew Martin

Lake Worth Beach, Fl. 33460

---

**Concern ID: 63340**

**The proposed Project would restore the natural processes of the previous river inputs into the Barataria Basin, which would result in wide-ranging benefits, including the creation of wetlands (important wildlife habitat and carbon sequestration), protecting coastal communities from storm events, and economic benefits from the general protection and maintenance of the proposed Project area.**

**Response ID: 16298**

The commenter's support for the proposed Project is noted. As explained in the Draft EIS, the proposed Project would result in both beneficial and adverse impacts on the extent of wetlands, protection from storm events, and the economy, depending on the wetland area, community, and industry considered; see Chapter 4, Sections 4.6 Wetland Resources and Waters of the U.S., 4.20 Public Health and Safety, Including Flood and Storm Hazard Risk Reduction, 4.13 Socioeconomics, and 4.14 Commercial Fisheries.

Sovann Cheap P

I don't remove the drainage of fresh water into the lake because it causes the loss of shrimp resulting in the impact to the family livelihood.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRa has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRa has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Sieng Suong

My name is Sieng Suong. I earn a living as shrimp fisherman and when I get the news that the government told the fishermen to have to drain fresh water into the sea I know that the fresh water will be greater than the salty water and if there are no shrimps in the future and further onwards, my family and I have consulted with each other what we had to do since we get older and older and if we go to work at a company, we would not be accepted and on the other hand, I don't have language competency and I also get sick with multiple illnesses thus I would like to ask the government to help with raising me up until I retire. Thanks.

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)

- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments:

- I don't want the Diversion to open because it will affect shrimping.
- For the months I cannot work and do not have income, I request that you compensate my expenses.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Comments: As a wife as well as a worker, along with my husband, when your agency's project was announced, all of us in general and my family in particular were shocked. We are also worried because we do not understand much English. Having to change occupations is a hardship for me and my family, and a very big yearly loss for all of our families. Who will assure a future for us???

---

**Concern ID: 63944**

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix

R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: This is not at all what we want. While we are working to raise our families, if this project proceeds, we will all feel very worried because most of us are already old, so there's no way we can change our occupation. Therefore, I hope that your agency has the authority to help us and provide favorable conditions for us fishermen to continue to work and raise our families.

1. For example, purchase good equipment for us to work.
2. Compensate for yearly losses.

Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Sang Nguyen

Comments: My name is Sang Nguyen. I make my living from the sea and shrimping. Presently business is down - the price of oil has increased and the price of shrimp has decreased. If in the future any surprises or troubles in my occupation occur, I hope that your agency can assist me. Thank you very much.

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A

summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

Comments:

I don't want the Sediment Diversion to proceed.

+ Because the Sediment Diversion will cause the shrimp to disappear. If freshwater is released, the shrimp cannot reproduce, and the lakes and waterways will all dry up, narrowing the fishing grounds.

+ The Sediment Diversion project will not help me. I need assistance with money for expenses (fuel).

+ And regularly clearing (making deeper) the canals and channels going out to sea or between lakes.

Comments: If any problems arise, I want the government to assist me with everything so that life will be like before.

---

**Concern ID: 63944**

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS

Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: To the office of the government, Dear sir or madam, In the future the government plans to release freshwater into the lake and sea, which will greatly affect the seafood. We fishermen make our living from the sea. If freshwater is released into the lake and the sea, the fishing industry will be affected long-term. My family and children live and go to school thanks to income from fishing. You provide conditions to help us. But none of these conditions are helpful.

- 1) My ship is very small. A freezer cannot be stored on it.
- 2) It is hard to find [?] for a big ship.
- 3) Do nails? We are old. How can we do that?
- 4) Shrimp that are caught cannot be held for long for distributing to markets and restaurants! Therefore, I hope that you will have better long-term assistance in the future. I and my family thank you.

Tai T Nguyen

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSF Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)

- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Comments: I have worked in shrimping for over 20 years. My family lives on this income, to pay for the children's school fees, auto insurance and the house. If in the future the land is repaired or freshwater is released and the shrimp die, or for some other reason the number of shrimp is reduced, then I would ask the government to compensate my family with an amount of money to cover expenses for about 10 to 12 years. Thank you very much.

Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: Provide favorable conditions so that I can complete my studies, if my parents are unable to do so anymore because they are affected by the project.

---

**Concern ID: 63944**

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS

---

Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Jennifer Tran

Comments: My family has worked in shrimping for over 20 years. My family lives on this income, to pay for the children's school fees, auto insurance and house. If in the future the land is repaired or freshwater is released and the shrimp die, or for some other reason the number of shrimp is reduced, then my family would ask the government to compensate my family with an amount of money to cover expenses for about 10 to 12 years. Thank you very much.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

\*I need income and money to repair my ship if any problems arise.

---

**Concern ID: 63944**

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and

Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Tinh Nguyen

Comments: My shrimping occupation will be affected long-term. For instance, the 2010 BP oil spill is still affecting me now.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRa has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRa has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS

---

Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: My comments: From long ago until now I have fished in the lake, my ship is small and I can only fish in the lake. If the Sediment Diversion is built at the south lake, the Brown shrimp will be lost. If the shrimp die, I will no longer be able to work. I will lose lots of income because of the freshwater and the Diversion. I want to retire and not work anymore. [I request that] the government buys back my ship and licenses. I will retire and not work on the sea anymore. That's all I have to say.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: I make my living from the sea. I am only able to live thanks to the water. I request the government to not release freshwater. That is the only assistance from the government I request! I am old. I can't do anything else. I must ask my children to help pay for the house, insurance and taxes. Do not release freshwater because there will be no more shrimp for me to do my job. I cannot live if there are no shrimp.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRa has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRa has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)

- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: I have made my living from the sea for 30 years. Thanks to this I have been able to earn money to pay for my house, insurance, taxes, and various other things. I only work on the sea; I don't work on land. The government can assist with various things, just don't make the water spill over / this Sediment Diversion open up. Do not release freshwater! Because there will be no more shrimp! How can I make a living or provide for my house or family as a seaman without any shrimp?!

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)

- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public

Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: I request assistance from the state for the shrimping industry. Assist with the diminishing income of the fishermen.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based

organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

1) We support and do not oppose the policies the government proposes, such as building a Diversion to prevent landslides or erosion.

But we fishermen only have one occupation to make a living. If this matter causes difficulties for fishermen's livelihoods then the government must compensate the fishermen for damages, to meet living expenses.

2) Assistance with money to improve fishing nets for catching shrimp to have a better income for when life becomes difficult and expenses increase.

---

Comments: If the Diversion proceeds, then my comment is that currently I have a 43 ft. ship with one engine, so it cannot go out to sea. I would need a bigger 47 ft. ship with two engines so I can go out to sea and fish.

---

**Concern ID: 63944**

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and

Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and

Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: According to me, compensating the fishing industry by creating fishing work is very easy (for example) increasing the price of shrimp and maintaining the price of diesel (oil) and occupational supplies. I ask the authorities to consider this for our fishermen (who love their work) and hope that the [project] does not proceed do we can earn a living and raise our families in peace.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiessy, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: I am a boat owner who doesn't know English. If we face various difficulties that affect the work we are doing, I hope the authorities will assist us with compensation for our yearly income, so that our lives have less hardships.

---

**Concern ID: 63944**

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and

Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

Minh Chau

Comments:

- 1.) Danger of extinction of shrimp in particular, and of all seafood in general for fishermen and consumers.
- 2.) Danger of flooding, property damage and home damage to the community, neighboring states and residents.
- 3.) I want to continue the tradition. I am old and don't want to learn another occupation. During the time needed to learn I won't have an income.
- 4.) I don't agree with the above program. It might help us now, but what about in the long-term?

---

**Concern ID: 62009**

**The negative socioeconomic consequences would devastate southeast Louisiana, destroy people's livelihoods, displace people living near the diversion, and destroy property in the areas impacted by the proposed MBSD Project.**

**Response ID: 16207**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.13 Socioeconomics, discusses impacts of the proposed Project on the economy of Louisiana, including impacts on population, property values, and community cohesion. As noted in these sections, the proposed Project would have both beneficial and adverse socioeconomic impacts on the people and communities within the Project area. Minor to moderate, permanent adverse socioeconomic impacts are expected to occur near the immediate outfall area outside of flood protection. Minor to moderate, permanent, beneficial socioeconomic impacts are expected to occur in the west bank New Orleans area north of the diversion. Moderate to major, beneficial, temporary impacts from job creation and economic activity in the proposed Project area are anticipated. In addition, the Socioeconomics Technical Report in Appendix H1 provides additional details on these projected effects.

As part of its restoration planning efforts, the LA TIG recognizes that there are clear tradeoffs among the alternatives in terms of the likely benefits achieved and risks related to collateral injury and public health and safety. The LA TIG believes the proposed MBSD Project is critical to achieving the overall goals of the Wetlands, Coastal, and Nearshore Habitats Restoration Type in the Final PDARP/PEIS, which include providing benefits across the interconnected northern Gulf of Mexico ecosystem, and placing particular emphasis on coastal and nearshore habitat restoration in the historical Mississippi River Delta plain in Louisiana. While recognizing the risks for collateral injury, the LA TIG believes the net benefits of the proposed Project meet OPA's requirement of restoration, rehabilitation, replacement, or acquisition of the equivalent, of the natural resources injured by the DWH oil spill.

The commenters' concern regarding the potential impacts of the diversion were considered by CPRA and the LA TIG in developing the Mitigation and Stewardship Plan (Appendix R1) issued with the Draft EIS. The Mitigation and Stewardship Plan issued with the Draft EIS included mitigation to address and offset some of the projected impacts of the Project on fisheries and surrounding communities outside levee protection including providing structural

mitigation and stewardship measures for increased water levels that are projected to result due to the Project, such as raising roads or improving bulkheads. Since publication of the Draft EIS and in response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1).

In communities south of the Project site outside of federal levee protection where the proposed Project is projected to cause increased water levels, CPRA plans to take one of two approaches. In Myrtle Grove, CPRA is planning to improve the bulkhead around the Myrtle Grove Marina Estates Subdivision. By improving this bulkhead, CPRA would reduce the incidence of tidal flooding in the Myrtle Grove Marina Estates Subdivision compared to future conditions without the Project. See Table 1 in the Final Mitigation and Stewardship Plan for more details. CPRA plans to acquire a temporary right-of-way to permit improvement of the bulkhead, voluntarily or through eminent domain if necessary, from the property owners in the Myrtle Grove Marina Estates Subdivision.

In other communities south of the Project site outside of federal levee protection, from Woodpark south to the communities of Grand Bayou and Happy Jack, CPRA plans to elevate the portions of public roads outside of levee protection that provide access to each of these communities. In addition, CPRA plans to acquire the right to add and/or increase water flow on landowners' properties through the purchase of Project servitudes from landowners in these communities. The Project servitude would allow CPRA to flow water over the landowner's property at heights and durations that are greater than would be the case in the future without the Project. The Project servitude would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the landowner to acquire this servitude. If the CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. CPRA would compensate those landowners for the value of the Project servitude. A property owner would be able to use the funds received in exchange for the servitude to implement flood mitigation measures. As an alternative to these measures, CPRA may consider purchasing an impacted property outright (that is, in fee) if requested by the owner. Decisions about whether to purchase a property would be made on a case-by-case basis depending on the particular circumstances.

These measures are described in CPRA's Final Mitigation and Stewardship Plan (Appendix R1 to the Final EIS).

Structural measures in CPRA's Mitigation and Stewardship Plan are not included in CPRA's DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation. Such permits are not guaranteed and would take time for USACE and other regulating agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range

of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62071**

**The proposed MBSD Project would negatively impact the seafood industry, including shrimp, crab, and oyster fisheries. Commercial fisheries are directly linked to the favorable conditions of the estuary and its resources being healthy, abundant, and consistently available but that would be forever changed by the introduction of polluted Mississippi River water.**

**Response ID: 16241**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated under the Applicant's Preferred Alternative.

The LA TIG's Final Restoration Plan also acknowledges these impacts, and notes that such impacts are also anticipated under the No Action Alternative, but on a longer timeline. The Restoration Plan also notes that some benefits to the blue crab fishery and some finfish are anticipated.

CPRA has developed a plan to mitigate the potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to public comments, CPRA has expanded and refined the Mitigation and Stewardship Plan in the Final

---

EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA

TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 62227**

**The diversion would flood access roads, damage vehicles, cause siltation/sludge, cause cancellation of flood insurance, inundate cemeteries, stress levees, impact provision of emergency services, and increase the cost to raise homes, slabs and wharves.**

**Response ID: 15820**

Draft EIS Chapter 4, Section 4.13.5 in Socioeconomics and 4.20.4 in Public Health and Safety discusses the increased flooding impacts outside of federal levee systems, including road inundation and infrastructure damage, anticipated to be caused by the operation of the diversion. Sections 4.13.5.1.2.1 and 4.13.5.3.2.1 in Socioeconomics of the Final EIS has been updated to include potential impacts such as vehicle damage, accumulation of siltation and sludge, cemetery inundation and interruption of emergency services. Recognizing the potential for these impacts, CPRA has developed a comprehensive inventory of potentially affected properties and CPRA's land services planning is progressing to enable CPRA to mitigate for increased water levels caused by the proposed Project. CPRA's mitigation and stewardship measures would take the form of: (1) monitoring and adaptive management of operations, (2) structural mitigation (for example, elevating public roadways, utility upgrades, water control structures, or other structural measures to partially offset additional inundation), (3) paying landowners for a Project servitude, and/or (4) providing landowners with funds to elevate their homes and other structures on private properties.

In the communities south of the diversion starting at Woodpark and continuing south to Grand Bayou and Happy Jack, CPRA would acquire Project servitudes. A Project servitude would allow CPRA to flow water over the landowner's property at heights and duration that are greater than would be the case in the future without the Project. CPRA would compensate those landowners for the value of the Project servitude, which would be recorded against title to the property and would run with the land. CPRA would attempt to negotiate with the affected landowner to acquire the Project servitude. If CPRA and the landowner were unable to reach a negotiated agreement, CPRA would exercise its eminent domain authority to purchase the Project servitude. Property owners would be able to use the funds from the Project servitude to implement additional flood mitigation and stewardship measures. These mitigation and stewardship measures are described in the Final Mitigation and Stewardship Plan, Appendix R1 to the Final EIS.

Structural measures in the Mitigation and Stewardship Plan are not included in CPRA's MBSD DA permit application and if this permit is approved, would not be authorized under the DA permit. Many of these structural measures would require additional DA and other permits prior to installation; such permits are not guaranteed and would take time for USACE and other agencies to process.

A DA permit does not convey any property rights and does not authorize any injury to property or invasion of rights or any infringement of Federal, state or local laws or regulations. The applicant's signature on an application is an affirmation that the applicant possesses or will possess the requisite property interest to undertake the activity proposed in the application.

The Final EIS concludes that the proposed Project would not have impact on the availability of flood insurance, but may cause an increase in flood insurance premium for some properties. See Section 4.13.5.3.2.1 in Socioeconomics and Section 4.15.4.2.3 and 4.15.5.1.2 in Environmental Justice of the Final EIS for further discussion of the potential effect of the Project on the cost of flood insurance. Due to the evolving implementation of FEMA's Risk Rating 2.0, it is difficult to predict whether or by how much premiums may change.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA and the LA TIG intend to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40694**

Phong Nguyen

Comments: [English: My name is Phong Nguyen. I'm fisherman over 15 year.] I don't know what else to say. If the government builds the Sediment Diversion, freshwater will pour into the sea and flood it. This will greatly affect residents, especially the fishing and seafood industries. Each year I make enough income to raise my family, but if the government builds the Diversion, my income will slowly become worse and worse, and my sea occupation will no longer exist. If there is a better solution than releasing freshwater, or another way, etc. But if there is no alternative to the Sediment Diversion, then I ask that the government assists and helps us, because we have only this sea occupation, or give fair compensation

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)

- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for such improvements), improving facilities like docks, providing money for lost income,**

---

**offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.**

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in

---

those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Comments: My name is Anh Tran. I have made my living from the sea since 1997 until now. My family only does this one occupation. If the government releases freshwater, we will be greatly affected. A low income will affect my children's studies, and my family's lives will have many hardships. I ask that the government re-considers allowing us to continue our sea occupation, because our family has no other occupation besides this one. We are also old. If the government releases freshwater, our sea occupation will suffer greatly, and we will need assistance and compensation from the government.

---

**Concern ID: 62077**

**The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)

- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 64171**

**Comments were received suggesting that the MBSD would have negative impacts on the fishing industry due to further accelerations in exits from the industry especially for older members of the workforce for whom job retraining may not be as easily undertaken and the fact that there are less young fisherman coming into the fishing industry to replace the aging fisherman. The invaluable traditional ecological knowledge that has been passed down from generations could be lost.**

**Response ID: 16267**

Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discusses impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, moderate to major adverse impacts to shrimp and oyster fisheries in the Project area are anticipated. Section 4.14.4.2 Applicant's Preferred Alternative discusses the potential behavioral responses of fishermen to changes in species abundance, including the potential for substitution of species and need for gear upgrades, increasing the length of fishing trips, as well as exiting the industry.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)

- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. **The proposed MBSD Project would put an economic burden on local commercial fisherman and related businesses including those who fish for oysters, shrimp, crawfish, crabs, and alligators. Altogether, Louisiana's commercial fisheries provide approximately 35,000 jobs for Louisiana residents and produce and sell \$2.4 billion of seafood annually. Fisherman would lose their source of income and livelihood. The diversion would displace so many Louisiana workers, and would further dampen a weak south Louisiana economy.**

**Response ID: 16242**

The issues raised by the commenters were considered in the Draft EIS. Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discussed impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, as compared to the No Action Alternative, moderate to major adverse impacts on shrimp and oyster fisheries in the Project area are anticipated with the proposed Project. Negligible to minor beneficial impacts are anticipated on blue crab and white shrimp, and moderate beneficial impacts are anticipated on Gulf menhaden, under the Applicant's Preferred Alternative. As discussed in Chapter 4, Section 4.9.4.2.2.3 in Terrestrial Wildlife and Habitat, minor beneficial impacts are anticipated on alligator populations under the Applicant's Preferred Alternative. The EIS acknowledges that communities reliant on employment and expenditures associated with the shrimp and oyster fisheries would be adversely impacted by the proposed MBSD Project.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)

- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation and stewardship measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 63131**

**Mitigation must be adequate, clearly explained and developed through collaboration with impacted communities. Commenters suggested multiple examples of mitigation measures, including: developing a formula to calculate lost income, providing financial and technical assistance for alternative business ventures, providing job training for alternate jobs, tuition assistance for fishers and their children, providing funding for larger boats and/or boat improvements like refrigeration (including maintenance for**

---

such improvements), improving facilities like docks, providing money for lost income, offering boat, license and job buyout programs, loan programs, providing subsidies for things like fuel, R&D for collaborating with fishers to innovate and change the way their operations work, creating a MBSD Fisheries Mitigation Fund, offering targeted mitigation for inshore fishers who rely on brown shrimp and could not easily transition to catching white shrimp (LDWF, 2016), and providing low cost internet.

**Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016.**

**Response ID: 16515**

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the Project through public meetings and community-based organizations to solicit input on mitigation strategies. A summary of these public engagement meetings and outreach efforts is in Chapter 7 (Public Involvement) of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the Project is approved and funded.

The literature cited by a commenter, (Bourgeois, M., K. Chapiesky, L. Landry, J. Lightener, and J. Marx. 2016. Louisiana Shrimp: Fishery Management Plan. Louisiana: Louisiana Department of Wildlife and Fisheries, Office of Fisheries. Updated April 11, 2016) or (LDWF 2016), was considered as part of the analysis set forth in the Draft EIS and as part of developing the Mitigation and Stewardship Plan.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix

---

R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

---

**Concern ID: 64171**

**Comments were received suggesting that the MBSD would have negative impacts on the fishing industry due to further accelerations in exits from the industry especially for older members of the workforce for whom job retraining may not be as easily undertaken and the fact that there are less young fisherman coming into the fishing industry to replace the aging fisherman. The invaluable traditional ecological knowledge that has been passed down from generations could be lost.**

**Response ID: 16267**

Chapter 4, Section 4.14.4.2 in Commercial Fisheries of the Draft EIS discusses impacts of the proposed MBSD Project on commercial fisheries. As summarized in Section 4.14.5, moderate to major adverse impacts to shrimp and oyster fisheries in the Project area are anticipated. Section 4.14.4.2 Applicant's Preferred Alternative discusses the potential behavioral responses of fishermen to changes in species abundance, including the potential for substitution of species and need for gear upgrades, increasing the length of fishing trips, as well as exiting the industry.

CPRA has developed a plan to mitigate some potential adverse Project impacts. The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. In response to comments, CPRA has expanded and refined this Mitigation and Stewardship Plan in the Final EIS (Appendix R1). The Final Mitigation and Stewardship Plan includes the following measures aimed at supporting and sustaining the fishing industry:

---

- Providing financial and technical assistance for alternate business ventures and job training for alternate jobs (Workforce/Business training -- \$2 million allocation)
- Funding for shrimp vessel improvements, including, potentially, larger boats, and improving docks (shrimp Vessel/Facility improvements -- \$15 million allocation)
- Establishing new oyster seed grounds (\$4 million allocation)
- Enhancing public and private oyster grounds (\$15 million allocation)
- Enhancing oyster broodstock reefs (\$4 million allocation)
- R&D for collaboration with fishers to innovate and change the way their operations work (Alternative Oyster Culture techniques -- \$8 million allocation)
- Marketing and outreach support (\$5 million allocation including oysters, brown shrimp, finfish, and crab).

CPRA engaged the fishing community potentially impacted by the proposed Project through public meetings and community-based organizations to solicit input on mitigation and stewardship strategies. A summary of these public engagement meetings and outreach efforts can be found in Chapter 7 Public Involvement of the Final EIS. CPRA plans to continue utilizing community-based organizations to help ensure that diverse populations become aware of and take advantage of the mitigation measures that CPRA would offer if the proposed Project is approved and funded.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in the Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring, or adaptive management measures are required by USACE as part of its approval of the proposed Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

**Correspondence ID:40700**

Que Le

Comments: I am old. I cannot work. I want to quit my fishing job and retire. If too much freshwater is released, my small ship cannot catch shrimp. I cannot change to a bigger ship, because I am alone. I want the government to provide compensation. For example, if in one month I earn \$5,000 then I would need a bit more compensation.

Comments: I request weekly assistance until my retirement.

---

**Concern ID: 63944**

**Some commenters were concerned about potential hardships that would be caused by the diversion and made personal requests for direct financial assistance, job training, boat repairs, or boat upgrades to allow them to fish in more distant fishing grounds.**

**Response ID: 16584**

The Draft EIS evaluates how the Project would impact commercial, recreational, and subsistence fishers and how it would affect disadvantaged, minority and low-income communities as compared to No Action conditions in Chapter 4, Sections 4.10.4.5 Aquatic Resources, Key Species, 4.14.4 Commercial Fisheries, Operational Impacts, 4.15.4 Environmental Justice, Operational Impacts, Commercial Fishing and Subsistence Fishing and Hunting, and Recreational Fishing and Hunting and 4.16.5 Recreation and Tourism, Operational Impacts, Recreational Fishing. Without the Project, adverse impacts to fisheries would be expected during the 50-year period evaluated in the EIS. Prior to 2050, those changes would be minor and gradual. After 2050, more drastic changes are anticipated, leading to a steep decline in suitability for some fisheries in a large portion of the currently suitable habitat. By contrast, with implementation of the diversion, the Project would cause significant adverse impacts to some commercial fisheries in the early years of the Project's operational life.

To address some of the adverse impacts to fishers and fisheries projected to be caused by the proposed diversion, CPRA has prepared a Mitigation and Stewardship Plan (see CPRA's Mitigation and Stewardship Plan in Appendix R1 to the Final EIS). CPRA's mitigation and stewardship strategies and expenditures focus on establishing sustainable fisheries rather than on compensating individual fishers for their particularized economic losses. In response to public comments and agency input about proposed mitigation and stewardship efforts, CPRA has expanded and refined its mitigation and stewardship measures.

The Draft Mitigation and Stewardship Plan (Appendix R1 to the Draft EIS) included measures focused on establishing a sustainable fishing industry in the long term, rather than measures for compensating the short-term economic losses of individual fishers. CPRA's Mitigation and Stewardship Plan includes many of the programs suggested by the commenters, including:

- \$15 million for vessel and facility improvements
- \$2 million in workforce and business training

See Appendix R1 to the Final EIS for more details.

The Mitigation and Stewardship Plan and the Monitoring and Adaptive Management (MAM) Plan provided in Draft EIS Appendix R were submitted by CPRA and represent a range of potential mitigation, stewardship, monitoring and adaptive management measures (collectively, measures). At the time of publication of the Draft EIS for public review, Appendix R contained draft Plans and CPRA had not identified which of the measures contained in those Plans it intended to implement. CPRA expanded and refined the Final Mitigation and Stewardship Plan in response to community and resource agency input. The Final EIS Appendix R contains the final Plans and specifies which measures CPRA intends to

implement. Generally, impact determinations discussed in the EIS represent anticipated Project effects without implementation of these measures except in instances where such measures are identified in the discussion. If any mitigation, monitoring or adaptive management measures are required by USACE as part of its approval of the Project, such measures would be required as special conditions of the Department of the Army (DA) Section 10/404 permit and would be listed in the permit, if one is issued. Implementation of specific measures contained in either Plan, but not included in the Section 10/404 permit as special conditions, would not be required by USACE. USACE does not know whether any particular measure that is not a DA permit condition would be implemented. Measures that USACE currently contemplates as conditions of a DA Section 10/404 permit, if one is issued, are provided in Chapter 4, Section 4.27 Mitigation Summary of the EIS.

The LA TIG explains in Section 1.5 of the Final Restoration Plan that it anticipates requiring implementation of the Mitigation and Stewardship Plan, MAM Plan, and Marine Mammal Intervention Plan as components of the proposed Project, if the Project is approved by the LA TIG for funding. Decisions regarding which measures would be required as part of the LA TIG's funding decision would be set forth in the LA TIG Record of Decision related to the proposed Project.

## ENVIRONMENTAL PROTECTION AGENCY

[FRL-10021-24-OA]

### Local Government Advisory Committee and Small Communities Advisory Subcommittee: Request for Nominations

**AGENCY:** Environmental Protection Agency.

**ACTION:** Notice of request for nominations.

**SUMMARY:** The U.S. Environmental Protection Agency's (EPA) Office of Intergovernmental Relations invites nominations from a diverse range of qualified candidates to be considered for appointment to its Local Government Advisory Committee (LGAC) and Small Communities Advisory Subcommittee (SCAS). LGAC and SCAS members and qualified nominees hold elected or appointed positions with local, tribal, state, and territorial governments. This notice solicits nominations to fill up to 30 memberships on EPA's LGAC and 10-15 on the SCAS throughout 2021.

**DATES:** To be considered for 2021 appointments, nominations should be submitted by April 16, 2021. Nominations are reviewed on an ongoing basis.

**ADDRESSES:** Submit nominations electronically to [LGAC@epa.gov](mailto:LGAC@epa.gov) with a

subject heading of 'LGAC 2021 NOMINATION.'

#### FOR FURTHER INFORMATION CONTACT:

Paige Lieberman, the LGAC Designated Federal Officer at (202) 564-9957/[LGAC@epa.gov](mailto:LGAC@epa.gov).

**SUPPLEMENTARY INFORMATION:** The LGAC is chartered under the Federal Advisory Committee Act (FACA), Public Law 92-463, to advise the EPA Administrator on environmental issues impacting local governments. The Small Communities Advisory Subcommittee is the LGAC's standing subcommittee to advise on issues of concern to smaller communities. Members of LGAC and SCAS will provide advice and recommendations on a broad range of issues related to our shared goals of promoting and protecting public health and the environment. These issues may include: Advancing environmental justice; ensuring access to clean air and water; reducing greenhouse gas emissions; bolstering resilience to the impacts of climate change; and limiting exposure to dangerous chemicals and pesticides.

Viable candidates must be current elected or appointed officials representing local, state, tribal or territorial governments. Additional criteria to be considered may include: Experience with multi-sector partnerships; coalition-building and grassroots involvement; involvement and leadership in national, state or regional intergovernmental associations; knowledge of and commitment to promoting environmental protection and public health issues, including those of communities of color and low-income communities; and leadership and implementation of federal, state, local, tribal, territorial and international environmental programs, including permitting programs, Brownfields, Superfund clean-up, air and water quality, solid waste management, emissions reduction, resiliency and adaptation, sustainability, and environmental justice programs. Diversity in vocational/career/volunteer background, professional and community affiliations, and demonstrated familiarity with local, regional, national, and international environmental issues, also may be considered.

LGAC members are appointed for 1-2-year terms and are eligible for reappointment. The Committee meets multiple times a year, typically with at least one in-person meeting. EPA is committed to prioritizing members' health and safety during the COVID-19 pandemic and will follow CDC guidelines when considering any in-

person meeting. The Administrator may ask members to serve on Subcommittees and Workgroups to develop reports and recommendations to address specific policy issues, reflecting the priorities of the Administration. The average workload for members is approximately 5 hours per month. While EPA is unable to provide compensation for services, official Committee travel and related expenses (lodging, etc.) will be fully reimbursed.

**Nominations:** Nominations must be submitted in electronic format. To be considered, all nominations should include:

- Current contact information for the applicant/nominee, including name, organization (and position within that organization), current work address, email address, and daytime telephone number;
- Brief statement describing the nominee's interest in serving on the LGAC;
- Resume and/or short biography (no more than 2 pages) describing professional, educational, and other pertinent qualifications of the nominee, including a list of relevant activities as well as any current or previous service on advisory committees; and,
- Any letter(s) of recommendation from a third party (or parties) supporting the nomination. Letter(s) should describe how the nominee's experience and knowledge will bring value to the work of the LGAC.

Other sources, in addition to this **Federal Register** notice, may be utilized in the solicitation of nominees. EPA expressly values diversity, equity, and inclusion, and encourages the nominations of elected and appointed officials from diverse backgrounds so that the LGAC and SCAS look like America and reflect the country's rich diversity. Individuals may self-nominate.

Dated: March 2, 2021.

### National Environmental Justice Advisory Council; Notification of Virtual Public Meetings

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notification for a series of public meetings.

**SUMMARY:** Pursuant to the Federal Advisory Committee Act (FACA), the U.S. Environmental Protection Agency (EPA) hereby provides notice that the

National Environmental Justice Advisory Council (NEJAC) will meet on the dates and times described below. All meetings are open to the public. Members of the public are encouraged to provide comments relevant to the specific issues being considered by the NEJAC. For additional information about registering to attend the meeting or to provide public comment, please see "REGISTRATION" under **SUPPLEMENTARY INFORMATION**. Due to the limit of 500 participants, attendance will be on a first-come, first served basis. Registration is required.

**DATES:** The NEJAC will hold a series of virtual public meetings on Wednesday, March 24, 2021, Thursday, May 6, 2021, and Thursday, June 17, 2021, from approximately 1:00 p.m. to 7:00 p.m., Eastern Daylight Time each day. The meeting discussions will focus on several topics including, but not limited to, EPA administration transitions priorities, and discussions and deliberations of a charge related to the reuse and revitalization of Superfund and other contaminated sites. A public comment period relevant to the specific issues will be considered by the NEJAC at each meeting (see **SUPPLEMENTARY INFORMATION**). Members of the public who wish to participate during the public comment period must register by 11:59 p.m., Eastern Daylight Time, one (1) week prior to each meeting date. **FOR FURTHER INFORMATION CONTACT:** Karen L. Martin, NEJAC Designated Federal Officer, U.S. EPA; email: [nejac@epa.gov](mailto:nejac@epa.gov); telephone: (202) 564-0203. Additional information about the NEJAC is available at <https://www.epa.gov/environmentaljustice/national-environmental-justice-advisory-council>.

**SUPPLEMENTARY INFORMATION:** The Charter of the NEJAC states that the advisory committee "will provide independent advice and recommendations to the Administrator about broad, crosscutting issues related to environmental justice. The NEJAC's efforts will include evaluation of a broad range of strategic, scientific, technological, regulatory, community engagement and economic issues related to environmental justice."

Registration: Individual registration is required for each virtual public meeting. Information on how to register is located at <https://www.epa.gov/environmentaljustice/national-environmental-justice-advisory-council-meetings>. Registration for the meetings and to speak for public comment will close at 11:59 p.m., Eastern Daylight Time, one (1) week prior to meeting date. When registering, please provide your name, organization,

city and state, and email address for follow up. Please also indicate whether you would like to provide public comment during the meeting, and whether you are submitting written comments at time of registration.

#### A. Public Comment

Individuals or groups making remarks during the public comment period will be limited to three (3) minutes. To accommodate the number of people who want to address the NEJAC, only one representative from each community, organization, or group will be allowed to speak. Written comments can also be submitted for the record. The suggested format for individuals providing public comments is as follows: name of speaker; name of organization/community; city and state; and email address; brief description of the concern, and what you want the NEJAC to advise EPA to do. Written comments received by the registration deadline, will be included in the materials distributed to the NEJAC prior to the meeting. Written comments received after that time will be provided to the NEJAC as time allows. All written comments should be sent to Karen L. Martin, EPA, via email at [nejac@epa.gov](mailto:nejac@epa.gov).

#### B. Information About Services for Individuals With Disabilities or Requiring English language Translation Assistance

For information about access or services for individuals requiring assistance, please contact Karen L. Martin, at (202) 564-0203 or via email at [nejac@epa.gov](mailto:nejac@epa.gov). To request special accommodations for a disability or other assistance, please submit your request at least fourteen (14) working days prior to the meeting, to give EPA sufficient time to process your request. All requests should be sent to the address, email, or phone number listed in the **FOR FURTHER INFORMATION CONTACT** section.

**Matthew Tejada,**

BILLING CODE 6560-50-P

governments; academia; public health organizations; and the public. If you have questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

*B. How can I get copies of this document and other related information?*

The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2021-0196, is available online at <http://www.regulations.gov>.

Due to the public health concerns related to COVID-19, the EPA Docket Center (EPA/DC) and Reading Room is closed to visitors with limited exceptions. The staff continues to provide remote customer service via email, phone, and webform. For the latest status information on EPA/DC services and docket access, visit <https://www.epa.gov/dockets>.

Once the EPA/DC is reopened to the public, the docket will also be available in-person at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the EPA/DC, West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPP Docket is (703) 305-5805.

## II. Background

The PPDC is a federal advisory committee chartered under the Federal Advisory Committee Act (FACA), Public Law 92-463. EPA established the PPDC in September 1995 to provide advice and recommendations to the EPA Administrator on issues associated with pesticide regulatory development and reform initiatives, evolving public policy and program implementation issues, and policy issues associated with evaluating and reducing risks from use of pesticides. The following sectors are represented on the current PPDC: Environmental/public interest and animal rights groups; farm worker organizations; pesticide industry and trade associations; pesticide user, grower, and commodity groups; federal and state/local/tribal governments; the general public; academia; and public health organizations.

## III. How do I participate in the virtual public meeting?

*A. Virtual meeting.* The virtual meeting will be conducted via webcast. Please visit <https://www.epa.gov/>

*pesticide-advisory-committees-and-regulatory-partners/pesticide-program-dialogue-committee-ppdc* to find a link to register for the meeting.

*B. Oral comments.* Requests to make brief oral comments to the PPDC during the virtual meeting should be submitted to the DFO listed under **FOR FURTHER INFORMATION CONTACT** on or before noon on the date set in the **DATES** section.

**Authority:** 5 U.S.C. Appendix 2 *et seq.* and 7 U.S.C. 136 *et seq.*

Dated: April 8, 2021.

**Edward Messina,**

*Acting Director, Office of Pesticide Programs.*

### Notice of Proposed Administrative Settlement Agreement and Order on Consent for Cost Recovery of Past Response Costs at the Advanced Micro Devices, Inc. Building 915 Superfund Site, Sunnyvale, California

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice of proposed settlement; request for public comment.

**SUMMARY:** In accordance with the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended ("CERCLA"), notice is hereby given that the Environmental Protection Agency ("EPA"), has entered into a proposed settlement, embodied in an Administrative Settlement Agreement and Order on Consent for Cost Recovery ("Settlement Agreement"), with Advanced Micro Devices, Inc. ("AMD"). Under the Settlement Agreement, AMD agrees to pay some of EPA's past response costs at the AMD Building 915 Superfund Site ("AMD 915 Site") in Sunnyvale, California.

**DATES:** Comments must be received on or before May 24, 2021.

**ADDRESSES:** The proposed settlement agreement is available for public inspection at <https://semspub.epa.gov/work/09/100023247.pdf>. Comments on the Settlement Agreement should be submitted in writing to Rebekah Reynolds at [reynolds.rebekah@epa.gov](mailto:reynolds.rebekah@epa.gov). Comments should reference the AMD Building 915 Superfund Site and the EPA Docket Number for the Settlement Agreement, EPA R9-2021-01. If for any reason you are not able to submit a comment by email, please contact Ms. Reynolds at (415) 972-3916 to make alternative arrangements for submitting your comment. EPA will post its response to any comments at <https://cumulis.epa.gov/supercpad/cursites/csinfo.cfm?id=0902708>, EPA's website for the AMD 915 Site.

**FOR FURTHER INFORMATION CONTACT:** Rebekah Reynolds, Assistant Regional Counsel (ORC-3), Office of Regional Counsel, U.S. EPA Region IX, 75

ER 21/0089

Mr. Brad LaBorde  
U.S. Army Corps of Engineers  
New Orleans District  
7400 Leake Ave,  
New Orleans, LA 70118

**RE: Draft Environmental Impact Statement for the U.S. Army Corps of Engineers  
Proposed Mid-Barataria Sediment Diversion Project, Plaquemines Parish,  
Louisiana.**

Dear Mr. LaBorde:

The Department of the Interior (Department) has reviewed the Draft Environmental Impact Statement (EIS) for the Coastal Protection and Restoration Authority of Louisiana's (CPRA) Proposed Mid-Barataria Sediment Diversion Project, Plaquemines Parish, Louisiana.

## **Background Information**

CPRA submitted a Joint Permit Application on June 23, 2016, to the U.S. Army Corps of Engineers (USACE), New Orleans District (CEMVN) for a Department of the Army (DA) permit under Section 10 of the Rivers and Harbors Act of 1899 (33 United States Code [U.S.C.] 403 and Section 404 of the Clean Water Act (CWA) (33 U.S.C. 1344) and submitted a Section 408 Permission Request Letter (33 U.S.C. 408) to CEMVN on January 13, 2017 for activities related to the construction, operation, and maintenance of the proposed Mid-Barataria Sediment Diversion Project (MBSD Project). The proposed project consists of a multi-component river diversion system intended to convey sediment, freshwater, and nutrients from the Mississippi River to the mid-Barataria Basin at River Mile (RM) 60.7 near the town of Ironton, Plaquemines Parish, Louisiana.

## **Fish and Wildlife Resources**

The following comments and recommendations are submitted pursuant to the authority of, and in accordance with, the provisions of the National Environmental Policy Act of 1969 (83 Stat. 852, as amended P.L. 91-190, 42 U.S.C. 4321 et seq.), and the Fish and Wildlife Coordination Act of 1956 (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.).

Coastal marshes are considered by the U.S. Fish and Wildlife Service (Service) to be aquatic resources of national importance due to their increasing scarcity and high habitat value for fish and wildlife managed by the Service (i.e., migratory waterfowl, wading birds, other migratory birds, threatened and endangered species, and interjurisdictional fisheries). Upon review of the Draft EIS, the Service finds it addresses all impacts and benefits, including those related to fish and wildlife resources, coastal wetlands, and threatened and endangered species.

The Preferred Alternative would directly impact 182.9 acres of jurisdictional wetlands and 266.3 acres of vegetated shallows (submerged aquatic vegetation or SAV) and other waters of the U.S. Additionally, because Mississippi River sediments would be diverted up river of the Birdfoot Delta, the Delta would experience a projected indirect loss of 2,891 acres of wetlands by 2070 when compared with the No Action alternative, of which 926 acres would be indirectly lost on the Delta National Wildlife Refuge (Delta NWR) and 37 acres on Pass-A-Loutre Wildlife Management Area (Pass-A-Loutre WMA). The indirect wetland losses to Delta NWR and Pass-A-Loutre WMA would be offset by the construction of crevasse projects as described in Recommendation #1 of the Draft Fish and Wildlife Coordination Act Report for the MBSD Project. The MBSD project anticipates a net benefit of 13,151 acres of marsh (3,848 AAHUs) near the outfall over the 50-year period of analysis. Overall, there would be positive net benefits to wetland resources in the project area, with the creation and preservation of emergent wetland habitat of high value to fish and wildlife resources.

The Service has continually been involved throughout the planning and evaluation process for the MBSD Project. The CEMVN and CPRA have been responsive to all our data needs, questions, comments, and concerns. Because of our extensive coordination, and the positive net benefits to wetland resources, all of our comments and suggestions have been sufficiently addressed at this time and the Service has no further comment.

We appreciate the cooperation of your staff on this project and look forward to our continued coordination to further protect fish and wildlife resources. If you need additional assistance or have questions regarding this report, please contact Cathy Breaux (504/862-2689) of this office.

Sincerely,

John Nelson  
Regional Environmental Officer

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 6

1201 ELM STREET, SUITE 500  
DALLAS, TEXAS 75270-2102

May 26, 2021

Brad LaBorde  
Regulatory Project Manager  
New Orleans District - CEMVN-ODR-E  
U.S. Army Corps of Engineers  
7400 Leake Ave  
New Orleans, Louisiana 70118

Dear Mr. LaBorde:

The U.S. Environmental Protection Agency (EPA) has reviewed the U.S. Army Corps of Engineers (USACE) Draft Environmental Impact Statement (EIS) for the Mid-Barataria Sediment Diversion Project, Plaquemines Parish, Louisiana (CEQ Number 20210025). The Draft EIS was reviewed pursuant to the National Environmental Policy Act (NEPA), the Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500 - 1508), and EPA's NEPA review authority under Section 309 of the Clean Air Act.

The Coastal Protection and Restoration Authority Board of Louisiana, through the Coastal Protection and Restoration Authority (CPRA), submitted a Joint Permit Application to the Department of the Army under the provisions of Section 404 of the Clean Water Act, Section 10 of the Rivers and Harbors Appropriation Act of 1899 and a permission request under Section 408 of the Rivers and Harbors Act of 1899 to the USACE, New Orleans District, for CPRA's proposed Mid-Barataria Sediment Diversion (MBSD). The Proposed Action consists of the placement of a sediment diversion through a portion of the federal Mississippi River and Tributaries Project mainline levee on the right descending bank of the Mississippi River at approximately River Mile 60.7 and through the future New Orleans to Venice (NOV) Hurricane Protection Levee, extending into the Mid-Barataria Basin in Plaquemines Parish, Louisiana.

EPA served as a Cooperating Agency and reviewed and provided technical comments on the Draft EIS during its development. We appreciate participating on issues of importance to the Agency including climate change considerations and evaluation of the climate resiliency and adaptation aspects of the proposed project. In addition, EPA acknowledges the proactive approach taken to incorporate technical suggestions and factoring a changing climate into the overall modeling for the project regarding greenhouse gas emissions and climate change. We also acknowledge that this approach was out of recognition that this effort is different from other infrastructure projects in that the proposed action itself is an adaptation/resiliency feature.

In addition, we appreciate working with USACE, CPRA, and the other agencies on the key issues of environmental justice and impact mitigation throughout development of the Draft EIS. The Draft EIS acknowledges in Chapter 4 that the proposed project may have disproportionately high and adverse impacts on the project affected area for minority and low-income residents and users of the resources in the area. According to the models, this may include periodic flooding of some residences and businesses during the operation of the MBSD. It may also include storm hazards and changes in the composition of fishery species. EPA encourages and supports the ongoing efforts to effectively address the identified

environmental justice impacts in the development of the Draft Mitigation Plan provided in Appendix R. EPA strongly recommends that the Final Mitigation Plan include measures to specifically address disproportionately high and adverse impacts related to commercial shrimp and oyster fishing, tidal flooding, and storm hazards identified in the proposed project area. The mitigation measures should include elements designed to consider any unique vulnerabilities and help ensure an equitable distribution of benefits to minority and low-income populations that would be impacted by the proposed project. EPA commends CPRA for holding outreach meetings with minority and low income people in the area to discuss impacts of the proposed project and related mitigation measures.

Thank you for the opportunity to review this Draft EIS. EPA looks forward to the receipt and review of the Final EIS. If you have any questions, please contact Michael Jansky, the project review lead, at 214-665-7451 or [jansky.michael@epa.gov](mailto:jansky.michael@epa.gov).

Sincerely,

Jonna Polk  
Director  
Office of Communities, Tribes, and  
Environmental Assessment

cc: Louisiana Trustee Implementation Group Representatives

The Department of Environmental Quality (LDEQ), Business and Community Outreach Division has received your request for comments on the above referenced project.

After reviewing your request, the Department has no objections based on the information provided in your submittal. However, for your information, the following general comments have been included. Please be advised that if you should encounter a problem during the implementation of this project, you should immediately notify LDEQ's Single-Point-of-contact (SPOC) at (225) 219-3640.

- Please take any necessary steps to obtain and/or update all necessary approvals and environmental permits regarding this proposed project.
- If your project results in a discharge to waters of the state, submittal of a Louisiana Pollutant Discharge Elimination System (LPDES) application may be necessary.
- If the project results in a discharge of wastewater to an existing wastewater treatment system, that wastewater treatment system may need to modify its LPDES permit before accepting the additional wastewater.
- All precautions should be observed to control nonpoint source pollution from construction activities. LDEQ has stormwater general permits for construction areas equal to or greater than one acre. It is recommended that you contact the LDEQ Water Permits Division at (225) 219-9371 to determine if your proposed project requires a permit.
- If your project will include a sanitary wastewater treatment facility, a Sewage Sludge and Biosolids Use or Disposal Permit is required. An application or Notice of Intent will be required if the sludge management practice includes preparing biosolids for land application or preparing sewage sludge to be hauled to a landfill. Additional information may be obtained on the LDEQ website at <http://www.deq.louisiana.gov/portal/tabid/2296/Default.aspx> or by contacting the LDEQ Water Permits Division at (225) 219- 9371.
- If any of the proposed work is located in wetlands or other areas subject to the jurisdiction of the U.S. Army Corps of Engineers, you should contact the Corps directly regarding permitting issues. If a Corps permit is required, part of the application process may involve a water quality certification from LDEQ.
- All precautions should be observed to protect the groundwater of the region.
- Please be advised that water softeners generate wastewaters that may require special limitations depending on local water quality considerations. Therefore if your water system improvements include water softeners, you are advised to contact the LDEQ Water Permits to determine if special water quality-based limitations will be necessary.
- Any renovation or remodeling must comply with LAC 33:III.Chapter 28, Lead-Based Paint Activities; LAC 33:III.Chapter 27, Asbestos-Containing Materials in Schools and State Buildings (includes all training and accreditation); and LAC 33:III.5151, Emission Standard for Asbestos for any renovations or demolitions.

- If any solid or hazardous wastes, or soils and/or groundwater contaminated with hazardous constituents are encountered during the project, notification to LDEQ's Single-Point-of-Contact (SPOC) at (225) 219-3640 is required. Additionally, precautions should be taken to protect workers from these hazardous constituents.
- The two unregistered free flowing water wells that were discovered in the pasture land during the site investigation and the corroded steel oil well pipe that was observed protruding from the water near the center of the West Access Canal need to be properly plugged and abandoned. The plugging and abandonment of these wells must be completed by a Louisiana Department of Natural Resources (LDNR) Licensed Water Well Driller, and be done in accordance with LAC Title 56 Regulatory Requirements.
- If any docks or pilings involve any treated wood elements, the treated timber must be reused, recycled, or properly disposed of at permitted facilities.
- If the project will involve the removal or disturbance of any soils which may have contaminant concentrations that exceed the Limiting Screening Option Standards established by the LDEQ Risk Evaluation/Corrective Action Program (RECAP) Regulation, these materials may be considered a waste and disposed of at a permitted facility, or might be managed as part of a Solid Waste Beneficial Use or Soil Reuse Plan in accordance with LAC 33:VII.Chapter 11. Alternately, a site-specific RECAP Evaluation might be conducted and submitted to the LDEQ.

Currently, Plaquemines Parish is classified as attainment with the National Ambient Air Quality Standards and has no general conformity determination obligations.

Please send all future requests to my attention. If you have any questions, please feel free to contact me at (225) 219-3954 or by email at [linda.piper@la.gov](mailto:linda.piper@la.gov).

Sincerely,

Linda (Brown) Piper

July 22, 2022ee

U.S. Army Corps of Engineers  
Attn: Colonel Stephen Murphy  
New Orleans District  
P.O. Box 60267  
New Orleans, LA 70160-0267

Colonel Murphy,

I would like to take this opportunity to share concerns of the U.S. Coast Guard with regard to the Mid-Barataria Sediment Diversion project, permit number P20131098. My staff has reviewed the permit application and met with navigation stakeholders over the previous months to hear their input regarding this project. Based on this information, I have concerns that this project presents an increased risk to navigation safety both during the construction and operational phases of the project, as well as unknown sedimentation impacts to anchorages.

The proposed project will require extensive coordination during both the construction and operational phases. This project is not located in an area that is actively monitored by a Coast Guard Vessel Traffic Service, and therefore detailed planning and communication between waterway users and project workers will be necessary to facilitate construction while ensuring safe and free navigation. Additionally, there are concerns that other navigation safeguards will be necessary once the project is operational, such as picket boats, light & sound signals, and radio guards. Given the significant changes to the operating environment and associated navigation concerns this proposed structure represents, a decision to deny or grant the permit must be informed by a thorough risk analysis. To that end, and based on our initial determination of increased navigational risk resulting from the changes to operating conditions, it is my strongest recommendation that your office require the applicant to conduct a formal navigation safety risk assessment (NSRA).

Based on my office's preliminary review of the project and the comments I have received from stakeholders, I also have significant concerns regarding the impacts this project will have on sedimentation affecting the anchorages. Anchorages along the lower Mississippi River are crucial to facilitating deep draft vessel safety, movement, and commerce. Therefore, I strongly recommend conditions be included in any permit approval to mitigate and/or address sedimentation negatively impacting anchorages as a result of permitting this structure.

My staff and I are available to meet with you and the permit applicant to discuss these concerns and the scope and process of a formal NSRA. My primary point of contact for this matter is LCDR William Stewart. He may be reached at [William.A.Stewart@uscg.mil](mailto:William.A.Stewart@uscg.mil) or (504) 365-2246.

Sincerely,

A handwritten signature in blue ink, appearing to read "K. K. Denning".

Phone: (504) 365-2215  
Email: Kelly.K.Denning@uscg.mil

16670

AUG 16 2022

U.S. Army Corps of Engineers  
Attn: Colonel Stephen Murphy  
New Orleans District  
P.O. Box 60267  
New Orleans, LA 70160-0267

Colonel Murphy,

Following my previous letter of July 22<sup>nd</sup>, in which I expressed some concerns related to the Mid-Barataria Sediment Diversion project, permit number P20131098, I have since reviewed information provided and engaged in several discussions regarding the project. Based on information obtained from communications with the Coastal Restoration and Protection Authority (CPRA), Coast Guard Navigation Center, and the Environmental Impact Statement (EIS) Navigation and Dredging Analysis, the Coast Guard has no objection to this structures' permit.

Notwithstanding, further coordination between CPRA, Lower Mississippi River (LMR) navigation stakeholders, and the Coast Guard will be needed to identify navigational safety measures to be implemented during both the construction and operational phases of this project. The navigational safety measures that require further clarity include but are not limited to procedures related to communications, signs and signals, and operational status of the diversion structure. We recommend these discussions continue through the Greater New Orleans Port Safety Council, Harbor Safety Committee's Subcommittee for Navigation and Waterway Utilization. While finalizing these details is an important step to maintaining navigation safety, they can be coordinated concurrently during the remainder of the permitting and construction processes.

Lastly, based on the EIS Dredging Analysis provided, sedimentation impacts to Non-Federal Facilities (i.e. anchorages) "were not sufficiently resolved by the models to justify any conclusions." I want to express the importance anchorage grounds provide to facilitating safe navigation on the Mississippi River. If any future loss of, or impacts to anchorage grounds becomes apparent as a result of this structure, please notify and coordinate with the Coast Guard and applicable stakeholders to ensure safety of navigation.

My staff and I are available and look forward to working with you and the permit applicant to ensure safe navigation during all stages of this project. My primary point of contact for this matter is LCDR William Stewart. He may be reached at [William.A.Stewart@uscg.mil](mailto:William.A.Stewart@uscg.mil) or (504) 365-2246.

Sincerely,

A handwritten signature in blue ink that reads "Kelly K. Denning".

| 9/5/2018  | Nav Simulations            | Phone Call                         | Status update on Nav Sims with USACE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Jeff Varisco<br>Brad Laborde<br>Mario Sanchez (ERDC)                                                                                                                                  |
| 3/4/2020  | Nav Stakeholders           | MNSA/Pilots Meeting                | CPRA provided Diversions updates; update on Barataria design (nav related), nav sim results, and nav/dredge appendix (CPRA's Opinion), as well as upcoming Breton Sims.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 20 attendees: representation from all 4 pilot groups, USCG Sector of New Orleans Waterways                                                                                            |
| 3/11/2020 | Nav Stakeholders           | Greater New Orleans Safety Council | CPRA provided Diversions updates; update on Barataria design (nav related), nav sim results, and nav/dredge appendix (CPRA's Opinion), as well as upcoming Breton Sims.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 50 attendees.                                                                                                                                                                         |
| 7/17/2020 | USACE River H&H / Dredging | Conference Call                    | CPRA's River SME Collin Thorne discussed overall potential dredging reduction with diversions, main issue RSLR, salt wedge, and ultimately diversions may benefit USACE's Dredging Program. USACE had Jeff Varisco, Brad Laborde, Steve Ayers, Will Veatch, Gary Brown, Nik Richard, and Landon Parr. Discussed salt wedge is always in SWP and since wash load is SWR=1, salt wedge is a local position issue related to flow. GB acknowledged lower spillage in Lower East (Ft. St. Philips), as well as USACE's dredging locus is / will move up stream regardless of diversions (RSLR). USACE has little to no data in regards to salt wedge/dredging conversation. USACE also noted that wind forcing is a key uncertainty in regards to which way flow exits the lower river. | Collin Thorne (CPRA)<br>Jeff Varisco (USACE)<br>Brad Laborde (USACE)<br>Steve Ayers (USACE)<br>Will Veatch (USACE)<br>Gary Brown (ERDC)<br>Nik Richard (USACE)<br>Landon Parr (USACE) |
| 10/1/2020 | USACE                      | Conference Call                    | Jeff Varisco confirmed USACE is finalizing the DEIS Navigation Appendix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | CPRA, Jeff Varisco                                                                                                                                                                    |
